unexpected difficulty arise. Our colonies, established for the reception of convicts, refused to receive them any longer. No doubt many material advantages arose to them from the labour of convicts, by which they had formed their harbours, made public roads, and erected public buildings; but when they rose themselves in the scale of civilisation, they found that these advantages ill-compensated them for the low and degraded tone of public morals which the introduction of a large number of these miserable men produced, and they successfully resisted any further influx of convicts usually transported—at least all excepting one small colony of perhaps 50,000 inhabitants, Western Australia, which could absorb but a small proportion of our criminals. In consequence of this we were obliged to discharge our convicts into the population at large. No one would doubt the proposition that if a man who was sent to gaol did not become improved he must become deteriorated; he never comes out the same—he is either better or worse. He knew of no beast of prey which naturalists have described, at all so dangerous or so injurious to society as the unreformed criminal. His passions become exacerbated by the punishment he has received, his mind is uninfluenced for good, and his habits are not reformed. It must be admitted that the rulers of this country were placed in a most difficult and uneviable position. It is true they are open to this reproach—which belonged, he believed, to our nationality—that energetic as we are in removing our present evils, we never look forward to meet the evils which are coming, and which, if met in time, would be received with half the expense and trouble they naturally entail when we wait for them to come to us. It is true a prospect had been opened by the thoughts and labours of reflecting men and women; it is quite true much had been done to demonstrate the possibility of reforming criminals—not all criminals, but a large proportion, whether of juveniles or adults, who come under the animadversion of the law. The illustrious Howard had pointed out a course which those who thought afterwards they were walking in his steps neglected because they did not comprehend it. Many of both sexes exerted themselves for the amelioration of the condition of criminals. He must not stop to dwell upon names, but he could not help mentioning the poor sempstress of Yarmouth, Sarah Martin, and the illustrious Elizabeth Fry, both of whom were the means of turning many from evil to good. Dr. Whateley, Archbishop of Dublin, in a review which he wrote, and which was published in 1829, said that it appeared to him that one great error in our system arose from the practice of sentencing criminals for a time certain, and that they ought to be sentenced to a task—a work and labour certain; they should be told that they must remain in prison until that task was completed; that they were not to look to the calendar and notch off day by day and say that after the lapse of a certain time they would be free; they should be told that they would not be released until after their labour was completed, and then, he says, it would be seen how they would work, when every stroke of the axe would be cutting their way out of prison, and every spadeful dug would be assisting in their liberation. Captain Maconnochie elaborated this principle of the good archbishop into a system, by setting in a book to the credit of a criminal marks in his favour for labour performed, and deducting all marks for fines for misconduct, and by various other ingenious and well-considered expedients. This system had a great effect upon the minds of those who had considered that most difficult problem—"How shall we treat our criminals?" and, whether they adopted this system in its entirety or not, it led the way to that which was now called the reformatory treatment of criminals in England and Ireland. He had now, at much greater length than he intended, come down to the year 1853. In that year the Government found it necessary to do something, in consequence of the colonies having refused to take any more criminals. What was to be done? Were unreformed criminals to be poured into the streets, and the gates of prisons to be opened to dissolute and violent men? It seemed so. But in that year a statute was passed based on a principle which, if it had been carried into due effect, would he thought have produced a state of things which would have been hailed throughout the British dominions as the greatest boon which could have been granted. That principle was this: It was thought that the view of the Archbishop of Dublin could not be adopted in its entirety, nor could Captain Maconnochie's elaboration of it be adopted in its entirety, because it conflicted too much with established modes of feeling. It was decided that criminals should be sentenced to time certain as heretofore, but that an opportunity should be given them of working out of prison before the expiration of that time, either by industry or good conduct, and that then they should not be absolutely discharged, as all tests of good conduct afford no certainty, but only aprobility, of reformation. They were to be discharged upon a licence, which has obtained the name of a ticket-of-leave. Upon this document it is expressly stated that for the holder to forfeit it and be sent back to prison, it was not necessary that he should have committed any specific offence, but it says that if he consorts with the idle and dissolute, if he be himself idle, if he evince a disposition not to profit by the experience he has undergone, it shall be considered that he is lapsing into crime, and his licence shall be withdrawn, and he shall be sent back to gaol for the time for which he has been sentenced. But unfortunately this grand and noble principle was so incorporated into the Act of Parliament that was to bring it into action as to deprive it of very much of its salutary qualities. It was thus that the Act dealt with the subject. It said—We must give up transportation for the greater number of our convicts, and we will therefore reserve it for the few who have committed the most heinous offences, and the greater number shall be kept at home imprisoned and set to hard labour. But inasmuch as the common ordinary sentence of that kind would leave them at the county gaol, whereas we desire to keep them in the Government convict prisons, we will sentence them to a new punishment called penal servitude, which will give us the power over them and the management of the discipline they are to undergo. But, unhappily, in making this arrangement they reduced the extent of the sentences in an enormous degree. Those who before were transported for seven years were punished with four years' penal servitude, and so on with the higher rates, those formerly transported for ten years being sentenced to six or eight years' penal servitude, and so on. The consequence of this was that when the Act was passed, the Government, thinking that as the sentences had been reduced in extent there was as regards those sentenced to penal servitude no room further to diminish them, as would be the case with those who, by industry and good conduct, claimed to be set at liberty before the period for which they were sentenced. The effect of this was that with regard to all persons sentenced to penal servitude—which was the case with a vast majority of those sentenced after 1853—all these were precluded from that encouragement to do right which had been promised by the Act. This went on until 1857, when, by the strong remonstrances of a committee of the House of Commons, Government was induced to alter these regulations, and to bring in an Act which placed penal servitude and transportation on the same footing. There were now, in consequence, four classes of convicts. Those sentenced before 1853 have the coveted privilege of shortening the period of their imprisonment, but to those sentenced between 1853 and 1857 no encouragement was held out, while those convicted after 1857 have the privilege of shortening their sentences. Look at the unhappy men convicted between 1853 and 1857. The thought that his predecessors, who stand exactly upon the same footing as to crime with himself, have the privilege, and that his successors who are similarly circumstanced, have likewise the privilege of shortening their sentences,—with this thought, how is it possible to give any reason satisfactory to his mind why he is debarred from the same privilege? No reason has been given, no reason can be given, and the consequence is that a mutinous spirit exists amongst this class of criminals, and a few months ago it broke out into an open rebellion, which was only quelled by the force of arms. But what expedient has been invented? They have been told—and it has been acted upon—that they could not have that moral encouragement which would make them better men, which would teach them self-denial, and teach them to master their passions, but they should have an equivalent. They were told that they could not be given their liberty, they could not be exhorted to habits of frugality, economy, and self-denial, but their appetites could be pampered—they could have roast meat and boiled meat, while the other convicts had the ordinary prison fare! They were told that they should have the luxury of treacle pudding, and they would be given a higher gratuity when they left the prison, in order that they might be able to gratify those pampered appetites which had been created in them while under-

Digitized by Google

going their punishment. This was sober fact in the year of our Lord 1859! The law as regards the Act of Parliament, and as regards many of the regulations under those Acts, is the same in Ireland as in England; but fortunately for Ireland—fortunately for England and the whole civilized world, if they can profit by the experience they may learn from Ireland—the impediments and difficulties to moral encouragement and moral and religious discipline have been encountered with determined purpose, unflinching zeal, and never-tiring industry, by the excellent friend who sat on his right hand (Capt. Crofton), and who had been fully rewarded for his exertions by the best possible reward—the success which had attended his great undertaking. He had said at Birmingham, and he would repeat it, that he believed Captain Crofton had solved the great problem, "What shall we do with our criminals?" That gentleman had solved this problem, and he would now tell them how (applause).

Captain Crofton observed that his friend Mr. Hill had indeed cleared the ground for him, and had traced in a very able manner the circumstances of criminals and their treatment, from a very early period to the passing of the Penal Servitude Act in 1853; by which there was an almost total cessation of transportation. He should dwell upon this Act, for it was with its working that he had most to do—with the ticket-of-leave system, and show how it had been carried out in England, how it had failed because it did not prepare the convict for his release, nor the employer to avail himself of his services when he was released. The best plan he could adopt, perhaps, would be to read an extract from a report written some years since, giving certain propositions to the Irish Government, adducing certain theories, and setting forth what would ensue if a certain line of conduct was pursued; he would afterwards explain how these anticipations had been realised, and adduce facts which would bear out his statements as to the results: and he would then enter into an explanation of the ticket-of-leave system, as carried out in Ireland. The directors of convict prisons in Ireland, in their second annual report, published in 1855, say:—

"The subject on which we felt great anxiety, and to which we alluded as of the utmost importance in our last report, is the employment of the well-disposed convict on discharge; for without we can further this, we cannot anticipate a satisfactory termination to the reformatory treatment we have endeavoured to institute in the prisons. It has now been decided that 'Tickets of Licence' shall be issued to those prisoners eligible by character and length of imprisonment, and in carrying out these instructions we feel the very great responsibility which attaches to us. We know that the public look with alarm upon arrangements which they consider consist in turning loose upon the community men convicted in most instances of very serious crimes. We are aware how sceptical persons are of a reformation tested alone by prison surveillance, under a comparative absence of temptation; that the press teems with outrages committed by 'Ticket-of-Licence' men; that the system is denounced by some of those administering the criminal justice of the country as an unmitigated evil; but we do not hear the suggestion of a remedy. Our colonies will not (with the exception of Western Australia) receive our convicts; there is, therefore, no alternative but that, for the most part, they must be discharged at home."

The directors recommend that prisoners eligible for discharge (from length of imprisonment and exemplary character) should be collected at certain "intermediary" establishments, where they may be profitably employed in labour.

"These establishments will act as filterers between the prisons and the community; but to enable them to be *really* such, the system pursued in them must be of such a character as to test the reformation of the prisoner, and throw him more on himself; hard work and coarse fare must be the rule, and in the evenings carefully selected lecturers may inculcate lessons of practical utility. It is important that these establishments should be as self-supporting as possible, the officers connected with them should be cognisant of some branch of industry, and give the public the benefit of their own labour—the prisoners may be employed in offices and avocations that could not be sanctioned in a prison, but which, in this intermediate stage, would tend to engender self-respect. We believe that, by means of these establishments, we shall obtain a further insight into the prisoner's character through individualisation, and thus be enabled to recommend the really deserving for tickets of licence. We consider that the community will have greater faith in such a test than they would in a character earned merely under prison discipline; but in recommending these intermediary establishments, we had a further view than the mere amelioration of the system of issuing tickets of licence; we considered that they would equally work for good towards the termination of penal servitude sentences; that they would tend to the solution of a very important question, 'the treatment of our criminals;' that the good and evil can be thereby properly tested and separated—the former to be aided in the onward path of reformation, the latter, when discharged in the usual course at the expiration of their sentences, to be noted to the police of their district as requiring special supervision. This will not be a matter of such difficulty as may appear, first as the fact of not having passed through these establishments will be sufficient grounds for warning the police. Many, it is expected, will enter them in consequence of their exemplary prison character who, on being tested, will fail, and be returned to the penal establishments. Registers will be kept, and every aid given to further the efforts of these selected prisoners in obtaining employment at home and in the Colonies. A diminution of crime (which is confined to fewer individuals than is generally supposed) must be the consequence; and, what is of great importance, it will always place at the disposal of the Government a large number of prisoners, whose labour can be employed economically on harbours of refuge, &c., who will require less supervision than ordinary prisoners, and who can be located in any accommodation that may be offered, instead of requiring special prison construction. We have commenced this system, and have every confidence in its success. We believe, if properly carried out, and extended with the assistance of the police and constabulary, it will, through the two important channels of directing and preventing, be made the means of exercising an influence over the criminal population generally, which cannot well be too highly appreciated."

In another portion of their report, the directors expressed their belief that "the employment of convicts in small bodies on public works in various localities, under circumstances of exposure to the ordinary temptations and trials of the world, when the reality and sincerity of their reformation may be fairly and publicly tested, will prevent the most favourable chances for their absorption into the body of the community. They refer to the prejudice of the public against the employment of convicts, all of whom are judged by the standard of the lowest and most degraded, and then go on to say—

"We hope, by a careful selection of convicts, according to their general as well as 'prison character,' by their employment in small bodies in various localities, comparatively as freemen (though under surveillance), that the public will gradually become convinced of the difference to which we have alluded, that many of these men are not utterly irreclaimable; and that by degrees they will become willing to extend a helping hand to such as may really prove themselves deserving of their aid and encouragement. We believe that a general desire is felt by the community at large to aid in the restoration of these fallen members of society, though all, or nearly all, shrink from personal contact with them; however, when they become convinced that a careful discrimination has been exercised in the selection of convicts to be employed in the manner indicated—that there are some of whose real and sincere reformation good hopes have been formed—and when they know that such reformation has been further thoroughly and publicly tested, we hope to find that this class of convicts at least will be no longer shunned as hopeless outcasts. If means cannot be devised to induce the community to hold out a helping hand to re-establish the reformed criminal, all schemes for their improvement and reformation within the prisons, however ably devised, however zealously carried out, must be comparatively fruitless."

He thought this carried with it the reason why the ticket-of-leave system failed in England. He would detail some facts, showing that after an experience of more than three years and a-half, gained since that report was written, they had realised even more than was anticipated. Individualisation, it would be observed, was the ruling principle propounded, and during three years and a-half more than 2000 persons had been subjected to that influence, and several hundred criminals (the large majority of them old offenders) had been employed in isolated stations in a state almost of freedom, without guards, with only four or five officers working with them to restrain them, and they had conducted themselves equally well with any body of labourers. That he believed to be a sufficient answer as to the success of the scheme. The fact that such prisoners as those of whom he had spoken could be maintained in a perfect state of discipline, and could be employed on public works for the good of the State, spoke volumes in favour of the system. Employers who had taken men for three years, still continue to apply for others on their liberation—those who at first had been induced to give the convicts on ticket-of-leave a fair trial, have ever since been employers of convict labour. Even within the last two days he (Captain Crofton) had received a letter from Mr. Organ—to

Digitized by Google

whom great credit was due for the exertions used by him to get persons to give a fair trial to convict labour—stating that he had had applications from two merchants to send them men. These two facts—that prisoners can be employed without guards, and that after liberation those who have employed convicts have come forward again to employ them, were two of the strongest facts which could possibly be adduced in favour of the system. In Dublin there were sixty or seventy convicts employed on ticket-of-leave, and they were visited fortnightly, carefully watched, their conduct noted by police information, and the result had been most satisfactory, for as a general rule their conduct had been unexceptionable. That too sanguine a view of the success of the system might not be taken, the information obtained from interviews with the convicts themselves and with their employers, as well as intelligence gleaned from every available source with regard to their conduct, was compared with notes taken by the police, who exercised over them a slight surveillance, and the general results were highly satisfactory and encouraging, notwithstanding that the convicts had in nearly all instances been notorious thieves and nurtured in crime. The indorse of the ticket-of-leave stated that the convict was to report himself at certain fixed periods, and if he did not do so it would be assumed that he was leading an idle and irregular life, and would therefore entail a revocation of his licence. In addition to this the convict was also regularly visited. In Ireland the conditions of the ticket-of-leave were faithfully carried out, and it was clear that by so doing the community received that protection which was always accorded in the colonies. In England, in 1853, the people were called upon to adopt the colonial practice of the ticket-of-leave, but they did not receive that protection afforded by registration. If such protection had been afforded, the same confidence would be felt in the employment of convicts that was felt at the present time in Ireland. In the country districts in Ireland a different course to that pursued in the city of Dublin was adopted. A large number of men were scattered over the country, and as it would be difficult to insure visitation, it was determined to adopt a system of registration. The convict was to report himself at the constabulary station on his arrival in a district, and he was also required to report himself on the first of every month at the station of the district to which he belonged. The country form of indorse to the ticket-of-leave was as follows:—"Each convict will report himself to the constabulary station of his locality on his arrival in the district, and subsequently on the first of each month. A convict must not change his locality without notifying to his constabulary station, in order that his registration may be changed to the locality to which he is about to proceed. An infringement of these rules by the convict will cause it to be assumed that he is leading an idle and irregular life, and thereby entail a revocation of his licence." The beneficial effect of the system was strikingly exemplified in Dublin. A detective officer had it explained to him, and he expressed a hope that a certain convict whom he named would not be liberated, for if he were, and it became known, a gentleman whose house he had robbed would be sure to leave the city. At this time the man referred to had been at liberty for three months, and on the day after the conversation with the detective officer the same man came and begged that he might be removed from the work he was doing, as he was in a bad neighbourhood. By that he meant that he was working on the road near the house he had robbed, and if anything happened he would be sure to be suspected. The man had now been at liberty for eighteen months, and nothing had been brought against him. He had been engaged at blue vitriol works and other distasteful labour, although nurtured in crime, and had previously lived by it, and nothing had been brought against him since his liberation. He (Capt. Crofton) knew sixty or seventy men in a similar position, many of whom had for twenty or thirty years previously pursued a course of crime, and when he saw them cheerfully engaging in work of a laborious description, rather than relapse into their former courses, he was bound to believe in their reformation, and in the value of the individualising principle of which he had spoken. During upwards of three years a thousand tickets of leave had been issued, and of these only fifty-two revocations had been made, or less than six per cent. Of the number of revocations, seventeen were for irregularities and misconduct not of a criminal nature. Of the 1600 prisoners who had been released to test the value of the system, 600 had been discharged unconditionally, and of these only twelve had been known to be re-convicted. Positive statistics had been obtained, however, of only 300 out of the 600, and he could not, therefore, speak with certainty of them, and so it would always be if no check were kept by means of registration. It could only be assumed that they had reformed because they had not been re-convicted. But that was no test of their reformation, for many who committed crimes succeeded in keeping out of the way and were never re-convicted. To show the value of the system it must be proved that a man is going on right, and not that he is not going on wrong; and the only method of doing so satisfactorily is by registration, which should have been carried out in the Act of 1853. The general result in addition to this has been highly encouraging. In 1853 there were nearly 5000 prisoners in the convict prisons, while now there are not more than 1900, although there has been no transportation to Western Australia from Ireland, because the English convicts have gone there, and there has been no assistance afforded by patronage societies, as there are none in Ireland. The police used to say, when robberies were committed, that they were the work of ticket-of-leave men; but they cannot say so now, as it is known how the convicts are engaged, and an account can be given of each. He had received hosts of letters from employers, testifying to the value and good conduct of convict labourers, and he had had the strongest testimony of the soundness on which the system was based. The system of individualisation was not original—in reformatories this principle was adopted. The committee who sat to inquire into prison discipline reported that the majority of criminals were susceptible to good impressions the same as other persons. These principles also were under discussion with regard to reformatories; they were not original principles, therefore, and in Ireland they had fortunately been able to carry them out. Some questions had been asked with regard to these intermediate prisons—some of them had been asked, under anonymous names, in the newspapers—and as they might, perhaps, be in the minds of many present, it would be as well to devote a little time to their consideration, and if possible to answer them. "Is it true that a sympathy for crime exists in Ireland which better enables convicts to obtain employment?" He said distinctly that it was untrue, and the impression might have got abroad from the fact that the lowest classes in Ireland have been in the habit of sheltering those who have offended against the law; but the class who employ criminals are the higher classes—merchants, tradesmen, and large farmers, who have no sympathy with crime. "Is it true that the class of criminals is not 'habitual' but more generally 'casual' offenders?" In reply, he could only say that many of them had been nursed in crime, that some of them had pursued a course of crime for twenty or thirty years, and that the majority of them were habitual offenders. "Is the association in the intermediate prisons productive of abuse as to language or conduct?" These prisons are moveable huts, and are removed when the work upon which the men have been engaged is completed. The men live fifty together in each hut; they associate like soldiers, and it has been asserted that that association is productive of abuse. He should be the last to advocate that association at any period of imprisonment did he believe it productive of abuse. It was in reality a most valuable test, for much reliance could not be placed upon the reformation of those who could not be associated together in such a way without abuse. They did in reality associate together in this way, and although they were allowed to have a portion of their gratuity in their pockets, they exercised great self-control, and did not abuse the privilege afforded them. The object of giving the men a certain portion of their gratuity—with the privilege of spending it in certain ways—was to discover what amount of self-command they possessed, and he had known men who have spent nothing for eighteen months, but who have struggled to save, and denied themselves every indulgence in order that they might raise sufficient money to enable them to reach a colony at the expiration of their sentence. He could say emphatically, that neither in language nor in any other way had there been any abuse among those men who have associated together in intermediate prisons. "Is the possession of money on the part of

Digitized by Google

convicts in this stage productive of sufficient inconvenience to counterbalance the advantage of testing self-reliance?" He would not for the world part with this practice, as it brought forth habits of self-reliance and self-command, and was not attended with abuse. "Is the diet sufficiently good, and the treatment sufficiently indulgent, to make the position of the convict in the intermediate stage an object of envy to the labourer?" The diet was the lowest the medical officer would allow the men for the work they had to perform. That it was not too indulgent was sufficiently proved by the fact that in many cases the men purchased bread with their gratuity money, in order to supplement their ordinary diet. They likewise worked hard—for they were paid according to the amount of labour they performed — and the farmers in their neighbourhood often remarked that they wished they could get their labourers to work like them. There was, therefore, no temptation to other labourers to become like them, for there was nothing but hard fare and hard work, and the pauper would immediately turn away from the intermediate prison, if the choice were offered to him. "As a rule would it be observed that men discharged from intermediate prisons have appeared ashamed of having committed crime?" His experience led him to believe that such was the case, and that they felt doubly abased in comparison with those who left the ordinary prisons, and who generally exulted in their crime. "Has the institution of intermediate prisons been potent for good in the ordinary prisons?" At first this was not so clear, but when it was understood and thoroughly felt that men, through their own exertions, might work into these intermediate prisons, it did stimulate those in the ordinary prisons. "What has been the most valuable test of the intermediate system?" That men under sentence of penal servitude, without receiving any remission of their sentences for good conduct, behaved equally well with those who did receive such remission. "Is it true that the convicts are picked for the intermediate prisons?" They are selected in consequence of their having advanced by their own exertions—that is, they have attained a certain number of marks. "Is it expected that intermediate prisons can be made self-supporting, not in skilled labour, but in the wages of ordinary unskilled labour?" In labour, such as that in which masons would be engaged, special works would be required; but in earthworks, such as fortifications, prisoners could, when working in a body, be made self-supporting, of which he had the most positive proofs. "Is it found that the best-intentioned criminals desire to leave the country, and to go where they will avoid their bad associates and get employment more easily?" With all young men he found that it was so. They dread going out unless they can get clear of their associates. They have no homes but bad homes, and the gratuity they have acquired in prison enables them to go to the colonies—to go where their labour is required, and where their antecedents are not narrowly scanned. If these men meant to rob they would go back to their companions in the crowded cities, and not to the colonies, where the same field is not afforded for the commission of robberies, and it was, therefore, fair to assume that when men go there, they go with the intention of reforming themselves. "Do the convicts object to report themselves to the police, and have many complaints been received of abuse of power on the part of the latter?" In England the police system was more objected to than in Ireland, because of the feeling existing against centralization, but if a system of supervision be made a duty on the part of the police there will be no espionage. In England, where supervision is not made part of the duty of the police, every ticket-of-leave man is suspected, and can have no rest, but in Ireland it is not so; and during the time that the registration scheme has been employed, only two cases of interference on the part of the police has occurred, and those only at the time when the system was first commenced. The greatest difficulty at first with old thieves was with regard to this matter—they were afraid that their every movement would be watched; but now they regard registration as a protection to themselves if well-intentioned. The same course might easily be pursued in England, for it is not likely that the English police would abuse what the Irish constabulary are carrying out so successfully, and if a similar practice were adopted in England there would be no objection. Under the present system of ticket-of-leave, however, many persons are brought before the magistrates in London for robberies which they said they were bound to commit, because, if they went to work anywhere the police gave information to their employers that they were ticket-of-leave men, and they were at once discharged. Captain Crofton, at considerable length, proceeded to point out how the Act of 1857 would fail in England, unless the remission of the term of sentence was made conditional, and contrasted with it the system pursued in Ireland, which he showed to be not only more beneficial to the community at large, but also more severe to the convict; for while in England the prisoner has a portion of his sentence remitted unconditionally, the period of punishment is more extended in Ireland, no portion is remitted until by good conduct and the performance of a certain amount of labour he has shown himself to be deserving of the leniency extended to him, and even then, by the adoption of the scheme of registration, the convict is liable to a revocation of his licence at any time if he misconducts himself. This subject, he said, was brought before the National Association for the Promotion of Science at Liverpool in October, 1858, and so impressed were they with its importance that they passed the following resolution:—"That it is the unanimous feeling of the section that the attention of the Legislature be urgently invoked upon the following subject:—The expediency of so prolonging the sentence passed in serious cases of crime as to admit of considerable periods of fixed confinement, followed by a proportionate period of probationary detention, part of which should be open to remission in consequence of good behaviour, under the liability of such remission being revoked in consequence of bad behaviour while the prisoner was at large." He believed he had shown that longer periods of sentence with conditional liberation was productive of advantage to the community at large while it was not injurious to the criminal, but aided him in his good intentions, and if he had done so to the satisfaction of those present, he hoped they would use their influence for the adoption in England of a similar system to that pursued in Ireland Captain Crofton, in conclusion, stated that after some years' practical experience in Ireland he had endeavoured to demonstrate to the meeting that in order to protect the community, improve and restrain the criminal, and break up the criminal class, it would be necessary—1st. That lengthened sentences of penal servitude should be given. 2nd. That towards the termination of sentences a probationary or intermediate stage of prison treatment should be adopted, as better preparing the convict for release. 3rd. That to the periods of sentences ordered to be remitted under the Act of 1857, a condition of subsequent good conduct should, in all cases, be attached to the liberation, the condition to be enforced by means of a system of registration.

Mr. Commissioner Hill said he was sure he spoke the sentiments of all present when he said they were obliged to Captain Crofton for the proof he had given of the success of the system in Ireland, the details of which were highly interesting and useful. He wished now that his friend Mr. Baker would explain reformatory treatment and its effects as evinced in his own mansion at Hardwicke Court.

Mr. Baker, after expressing himself highly favourable to the scheme propounded by Captain Crofton, and observing that he had not come prepared to make any observations on reformatories, as he understood that the evening was to be devoted to the consideration of the suggestions of Captain Crofton, proceeded to say that the great object which he wished to see accomplished was the diminution of crime, and reformatories had, in a great measure, been successful in this respect. In proof of this assertion he read statistics of juvenile crime in various counties where reformatories had been established. In the year ending August 1854, there were in the city of Norwich 117 convictions of juveniles, 82 of which were charged on 18 boys. From that time there had been a decrease every year, and for the year ending August, 1858, there were 31 convictions, 15 of which were charged on 4 boys. In Liverpool the convictions of juveniles in 1856 numbered 995; in 1857 the number was 793; and in 1858 the number was reduced to 486. In adult crime there was but little diminution, but crime amongst juveniles had been reduced considerably more than one half, and he believed it would be yet further very considerably diminished in a short time. He said that diminution was so great that a sufficient number of boys could not be obtained for some reformatories, and that the children of counties where no such establishment existed could now be provided for in those already erected, but the great obstacle to their being sent to them was the fact that a charge

Digitized by Google

of 2s. or 2s. 6d. was made for each, which the authorities of those counties declined to pay.

The Rev. Mr. Osborn, chaplain of the gaol at Bath, proposed a vote of thanks to Mr. Commissioner Hill, and in doing so entered at some length into the abuses at present existing with regard to the punishment of children, expressing, at the same time, a hope that the learned commissioner would be long spared to consider these abuses.

The vote of thanks was passed with acclamation, and the compliment having been acknowledged, the company separated.

REFORMATORIES AND REFUGES.

Notwithstanding all that has been done for the above institutions throughout all the country, the Reformatory movement is still in its infancy in many respects. Theory, however, is beginning to give way to practice and experience, and those positively engaged in the working out of Reformatories and Refuges are acquiring a degree of intimacy with the difficulties and encouragements which surround them, which enables them to avail themselves of the one to surmount the other. Experience, however, teaches them difficulties as yet unmet even by attempt, and on the other hand attracts attention to advantages which are not universally appreciated. Hence it is that we rejoiced at the establishment of a Society of the Masters and Matrons, which has been fostered and encouraged by the Reformatory and Refuge Union, at whose rooms the Society meets monthly for interchange of thought. We shall at all times be glad to give what publicity we can to the papers read at these meetings. The following papers emanate from parties of considerable experience in the practical part of this important work. We need not remind our readers that we do not insert them as specimens of literature, but rather as conveying, in homely yet intelligible language, suggestions connected with the management of Institutions forced upon the writers by actual contact with the practical working of the system. The paper on the Promotion of Mutual Sympathy among Children was read by Mrs. Johnson, the Matron of the School of Discipline, Chelsea, on the 9th of February; that on Lodgings in the Neighbourhood of our Refuges, by Mr. Amor, the Master of the Boys' Refuge, Maida Hill, on the 9th of March.

HINTS RESPECTING THE GREAT IMPORTANCE OF PROMOTING AMONGST THE CHILDREN A FEELING OF INTEREST IN EACH OTHER'S WELFARE.

My dear Friends,—I am quite sure we shall all readily agree that the subject now under consideration is of very great importance. As regards myself, I feel that I am quite incompetent to do it justice, so that after I have given my mite with regard to the plan I have adopted, I trust some of our friends will kindly take up the above subject, and enlarge more ably upon the powerful weapon of influence when combined with sympathy, whether for good or evil.

When I first entered upon my duties as matron of the School of Discipline, so many mountains of difficulties arose to discourage me, that several times during the first three months I almost made up my mind to resign my office. But I am thankful to say (in answer to prayer) some of these mountains began to dissolve, and much that was difficult at first soon became comparatively easy. I began by drawing out some rules for different parts of the house, which were approved and sanctioned by the Ladies' Committee. There was one thing, however, that painfully distressed me, which was a constant spirit of aggravation and tendency to quarrelling amongst the children. Such was their mutual ill-feeling that they would frequently take away from each other anything they valued, such as markers, needle-books, &c. entirely spoil them, and afterwards replace them, in order that they might rejoice at the sorrow and vexation they should thus cause to their owners. Sometimes they would quite destroy them, as best suited their purpose. Whilst thinking deeply upon this state of things amongst these girls, and wishing I could do something to cure this great evil, the following plan suggested itself to my mind, namely, to form a class which I would call a missionary class, and each member of this class should have one child committed to her care, to watch over and assist, and to encourage her to be good by every means in her power, and to report to me (at meetings held for that purpose) everything worthy of remark.

I immediately put this plan into execution, and selected (with great difficulty at that time) eight girls as missionaries, telling them what I proposed doing, and the object I had in view. I spoke to them for some time upon the responsibility of their new position, and what watchfulness and self-control they must exercise over themselves to be of any real use to the children I was about to commit to their charge. I then read to them Jethro's advice to Moses, contained in Exodus xviii., as applicable to our purpose, and told them they were to consider themselves fellow-workers with me in the blessed Saviour's service; but as I wished to have none but willing and useful servants, any girl was at liberty to refuse at once, or I would give them one week to consider the matter, "to count the cost," and pray to God for direction. This was agreed to, and the following Sunday I was rejoiced to see this little band come to me, earnestly desirous that their names might be placed on my book as missionaries, saying it was their desire and intention to undertake the charge, and abide by the rules which I had read to them.*

We then knelt down in prayer together to ask the Divine blessing upon our new undertaking, and I can truly say that He who despiseth not the day of small things has prospered this mutual endeavour to do good.

Since our commencement I have made a slight alteration, which I find to be an improvement. I have selected the next best girls to the missionaries, and called them assistants, so that the whole school is now in little bands of three—missionary, assistant, and child—reminding them that "a threeford cord is not easily broken."

I have now tried this plan for two years, and never during my experience of twenty years' training the young, whether in my own family or in schools, have I had such cause for encouragement in any plan I ever tried, nor was I ever permitted to see such good results. Now, instead of the manifestation of the worst feelings of our nature, as pride, envy, jealousy, revenge, these, I am thankful to say are the exception—they are exchanged, thank God, for mutual sympathy in trouble as well as joy, and a deep interest in the welfare of each other on all occasions. I subjoin a few of the results which I have observed amongst these children.

When any child is kept in after school-hours for a lesson, or in trouble in any way, her missionary will leave her play and assist her out of her difficulty.

When the children are disposed to quarrel in the playground, and their own missionary is not there, they will go to the first they come to and say, "You are a missionary, come and settle this for us." She will then do all in her power to make peace between them, and the children will (almost always) abide by her decision.

The feeling of harmony and sympathy also which exists between the missionaries themselves is most pleasing. When any of their number is suspended the others will try to be more kind to her than usual to prevent her as much as possible feeling the loss of her position, and will talk about the time when she is to be restored as a joyful event to them all.

I will mention one other gratifying feature. Every Sunday afternoon when we come from Church this little band meets for social prayer in a small room at the top of the house. I have an opportunity of listen-

---

* Rules.

1st. Each missionary, with an assistant, is to take charge of one child, and to endeavour to do her all the good she can, both by example and advice.

2nd. Any missionary guilty of lying or stealing will be suspended for three months, or more. Any missionary giving way to bad temper, or otherwise setting a bad example, will be suspended for one month, or more, as the case may be.

3rd. Each missionary to give the matron a faithful account of her child at each meeting held for that purpose.

4th. Each missionary to hear her child repeat a verse of scripture every day, and between one meeting and another to teach her one hymn at least, to be repeated, with the scripture, to the matron, at the meeting.

5th. All the missionaries to cultivate a spirit of love in an especial manner one towards another.

6th. Each missionary to pray to God every day for a blessing to rest upon her endeavours to do good to the child committed to her care.

Digitized by Google

ing to them without their knowing it, so that they believe themselves to be entirely alone. Their plan is first to sing a hymn, then read a few verses of Scripture, and afterwards to offer a prayer. About three can engage during the time allowed them.

Many other similar results might be mentioned, but it must be experienced rightly to appreciate this kind of moral training. I can truly say that I have been more than rewarded for any extra trouble that I have taken with my children.

Thus far I have endeavoured to state my experience with respect to the plan I have adopted to bring about a most desirable object; but whatever good has resulted, or may hereafter result, from this feeble attempt to do good, to God be all the praise and all the glory.

SUBJECT:—WHAT ARE THE BEST MEANS OF PROVIDING LODGINGS FOR OUR INMATES WHO OBTAIN EMPLOYMENT IN THE NEIGHBOURHOOD OF OUR REFUGES?

In every period of the world's history there have been persons more or less alive to the conviction of their responsibility concerning the condition of their fellow-creatures; but especially since the blessed example of our Saviour's self-sacrifice, and the establishment of his commandment, "That ye love one another," have men and women arisen, who have given up ease, comfort, home, position, and even life itself, that they might improve the moral, social, and spiritual condition of the more destitute portion of those for whom Christ died. But the field for exertion is so large, and the objects so many. Philanthropists have discovered that although individually they might do something for the alleviation of ignorance and misery, yet the most effectual plan of grappling with the evils was to co-operate with men likeminded, and, thus united, they might make such an impression that the work of improvement might truly be said to have begun. And yet this plan has been attended, in many instances, with evils which have much contracted the wide schemes of benevolence originating in the renewed hearts of some of the followers of the Lord Jesus. By uniting and associating their ideas of usefulness, they have fallen into the error of mere theory, instead of working out the plan adopted. The consequence has been, that, in committing it to others, the difficulties have neither been understood nor had their sympathy.

Now, if we direct our attention a little closer to the greatest of all modern movements for the amelioration of human misery and depravity, the Ragged School, Refuge, and Reformatory work, it affords a bright exception to the foregoing remarks, it having been originated in the most simple manner by humble, earnest-minded men and women, who saw the great necessity, and immediately set about the work, in reliance upon the precious promises of our heavenly Father, and encouraged by the example of our dear Redeemer. At first, small as a mustard-seed when planted; but commenced in faith, and sustained by prayer, it has grown, and by the blessing of God is now expanded and vigorous; insomuch that even the public press generally concur in the necessity of something being done to remove the dark blot which has existed so long upon the Christian character of our country. But although so much has been spoken and written on the subject, there remains very much to be done to bring these institutions to meet the variety of circumstances which present themselves to the eyes of those practically engaged in their operations. It has been the plan in public meetings to confine the statements to two features. The condition in which the candidates for our Refuges are found, and the happy condition in which after the renovating process they are launched upon the broad ocean of this world, to get an honest living. Now, this is a very pleasing picture, especially to an interested audience; but what we want is, that those who have the opportunity and influence should use them to bring the friends of the cause to understand more of the practical difficulties of the work, by inviting and persuading them to become more acquainted with the details of the cases of those who are being brought under the sound of God's and of the influence of Christian teaching and kindness, and by that means become sensible of some of the difficulties, both of his training and of putting the effect of that training to the test, so that the boy or girl shall be placed in such a position that the trial shall be an honest one.

Another objection to this method of advocating the claims of our institutions is, that the governor or teacher placed in them may look in vain for anything like encouragement or guidance in any particular mode of discipline or management, and another serious feature is altogther lost sight of, and that is a suitable provision in the way of lodging for those of our inmates who are neither fit for the sea nor emigration, or who do not desire either, but prefer endeavouring to obtain an honest living in their native land.

It is, then, to this subject that I solicit your attention this evening,—"The disposal of those inmates who obtain employment in the neighbourhood of our Refuges." It would occupy too much time to enumerate all the dangers and temptations to which a boy or girl is exposed on leaving the Institutions, and yet it is necessary that I should mention some of them, to shew the necessity of providing additional means to those now generally employed for the preservation, encouragement, and establishment of those principles of morality and religion which have been inculcated during the residence in the refuge. When you look into the face of a boy who maybe is telling you of some little experience of the love of Christ, of his desire and determination to serve God; of his sorrow and regret for past sins—the comfort of such a token of God's blessing on your labour is accompanied by a feeling of anxiety and pain in your heart, as you think of his present seclusion from the temptations of his previous career, and the trial to which he will be subjected when he goes from under your watchful care, and from the influence and routine of the Refuge.

With girls the case is different, as they generally are placed out as domestic servants in families which are known at least to have the form of godliness; but with boys it is not so; they have to be placed in situations, (however carefully selected) where they will be brought into the company of those who neither reverence God's word, nor his Sabbath; in addition to which, their leisure time, if not directed to a profitable use, will by the devil be employed in his service and to their destruction. I imagine a boy sent from a refuge into a London workshop, and obliged to seek a lodging where he best may, as many who leave our refuges have to do. He is suddenly severed from all those associations which have been like a barrier around him to shelter him from evil. There is no morning and evening assembly for the worship of God and seeking grace to help in every time of need; there is no friendly voice of counsel and encouragement; but on the contrary there is perhaps drinking, swearing, lying, and stealing, carried on amongst those into whose society he is cast, so that the heart very soon gets strangely out of tune either to prayer or praise. He is soon drawn into a laugh at some ribald jest, and led to use his tongue, with which he has been accustomed to bless God, in cursing men; and then comes the temptations in the unemployed hours, when vice with its snares allure him to the paths out of which so much labour and expense have been taken to rescue him; once ensnared, the appetite for ungodly pleasures revived, the devil reminds him that he is free again—that he is placed in a position of trust—that with his ability to deceive he may be most successful in obtaining the means to renew the sinful pleasures which he once enjoyed, the appetite for which, (unless the grace of God has touched the heart) has been only slumbering, but never crucified. Now, much of this might have been prevented if means were used to keep up the associations of the refuge; but having none to guide him, and few opportunities of seeking by prayer for strength, no wonder that the poor fellow makes shipwreck of his principles.

It is an encouraging fact, that many employers have such a good opinion of the moral and industrial training of the inmates of our refuges—that they prefer them to those who have been brought up in the usual method of moral culture and education. With this fact before us, and also with the knowledge that a very large portion of cases are neither suited for nor desirous of emigration, it becomes a matter of urgent necessity that a provision should be made, in the way of lodgings, for those who obtain employment without board and lodging attached. I would urge it for the following reasons:—

1. Because it is not advisable to keep him in the refuge, as it interferes with the order and necessary routine of the duties, and also produces a restless effect upon the other inmates.

2. Because the wages received is insufficient to procure, in addition to other necessaries, a respectable lodging in a respectable locality.

3. Because the boy has never had a correct idea of the value of money, and his extreme ignorance of the proper and economical use of it.

And again, for the sake of the boy's soul, do not launch him unrestrained

Digitized by Google

among the rocks and quicksands of this world, on which he is most likely to make shipwreck, unless he has the grace of God to strengthen and direct him. I have known many melancholy instances of the kind; boys who have given the brightest hopes of future standing, usefulness and respectability, and evidences of the power of Christian truth and teaching, who have, from the very force of circumstances, lost the high ground they had attained, and whose downward course has been so rapid, that in a very short time they have become more the children of hell than they were before; the training received in the institution rendering them greater adepts in crime, and the thought of what they might have been and what they are has made them more desperate in their deeds, and more reckless as to the result of their unhappy course of life.

Now, dear friends, feeling the importance of the matter, I would venture to suggest that there should be in connexion with every refuge, a lodging-house for those who have been trained in the refuge and obtained employment, where they might be lodged, and if necessary boarded; or where this is not practicable, a lodging-house, or receiving house, might be arranged in some pious and respectable family, where they would be subject to the restraint necessary to keep them from the evils to which they are exposed by not having a limit placed on their time and actions.

With your permission I will briefly state the plan which has been pursued in the Institution which I have the privilege to conduct. In the same building as our refuge, we have a portion allotted for those who have obtained situations in the neighbourhood, called our dormitory, or lodging-house. It is furnished with separate iron bedsteads and clothes boxes; and cupboards for food, with locks, are provided for each inmate. These they are encouraged to purchase by small weekly instalments. In addition to which they have the use of the kitchen, which also affords them, in the winter's evenings after work, the cheerful fireside, which is so dear to every Englishman. Here they may sit and enjoy the social chat, or, if preferable, the interesting book. The following are the rules, which we have found to work most admirably:—

1. Lodgers are admitted upon payment of one shilling per week, payable in advance.

2. Every lodger is expected to rise early, in order that the inmates of the Refuge may proceed with ventilating and cleansing the apartment, and making the beds.

3. Every lodger to be in the house by ten o'clock in the evening, when the Holy Scriptures are to be read and prayer offered.

4. Any lodger making use of bad or improper language, or guilty of immoral conduct of any kind, will not be permitted to remain in the Institution.

5. The lodgers have the privilege of attending divine service at Christ Chapel on Sunday, and they must also attend the school on Sunday morning and evening.

6. No lodger in a diseased condition can remain in the Institution.

7. Every lodger is expected to assist the master in maintaining the rules of the Institution.

By these simple means, with God's blessing, we have been able to afford a home and protection to scores of poor lads, who would otherwise have been obliged to have recourse to the low and vile lodging-houses, which are the nurseries of vice, until their wages and circumstances enabled them to obtain that much-to-be-desired comfort, a respectable lodging for a single man. You must pardon me for not entering more into detail, especially with reference to girls; but I trust these remarks may be suggestive of many thoughts, and also a method to our lady friends of providing a home for those poor girls who are placed in similar circumstances.

ANNUAL MEETING OF THE ISLINGTON REFORMATORY.

The Annual Meeting of this Institution was held at Baker's Rooms, on Tuesday evening, March 22nd. The Rev. Daniel Wilson, M.A., Vicar, in the chair.

Prayer having been offered by the Rev. W. Vincent,

Captain Mann (the secretary) read the report, from which it appeared that the institution had largely increased, both in its number and its sphere of usefulness. In December, 1857, there were but 25 boys in the Reformatory, while there were now 33, as many as the present building could accommodate, and the Committee contemplated removing into more commodious premises as soon as practicable. The general conduct of the boys was good, and their progress in reading, writing, and arithmetic very satisfactory. During the year the boys had been taken to the Zoological Gardens, the British Museum, Highgate, Hampstead Heath, and Primrose Hill, and were taken into the fields on every convenient occasion. The balance-sheet showed a balance in the treasurer's hands of £48 12*s.* 8*d.*, and in it appeared the gratifying item that £20 16*s.* 1*d.* had been earned by the boy-shoemakers during the year.

The Chairman said nobody could hear the balance-sheet read without thinking that God had blessed this undertaking. This institution originated in a very humble manner, and it was mainly owing to Captain Mann, Mr. Vincent, Mr. Fisher and those connected with Trinity congregation, that it was established. They met with great difficulties at first, but the result had been that within the last two or three years its progress had been astonishing. The results that had followed, the funds that had been raised, and the comparatively prosperous condition in which the institution now stood, was so astonishing, that surely they must say the finger of God had been there. He need not explain the nature of a Reformatory. They were well aware that it was one of those benevolent institutions which, during the last two or three years, had arisen in the metropolis and throughout the country; and its object was to reform lads who, from bad companions, or other causes, had been withdrawn from the paths of virtue, and had either fallen into the open breach of the law of the country, or who had become so wild that their parents were utterly unable to manage them. It was formed on the well-known principle that "prevention is better than cure." They took these lads, not to treat them as they were very often treated by ill-advised parents—trying to drive religion into them with a hard stick—but they were taken up kindly, and taken away from the influence of bad example. They were placed under wise guides and superintendents, and set to a useful employment, which he (the chairman) thought lay at the bottom of this reform movement. They often complained in the present day how hard they were worked. Now that was a capital thing; for, let them depend upon it, it kept them out of mischief. If they had time at their disposal they would very likely be doing wrong, and that which originally was a curse—that man had to get his bread by the sweat of his brow—became a blessing. That was the principle of this reformatory—not to give them hard and laborious employment, but, as they had heard, employment which had produced astonishing results. Let them thank God for this. They knew it was not in any man's power to reform the heart—it was God's work, but they were using the legitimate means. He thought it was at the tea meeting of this institution, when Lord Shaftesbury told them the story of the little girl who had been transported to the colonies, and had married there, and those who knew the story would remember the interest of it. A lady called at Lord Shaftesbury's house and left her card, when, to his surprise, he found it was the same little girl who had, through his instrumentality, been sent to the colonies. If they only went forward in simplicity, faith, and love, God would prosper this work, and he trusted this meeting would tend to stir their hearts up in this cause, and that they would have a reformatory corresponding with the size and wealth of their parish.

The Rev. Thomas Green, M.A., (Principal of the Church Missionary College) moved the first resolution:—

"That the report now read be adopted, printed, and circulated, and that the following gentlemen constitute the officers and Committee of the Islington Reformatory for the ensuing year, with permission to add to their number."

He regretted he had not an opportunity of visiting the Reformatory, but he had heard enough in the report to satisfy him that it was a Christian work. They had heard in the report how many of these children were fatherless. The Committee acted as fathers to these children. They watched over them with care and tenderness, not treating them roughly or harshly, but drawing them together with cords of love. The Chairman had reminded them that to reform the character was God's work, and he could not help thinking, as this observation was made, that the Church itself was a grand reformatory; that the object for which the Church was constituted was that it might act as a reformatory, bringing in the lame, the blind,

Digitized by Google

and the fallen, that they might be educated for eternity. That was the object of this reformatory, and did they not identify the greatest blessing of their union with the blessed reform which took place 300 years ago. Their Divine Redeemer had told them not only to go to the lanes and highways, but to go to the bye-ways and hedges, and the object of this reformatory was to go to the bye-ways and hedges. It was gratifying to hear of the progress made, and of the work done in the Institution, specimens of which he saw before him, [specimens of work done by the boys were exhibited on the platform], but when they heard of the results it was perfectly astonishing. No report, however, could give the whole of the results, for that could only be known in eternity. He had great pleasure in moving the resolution.

The Rev. G. Thornton, M.A., (Missionary of the London Diocesan Home Mission), in seconding the resolution, said the resolution he had to second was not very suggestive, but at the same time the work that had been done in the Institution, the great increase that had been made, and the paying off of that "abominable" debt, was very encouraging. This reformatory movement was not a new work. It was a operation centuries ago, but the old plan of reform was to let ill alone. Let them thank God that this feeling had passed away. The reformatory movement was the only way of meeting the evil. A great thing was the sympathy of those in sin, which manifested itself in so remarkable a manner in the case of the young. He had found that 28 out of 30 could trace their sin to comrades of their own age, who led them first into it by taking them into a theatre. The only way of remedying this was to take them out of these associations, and supply different ones. One fertile source of crime was bad parental example, or the absence of it. Suppose a lad had not the corrective hand of a father. Where did he find a home? On the streets or in the streets he must go, and there he learned to pilfer and to lie. Once in that career, there was no stopping him, except by taking him out of these associations, and by doing this they took the natural and the only means of remedying the evil. This was the object this institution had in view, and it was one which must commend itself to every one. In conclusion, he would say to the officers and the Committee, "Go on, and prosper."

Mr. S. Hill, in supporting the resolution, spoke in strong terms against the decision of the Lord Mayor, who had, a few days since, sentenced a girl to fourteen days' imprisonment, for selling combs in the street, and had told her she must get an honest living, although he did not point out a way for her to do so.

The resolution was then put to the meeting, and carried unanimously.

Mr. S. Cave (Hon. Sec. to the Reformatory and Refuge Union) moved the second resolution:—

"That this meeting rejoices in the progress that has been made during the past year in the work of the Institution, and recognises, in the large number of vicious and outcast boys in the parish and neighbourhood, a call to make increased efforts to enlarge its sphere of usefulness, and by obtaining, if practicable, larger and more commodious premises."

One objection urged against these societies was, that in taking the vicious boys they gave a premium to crime; and it was one he found rather difficult to meet. They must deal, however, with the evil as they found it, and then, after that, they might proceed to deal with the normal condition of the people. No one who saw the influences to which these boys were subject, could doubt but that it was impossible, unless some helping hand were stretched out to them, they would be other than criminals all their days. Some in the best society turned out badly, and they excused them, on the ground perhaps that they had had a companion, or had gone to a bad school for a few months; but just let them consider the temptations these boys were subjected to. They were told they ought to be assisting the honest instead of the vicious poor. Now, he should say, they were assisting the honest by assisting the vicious. In Aberdeen a reformatory was established, and it was about to be given up, when the tradesmen of the town came forward and supported it; and they gave us as a reason, that, when the reformatory carried off the bad boys, their children could get much more safety. In Gloucestershire, also, when a reformatory had been established, it had literally cleared the country of juvenile ringleaders—and the report of the inspector of prisons showed that crime had decreased thirty per cent. They should do good because it was good, although they must not expect to see it themselves in their generation. Without detaining them further, he would just say that after the institution was enlarged they would find a difficulty in obtaining situations for the boys, and that their Union would be very glad to assist these boys to emigrate, or in any way to advance their welfare. Their Union had a reformatory in the Thames, on the plan of the *Akbar* at Liverpool, for the purpose of receiving those boys who were unmanageable at home; and he believed that some of these boys, if put to sea, would turn out almost heroes. He mentioned this because, if they had an unmanageable boy, he would be glad to make a young Nelson of him.

Mr. W. Harvey (Honorary Superintendent of the Reformatory), in seconding the resolution, said the gentleman who had just sat down had said they ought not to expect to see any good resulting from this movement in their lives, but he (Mr. Harvey) did not agree with him. Perhaps more good might follow hereafter, but it was a great thing to have drawn thirty-three boys together. Let it not be imagined that the honest and deserving had been neglected. It was only during the last two or three years that these outcasts had been thought of at all, while their free schools and institutions of a like character could hardly be counted. In many cases these boys had no parents, and others vicious parents, and their fate was inevitable unless some hand was stretched out to help them. He continually saw these boys, and he had no hesitation in saying that in no school in Islington could thirty-three boys be found more docile and manageable. These boys had not been convicted in every case, and they rather preferred a boy who had neither father nor mother, to one who had been convicted. They had heard of people with forbidding countenances, but he believed that by kindness the countenance changed, and became comparatively beautiful. Of course they did not pretend to give these boys a high degree of education, but they gave them the best education in teaching them to be industrious and obedient, without which all other kinds of education were utterly useless. He had seen a great many instances, indeed, where children, with every advantage of education had turned out badly, in consequence of their not having been taught sounder things. He came in the way of these boys continually, as he had to treat their ailments, and the readiness with which they did everything that they were told to do was astonishing, and very different from many children in higher classes, who often said to him, "Oh! I hope you will not give me a nasty pill," or "I hope you will sweeten the powder." He had seen these boys at church. They did not go to sleep—and he believed they were the most attentive of the congregation. He hoped the Reformatory would be increased, so as to accommodate 100 boys in a few years. He regretted that the meeting was so thinly attended. At the last meeting there was a larger attendance of gentlemen, but now the ladies greatly preponderated, and instead of being called the "better half," it ought to be "four-fifths." At the same time he thought something should be done for the poor girls. £2,000 a-year would provide a refuge for 100 of each sex, and after a time it would almost become self-supporting. Although it was now only capable of accommodating a few houseless, wandering creatures, he believed the time would come when the Institution would expand, and hereafter, when they were gathered to their rest, would continue to be an honour to this their common parish of Islington.

Mr. Lowton, a gentleman from Canada, in supporting the resolution, gave some interesting details respecting the conduct of the boys after their arrival at the colonies, and stated that 16 out of 20 he had taken to Canada last year had turned out very satisfactorily, and stated that he had lately selected 24 boys from a reformatory at Glasgow, to take out with him.

The resolution was then put to the meeting and carried unanimously.

The Rev. W. Vincent, M.A., moved the third resolution:—

"That while ascribing praise to Almighty God for the evident blessing that has rested on the Institution during the year, this meeting would also express its high sense of the value of the services of the Ladies' Committee, and especially its thanks to the Vicar of Islington for taking the chair on the present occasion."

This resolution, having been seconded by Mr. W. H. Miller, was carried unanimously.

The Chairman having briefly replied,

The Doxology was sung, and the meeting separated.

AND

SOCIAL SCIENCE GAZETTE,

April 1, 1859.

THE REFORMATORY AND REFUGE UNION.

"WHATSOEVER thine hand findeth to do, do it with all thy might," is a precept to the full spirit of which this valuable Society seem always disposed to act up. The notice in our advertising sheet of the School Ship *Cornwall*, is good evidence of the truth of this assertion. We shall not be thought to detract from the energy and perseverance of the very many zealous promoters of whatever is good, if we express our opinion, that no private party however high he may stand in the estimation of his benevolent fellow-creatures, could have secured for the experiment of the School Ship, such a sum as the list of contributors exhibits,—already £2,500. The truth is, we live in a benevolent age; yet an age when benevolence is driven to be more and more cautious as to the distribution of their charity. There is abundance of means ready and forthcoming; but benevolence is so largely drawn upon, and in too many cases so deceived, that there must be not only a good object, but a guarantee that that object will be properly carried into effect, and the money legitimately applied to the purpose for which it is subscribed. The confidence of the public has been fairly earned by the Reformatory and Refuge Union; and it takes its stand now as one of the most useful and valuable of our public Societies. Like others it has had its struggles, mainly arising from want of proper public support at its birth. It is impossible effectively to carry out its objects and operations without funds; we believe, however, the report which will be published at the forthcoming industrial exhibition will shew that there is improvement in this respect. Wherever the Reformatory and Refuge Union is known, —by known we mean understood,—there it cannot fail to secure public approbation, and, as a necessary sequence, public support. There is one point of essential importance on which we look forward to derive much advantage from the experience and researches of this body of men. We allude to the claims made upon the benevolent by institutions, which, though apparently all that can be required or expected, may be in reality totally unworthy of public support. When public benevolence flows largely in any particular direction, it is generally not long before cupidity steps in to take advantage of the feeling; and many with kindly disposed hearts and ready hands are chilled by deceit practised upon them, and are thenceforth closed against really deserving objects. This should be strongly guarded against. It is true that where Government makes the grants which may be coveted, the proper inspection affords a guarantee for the worthiness of the Institution: but all institutions are not under such inspection, and the only guarantee the public have is either from their own frequent visits or an efficient and trustworthy committee. This subject engaged the attention of a full assembly of the general committee, at the Quarterly meeting held on the 24th of March, and resulted in the notice of a resolution, "That no uncertified Institution be for the future placed on the list of the Union which has not a committee responsible in itself and ready to guarantee the *bonâ-fide* character of the Institution." To this resolution as it now stands we are not prepared to give our unqualified assent; and we would venture to submit for the consideration of the committee, whether it would not be better, after the words "no uncertified Institution," to insert the words, "supported by or seeking public voluntary contributions." Our reason is as follows: There have been, and may be again, Institutions wholly supported by single and noble-minded individuals, who repudiate public help;—It might be advantageous that the public should hear of and know the plans and operations of such Institutions, and that the establishments should have the countenance of the Reformatory and Refuge Union, even though there should be no committee, the founders and supporters having individually to see to the proper expenditure of their own money. It appears to us that the business of the Union in this matter, is to take care, first that the principles of any institution to which they give their countenance or support shall be correct; and secondly, that the public shall not be misled, by information disseminated through the Union, into supporting institutions whose internal practice may be completely at variance with their avowed principles.

We may return to this subject again at a future period: it is a matter of considerable importance, and we have made these remarks, somewhat in the hope that they may elicit from others facts and observations bearing upon it.

Our readers will bear in mind that the Industrial Exhibition will be held at Willis's Rooms, King Street, St. James's, on the 13th and 14th April, and we presume that they will make it a point of being there, and we think we may promise that they will be amply repaid for any trouble or inconvenience they may be put to in so doing.

DISCHARGED PRISONERS.

WE have our doubts whether any one could point out a more legitimate object of charity than a wretched being who, after having vindicated the broken laws of his country by the allotted space of his imprisonment, stands without the walls of his late prison, with a desire to steal no more, but rather to labour, working with his hands the thing which is good, but without means, even for bare support, in the world he re-enters. There is scarcely a phase which misfortune or misery can

Digitized by Google

assume which is not recognised by the wonderful public benevolence which is the very glory of our country: every one in real distress or affliction will meet with sympathy, and generally with effective relief. The case of the discharged prisoner is a lamentable exception; for while his distress is great, while to his destitution of the bare necessaries of life there must be added the mental agony of a wakened conscience, he too frequently meets with neither relief nor sympathy. It is not unfrequently matter of extreme difficulty even for the honest, who bear a decent character, to obtain the means of living: to one, therefore, who has the brand of the prison upon him, without character, friends, or home, it becomes almost a matter of impossibility. Rightly or wrongly, we will not here stop to argue; but undeniably few, if any, would take into their employment one scarcely yet easy in the clothes of freedom, from whose body the brand of the fetter is scarcely obliterated. This is a very obvious difficulty encircling the discharged prisoner, however good his intentions may be—a difficulty against which unaided he may struggle in vain, but which it is the imperative duty of the public, as well on the ground of morality as of expediency, to assist him in overcoming.

The first society which undertook this important and difficult task was the "Surrey Society for the Employment and Reformation of Discharged Prisoners," formed so far back as 1824 for the purpose of assisting penitent prisoners, more especially the young, on their discharge from prison. The support it has met with from the public has varied, we believe, generally, with the publicity which has been given to it, but has ever been inadequate to the demands upon it. Yet it has done a large amount of good, which must be regarded not merely as confined to those directly assisted, but to those who would by them otherwise have been probably initiated into a similar career. In the last two or three years other societies with the same object have sprung into existence; amongst which is the extremely important one, the London "Discharged Prisoners Aid Society," which held its second annual meeting on Saturday last, at St. James's Hall, under the presidency of the Earl of Carlisle, K.G.

The public should make themselves better acquainted with these Societies, and the almost unparalleled dangers surrounding the discharged prisoner, against which these Societies have to assist him in contending. The time will come, the time must come, when his position, and the effect, both morally and economically, which, leaving him unaided, must have upon the general welfare of the community, will receive the attention they deserve, both from the Legislature and the public at large. Meanwhile the call upon general benevolence is urgent. It will not do to force discharged prisoners back again upon their old habits; to drive them in despair to live by crime; to compel them as it were to break the laws, and then punish them for doing so. If any of our readers had not the good fortune to be present at the late meeting in St. James's Hall to which we have alluded, they will probably be repaid if they will endeavour to attend the meeting of the Surrey Society at "the Horns," Kennington, on Tuesday, the 17th of this month, which will be addressed by several noblemen and gentlemen whose authority on such subjects will not be doubted. We repeat our great anxiety that the peculiar work which such Societies undertake, the novelty and yet, despite of all apparent drawbacks, the hopefulness of the work, should receive at the hands of the public the attention they so richly deserve; so that the discharged prisoner may, when fair proof shall be had of the sincerity of his professions of repentance, have at least an opportunity held out to him of retrieving his lost character, shaking off his old habits and associates, and earning a living, however humble, by honest and steady industry.

PUBLIC PLAYGROUNDS.

It is not always that plans clearly advantageous to the well-being of the people can be readily carried into effect. In some cases inclination may be needed, in others the means. Few who know anything of the crowded parts of our metropolis and large towns, and the difficulty in procuring healthful and innocent recreation for the young in those parts, but will at once acknowledge the value of the object which the Playground Society has in view. And yet it cannot be denied that few societies have before them greater barriers to success. Where the want is most pressing, there that which creates the want, viz., the density of the population, the consequent crowded occupation of every foot of ground, creates also the very barrier to success. Land becomes so valuable that the object cannot be accomplished without a continually increasing pecuniary sacrifice. We are not, however, without our strong hopes that the sacrifice will, in many cases, be fairly weighed against the accruing advantages, both moral and physical, to the young—the future guardians of our liberties and rights—the future sinews of our labouring population: and when so weighed, in the scales of a far-sighted Christianity, the sacrifice will sink into insignificance. The efforts of the Society have called public attention to the wants which they are endeavouring to supply; and we are glad to see that Mr. Slaney's bill is likely to become law, as a measure apparently of a trivial nature, but which yet has for its object the social advancement of a large and important portion of the community. The following observations from the *St. James's Chronicle* will not be without their good influence:—

"The Public Playgrounds Bill, introduced by Mr. Slaney, looks somewhat strange in the midst of the very grave and occasionally heavy topics now engaging the attention of the House. But recreation itself has become a serious subject in these days of hard and weary toil, of unscrupulous competition, of overstocked markets, of sinful Mammon-worship; and those who are most anxious for the moral and spiritual good of the people, will be the most ready to promote their physical well-being, and to encourage all healthful and innocent recreation.

"We are no advocates for 'muscular Christianity.' We do not believe that physical prowess and hardihood are the necessary forerunners of spiritual life; but we do believe that a healthy active body is, or ought to be, the vehicle of a well-regulated mind, and that the physical deterioration of a race is most intimately connected with moral degradation and with national decline. Those who have studied the subject with the greatest care, tell us that the physical constitution of Englishmen is not now what it once was, that the refinements—perhaps we ought to say the barbarisms—of modern life, and the taxes made upon our strength, have weakened the heart and brain, and made us less capable of endurance, less able to resist the encroachments of disease. They tell us, too, that this decline of strength is most apparent in the poorer class of the community; and this is likely enough; for though the agricultural labourer may be still as strong as any of his rustic ancestors, the swarms of indigent poor that now crowd our cities, and the stream of ill-sustained life that is daily pressing into the courts and alleys of this great metropolis, bring with them the elements of decay, and form a nucleus for disease.

"A want of good wholesome food, a want of pure ventilation, a want of cleanliness—next, as the proverb truly says, to godliness itself—and, we will add, a want of out-door recreation, all tend to the encouragement of vicious habits and licentious or questionable amusements, to wild lawlessness of conduct, or to that brutal apathy and indifference which is even still more appalling.

"None know better than our city missionaries and our Christian philanthropists, how difficult it is to influence men whose humanity is thus deadened or crushed out. Christianity is, indeed, the one grand remedy which can alone be

Digitized by Google

placed in antagonism with this gigantic evil; but as God works by means and through the honest efforts of faithful men, we have no right to expect that a large spiritual blessing will accompany our labours to Christianise the masses, unless we endeavour at the same time to improve their physical condition, and while we point them to a heaven in the future, strive also to awaken in them self-respect, hope, and gratitude during their present existence.

"We are not straying from our subject in writing thus. Recreation is a necessity, and recreation of some kind will be grasped at even by the poorest poor; and so for want of better enjoyments, gin-palaces, penny theatres, and licentious casinos, swarm with their nightly occupants; prize-fighting and gambling are encouraged; and an open viciousness of conduct, a contempt for all law, human or divine, betrays but too clearly the sad condition of our London poor, and inflicts a deep stain upon our character as a Christian nation.

"The danger arising from this state of things has of late years been pressed upon us, and attempts have been made by philanthropic individuals, as well as by societies, to stem the progress of the evil. While our baths and washing-houses, lodging-houses and parks for the people, aim at the improvement of their physical condition, it has been felt that still more direct efforts have been made to encourage recreation, which shall be alike innocent in its nature and healthy in its tone. Mr. Slaney's bill "to facilitate grants of land, to be made near populous places for the use of regulated recreation of adults, and as playgrounds for poor children," aims at the promotion of this object; and if the recreation be really 'regulated,' and not suffered to encroach upon the day of rest, is likely to prove of considerable advantage. It is easy enough for our shopkeepers and artisans to escape occasionally from the heavy atmosphere of London and to enhale the freshness and fragrance of the country, but the men, women, and children, who congregate in the neighbourhood of Brick-lane or St. Giles's have no such remedy as this. In those gloomy alleys, surrounded by dirt, and seeing nothing of nature beyond occasional glimpses of sunshine, or a star shining down on them from their narrow strip of sky—they must work or starve, and there, too, they must die. Dreary enough that life of theirs must be. It is well that the burden of it should be lightened as far as can be done by legislative enactments. It is not much, indeed, that laws can do in this case, but there are some remedial measures which private benevolence cannot compass, and which, like the object proposed in Mr. Slaney's bill, can only be carried out by the voice of the country as expressed in Parliament.

"It will be no small boon to have open spaces set apart near the densely-crowded courts and lanes of our great city, in which the children of the poor may strengthen their limbs by exercise, and realise something of the pleasure which legitimately belongs to their young life; and it will be well if their fathers can be drawn from the gin-shop to try their strength in athletic exercises, and to find that healthful recreation is, to say the least, more pleasant and more economical than any sinful pleasure."

SUMMARY CONVICTIONS.

Those who are directly connected with the administration of our prison discipline, and indeed the country generally, are under an obligation to Mr. Drummond for bringing the matter before the Government as he has done. It will be remembered that at the last Michaelmas sessions the chaplain of Horsemonger-lane Gaol commented very forcibly on the evils arising out of the mal-administration of the Summary Jurisdiction Act; since which time some very valuable and important statistics were prepared and laid before the visiting justices of the House of Correction, Wandsworth, in reference to the committal to that prison of old convicts from the metropolitan police courts for short periods, who should have been committed for trial at the Old Bailey. The visiting justices drew the attention of her Majesty's Government to this evil, and in answer to a question by Mr. Drummond, Mr. Hardy said that the subject of the honourable gentleman's inquiry applied as much to the country at large as to the metropolis. He was sorry to say that the Act of Parliament which was passed to enable magistrates to inflict summary punishment in cases of petty larceny had been greatly misunderstood by the police magistrates. It was found that they inflicted summary punishment in cases where the prisoners had already been convicted many times, which was not at all the meaning of the act. It was the intention of his right honourable friend the Home Secretary to institute inquiries of the various metropolitan magistrates as to the course which they pursued; and if it was found that they did not pause in their present career, some legislation must be adopted.

We should hope that on this matter being so brought before the attention of the magistracy, the evil will be checked. The act to which Mr. Hardy alluded is of considerable value, if properly acted upon, but if the present course continues to be followed, it will simply have the effect of mitigating the punishment of those who deserve severity, and defeating to all intents and purposes the ends and objects of justice, and rendering further legislation absolutely imperative.

DISCHARGED PRISONERS' AID SOCIETY.

The second annual meeting of this Society was held at St. James's Hall, on Saturday, March 26th, when the Earl of Carlisle took the chair. The chairman explained the object of the Society, which was to enable prisoners upon their discharge, with a small amount of support, added to what they might be able to obtain from their friends, to resort to some honest mode of earning a living. He stated that since the Society had been in existence it had given assistance in 556 cases, and proceeded to read extracts from letters addressed to the society by governors and chaplains of various gaols throughout the kingdom, detailing a number of cases in which much valuable assistance had been rendered by the Society. In conclusion, the noble lord urged upon the meeting the necessity for supporting the objects it had in view, objects which, though unrecognized for a time, must in the end prove abundantly prolific of good. The annual report having been read by the secretary, Mr. Byng, M.P., proposed, and Mr. Melly of Liverpool seconded a resolution, "That prisoners who, on their discharge, evince an anxiety to return to an honest course of life are fit objects for assistance, and it is the bounden duty of all to lend them a helping hand," which was put and carried unanimously. The Hon. and Rev. Sydney Osborne proposed, and Mr. Monckton Milnes seconded, the next resolution, "That the great success of the Discharged Prisoners Aid Society proves both the existence of such a want and the means of supplying it." This was also carried unanimously, and the proceedings terminated with the customary vote to the chairman.

Monmouthshire Reformatory at Little Mill.—This school, for boys only, has been completed, certified, and opened. It is situated on an open and peculiarly salubrious spot, beside the Newport and Hereford Railway, about a quarter of a mile on the Hereford side of the Little Mill Station. The locality is a small farm which the Reformatory Committee have purchased from voluntary contributions only; the buildings of the farm have been accommodated to the objects of the School, and about 14 acres of the land have been retained for cultivation by the boys. The establishment consists of a large school-house, with dormitories, hospital, lavatory, cells, kitchen, &c., and apartments for the labour wastes under the same roof. The head master's house is adjacent but separate. The care of the school has been entrusted to a master of some experience gained under the valuable superintendence of the present Inspector of Reformatories, at the Institution at Redhill. The whole is placed in complete working order. At present convicted boys only from the county are received.

Munificent Gift to the Manchester Ragged and Industrial Schools.—Miss Atherton, of Kersal Cell, near Manchester, has made a donation of £5,000 to the Ragged and Industrial Schools of Manchester. Of the £5,000, Miss Atherton wishes £2,000 to be employed in liquidating, as it will completely, the building debt consequent upon the recent very great extension of the institution at Ardwick Green; and a desire is added that, as a commemoration of the main object with which the donation is made, the new portion of the building shall hereafter be called "The Byrom Wing." The remaining £3,000 Miss Atherton wished to have invested, the interest therefrom being payable yearly to the treasurer of the institution for the time being.

Correspondence.

WET-NURSES FROM THE FALLEN.

To the Editor of the Philanthropist.

SIR,—As you have given insertion, in your March number, to Mr. Acton's letter which appeared in the *Lancet* of February 12th, you will I am sure afford space to another letter, which was published the following week in the same journal, in reply to some of Mr. Acton's statements.—

" To the Editor of the Lancet.

"SIR,—Allow me to offer one or two remarks upon Mr. Acton's letter which you published last week. Most of the points touched upon in that letter have been so ably discussed from time to time in the 'Medical Annotations' of *The Lancet*, that I presume your readers are prepared to accept Mr. Acton's opinions for what they are worth, and no more. My object, therefore, is not so much to find fault with what your correspondent says, as to remind him of one or two important matters, closely connected with this question, which he has omitted to refer to.

"In the letter before mentioned, a very graphic picture is drawn, in which is presented to us the 'sickly babe of a sickly mother, pining for that sustenance which a *healthy one* in the next street is able and willing to afford it.' But there is another and a darker picture in the background, which must be brought forward and placed side by side with the first. What becomes of the 'poor girl's' child, which is put aside to make way for the interloper?—we are told not of its fate, how its death is sometimes sudden, sometimes slow, but in any case it almost always falls a sacrifice to that tyrant custom, *wet-nursing*.

"When Mr. Acton speaks of the beneficial effects of the 'charge of infancy' in reclaiming the girl, he forgets that the most 'solemn task' of that description which she can undertake is the care of her own child. Can any softening influence from another quarter take effect upon her nature, whilst she hardens her heart against the cries of her own offspring, whom, from its otherwise forlorn condition, she is doubly bound to protect?

"Let me remind Mr. Acton that the tables of infant mortality are greatly swelled by the premature deaths of the children of *wet-nurses;* and we have yet to learn how many of the vast numbers that are sacrificed annually to the demon *Infanticide* are derived from the same pernicious source.

"Mr. Acton says, 'hundreds of mothers are physically incapable of nursing their own children.' Numbers, doubtless, by luxurious habits, by the pursuit of fashionable pleasures, or by worry and excitement of some sort, render themselves unfit to perform that first and dearest duty to their babes; but that more than a very small proportion of mothers are by *nature* incapacitated for suckling, cannot be conceded. The artificial mode of life which leads to these evils must be blamed, and not Dame Nature, who is innocent of such offence. Far from excusing them on these grounds for hiring a substitute, it appears to me greatly to aggravate their fault, and I do not hesitate to say that the indulgence in such selfish and enervating pleasures, and the habitual neglect of the maternal duty, form a foul blot on the moral escutcheon of the mothers of England!

"Briefly I would reply to Mr. Acton on one point—viz., the transmission of moral taint to the suckling through the nurse's milk. It has been demonstrated by undoubted authorities that 'intangible moral qualities *can* be conveyed by the agency of a material substance such as human milk.' More than this: 'there are some diseases in the human constitution so insidious that they may escape detection, though the nurse's milk may be subjected to the test of chemical analysis,' so that it is *not* (as Mr. Acton asserts) 'possible to ascertain that the woman's milk is perfectly wholesome.' This fact ought to prove to mothers and medical men how great a risk to the child is incurred by the employment of a *wet-nurse* under any circumstances."

In addition to the above, permit me to offer a few further remarks upon other statements by Mr. Acton in the letter referred to.

Although that letter, on the whole, is very plausible and carries reason on the face of it, to all thoughtful readers the utter fallacy of the arguments and the futility of the suggestions must appear.

It is not my intention, therefore, to notice more than one or two points therein discussed, which, from the specious way in which they are handled, might pass current with some readers as sound, when in fact they are only glossed over in a very meretricious manner.

Mr. Acton, in speaking of the employment of fallen-women as wet-nurses, says, "and *thus* open to them a path of return from vice," as though that were the *only* employment available, as a means of escape from future sin. But numerous other occupations offer, which it is not necessary here to enumerate. I would, however, say emphatically, try *any other* employment in preference to the particular one under discussion, which, for the small and very doubtful good that could be effected, must produce a very large and certain amount of evil.

For the sake of virtuous homes—that they may retain that pure atmosphere which should pervade them—that they may set that example and shed that influence around for good, which makes every home the centre of a wide-spreading blessing to the land—or the perversion of these principles equally a curse: in order to promote such a good and avoid such an evil, it is devoutly to be wished that *mothers*—in whose hand it chiefly lies—will do their part to check the baneful custom. Let them then cease to receive the "fallen," to place her in the highest position in their household. Can it be be said that this "offers no premium to vice," when, instead of the chastening degradation which should be the necessary consequence of that false step, the erring one finds herself surrounded by comforts, ease, luxuries, and the object of most solicitous consideration, which the honest, chaste, hardworking servant cannot hope to obtain?

Mr. Acton says, "The most vehement objector will not venture to assert that any girl submits to be seduced on the faith of getting employment as a wet nurse," &c. Perhaps this probability may not be asserted by Mr. Acton's objectors, precisely as he has put it; but although the custom of employing such characters may not act as a *direct* incentive to this vice, it certainly is an *indirect* encouragement to it; for, as I have elsewhere said, "one barrier is thus removed which might stay their downfall, viz., a fear of the loss of character and service."

If anything further be wanting to prove the injurious effects of this system in a moral point of view, it is but necessary to glance down the column of "Want Places" in the *Times*. There may be seen almost daily six or seven "Wet-nurses" advertising themselves for hire; three or four of whom probably publish that they are "single," and not unfrequently recommended by *Medical Men*. That these women can thus parade their dishonour, as an additional fact in their favour,—that such things are acceptable to mothers and sanctioned by medical men,—that such semi-barbarism can be practised openly and unblushingly before our eyes in this advanced period of a civilized age, must strike all who are not quite apathetic or perverse with dismay and concern; it is a remarkable evidence as to the low tone of morality that pervades *society* at the present time, alike disgraceful to all parties concerned; and it is difficult to determine which is deserving of the larger share of discountenance and blame from all right-minded persons,—the patient who proposes, or the practitioner who permits, the perpetration of such an unnatural state of things.

Although my letter is already too long, I am inclined to trespass, Sir, a little more upon your indulgence, in order to refer as briefly as possible to one important point relating to the *physical* part of this question. I allude to that which Mr Acton has altogether ignored, viz., *the possibility of rearing infants artificially*, or, as it is commonly termed, "by hand."

In one place, Mr. Acton says, "Healthy milk is life to the child, and anything else death." Again, he speaks of the result of not employing wet-nurses as condemning them to the "pap-bottle, indigestion, and the grave."

It would involve too much time and space to enter into the question of artificial feeding as it deserves; but I will just inform your readers that it is quite possible to bring up infants with perfect success upon *bottle-food*, and I could cite cases where delicate infants, who have not thriven upon the "hired breast," have become robust and strong by means of judicious feeding. I admit that such instances are rare, from the want of intelligent trained nursemaids. The *Ladies' Sanitary Association* (Brighton and London,) offers to supply this want "by imparting theoretical and practical instruction in all matters relating to the management of infants and children."

Digitized by Google

Ignorance and prejudice in the matter of rearing infants slay thousands of little ones annually; and instead of condemning the system itself so unfortunately administered, our attention and our efforts should rather be directed towards the removal of those impediments which hamper it, and which are the cause of such disastrous consequences.

I am, Sir,
Yours obediently,
March 4th. M. A. B.

NATIONAL ASSOCIATION FOR THE PROMOTION OF SOCIAL SCIENCE.

(A FEW HINTS FOR THE NEXT ANNUAL MEETING.)

To the Editor of the Philanthropist.

SIR,—The "Introduction" to the volume of *Transactions* of the above association for 1858-9, contains, in addition to a review of the proceedings at Liverpool, some suggestions as to the means by which the future success of the meetings may be promoted. Amongst other things, members are counselled as to "subordination" and "self-denial;"—this advice is important, doubtless; but perhaps a disinterested looker-on may be allowed a voice in the matter,—one who is acquainted with the *external* feeling and "out-of-doors" opinion concerning the business of the association, and able to judge of such matters as affect the public mind, and the public interest, in connexion with it, more accurately than can those, perhaps, whose attention is occupied chiefly with its "inner workings."

It may be necessary to repeat that I am perfectly disinterested in what I am going to say. I state my opinion here for the good of the friends of *social science* at large, knowing that this excellent publication, the *Philanthropist*, is widely circulated amongst the members of the association, and the philanthropic public generally, of whom I am sure there are many who will agree with me, and as many, I hope, who will do something to effect the objects I have in view.

It is said in the *Introduction* before alluded to, in referring to the selection of papers, that "in most cases priority has been given to *local* papers; this statement was hardly necessary, a glance through the list is sufficient to convince that such is the case. I will not say in what proportion local and other papers stand one against the other, but a single *fact* will suffice. One gentleman of the "local" class of contributors had the privilege of reading *four* papers at the Liverpool meeting, *three* of which, of tolerable length, are printed in the "Transactions," and the other liberally *noticed* in the "Summary of Proceedings" of the department in which it was read.

Again, a paper of very considerable dimensions is printed *in extenso* (alluded to in the introduction as an exception to the rule of admission). But I may ask, could not every reasonable object have been answered, by giving the *leading heads* of subjects in this now overcrowded but incomplete volume? The papers which were considered too long for insertion, wholly, could have been afterwards published by the authors in the form of a pamphlet, for the benefit of those who might feel sufficiently interested in the subject to avail themselves of the opportunity thus offered.

Such a plan I believe would be likely to prevent anyone feeling that their contributions do not receive their due share of attention, and I therefore submit it for consideration—for the announcement in the *introduction* to the effect that "the omission of a 'paper' must not be taken as a proof that it was judged unworthy of insertion"—when considered in connection with the foregoing facts, could scarcely be expected to satisfy those whose papers are barely named, or not noticed *at all*.

The latter is the case with an admirable paper by Professor Ganegee, on the "Diseases among the lower animals." This paper was read in the *Public Health Department*, and it was listened to with great attention and interest; at its conclusion, Lord Shaftesbury spoke in the highest terms of the ability displayed by the talented author, and expressed the acknowledgments of the meeting to Professor Ganegee for this valuable contribution.

I would suggest, as one step to reform for future meetings, that "local" contributors do *not* have a preference. Why should they? What are the grounds upon which such a preference is accorded?—merely as a complimentary acknowledgment for the invitation to hold the meeting in a certain town, and for the reception accorded to the council, committee, and members of the association!

It appears to me that this is a very unsatisfactory reason for sacrificing the true interests and prospects of SOCIAL SCIENCE, and is altogether impolitic; for it must necessarily cramp the operations of the association, by checking the efforts of members in general.

If a preference must be given to local contributions, let it take effect *in toto* for the time being; thus each town would have its opportunity, in its turn, and I believe it would work more satisfactorily than the present place would ever be found to do.

Of course this scheme is not without objection, it would be obviously too exclusive; but if the Association is to maintain its position in public regard, and to become permanently popular, some of the present rules and modes of action must be altered. I would suggest the following:—

1. That *all* papers be allowed to stand on their own merit alone, irrespective of any other consideration.

2. That a Committee be chosen (comprising about twelve members of the *Council*) to decide upon the reception of "papers." No contributor of a paper to be considered eligible for nomination to this Committee.

3. The reading of such papers, whose authors, from absence or other causes, may be unable to read them for themselves, should be confided to those who would read them deliberately and clearly; much valuable matter being lost by the hurried and indistinct manner in which some of the papers were read in one department last year, being a loss to the audience and an injustice to the author.

4. That the secretary or other person reading a paper, should not be permitted to remark upon it, during the reading. Papers should be read through without comment; neither should tone nor look be employed by the reader, to prejudice the minds of the audience one way or another; all fair argument can be made use of during the discussion which is allowed to follow the reading of "papers."

5. The discussion upon papers should be kept strictly within certain limits, much valuable time being lost by random remarks and lengthy statements, which ill-timed interference with the business of the meeting often crowds an undue proportion into a short period at the last, and not unfrequently necessitates the omission of very important matter.

I cannot conclude these suggestions without giving my testimony to the earnest and able manner in which the officers of the Association have hitherto carried on their important and arduous duties. They had abundant proof during the meeting at Liverpool of the hearty manner in which the public are disposed to appreciate and recognize the value of those services; it is in no spirit of depreciation or fault-finding that I have now taken up my pen; on the contrary, it is because I feel and know full well the extent of the task that lies before them, that I venture to lend some small aid to the better adjustment of some of the difficulties that necessarily surround this new undertaking, but which difficulties will soon vanish, if viewed with a comprehensive eye, and dealt with in a liberal spirit.

I am, Sir,
Yours obediently,
A MEMBER OF THE "NATIONAL ASSOCIATION."

"THE JEBB AND CROFTON CONTROVERSY."

To the Editor of the Philanthropist.

Dublin, March, 1859.

SIR,—In the number of your excellent journal for the present month, you publish a letter, on the above subject, from my much esteemed friend, Mr. Baker of Hardwicke Court.

With the best possible intention of doing justice to all, Mr. Baker falls into two very grave mistakes. First, he assumes that the question in dispute between Colonel Jebb and Captain Crofton, is simply one as to priority of idea; and his second error is, that he supposes some system like the Irish Intermediate Prisons to have been at some or any period even attempted by Colonel Jebb in England.

Shortly and plainly, the whole question resolves itself into the following issue,—Has the success of the Irish system been proved, and if proved, why is it not adopted in England by Colonel Jebb?

I contended, and I now contend, that it has succeeded. This the writer in *Meliora* does not deny; but he claims the whole merit of having originated the system for

Digitized by Google

the man who, according to *Meliora*, has done more than any other since the days of John Howard "for prison improvement"—Colonel Jebb.

I declared in *The Irish Quarterly*, and I think I proved, the whole merit of success to belong to Captain Crofton; and further, I claimed for him the credit of having originated the system; and herein it is that *Meliora* and *The Irish Quarterly* differ.

Colonel Jebb was sent here to inspect and report upon the system as carried out in Ireland. He did come, but he did *not inspect*, yet he reported AGAINST the system. This *Report* appeared last July; it was not a fair report; it was made without sufficient knowledge or inquiry; it mis-quoted or omitted the evidence in support of Captain Crofton's system. The strong testimony of Alexander Thomson, of Banchory, was openly perverted; the later *Reports* of the Directors of Convict Prisons in Ireland were ignored; the luminous and deep-reasoned paper of Mr. Recorder Hill, written after a close, and anxious, and jealous examination of the Irish Convict Prisons, was not even mentioned; and, therefore, Captain Crofton issued his very just and proper *Notes* on the *Report* of Colonel Jebb.

These *Notes* were before the writer in *Meliora;* Mr. Hill's paper was before him; Mr. Hill's *Repression of Crime*, with its earnest testimony in favour of the Irish system, was before him; Lord John Russell's speech at Liverpool was before him; Lord Carlisle's Inaugural Address at Liverpool was before him; the whole weight of the press was in favour of Captain Crofton, and the writer in *Meliora* could not deny the success, and therefore he claims the conception of the system for Colonel Jebb.

He claims it for the man who, in a grave public document, reported *against* this very system, founding his arguments upon his own peculiar and unhappy failures in a system called Intermediate, and which was an experiment so hopelessly and so helplessly designed, that in a class of convicts, of men supposed to be, in reformation, superior to the great body of their fellows, there were men so bad in conduct, so foul in speech, that their better disposed companions preferred, and begged, a return to the less advanced prisoners to association with the men promoted to Vern-Hill.

If Colonel Jebb is really the founder of the Intermediate System, why did he report against it? As he has reported against it, how can the writer in *Meliora* claim its parentage for him? If Colonel Jebb is the founder, and if the system be successful, as is admitted, in Ireland, why should it not be introduced into England? If Colonel Jebb fears his ability, or doubts his energy, to carry out the system, I can understand his coyness, and appreciate his motives. But he should have thought more deeply before denying that offspring claimed for him by the writer in *Meliora*, who does for the unnatural parent more than the real parent ventured in that famous judgment of Solomon.

Mr. Baker refers to the Fulham Refuge, and appears to think that there is some kind of analogy between it and the establishment at Golden Bridge, to which Lord Carlisle gave, at Liverpool, such well-merited praise. Now there is no analogy; Fulham is a Refuge, Golden Bridge is a Prison; a prison to which women convicts, who have worked themselves into good characters in the convict prisons (I do not mean *prison characters*) can come as a reward: but the Directors of Convict Prisons give all the credit of the success of this establishment to the ladies who manage it, the Sisters of Mercy; and I claim for the directors only the credit of having organised such a staff of prison officers, and of having carried out such a system of convict management, as has enabled the ladies at Golden Bridge to produce such results as the following, for all the figures of which I hold myself responsible:—

Golden Bridge was opened for the reception of female convicts of the list class, and whose sentences had nearly expired, April 1st, 1856. From that period, to March 1st, 1859, not less than 208 women were received, who were disposed as follows:—40 emigrated; 27 were sent to situations; 20 returned to their husbands and families; 18 returned home to their parents and friends; 4 went to Magdalen asylums; 3 married; 8 were sent back to prison: 2 were discharged at Grange Gorman Prison; 1 escaped; 6 took their discharges when their sentences expired—giving a total of 129 discharged; and on the 1st March, 1859, there remained in the Institution, 79.

These are not negative statistics; they are strong, cold, iron facts: they will bear any investigation, and are as real as truth itself.

Mr. Baker deplores what he calls my warmth in replying to the writer in *Meliora*. I can assure him that I have before me letters, from English friends, valued friends, of his and mine, far more warm in expression on this "Jebb and Crofton controversy" than anything appearing in my strictures. I felt regret and indignation that, after the success of Captain Crofton's efforts had been proved, his merit should be denied; and I felt not less indignant at a charge being made against the people of Ireland, which proclaimed to the readers of *Meliora* that much of Captain Crofton's success was due to the fact, that the Irish were less unwilling to associate with criminals than the English.

Pardon this trespass on your space. But let me again ask, why, if the system found so admirable in Ireland is a system designed by Colonel Jebb, that system is not adopted in England?

I am, sir, very truly yours,
THE EDITOR OF THE IRISH QUARTERLY REVIEW.

ROMAN CATHOLIC INSTITUTIONS.

To the Editor of the Philanthropist.

SIR,—Allow me to call your attention to a matter of much importance in connection with your reports of various reformatory and other institutions. Your readers should not be left in ignorance of the religious tenets and principles on which they are conducted, when they are of a decidedly distinctive character. Adopting as you have done—and I think most of your readers will think wisely done—a broad line of impartiality, so far as your information as to the internal management, objects, industrial occupations, &c., &c., is concerned; yet, unless I greatly misunderstand your mind and feelings, as generally indicated by your remarks, I feel certain that you would be the last to wish that those who profess the Protestant faith should unwittingly send their children to an institution under Roman Catholic management. *Fas est ab hoste doceri.* Many valuable hints on the reformatory movement have been learnt from Mettray. It is well also to know that any are eager in the cause of criminal reformation and the education of the poorer classes. Their success may encourage us in our apparently hopeless labour, or put us to the blush for our negligence. I will not argue about what appears to be admitted as at least equitable—that your pages should be open to all who are engaged in the work of social amelioration. But, Sir, I must most strongly protest, on behalf of the rising generation, against your lending your influence to such institutions as St. Joseph's School, of which you spoke so largely in your February number, unless it be at the same time fairly intimated that the institution is in its tenets Roman Catholic. I do not desire you to abate one iota of the praise which a Roman Catholic institution may honestly and fairly deserve; only let your readers know that it *is* Roman Catholic. The institutions belonging to this body are few, but I believe them to be generally well-managed and conducted, having much to be commended, much to be imitated.

The bulk of our people are Protestant: and the charge of bigotry could scarcely be brought against any who should feel unwilling to trust their children to institutions other than those which are founded in the fear of God and knowledge of His Holy Scriptures. I think, too, that you will agree with me that this is a matter of decided importance. I will only now apologize for this intrusion, and I venture to suggest that, while reporting as fully as you please, the operations of such establishments, which are frequently, as in the case to which I have alluded, very interesting and instructive, you should in future let your readers at once into the truth as to the religious persuasion of the institution; and this might have been done by simply stating at the head of your interesting account of St. Joseph's Industrial School, "This is a Roman Catholic Institution." This announcement would not detract from its merits, it would simply be a proper and fair act on your part towards those who might otherwise be allured, by the account of the internal arrangements, to commit their offspring *unknowingly* to the risk of a teaching completely at variance with their own.

I leave the matter to your own good judgment.

I am, Sir,
Your obedient servant,
HIC ET UBIQUE.

[There is reason in the suggestion, which shall be adopted.—ED.]

Reviews.

The Improvement of the Dwellings of the Labouring Classes, through the operation of Government Measures, by means of Public Bodies and Benevolent Associations, as well as Individual Efforts. By HENRY ROBERTS, F.S.A., formerly Honorary Architect, and a Member of the Society for Improving the Condition of the Labouring Classes, London. London: J. RIDGWAY, 109, Piccadilly; KNIGHT and Co., Fleet Street, 1859.

THIS is a paper read before the National Association for the Promotion of Social Science, at the meeting held in Liverpool, October 1858, and prepared with a great deal of care, and an evident knowledge of, and deep interest in, the subject. A more important one can hardly be conceived: in our eyes equally so with popular education. It is in fact part and parcel of popular education. Were all a child's ideas and associations formed only in the school-room, the case might be different, but the major part of the mental training which our young receive, apart from mere book-learning, is in the home and in the play-ground. There are imbibed the feelings and habits which influence all their after-life; and while their homes continue such as they are, it will be matter of wonder, not that so many become vicious and criminal, but that any should come out untainted, uncontaminated, or with pure and cleanly feelings. This paper must be read in order to be fully appreciated, and we are disposed to feel that Mr. Roberts' suggestions would then be more easily followed. Possibly it may stimulate some to enter upon this study, if we enumerate the contents of these pages, which are as follows:—

"Improvement in the Dwellings of the Labouring Classes a prerequisite to the complete success of Popular Education, 3. Review of past efforts and of measures for sanitary reform—The subject in its relation to public health, treated by Lord Stanley—Isolated individual efforts—First appearance of cholera in England in 1832—Violent epidemic in London—Inquiries instigated by the Poor-law Commissioners, 4. Health of Towns Association—Parliamentary movement—Poor-law Board Report—Appointment of a Royal Commission and its reports—Uniformity of Testimony as to the causes of existing evils, 5. Establishment in the metropolis of two societies, 6. Legislative measures—Public Health Act—Nuisances Removal, and Diseases Prevention Acts—Their subsequent amendment—Local Government Act—Transfer of the sanitary functions of the General Board of Health—Labouring Classes Lodging Houses Act—Act for regulating common lodging-houses, 7. Beneficial results of this act, and suggestions for an extended application of its powers, 8. Lord Kinnaird's experience in Westminster and elsewhere, 9. Leeds model lodging-house—Labourer's Dwelling Act of 1855—Similar Act applicable to Scotland; its peculiar powers, 10. Act of 1856 applicable to Ireland—Repeal of taxes—Standing order of the House of Lords—Effects of Recent Destructions in Paris—Memorial presented to the Emperor—The providing by Government of dwellings for subaltern *employés*, 11. Law relating to the transfer of land—Facilities given on the Continent for working people to purchase their own dwellings, 12. Evils of the 'close parish' system—Government pecuniary aid—Valuable assistance rendered by the public press, 13. Sympathy evinced by Scientific Societies—The Metropolitan Sanitary Association, 14. SECOND BRANCH OF THE INQUIRY — Measures adopted by public bodies and benevolent associations, 14. Duty of those who have working people in their constant employ—The objects in common, and results of the efforts made by the two leading societies in London—The Metropolitan Association for Improving the Dwellings of the Industrious Classes, 15. Receipts and expenses for one year at the Society's model-houses, 17. Experience of the Society for Improving the Condition of the Labouring Classes, or Labourer's Friend Society, 18. Receipts and expenses for eight years at model-houses belonging to the Society, 19. Expenditure on repairs—Practical lessons—Necessity for watchful management—Comparative profit derivable from new and old buildings, 20. Importance of the financial question, 21. Extensive circulation of the Society's publications in various parts of the world—New York, 22. Boston, U.S.—The late Mr. Abbott Lawrence—Australia and India—Interest of foreigners in H.R.H. the Prince Consort's exhibition model-houses—Efforts in Berlin promoted by H.R.H. the Prince Regent of Prussia—Model-houses in Sweden—In Holland, and projected in St. Petersburg, 23. In Switzerland—In France—In Florence—Claim of England to the initiating this measure of social reform—The author's relationship to the Labourer's Friend Society, 24. Efforts made in Scotland—The dwellings for Dock Labourers at Birkenhead—Thanksgiving collections on the removal of the cholera, 26. Efforts in Chelsea, in Paddington, and St. James's—the Windsor Royal Society—Marylebone Association, 27. Lambeth Association and Duchy of Lancaster Houses—Strand Building Company — St. Giles's-in-the-Fields — St. George's, Bloomsbury—Kensington—Recent effort in Dudley-street, St. Giles's, 28. At Bethnal-Green—Companies lately projected in London—Efforts in Liverpool, 29.—At Huddersfield—The Salopian Society—Societies at Hastings or elsewhere, 30. INDIVIDUAL EFFORTS—Example given by her Majesty the Queen, 30. H.R.H. the Prince of Wales—H.R.H. the Prince Consort—Apprehensions of the Duke of Wellington—Married soldiers' lodging-house—Separate dwellings at Chatham—Efforts of great landed proprietors—The Dukes of Bedford and Northumberland—Of great manufacturers and private individuals, 31. Suggestions for building workmen's dwellings out of London—Example near Paris, 33. Efforts by Merchants' 'Sailor's homes'—Responsibility—The guilt of neglecting the use of means, 34. Efforts within the power of the labouring classes—Duty of instructing them therein—Advantages of open staircases and galleries in town dwellings, 35. Plan adapted to the lower paid class of the working population, 36. Plan adapted to the higher paid class, 37. Mr. Becket Denison's notice of the Leeds model lodging-house, 38."

The subject engages the attention of many; amongst others, of Miss Burdett Coutts. This lady, who annually expends large sums in deeds of piety and charity, has resolved to found model-houses, as refuges for the poor. She has begun by giving orders for the erection of a block of dwellings for families in Nova Scotia-gardens, Shoreditch, one of the eyesores of even that neglected quarter of the metropolis. Four stories, with an attic story, to be used as laundries, &c., club-rooms, and covered-in areas for the exercise of the children of the inhabitants in wet weather, will make up an imposing building of 176 feet long, and nearly 50 feet high. We may raise the poor by improving their dwellings.

ROYAL NATIONAL LIFE-BOAT INSTITUTION.

THE Annual Meeting of the friends and supporters of this truly national and philanthropic Institution was held at the London Tavern: Sir John Pakington, Bart., M.P., First Lord of the Admiralty, in the chair. The meeting was numerously and influentially attended.

Mr Lewis, the Secretary, read the Annual Report.

It commenced by expressing gratification at the continued enlargement of the sphere of the Institution's operations, and its accompanying advancement in public favour. The Society now possessed eighty-one Life-boat Establishments, thoroughly equipped in every way; fifteen of which had been added during the last twelve months. A new boat is building for Kilmore. All these boats are on the self-righting principle. Transporting carriages and boat-house had also been provided for the same, viz:—at Cromer, Mundesley, Bacton, Winterton, Yarmouth (two boats), Exmouth, Aberdovey, and Fleetwood; in Ireland—at Dundalk, Carnsore, Tramore, Dungarvan and Newcastle, the last-named in lieu of a previous boat; and in Scotland—at Fraserburgh and Lossiemouth. The Committee continued to receive the most satisfactory reports of this class of life-boats, many of which had rendered important services in saving life during the past year. Life-boats on the same plan had been ordered by the Governments of Russia, Prussia, and Portugal, and by some of our own Colonial Governments, from the builders to the Society; and the Institution had in every case been requested to superintend their construction. The life-boats of the Institution had been instrumental in saving *one hundred and six persons* during the past year. They had

Digitized by Google

also been off on twenty-nine occasions to the assistance of vessels showing signals of distress. The Institution again acknowledged the important and cordial assistance which it continued to receive from its several Branch Committees. It appeared, from the Report of the Board of Trade presented to Parliament, that the number of shipwrecks on the coasts of the United Kingdom during the past year had been nearly the same as that of the previous year—1170 in all—from which 343 lives had unhappily perished. It was, however, gratifying to find that the total number of lives saved from shipwrecks, by life-boats and other means, on our coasts during the same period, was 1555. The total number of persons saved from shipwreck since the first establishment of the National Life-boat Institution, and for rescuing whom the Committee had granted honorary and pecuniary rewards, was 10,902. The amount of happiness afforded to this large number of persons rescued from death in one of its most appalling forms, and to the relatives and friends to whom they have been restored, can only be fully realized by themselves. The British public in general may, however, entertain a sense of the national benefit derived from the preservation of so many shipwrecked seamen; and it must be a source of satisfaction especially to every philanthropic individual who had directly or indirectly aided in the good work. The lives of 427 persons from 64 wrecks on the coasts of the British Isles had been rescued during the past year, through the instrumentality of the life-boats of the Institution, and of other means; in acknowledgment for which services one gold medal, 23 silver medals, 37 other honorary distinctions, and £952 had been voted. Since the formation of the Institution it had expended on life-boat establishments £28,061, and had voted 81 gold, and 629 silver medals for distinguished services for saving life, besides pecuniary awards, amounting together to £11,651. From the financial statement it appeared that the Institution had expended, on new life-boat carriages and boat-houses, and their equipments, £8,051 4s. 11d., and £1,203 18s. 5d. for exercising the crews of its life-boats; making altogether a total of £9,255 3s. 4d. This great and national work, had, however, only been accomplished by the Society, incurring further liabilities to the extent of £3,047. With so sacred an object in view as the rescue of our fellow-creatures from an appalling death by shipwreck, it might be supposed that the National Life-boat Institution had claims which would come home to the heart of everyone in this great maritime country. The report referred to a donation of £50 from his Royal Highness the Prince Consort. K.G., Vice-Patron of the Society; to Lady Rolle, who had promised to defray the cost of the Exmouth life-boat establishment, amounting to £367; to the following gifts—£150 from a lady who had previously presented the Society with the like amount towards the cost of a life-boat station; £160 9s. 10d., being the produce arising from the sale of the contents of a plate-chest, presented by Mrs. Coles, of Tunbridge Wells, whose husband had previously bequeathed to the Institution £200; £300, being the cost of a life-boat station, from a lady whose life had been providentially saved from drowning on the Irish coast; £242 from the sister institution, the Shipwrecked Fishermen and Mariners' Society, chiefly collected in threepences from its members; £21 from Viscount Bury, M.P., and his fellow-passengers, being the amount collected amongst themselves in aid of the funds of the Institution, on their homeward voyage from New York, on board the steam-ship *Asia;* and £30 from the boat-builders, sawyers, and other workmen in the employ of the Messrs. Forrest, of Limehouse. The report concluded by earnestly soliciting the support of all those who are able to render it. That help was never more needed than at present, when, through the extraordinary exertions the Society had made within the past few years, it had now no less than *eighty-two* life-boats under its management, for the maintenance of which, in a state of thorough efficiency, a large permanent annual income is absolutely needed, if its humane mission is to be perpetuated. The Committee felt assured that they did not miscalculate on the support that would continue to be extended to the National Life-boat Institution. On the contrary, they believed that the facts which they had been able to lay before the British public, must call forth such prompt and liberal aid as might enable the Institution to persevere in its course of usefulness on a scale adequate to its great and national importance in the cause of humanity, that of saving our fellow creatures from the perils of the sea.

The report having been adopted, various resolutions, pledging the meeting to renewed exertions on behalf of the truly benevolent and national objects of the Institution, and thanking the Board of Trade, the Coast Guard, and the local Life-boat Committees, for their valuable co-operation with the Society, were afterwards carried: and the usual complimentary vote of thanks having been given to the Chairman, and the same having been acknowledged, the proceedings, which were of an unusually interesting character, closed.

Poor Rates and Pauperism.—On the last day of the fourth week of December last the number of paupers in the receipt of relief in England and Wales was 857,903, against 936,815, in 1857. This is a dffe-rence of 78,912, equivalent to a decrease in pauperism amounting to 8.42 per cent. We are happy to state that this decrease is general throughout the districts, but at the same time it must be explained that the comparison is between the months of December, 1857 and 1858, whereas it appears that there was a gradual rise in the number of paupers from the second week of October last, continuing to the close of the year. This is due to the decrease of employment in the winter season. Between the 1st of October and the 31st of December last there was an increase of 55,796 paupers, or 7 per cent.

RED LODGE, BRISTOL.

We have received the Fourth Report of the Red Lodge Girls' Reformatory School, at Bristol, being for the year 1858, from which we gladly make the following extracts:—

Number of girls in the School, Jan. 1st, 1858	60
Admitted under sentence in 1858 ...	16
Ditto, voluntary	1
	77
Belonging to the School, Dec. 31st, 1858...	59
To be accounted for...	18
Placed in service	7
Sent home to respectable friends ...	3
Emigrated to the United States ...	2
Transferred to another School ...	1
Discharged by order of Secretary of State	5
	18

The girls who have been newly admitted during the year have been, with only one exception, *first convictions:* they exhibit nearly the same parental and educational condition as in former years:—

Girls having both Parents living ...	8*
" " Step-mothers	2
" " Father only	3
" " Mother only...	3
" " Both Parents dead ...	1
	17

The educational condition is as follows:

None	9
Little	6
Fair	2
	17

It is evident that not orphanage, but the neglect of parents in discharging their duties to their children, is the usual cause of juvenile delinquency; it is owing to this, and to consequent early exposure to scenes of vice, rather than to any peculiar predisposition to evil in these unfortunate young beings, that their education is here committed to strangers.

The girls who have left the institution have done so under the following circumstances:—

All the girls sent to service were placed in suitable situations, and the last accounts of them have been satisfactory on the whole; three of them are placed out in Bristol, and have for some time been obtaining a good character with their employers. When it is known that one of these, who is now going on admirably, had been previously twice in prison, her mother also being in prison when she came, it is evident what the effect of the School has been in her case. She herself entertains a most grateful sense of it. Of one who was placed in London her mistress has written in very high terms, finding her perfectly trustworthy. The success attending the training given in this Institution to young servants is of high importance to the future settlement of the girls, and gives confidence to the public in receiving them into domestic service. The

* Of these, however, the fathers of two have absconded.

Digitized by Google

three girls placed again in their own families have been kept under surveillance; of two of them excellent reports have been received; the third has not yet had time to show results. The two girls who emigrated were at once placed in good situations, and are maintaining themselves well. They were selected for the purpose from being strong and capable of work, and not having any relations or friends in England with whom they could safely associate. The girl transferred to another school had relatives in Bristol from whom it was desirable to separate her. She is doing well.

The five girls discharged by order of the Secretary of State were so under circumstances of a very painful nature, which point strongly to the necessity of an establishment being provided of a more penal character than a school, where those who cannot safely be associated with others may yet be under reformatory training. Gladly should we avoid the distressing details, yet as the painful experience thus gained may save other Reformatories from similar dangers, it is felt a duty briefly to detail them. Three of these girls had been Penitentiary cases before their admission to this School, and consequently ought not to have been sent to it. On their release, early in the year, from the Bridewell to which they had been sent for absconding from Red Lodge, they introduced a most injurious and immoral influence into the School; they had not been kept under strict separation and had had access to a prostitute within the prison. The contamination caused by these girls was of a most serious kind, and was beginning to affect all the older girls. Two again absconded and went straight to a house of ill fame, to which they had been invited in the Bridewell. They were at once sent with two others to the City Gaol, where strict separation is enforced, and an application was made for their discharge, with that of another girl who had imbibed the contamination and whose example was most injurious. This last girl at once resumed her criminal practices, and is now in gaol awaiting her trial. The other four were sent into separate institutions on their discharge from gaol, but being under no legal detention all but one soon left them. Now it is evident that it is highly injurious to the discipline of a Reformatory for girls to perceive that their own misconduct is the means of their obtaining a discharge, and also that the girls who are thus released, and who do not wish to submit to the control of an institution, with whatever kindness they are treated, are exactly those who ought to have a long period of strict reformatory training. The want is increasingly felt, and it is hoped that it will be ere long provided for.

The general discipline and order of the School was for a time interrupted by these painful circumstances, and a restless spirit was infused which caused some girls to abscond. All were brought back, five from distant towns. Two of them voluntarily gave themselves up, and afterwards proved the sincerity of their repentance by their subsequent conduct.

A tone of settled obedience and improvement has for some time been re-established in the Red Lodge, and no disposition to abscond now manifests itself.

Before proceeding to make a special report of the proceedings of the present year, it may be encouraging to take a general view of the results of the School from its commencement. The whole number of girls who have been in the School to Dec. 31st, 1858, is 104. Five having been discharged as unfit for the School, and 59 remaining in it, 40 are to be accounted for, which may be done as follows:—

Emigrated under care of relations..	1
Ditto, to go to service	6
Placed in service in England and doing well	13
Returned to relations and generally satisfactory	8
Placed in other Schools by Secretary of State's order	2
Voluntary, who absconded in a few months and was not recaptured.	1
Living a Criminal Life	1
Dead	4
	40

Now all of these girls had been previously convicted of crime, some of them had been several times in prison, and all appeared destined to lead a life of crime if their course were not arrested. One only of the whole number is now known to be living a life of crime, after a period of four years has elapsed. Some of those who appeared the most hopeless cases are now maintaining themselves respectably, either in our own country or America. None, indeed, who were discharged as having given satisfactory expectations that they would do well have fallen away, and many whose future appeared doubtful have afterwards proved to have made far more improvement than was anticipated. As every effort has been made to ascertain the real condition of the girls after leaving, and to retain an influence over them, it is believed that these results may be regarded as reliable.

During the past year a new department has been added to the establishment. A house becoming vacant which overlooked the premises, and the fit occupation of which was of great importance to the School, it was purchased by Lady Noel Byron, to be employed as the Superintendent's house. A closer daily supervision can thus be exercised, and an opportunity is afforded of giving a superior training to two girls in succession who may appear best calculated for service. They are thus accustomed to a greater degree of liberty than they could have in the School, and to resist the temptations which must arise in ordinary households. Many girls have been thus received, and great advantages have been found to arise from the plan. The girls have shown themselves sensible of the trust thus reposed in them, and valuable articles have been placed with safety in their charge. One disappointment of a painful nature has occurred. A very fine promising girl, when sent out on an errand, was lured by one of those wretched prostitutes who in the face of day infest our streets; she was induced by her to disguise herself in clothes which she found in the house and go off to London; yet even she abstained from taking a quantity of plate to which she had access. The poor girl was happily captured, and in a long imprisonment bitterly lamented her ingratitude. Should our streets be in such a condition that it is dangerous for a young girl to walk in them? In other respects great advantage to the School has arisen from the Superintendent's house, and not the least that it affords an opportunity to ladies of superior position and culture to reside there and give their influence and help to the School. Two such ladies have successively conferred this benefit on it.

The actual expenditure in the School has been about the same as in previous years. If we deduct the sum vested and the expense of repairs, the outlay for the year will be £829 15s. 5d. The average number of girls is 56; this makes the actual expense of such £14 16s. per annum.

The principle on which the Cottage is carried on is proved to be important, as giving an opportunity of testing the true character of girls when the stricter discipline of the School is relaxed. Every variety of housework is here taught, and the girls make the greater part of the bread consumed in the Red Lodge. The clear profits of the baking this year have been £15 18s. 7½d.

The general discipline and arrangements of Red Lodge have been similar to those of previous years. While watchful care is exercised to detect and check every fault, especially such as may indicate a laxity of honesty, and while obedience, order, and discharge of duty, are steadily enforced, yet every effort is made to stimulate and encourage the children to feel a direct interest in their own improvement, and, instead of regarding themselves as under a punishment in being at Red Lodge, to feel grateful for the privilege thus afforded them for their good. The ordinary treatment of the children is intended to place them as far as possible in the same position as children in the labouring classes. They attend public worship regularly, take walks in the country, and twice during the year have been allowed the privilege granted to other Schools of spending a day at the Zoological Gardens, and visiting a Diorama. On all these occasions their conduct has been remarked by strangers as particularly good. The children were very grateful for being allowed to enjoy some degree of Christmas festivity, when the old scholars were permitted to come and join them. All these arrangements inspire the children with a feeling of confidence that those under whose care they are placed have a true interest in their welfare. The results have been on the whole very encouraging; numerous instances might be cited of an evident and decided change taking place in girls who, for some time, seemed to set themselves against the efforts made for their improvement,—of grateful acknowledgment of benefits conferred, instead of sullen submission to authority,—and of an evident desire to live as pleasing Him who is invisible, instead of utter carelessness or absolute rebellion against the divine law. Such cases are most encouraging to those who strive day after day, sowing and watering, without, for some time, any apparent increase. The general tone of the household is very greatly improved from what it has been in former years;

Digitized by Google

this renders the work less arduous, and gives greater expectation of success with every girl freshly introduced. Thus, then, in faith and hope do we conclude the year with grateful thanks to the Giver of all good who has sustained us through it.

We need hardly remind our readers that this establishment has the privilege of being superintended by the well-known Miss Carpenter.

Results of Going to Law.—At Lambeth police-court an exposure took place of the extravagant costs of law proceedings and of the effects of attempting to obtain redress for injuries. A young women who had been falsely accused of robbing her master was induced to bring an action against him to obtain some compensation for the wrong she had sustained. She obtained a verdict with £20 damages, and her attorney, after receiving the amount and his taxed costs, sent in his bill, making it appear that there was a balance of above £14 due to him. The father appealed to the Lambeth magistrate who kindly sent for the attorney to explain, and that gentleman claimed great credit for having been at the risk of bringing the action, and then forgiving the father the balance. The magistrate said the case should serve as a useful warning to persons not to bring such actions.

Education and Harmony among the Police.—Mr. Superintendent Bramford, of the Metropolitan Police, has established a school at each station in his division, namely, Stones-end. Bermondsey, and Rotherhithe, at which upwards of 140 men, out of 360 under his charge, regularly attend. Mr. Bramford has likewise established a band of muscians, consisting of 35 men, whose instruments cost nearly £100, and whose progress in this department, as well as in the educational classes, does them great credit. These efforts of the excellent superintendent for the benefit of the men in his division, can scarcely be too highly commended. We presume that our readers will feel considerable interest in a movement of such a character in such a quarter.

Cripples' Home, Hill-street, Dorset-square.—It appears that this institution is the only industrial home in the kingdom for cripples. There are now 40 girls within its walls, the greater part of whom are afflicted. A few strong girls are kept to attend to the domestic duties, and to wait upon those who are too infirm to assist themselves. The afflicted are received from eight years old and upwards, and are entirely provided for until they are enabled to earn their own livelihood by straw-bonnet and mat making, which they are taught in the establishment. The institution was established in 1855, and the following donations and subscriptions will show the support which it has received:—1855-6, £508 7s. 6d.; 1856-7, £596 12s. 4d.; 1857-8, £847 12s. 6d.; making a total of £1,952 12s. 4d. A sum of money is still required to liquidate the heavy expenses incurred in carrying out further improvement and enlargement of the premises for the comfort of the cripples, and also to provide a "sick fund" to send them to the sea-side, from time to time, when requisite. The sermon recently preached at Quebec Chapel, Bryanston-square, by the Rev. Dr. Goulburn, provided the very liberal collection of £120.

Public Generosity.—A letter appeared recently in the *Times*, from the Rev. W. H. Buck, Chaplain to the Queen's Prison, on behalf of an ex-artillery officer and his family, in pressing want. Mr. Buck solicited £30; but so great was the sympathy of a generous public, that a sum of no less than £800 has already been forwarded to him; and even from Algiers and Switzerland donors have sent their timely subscriptions.

DISEASES of the EAR.—ROYAL DISPENSARY for DISEASES of the EAR, Dean-street, Soho-square: established 1816.

President—The Duke of BUCCLEUCH, K.G.
Treasurer—John Masterman, Esq.,
Surgeon—William Harvey, Esq., F.R.C.S.

This Institution is open Tuesdays and Fridays to the indigent afflicted with deafness, noises in the head and ears, and diseases of the throat.

The public are earnestly entreated for ASSISTANCE to enable the Institution to afford the requirements for the increasing number of applicants. Since the establishment of the Institution 35,000 patients have been admitted; 200 are in weekly attendance. Subscriptions will be thankfully received by Messrs. Masterman & Co.; and at the Dispensary, by H. SMYTH, Sec.

REFORMATORY FOR JUVENILE MALE CRIMINALS under 16 years of age.—The HOME in the East, Old Ford, Bow, near London.

PRESIDENT.
THE EARL OF SHAFTESBURY.

TREASURER.
JOSEPH CRANE, Esq.

BANKERS.
MESSRS. HANKEY & Co.

HONORARY SECRETARIES.
A. J. SCRUTTON, Esq., 81, Old Broad Street; THOMAS SCRUTTON, Jun., Esq., 3, Corbet Court, Gracechurch Street.

GOVERNOR.
Mr. J. W. GORDELIER, at the Institution.

Fifty youths are maintained at an annual average cost of about £1,000.

In addition to the ordinary operations of the Institution, the following efforts call for special funds:—

New workshops, with appropriate fittings, newly erected at a cost of £300.

Emigration of seven youths to Canada in April next, £85.

Contributions in aid of either of the above objects are earnestly solicited, and will be gratefully acknowledged.

SCHOOL OF COOKERY, 90, Albany Street, Regent's-park.

PATRONESSES:

The Countess of Ripon.	The Lady Laura Palmer.
Lady Colebrooke.	Lady Bridges.
Mrs. Archibald Tait.	Mrs. C. M. Lushington.

The object of this School is to teach correct principles of cookery and household economy. Girls are received as boarders at a fixed charge, and instruction is given to daily pupils. Ladies becoming subscribers may send their cooks for lessons. Cookery for the sick especially attended to, and tickets sold for soup, meat, &c., for relief of the poor.

Subscriptions thankfully received by the Hon. Sec., Reginald Kwatchbull-Hugessen, Esq., 23, Portman Square, W.; or at Messrs. Coutts', to the account of C. M. Lushington, Esq.

AT SANDWELL, near BIRMINGHAM, a HOME is OFFERED to WIDOWS and SINGLE LADIES, and the means of Education to Orphan Children, suitable to their situation in life. Girls from thirteen to sixteen are received and trained as domestic servants by being employed in waiting on the inmates of the Home. Boys from twelve to fifteen years old are also received and employed in the house, stable, farm, or garden. Ladies without family ties are invited to join in this work of usefulness, whereby many young persons are rescued from idleness and its attendant temptations. Further particulars may be obtained by letter addressed to the Superintendent, Sandwell, Birmingham, enclosing a stamped envelope, with the name and address of the applicant. Subscriptions are gratefully received by Messrs. Lloyd, Bank, Birmingham, to the credit of the Sandwell Institute.

FEMALE SERVANTS' HOME SOCIETY.

HOMES:—110, Hatton Garden, 21, Nutford Place, and 52, Nelson Square.

The Society was instituted *twenty-three years ago* for the purpose of offering a safe Home for female servants when out of place.

Also as a Home for young women from the country, seeking situations in London.

There are nearly one million female servants in the kingdom; more than one hundred thousand in London; and of these, ten thousand always out of place or changing places.

Great numbers of these young women were brought up in our Orphan Asylums, Parochial, National, British, Industrial or Sunday Schools, and having no relation in London, eminently deserve our pity.

The Homes shield them from the numerous temptations of the metropolis, preserve their moral and improve their religious character.

The blessing of Divine Providence has been so vouchsafed to the Society, *that seven thousand have been received at the Homes.*

Thirty thousand have registered there free of expense, and the greater part of these have been provided with situations.

Many have been restored to health by a short rest and residence in the Homes, and returned to their places.

Many furnished with admissions to Hospitals when ill.

Many received from Hospitals in a state of convalescence, and remained till able to obtain situations.

Many sheltered, unable to obtain places through age or incapacity, till assisted back to their friends in the country.

Many have received temporal assistance and spiritual consolation in sickness and till death, and in some cases, been buried at the expense of the Society, which has thus been as a Parent to many a poor young and helpless female servant.

Add to which, the success of the Homes in London caused similar homes to be established in many parts of England; suggested the idea of instituting Homes for other Classes; and led the way for the Model Lodging Houses.

Donations are *earnestly requested*, and will be thankfully received by the Treasurer, R. C. L. Bevan, Esq., 54, Lombard Street; Messrs. Barclay, Bevan & Co., the Bankers, 54, Lombard Street; the Hon. Secretary; and by the Superintendents at the Homes.

Post Office Orders may be made payable to the Hon. Secretary, Mr. Daniel Cooper, Sherbourne Lane, City, London.

THE GIRLS' REFUGE.—The KING EDWARD RAGGED & INDUSTRIAL SCHOOLS and EASTERN REFUGE, Albert Street, Buxton Street, Brick Lane, Spitalfields.—The objects of this Institution are to educate and train in habits of industry that class of children who, for want of clothing, or the means of paying for instruction, are unable to attend other schools, and to gather in the vicious and depraved who swarm in our streets, and endeavour to civilize and instruct them, and, as far as the funds permit, to provide food, clothing, and shelter for the most destitute.

In the erection of this Institution, provision has been made for about seventy inmates, while accommodation exists for the daily instruction of more than 400 poor children. The number of Refuges which have of late years been opened for the reception of houseless and destitute boys induced the Committee to depart from their original intention, and make this a Refuge for girls. In addition to the large number of children under daily instruction, thirty-five destitute girls are now enjoying the benefits of the Refuge, and the Committee are desirous of extending the sphere of their usefulness, and to afford food, shelter, and clothing to at least thirty-five more.

The varied operations of such an Institution necessarily involve a large annual expenditure, to meet which, and to carry out to the full extent the objects contemplated in its erection, subscriptions and donations are earnestly solicited, and will be thankfully received by Samuel Gurney, Esq., M.P., Treasurer, Lombard Street; Messrs. Smith, Payne, and Smiths, Bankers, 1, Lombard Street; and by the Hon. Sec., 2, Penbury Grove, Hackney. H. R. WILLIAMS, *Hon. Sec.*

APPEAL.—The ROSSES CHURCH, in the parish of Drumcliffe, near Sligo, is built by subscription and ready for divine service. This church is five miles distant from the parish church or any other church, and the district very much frequented by persons from different parts of Ireland for the purpose of sea-bathing, and also by sailors coming into port with vessels. The trustees of the church have been offered £200 towards its endowment on condition that the balance still required (£600) for that purpose be raised by June next. The AID of Christian friends is therefore very earnestly solicited for this cause, that the trustees of the church may be enabled to avail themselves of this liberal offer, and thus be in a position to appoint a resident minister, with the sanction of the Bishop of the diocese and the Incumbent of the parish. Subscriptions will be thankfully received by Messrs. Coutts & Co., Bankers, London; for Edward J. Cooper, Esq., M.P.; or by the Rev. T. Crawford, Drumcliffe, Sligo, Ireland.

Digitized by Google

AID is asked for many poor CLERGYMEN in DISTRESS, wanting food and raiment. Donations of money and clothing will be thankfully received by Rev. W. G. Jervis, Secretary to the Poor Clergy Relief Society, 345, Strand, W.C.

METROPOLITAN ASSOCIATION for IMPROVING the DWELLINGS of the INDUSTRIOUS CLASSES; incorporated by Royal Charter, dated October, 16th, 1845, with perpetual succession.

DIRECTORS.

Chairman.—Sir RALPH HOWARD, Bart.

Deputy-Chairman.—JOHN WILLIAM TOTTIE, Esq.

George William Alexander, Esq.
Major-Gen. Edward Pery Buckley, M.P.
The Right Hon. the Earl of Carlisle, K.G.
Stephen Charles Denison, Esq.
Edward Enfield, Esq.
Sir William Fraser, Bart., M.P.
Hon. D. Francis Fortescue, M.P.
Thomas Field Gibson, Esq.
Frederick David Goldsmid, Esq.
The Right Hon. Lord Claud Hamilton, M.P.
William Egerton Hubbard, Esq.
Edwin Hill, Esq.
Sir Samuel Morton Peto, Bart.
T. Southwood Smith, Esq., M.D.
Russell Scott, Esq.
William Arthur Wilkinson, Esq.
Horace Wilkinson, Esq.

The necessity for the prosecution of the objects of this Association is continually brought before the public by the press and in the reports of the officers of various sanitary boards, the only result of which has hitherto been the formation of various societies in addition to this Association, of smaller scope, though having the same objects in view.

The experience of 13 years has convinced the Directors that the only mode in which the existing evils resulting from the improper housing of large masses of the people in densely populated districts can be effectually and permanently alleviated, is by the exercise of such powers as they possess, and that the desire to do this must at the present time be exerted by one extended and powerful combination, instead of a variety of disjointed attempts, each necessarily burdened with expenses of its own, pressing upon the body of proprietors with a weight proportioned to the contraction of the area of its operations.

The Charter confers power to raise £100,000 capital, in shares of £25 each, to be expended in England and Wales, and to increase such capital to any extent from time to time, with the sanction of the Board of Trade and the Shareholders.

To enter into contracts under the common seal of the Association.

To declare dividends not exceeding £5 per cent.; surplus to be applied in further promoting the objects of the Association, with the approval of the Board of Trade.

Constitution—Shareholders incorporated, and liabilities of each limited to the amount of his investment.

Directors elected by the Shareholders, two retiring every year, but capable of re-election.

Supervision by the Government, through the medium of the Board of Trade, for the purpose of securing the permanence of the original intent.

It is gratifying to know that, wherever the operations of this Association have been felt, the result has been the improvement of the accommodation afforded in the neighbouring dwellings; but greatly increased efforts are requisite, both to meet the extent of the existing evil, and to perfect the remunerative character of the undertaking.

The Directors, therefore, invite the co-operation of the capitalist, and, to this end, his inspection of their buildings undermentioned.

The tenant class are earnestly requested, for the sake of their comfort, their health, and the economy of their dwellings, to make themselves acquainted with the accommodation hereby provided.

Every information may be obtained on application to the Secretary, Mr. CHARLES GATLIFF, 19, Coleman Street, London, E.C.

The existing property of the Association is as follows:—

Pancras Square, Old Pancras Road....	110	families.
Ingestre Buildings, New Street, Golden Square	60	do.
Nelson Square, Snow's Fields, Bermondsey	108	do.
Albert Street, Mile End New Town....	60	do.
Pelham Street, Mile End New Town ..	35	do.
Pleasant Row, Mile End New Town ..	11	do.
Queen's Place, Dockhead.....	10	do.
Albion Buildings, Bartholomew Close, Aldersgate Street	24	do.
	418	do.
Soho Chambers, Old Compton Street, Soho	128	single men.
Metropolitan Chambers, Albert Street, Mile End New Town	234	do.
	362	do.

HONORARY SECRETARY.
George Bell, Esq., 186, Fleet Street.

HONORARY PHYSICIAN.
George Buchanan, Esq., M.D., 75, Gower Street.

WITHIN the last few years, several Reformatories have been established in London and the neighbourhood for destitute boys. These institutions have on the whole been successful, and they have shown that under proper management destitute boys, who have already been convicted of offences against the law, may be reclaimed; and that in the meantime the proceeds of their labour go far towards defraying the cost of their maintenance.

All the above Reformatories are open to boys who have been convicted, and in most of them unconvicted boys are also received; but it is believed there is no institution *specially provided for boys who are destitute, but have not been convicted.*

The gentlemen whose names appear on this prospectus, desire to supply this want. They have opened a house, in a central situation, where boys are clothed, fed, and instructed, and have a home without the influence of bad example. Order, neatness, and cleanliness, both personal and domestic, are strictly enforced as important elements in moral training. The boys are engaged in household work, cleaning the rooms, windows, and furniture; cooking their meals, washing and mending their clothes; also in carpentry and chopping firewood.

Daily instruction is given in reading, writing, arithmetic, geography, and in the Holy Scriptures.

Some of the boys have been put to remunerative work, and it is hoped that the Institution may be thus made in a great measure self-supporting, and that many persons will be willing to give situations to boys who have earned a character in the Home. Some of the boys are employed in out-door work, returning every evening to the Home: some are instructed in the Home in skilled labour. The Home is thus a training school, *differing from Reformatories in not admitting convicts.*

Under these circumstances, the Committee of the BOYS' HOME *appeal with confidence to the Public to help them in offering to destitute boys who have never been convicted, the same advantages which have already been provided for convicted criminals.*

Application may be made to the Committee, at the Home, No. 44, Euston Road, for the reception of boys, gratuitously, or under the terms of the Industrial Schools Act, or at a fixed rate of payment. The number received gratuitously will depend upon the funds at the disposal of the Committee, and will consist entirely of the most urgent and most deserving cases. The number of boys boarded and taught in the Home, upon payment, must also in some measure depend on the future arrangements of the Committee: but the Managers intend carefully to avoid the substitution of the "Home" for the proper and natural guardianship of the parents.

Subscribers and Friends to the Institution are invited to inspect The Boys' Home at any time convenient to them. The Industrial working can be most satisfactorily seen from 11 to 12 in the Forenoon, or from 3 to 4 in the Afternoon. The School-hours are from Half-past 4 to Half-past 6 in the Afternoon, and from 7 to 8 in the Evening.

During the year 1858, 50 boys have been received into this Home. The Committee are reluctantly compelled to turn away applicants daily, and they earnestly entreat such pecuniary assistance as may enable them to continue and to extend this good work.

Subscriptions are earnestly requested in aid of this Institution, and may be paid to Mr. George Bell, Honorary Secretary, No. 186, Fleet Street; to any Member of the Committee; to the Master, Sergeant Rayment, at the Home, No. 44, Euston Road, St. Pancras; or to the account of the Boys' Home, at Messrs. Coutts & Co.

Donations of Clothes, Boots, Meat, Vegetables, Tea, and Provisions, most thankfully received.

HOMES for SERVANTS OUT of PLACE:

21, Nutford Place, Edgeware Road, W.; Superintendent, Mrs. Butcher.

110, Hatton-garden, Holborn, E.C.: Superintendent, Mrs. Peake.

52, Nelson-square, Blackfriars-rd., S.: Superintendent, Mrs. Garrard.

Lodgings, &c., at 1s. 6d. per week.

FUNDS are needed from the benevolent public. These Homes have been established many years, and have sheltered more than 6000 young women; 31,000, unable to pay, have registered free. Of the 100,000 servants in London, 10,000 are always out of place, and changing places.

Treasurer—R. C. L. Bevan, Esq.
Bankers—Messrs. Barclay and Co.
DANIEL COOPER, *Hon. Sec.*

EVERY MAN HIS OWN BREWER.

Containing Practical Instructions by which any man can brew his own Beer, equal to the best London Porter, at 4d. per gallon; Stout at 5d., and a variety of Ales at a proportionate expense. INDUSTRIAL EXHIBITION OF THE REFORMATORY AND REFUGE UNION.

THE Second Industrial Exhibition of the Reformatory and Refuge Union, consisting of specimens of the work of the inmates of the various institutions comprised in the Union, was opened on Wednesday, April 13th, at Willis's Rooms. The institutions which contributed to the exhibition of industrial produce are the following:—Home in the East Reformatory, London Female Preventive and Reformatory Institution, Training Refuge for Destitute Girls, Paddington Home and Laundry, St. James's Home, Refuge for the Destitute, Cottage Road Home, Dumfries and Maxwelltown Ragged and Reformatory School, School for the Destitute, King Edward or Eastern Refuge, Royal Female Philanthropic Society, Rescue Society, Aberdeen Female School of Industry, Cripples' Home and Female Refuge, School of Discipline, Boys' Home Industrial School, Industrial Home for Girls, Boys' Refuge, St. Giles' and St. George's Bloomsbury Refuge (boys), St. Giles' and St. George's Bloomsbury Refuge (girls), Reformatory Factory, East London Shoe-black Society, Buxton Juvenile Reformatory, Manchester Female Refuge, Red Lodge Girls' Reformatory, Bristol Ragged School, Islington Reformatory, Cork Industrial Ragged Schools and Dormitory, London Female Penitentiary, and Devon and Exeter Female Reformatory. The doors were opened at twelve, noon, and there was a large attendance of the nobility, gentry, clergy, &c., in the course of the afternoon, among whom we observed the following:—The Duke and Duchess of Argyll, Mrs. Tait, Lady Cranworth, Lady Eardley and Miss Eardley, Hon. G. Byng, M.P., Mr. and Mrs. R. Hanbury, the Ladies Pelham, Lady Martin, Lady Isabella Whitbread and Miss E. Whitbread, Hon. Mrs. Lefroy, Mrs. Holland, Hon. Miss Hobart, Mr. and Mrs. A. D. Chapman, Mr. and Mrs. C. Hanbury, Mrs. Hoare, Mrs. Fremantle, Mrs. G. A. Hamilton, &c. &c. The exhibition continued open during Thursday. On Wednesday evening there was a *Conversazione* of the subscribers and friends of the Union. The large room was filled by several hundred leading friends of the Reformatory movement, among whom we noticed:—The Earl of Shaftesbury, President of the Union; Earl of Carlisle, Earl Ducie, the Bishop of London, Mr. R. Hanbury, M.P., Hon. A. Kinnaird, M.P., Dowager Lady and Lord and Lady Radstock, Sir Duncan and Miss Macgregor and Mr. J. Macgregor, Mrs. Locke King, Hon. Miss Waldegrave, Lady Elizabeth Cust, Lady Ashley and party, Mrs. Labouchere and party, Miss Portal and party, Hon. Mrs. Lefroy and party, Hon. Mrs. Maude, Colonel Tynte and party, Lady Foster, Hon. Mr. and Mrs. Sydney Curzon and party, Hon. Mrs. Villiers, Sir William and Lady Maxwell and party, Lady Stuart, Lady Dunlop and party, Lady Emily Stratford and friends, Lady Helena Cooke and party, Admiral Vernon Harcourt, Mr. Henry Pownall (Chairman of Middlesex Magistrates), Mr. T. Carlton Tufnell (H.M. Inspector of Schools), Mr. Paynter and party, Mr. Alexander Haldane and Miss Haldane, Mr. J. Farish, Mr. G. H. H. Oliphant, Mr. and Mrs. A. D. Chapman, Mr. and Mrs. C. Hanbury, Mr. W. J. Maxwell, Mr. and Mrs. R. Charles, Mr. and Mrs. I. Braithwaite, Rev. L. Vernon Harcourt, Mrs. Moody and party, Rev. D. Laing and party, Mr., Mrs., and the Misses Dougal, Dr. Crawford, Colonel Oldfield, Colonel Fenning and party, Colonel Hall, Major and Miss Usher, Colonel Pitcairn, Mr. and Mrs. George Hankey, Mr. and Mrs. O. Hanbury, Mr. Hankey and party, Lieut.-Colonel Burrowes, Captain and Mrs. Anstruther, Mr. Joseph Payne, &c. &c.

The first half-hour was devoted to a general conversation, affording opportunity for those friendly recognitions which form so pleasing a feature of this class of meetings. At eight o'clock—

The Earl of SHAFTESBURY took the chair, and briefly stated the intended course of proceedings.

Mr. ROBERT HANBURY, M.P., Hon. Secretary of the Union, read a letter from the Rev. Dr. Guthrie, regretting his inability to be present at the meeting, owing to severe illness. Mr. Hanbury proceeded to give a brief statement of the objects and working of the Reformatory and Refuge Union. It served as an agency for bringing the reformatory institutions into contact with those who were fit objects for admission. Magistrates, who found it would be desirable to send any of the poor children convicted before them to a reformatory school, were enabled, by means of the Union, to know where they should apply, and to obtain information as to what institutions would be most useful in any particular case. During the last year the Union had succeeded in finding admission for 156 cases. It had also contributed to the establishment of new institutions, and the encouragement of those already existing. The necessity for its operations was much enhanced by the withdrawal of the Privy Council grants, with respect to which he referred to a published correspondence between the Committee and the Council. The Union had formed a fund to support the institutions which had suffered loss from this cause. But in order that the funds might be properly distributed, no grant was made except after two members of the Committee had visited and reported upon the institution. Another object kept in view was that of promoting the emigration of the inmates of the refuges and schools. This was essential to the success of the reformatory movement. The Union also attached great importance to the training of masters and matrons for reformatories, and this was done at Red Hill, Glasgow, and at the North-west London Preventive and Reformatory Institution, Euston-road. But all the training they could give these masters and matrons would be of no avail unless their hearts were in the right place, and unless they were really desirous not merely to rescue these children from the streets, but also to teach them those truths which concerned their eternal welfare. During the past year the girls' laundry and the school ship had been established. It had been said the Bible and the spade were the only two means of rescue. He did not mean to say that the occupation must necessarily be agricultural, but he did hold that the training given in these institutions should be thoroughly industrial. The three leading points to be kept in view were, the Bible, industrial training, and as much secular instruction as was possible without interfering with the two former. Nothing but the teaching of Christ's Gospel could give strength to stand against temptation. In conclusion, he said that the Committee were greatly indebted to two gentlemen, both of whom were present; to one of them they were indebted for the exhibition of the produce of the reformatories so nicely arranged down stairs; and to the other, for the arrangements relating to that meeting. He referred to Mr. Macgregor and Mr. Oliphant.

The Bishop of LONDON expressed his great regret at the absence of Dr. Guthrie, who, he said, had almost as much reputation for his connexion with this movement as for that eloquence in which he was unrivalled. The Right Rev. Prelate proceeded to state that in reading the Report of the Committee of last year, he was struck with the fact that in the entire metropolis there were but three certified Protestant Reformatories. The metropolis contained within itself two millions and a half of inhabitants, and yet the magistrates, who were called upon to commit young offenders to prison, or to send them to reformatories, could find only three Protestant Institutions, certified under the Act in the whole of Middlesex, viz., the "Home in the East" for boys, the School of Discipline at Chelsea, and the Reformatory at Hampstead for girls. Some time ago a relative of his was called upon to decide whether a boy who was brought before him should be sent back to prison, or to a Roman Catholic Reformatory, because there was no Protestant Reformatory that he knew of to which he could commit him. This Reformatory and Refuge Union would have the excellent effect of affording to magistrates and others information of this kind, which would be found very useful to them. He hoped the time would

Digitized by Google

speedily come when no magistrate would be at a loss for a reformatory to which to commit persons coming before him. He believed that it was not desirable at present to establish any more reformatories in the metropolitan districts, but rather to work well and efficiently the institutions already in existence. This, however, could not be done by any mere regulations, however admirable. The experience of missionary efforts, whether at home or abroad, had shown that our whole success depended not on lifeless machinery, but on the life infused in the agents. He strongly urged the necessity of self-denial, and of a spirit of active love and personal devotion on the part of the friends of this movement. Also the duty of self-examination as to whether there was anything in our own habits and customs—personally or socially—which tended to augment the number of those who require reformation. He pressed this point more especially with reference to the treatment of domestic servants. It was also their duty to inquire, how it was that these refuges for the homeless poor were necessary, when it was a part of the law of the land that a provision of this kind should be made in connexion with the workhouses? No doubt many of them had read the accounts which had from time to time appeared in the papers relative to the condition of the casual wards in our workhouses. He would ask whether there was not some great change necessary with regard to this matter? He contended that if the machinery of the Poor-laws were properly carried out they would meet the necessity which had given rise to these refuges for the houseless poor. How was it that these casual wards in our workhouses were not properly conducted? He believed that it was largely owing to the fact that the upper classes, to whom Providence had given wealth and leisure, neglected their duty with regard to the administration of the laws for the relief of the poor. Instead of performing their duty, the conduct of these affairs was left to men who, from their education and from their general habits and associations, were not very likely to have much sympathy with the poor. This was the reason why such scenes occurred in our casual wards as those to which he had referred. The fact was, that there seemed a tendency, increasing year by year, to let the administration of the relief of the poor fall into the hands of a lower and lower class of people. This was a serious matter for gentlemen to consider. They ought to do their duty in this respect, even at considerable sacrifice of personal convenience, and take a more active interest in parochial arrangements than they had hitherto done. In the course of some further remarks, urging the audience to effort in the various departments of the reformatory enterprise, the Right Rev. Prelate said he could not but regard it as a serious sign of the age that there was so much talked, and he might also say, so much done in this matter, but that so few took part in it personally. He called on all present to use their influence for Christ's sake on those who were brought within its range.

Lord Radstock, who had just returned from America, detailed some of the facts which he had gathered during his transatlantic tour as to the progress of the Reformatory movement in the United States. In the State of Massachusetts, with half the population of London, they expended half a million of money annually on education, which was nearly as much as was granted by Parliament for the whole of the United Kingdom. In Pennsylvania there had been for thirty-one years a house of refuge in active operation, and, in fact, it was a part of their system. In Massachusetts they set aside £10,000 a-year for these purposes out of the taxation. In Boston alone there was a reformatory for 300 boys, on which £4,000 or £5,000 a-year was spent. Even Rhode Island expended £3,000 a-year for these purposes. In Connecticut there was a reformatory for 150 boys, which cost £300 a-year. Chicago, twenty years ago a miserable swamp, but now a thriving city of 120,000 inhabitants, erected a reformatory as its first public building, and he held in his hand its third annual Report. In America this movement was not merely the result of philanthropy, it was based on economical calculations. These acute transatlantic cousins of ours had found that it would cost the community far less to subject criminal youths to the reformatory process, than to allow them to pursue their career, and to bear the expenses of convicting them, and of maintaining them in prison. His Lordship gave a very interesting account of a boy who had been trained in an English reformatory with which he was connected, where it was the principle to repose confidence in the inmates, and to promote their self-respect. This boy had often been trusted in various ways, such as being sent out to get change. In fact he would not have been afraid to send him out to change a £5 note. After being a little more than a year in the reformatory, the boy was sent out to Canada, and while there had given great satisfaction. He was sent by his employer to post a letter containing money. The letter arrived without the money, and the boy was suspected. The boy on one occasion indulged excessively in drink, so as to produce delirium; but, strange to say, his constant exclamation was that his honesty had been unjustly suspected. It turned out eventually that the money had never been put into the letter, and the employer gave the boy a very good character. This showed that the reformatory system, if properly pursued, would restore that moral sensibility which some supposed to have been extinguished by crime.

At this stage of the proceedings there was an interval of half an hour for refreshments, and the inspection of the exhibition in the lower room. The display of industrial works by inmates of the various reformatories was arranged on stalls, and occupied forty-two counters. It consisted of some admirably manufactured specimens in turnery, carpentery, mats, printing, tailoring, shoemaking, straw work, needlework, wood-chopping and other handicrafts, from upwards of forty reformatories. Several of the young lads were seen at work at one or other of these handicrafts. It is impossible to particularize the specific productions, which were of a quality and make quite equal to those purchasable at our metropolitan shops. A list of the various institutions contributing to the exhibition will be found above. Lord Shaftesbury having resumed his seat at the expiration of the appointed interval,—

The Earl of Carlisle said he had been called upon by their noble chairman to address them; and although he had that honour, yet it had not been very distinctly conveyed to him upon what part he was to speak, and consequently his address would be very short. In the first place, they had just been looking at a number of articles, so varied, tasteful, and artistic, that he could scarcely expect them to listen to anything which might be spun from his homely yarn. It was the first time he had been placed for this cause before an assemblage which appeared to him more like an evening rout than anything else; and he must admit that there was before him a placidity which rather overawed him; but he trusted that beneath that quiet form there existed a lively feeling, which should induce those whom he addressed, of both sexes, to give an energetic support to refuges and reformatories. He did not doubt that he was surrounded by persons to whom they had listened with attention, for they had heard Lord Radstock, who had described to them what their Transatlantic kinsmen had done in their reformatory institutions, and they had listened to the address of the Lord Bishop of the diocese, delivered in so discreet and quiet a tone, but with so high an aim, that it exalted him in the station which he so worthily filled. If he were to look about for a plea for refuges and the Reformatory Union, he could find it in the fact that he happened to have two reformatory institutions erected upon his own property, for he was the actual landlord of two refuges, one in Yorkshire and the other in Northumberland, and therefore he could speak as to their satisfactory state, and the essential service they had rendered to the different localities in which they were situate. He believed that they were eminently entitled to the philanthropic sympathy of all the citizens of that great city. It was not only to provide a refuge for the houseless and homeless, but the reformatory took permanent charge of the conduct and the heart; it dealt with the very germs of evils; it took the growing mischief, as it were, in the bud, and, by disinfecting the hideous crop of violence and crime, converted it into a smiling harvest of honesty and industry. It was no longer since than yesterday that he was reminded in that very room of an opinion which he offered at the great meeting of the Association for Promoting Social Science at Liverpool, in which he had said that for their machinery they must mainly rely—indeed, it was the great secret of the success of the reformatory movement—on the superintendence of a master who brought to bear the influence of one human heart working upon another human heart, for without that necessarily the best management must prove unavailing to effect its object; and the principal point was, that the heart of the master should be in the work. There was a passage in the report which had struck his attention, and to which he wished to refer. It said: "A member of the Committee visited Canada during the summer, for the purpose of making per-

Digitized by Google

sonal inquiries into the condition of emigrants of this class already settled in that colony. The result of his investigation was generally favourable, and he obtained promises of co-operation from the Government immigration agents in various towns." Now that extract gave him especial pleasure, as it was so promising. A wide field was opened for labour for the reclaimed youths, and the fact of one of their own officers going to Canada showed that they had on the committee men whose hearts were set on the welfare of this institution. He wished now to quote the case of the very first boy who was received into the Castle Howard Reformatory, as a general illustration of the working of this system. He was the son of very poor parents, and he was employed in a cotton mill at Hull, and while so employed the overseer noticed the very great delicacy of his touch, and after working hours he retained him to give him lessons. In what did they think that he gave him lessons? Why, in picking pockets. He used to intercept the persons as they were landing from the steam-boats, and pick their pockets; and at other times he pursued his vocation at the doors of churches; and before he was detected he had effected larcenies to the amount of £200. After stealing property to the amount of £200, he was at last detected, and being convicted, the eyes of the police were fixed upon him, and he went through seven imprisonments. After the seventh imprisonment, he was transferred to the Castle Howard Reformatory, where he spent two years, and now he (the Earl of Carlisle) was happy to say that he was earning his own living in an honest, and, he trusted, a lucrative manner. That was a specimen of the operation of reformatories which were now studded and parcelled throughout the land. Therefore he did not see why they should despair that, under the Divine blessing—without which no human efforts would prosper—he said he did not despair of achieving results on a more comprehensive scale. History told them that conquering Rome had been formed from the greatest scoundrels, vagabonds, and vagrants on the earth, and that it became, in the language of the poets, "the fairest of created things;" but what could they say of Australia, which was formerly the resort of housebreakers, forgers, and others steeped in crime, but was now a vigorous limb of the empire, and was more bounteous of wealth than Rome ever dreamt of? He concluded by urging on them to develope the resources of this institution, until the weak became strong, the little great, and the boy a strong man.

The Earl of SHAFTESBURY concluded the proceedings by a brief speech, in which he supported the views of the Bishop of London, as to the necessity of a reform in the casual wards of our workhouses. From evidence which he had himself taken, he had found that these casual wards were productive of a very large amount of mischief as at present conducted. Owing to the varied forms of evil to be dealt with, institutions of all the different classes ought to be supported, and they must not confine themselves to reformatories alone. For one class of the poor nightly shelter for a few hours was necessary, and for another class they must provide accommodation of a more permanent and systematic description. The moving population of London were 40,000 in number, and in some of the poorer districts the incumbents had told him that the population changed twice, and sometimes thrice in a year. He hoped, therefore, that they would continue to support all those different institutions which had for their object the relief of temporal distress, and those also which sought not merely to transform criminals into good citizens for this life, but to make them aspirants, and more than aspirants, for the citizenship of the life to come.

The LORD BISHOP OF LONDON then pronounced the benediction, and the proceedings closed.

STATE INDUSTRIAL SCHOOL FOR GIRLS.

LANCASTER, MASSACHUSETTS.

At the suggestion of the Chairman of the Joint Special Committee of the legislature upon the public charitable institutions, the following paper, prepared by the Superintendent for a convention of the managers of reformatory institutions, which was to have been held during last May, in New York, has been appended to his report.

A consideration of the advantages of the Separate and Family, over the United and Penitentiary System, in Juvenile Reformatories.

1. In the discussion of questions relating to the best system of discipline or architectural plans in an establishment for the reformation of juvenile offenders, it should be understood that in the advocacy of a supposed improvement there is no real or intended disparagement of any existing plan. With all the unfavourable circumstances attending the trial of this interesting experiment, the per-centage of reformation has been remarkable, and has afforded an ample compensation for the large outlays of money and the generous gratuities of personal services on the part of trustees and managers. Neither would an advocate of progress necessarily consider it expedient, when a considerable amount of money had been invested in buildings, and an elaborate system was in the course of successful experiment, to abruptly introduce a radical change. But the question presents itself, rather in this form: In the establishment of new institutions, shall we continue to construct our buildings after the old models, and pursue the old form of discipline, or are there any improvements which a sound philosophy or successful experiments suggest and justify? It should never be forgotten that, after all, the best system of discipline is the embodied good sense and moral power of a parent, matron or superintendent: that a constructive, harmonizing and powerful influence in a presiding mind will conquer all difficulties, and secure its predetermined results; while the lack of this cannot be compensated by the happiest material arrangements. A wise and pious parent, with God's blessing, may save his child in the heart of a vicious city, and a weak, indulgent, careless parent, may follow his child to the grave of sin from the most quiet country home.

2. There are two prominent arguments in favour of the united system, combining both sexes under the same roof and government, that arrest the attention immediately upon the consideration of this question. The first may be called the *providential* argument. The sexes were created to live together, both as children and adults, and to exercise in every age mutual and wholesome influences over each other. There are services that each may legitimately render to the other, and the lack of the society of either sex, under proper restraint, may be the occasion of serious mental and moral loss to the other. In the ordinary condition of youthful character, under the eyes of parents or judicious teachers, the presence and society of the opposite sex, by an early and innocent familiarity, may defend both from gross and impure affections and imaginings. But the children committed to these institutions are many of them precociously mature, corrupt in their habits, and familiar with social crime. They cannot innocently associate together; their presence and society mutually inflame morbid appetites, and suggest old habits and crimes, from the practice and even recollection of which we seek, as far as possible, to withdraw them. Indeed the force of this providential argument is destroyed by the extreme care exhibited in all united institutions, to secure an absolute separation, even from the sight of each other. There certainly can be no family or social benefit arising from the simple fact, that in an adjoining wing of the building is a class of girls as unfortunate or depraved as themselves, or that in the gallery overhead, during public worship, secluded like Jewish women in a synagogue, they are listening to the same services.

3. The second, and by far the strongest argument, is the *economic*. It is so much cheaper, it is urged, to have both sexes in the same inclosure, that extraordinary advantage alone, can justify their separation.

The buildings and external walls, being connected together will afford a considerable saving in materials and cost of construction. One set of public offices only will be required; one chapel, one system of water and heating pipes, one superintendent and chaplain, and one board of managers can supervise the united institution. There can be a profitable interchange of labours; the girls attending to the house-work and sewing, the boys to the farm and trades, and meeting the requisitions for male assistance in the female department. For a moment let us consider these points, not exactly in the order they are mentioned above, but all in their places. It is by no means indispensable that there should be two boards of management for separate reformatories where they are located in the same portion of the State. One board might, with much propriety and mutual benefit, if willing to devote adequate time to the responsible work, supervise and secure a correspondence and harmony between the

Digitized by Google

two establishments. But as this work is in nearly every case voluntary, costing the State only the incidental expenses of travel, this consideration can have but small weight. If not too far apart, one chaplain, with such voluntary service as can be readily commanded, might meet the principal requisitions of the schools, the superintendents conducting, at least a portion of the time, and profitably, the daily devotions. The proper discipline for the two sexes is so different; their temptations, their future condition in society, their habits, tempers, diseases, are so varied, that no ordinary man combines such a fruitfulness of resources as to enable him to turn readily from one to the other, and to meet the almost infinitely diversified demands upon his time and thoughts. In many respects a different kind of man, in person, temperament, and address, will succeed best as superintendent with the two sexes. As to the economical interchange of labour, the girls, it is said, could attend to the beds and to washing, making and mending clothes. All excepting the making of the beds, they could perform as well, when separated a few miles from each other. But what do we find to be the fact in reference to this matter? In the Reform School for Boys at Westborough, there are so many little fellows who cannot be otherwise employed, that without this sewing and house-work they must be idle a portion of the time, unless some new form of industry can be secured, adapted to their tender age, or their hours of study be increased beyond what has been considered advisable. We have attempted in vain to secure a portion of their sewing for our girls, and we feel the force of the reason forbidding their granting our request. Indeed they are in a condition to take in profitably sewing of certain descriptions, themselves, if it could be obtained. We have made a pleasant arrangement, by which the boys manufacture the shoes for the girls, and receive in remuneration for their work, stockings knit by our families. A distance of a few miles would offer no serious obstacle to the interchange of industry. The over-shadowing difficulty of both institutions is to obtain suitable, remunerating employment for both boys and girls. The washing being so largely performed by machinery the boys lose no manliness in its execution, while the performance of this labour for them by the girls, of the classes found in reform schools, might be open to the same objection urged against their holding social relation with each other in the same building.

4. But the great compensation set over against any advantage gained in economy is the fact, that wherever there is a union of the sexes in the same institution both are subjected to rigid and unnatural restraints that otherwise would not be required. There must be a constant surveillance, and the out-of-doors exercise must be confined to a limited space. The voluntary movements of the boys and girls outside of the school, permitted for the trial of their integrity must be circumscribed. The indulgence granted upon holidays will be restricted; in short, at every salient point of culture and discipline, the presence of the opposite sex, of the same class, must operate as an irksome restraint upon the innocent and almost indispensable gratifications of the other.

5. A union of the sexes necessarily requires the penitentiary discipline—the cell, the lock, the wall. Just in so far as by these appliances voluntary action is limited, just in so far the great work of reformation is hindered. Without trial there can be no positive character. How difficult to form an opinion of the probable course of a child, when the world is before him, and he is separated from it by the door that he can at any moment open, from the habits of the same youth, when continually followed by an officer, and constantly reminded of his duty by the ringing of the inevitable keys. The greater freedom of will and action that can safely be allowed, the more numerous the occasions for an undisguised exhibition of the real character, the more readily the proper antidotes to evil can be applied and the more positively can be the future disposition and probable success be predicated. Our refuges only rise above houses of correction in proportion to the elasticity of their discipline and the physical liberty allowed. Whatever tends, like the union of the sexes, to limit these, sinks the reform school into the jail, and exposes it to the same liability to ill success in the work of reformation of character.

6. The experiment of united institutions has not been satisfactory to managers and superintendents. By notes left in the chapel, in the rooms and halls, by signs and by actual communication, improper intercourse has occurred even under the very strict surveillance that has been exercised. Miss Carpenter, of Bristol, England, whose published volumes were among the first and richest contributions to reformatory literature, now generously exercising the superintendency of an industrial and reform school for girls in the vicinity of her residence, in which at first both sexes were gathered, says, in a private letter, referring to her published volumes: "The only point on which I have changed my opinion is, as to the expediency of allowing any connection or intercourse between boys and girls of this class. While still holding the importance of a mutual and well-regulated communication between the young of both sexes in ordinary schools, and having tried the experiment with these children at Kingswood, I believe that the passions of these poor children have become so diseased and prematurely developed that the reformatory action cannot be properly carried on without an entire separation." In a published tract, also from the same hand, giving the history of the Kingswood School, she says: "It was determined by its founders, Russell Scott, Esq., and Mrs. Carpenter, to try the experiment which has been successfully carried on in many continental schools of receiving boys and girls into the same establishment, the size of the premises appearing likely to allow needful separation. The difficulties, however, which constantly arose, and which at last appeared insurmountable, made them after a time decline repeated applications to admit additional girls;" and finally resulted in the establishment of a separate institution.

7. The hope of rescuing the class of girls that usually find a refuge in these institutions, so far as human measures are concerned, is based upon their absolute separation from their peculiar temptations, and everything calculated to remind them of a former life, until their dormant self-respect is awakened, higher and purer ideas of life excited, and conscience quickened by the knowledge of the law of God. It is just the period when the thoughtless girl begins to take upon herself the attributes of the woman; and if at this critical hour untoward influences can be avoided, habits of thought and industry formed, and the powerful forces of religion be brought down upon the heart, there is good reason to expect the happiest results. The close relation of individuals of the other sex, of the same age, acquainted with the same scenes, and constantly seeking to renew by significant signs and furtive glances old associations, must peril this delicate process. By a kind of instinct, children in the same institution, although they do not associate intimately together, come to an acquaintance with each other: and the knowledge of the mutual connection of the two sexes with an institution of this character, will not have a favourable influence upon them, in their possible meetings, when they return to society. A mutual loss of self-respect might be the occasion of the renewal of temptation, and a return to a life of crime. Neither would the previous acquaintance of boys and girls, taken from the streets of the city, and brought into the same locality, aid in securing an early forgetfulness of the past, and the introduction of a new mental and moral life.

8. The anxiety in reference to the supposed expensiveness of the separate and family system is based upon the present style of architecture prevalent in the construction of our reformatories. They are elaborate prisons, spanned indeed by a rainbow name, to save the child from the ignominy of the gaol. To construct such edifices an immense fund is required at starting, and to sustain them large current supplies are requisite. Why may we not begin simpler, and in a humbler structure? Why may not the architecture be as quiet and cheap as the average dwelling-houses of persons in moderate circumstances, having no other internal conveniences than houses of this class, and subjecting the inmates to the ordinary personal inconveniences which they will meet when they enter the families where they may be indentured? In the case of the majority of the English institutions, the commencement was very small; an old dwelling or school, but slightly changed in its original construction, is made to open its doors for the first inmates, and gradually, as the experiment justifies the wisdom of the trial, new, but exceedingly simple and humble buildings rise around the parent house. It is considered quite indispensable that the inmates of these institutions should be subjected to much the same style of life that they will meet in the homes of which they are hereafter to be the occupants, and enjoy no privileges above the average of the community, nor give colour to the natural objection of the honest, poor tax-payer, that the criminal

Digitized by Google

children of dissolute parents are better provided for than the inmates of his own virtuous, but somewhat circumscribed home. Five or six thousand dollars might easily be made to provide ample and permanent accommodation of this character, for thirty boys or girls. Twelve such homes would cost but about sixty thousand dollars. The cooking apparatus would be the simple family structure; the economical stove in the place of the wasteful range. Three officers, at most, would be required in each house, whose study would be only the solution of the problem of the thirty with whom they daily lived and laboured; and they could more readily and successfully manage their charge, win their affections, and mould them into harmony, than to attempt to accomplish their proportion of the same result upon three hundred and sixty. Over this village with its simple chapel, one superintendent, who might also be chaplain, with an assistant, might comfortably preside. In each house, or in the united school and workshop, the same officers should have charge of the industry, education and discipline of their particular charge. Under the force of this family bond, no other guard would be required than the presence of superiors, the appeal to the sensibilities, and sense of honour, and the knowledge that the magistracy of the State stood ready to enforce a return, in the case of those that attempted a dishonourable escape. Gradually the most generous confidence can be granted, and the inmates will feel no more incumbering restraints upon their movements, than the children of a family, or of a school. If a personal illustration may be permitted, we might say that this result has already been reached with us. Although we began with nearly an hundred, and therefore could not make use of the powerful public sentiment which at the present exists in each house, and at once restrains and moulds every new comer, as she enters the family circle, but were obliged to harmonise in each house, at once, more than thirty discordant minds, and control that number of almost lawless girls; still we have reached this point of success, that for the current year, there has been no attempt to run away,* and a marked and wonderful change for the better has manifested itself in nearly every instance. The divisions upon the lawn allotted to the families for exercise, bounded by simple paths, are rarely transgressed, and there is, probably, as little sense of confinement as is felt by any child in a family. The woods are scoured for flowers, berries, and ever-green dressing for the chapel, under the attendance of one assistant, and as often with no attendant. In the cases that seemed to be the most hopeless, on account of actual progress in crime, where there is any strength of purpose, the most satisfactory results have appeared. The old life comes to be regarded with horror and detestation, and a noble ambition to be a woman in the highest sense of the word, and to fulfil a noble woman's mission, has inspired the heart and aroused the energies of girls, who came to us with their robes of purity trailing in the dust.

BRADFORD K. PEIRCE.

* Since this date there has been one.

RECORDER OF BIRMINGHAM'S CHARGE TO THE GRAND JURY.

AT the Easter Quarter Sessions, held at Birmingham, on 28th March, M. D. Hill, Esq., the Recorder, charged the Grand Jury as follows:—

Gentlemen of the Grand Jury,—It has doubtless fallen under your notice that the tables relating to convictions show that these have been for some time diminishing in number, whence it is inferred that crime is diminished in a similar proportion; and although the consequence does not necessarily follow from the premises, yet I have some confidence in the truth of some diminution. Except in cases of death by violence, the law takes no cognisance of crime before the apprehension of the alleged criminal; and therefore any causes which would diminish the number of apprehensions would also lessen that of convictions, even although the amount of crime should remain the same as before. Gentlemen, I shall show you that such cases are in operation, and although there may be, as I have already stated, an actual decrease in offences, yet the apparent decrease is, I fear, greatly exaggerated by the causes to which I refer; and I cannot therefore congratulate you with the warmth which might be expected by that very large body of writers, and that still larger body of readers, who consider convictions as truly measuring the amount of crime; and take no thought either of offences which are not prosecuted, because the malefactors are not discovered, or because, although detection has taken place, yet some influence intervenes, and withholds the injured party from appealing to the law. It is grievous, Gentlemen, to know that improvements in science and in the arts are immediately seized upon by the malefactor and turned to the worst purposes. Let me speak of base coin. A few years ago, false money, purporting to be made of either of the precious metals, could only be fabricated so as to pass current by the aid of dies. But a die sinker is an artist; and few artists could be found who would be tempted to prostitute their talents and to brave the consequences of felony. Those therefore who so degraded themselves would expect to be very highly paid for their services. Then, again, for working these dies not only must an expensive press be supplied, but an appropriate room must be permanently occupied, and not only did the possession of coining implements expose their owner to the danger of detection, but it was difficult for him, if not impossible, to carry on this nefarious manufacture with such an absence of noise as to escape notice. Thus the coiner must have been a capitalist, and must be also willing to expose his capital and his person to the greatest risks in pursuit of his dishonest gains. But, gentlemen, these obstacles in the path of the coiner have been removed by the hand of science. At the present day he requires neither die nor press. He chooses a metal quickly fusible, which he casts in a mould of plaster of Paris; demanding but little skill for its construction. The surface of the false coin so produced he electrotypes; and his task is then complete; while the whole process from beginning to end requires but a very scanty apparatus; so small indeed in bulk, that the coiner may carry it about his person without exciting suspicion. Simple processes have also been discovered, by which a fac-simile of almost any print or manuscript may be produced with very little skill or trouble on the part of the forger. Gentlemen, the speed and the cheapness of railway travelling, and the frequent departure of railway trains, have been turned to bad account by the criminal class. Heretofore the number of malefactors who journeyed far from home was inconsiderable. Quick travelling was expensive, and exposed them to observation; enabling the officers of justice to track them from stage to stage. Now, having committed an offence and secured their booty, they mingle with the throngs that resort to the stations, and in a brief space of time enter a train which conveys them beyond the peril of detection. That nefarious body, the receivers of stolen goods, have availed themselves of the railway for the conveyance of stolen articles to their agents in distant towns; in exchange, probably, for the produce of robbery and theft, committed at the places where such agents reside, thus multiplying the difficulties of detection, and giving to articles, the form and appearance of which cannot be changed, a similar impunity to that which attaches to plate and other metallic wares, by reason of the facility with which the melting pot renders their identification impossible. Again, there is too much reason to believe that the Post Office, and even the Telegraph, are freely resorted to for the communication of intelligence required for the co-operation of confederates in the prosecution of their evil designs. It must, however, be conceded that science, when duly invoked, is to the full as willing to give her aid to the officers of justice as to the wrong-doer. The telegraph has often been used with success to intercept the absconding felon, and the railway gives the means whereby the detective policeman can hurry from place to place and follow the traces of the flying criminal as long as such traces exist. One art, that of photography, has never, so far as I know, been perverted to evil ends, while on the other hand it is capable of affording powerful aid in the detection of criminals who have successfully evaded all other expedients. Unfortunately, however, the ministers of justice are slow as compared with their opponents in availing themselves of new resources. Five years ago Mr. Gardiner, the intelligent govenor of the Bristol Gaol, having provided himself with an apparatus for taking photographic portraits, subjected such of his prisoners as were thought to be veterans in crime to this process, and copies of the portraits being distributed among the police of our large towns several instances of identification occurred, whereby prior convictions were produced at the trials against prisoners whose history had been thus disclosed, and opportunity was given for administering a punishment more adequate to their deserts than could have been inflicted had they been sentenced on what, but for these discoveries, would have appeared to be their first conviction. Very properly Mr. Gardiner hastened to communicate to the

Digitized by Google

Home Office his success in making photography the handmaid of justice. But, hitherto, I believe, no steps have been taken by the Executive Government to bring this novel detective into general employment. Mr. Gardiner, however, is not discouraged, but still perseveres, and I hold in my hand one of his photographs, which being sent from Bristol to Birmingham enabled one of the sergeants of your police-force to recognise the original as a hardened offender who had led a life of crime in Birmingham and elsewhere, and had been more than once convicted in this Court. That the identification was due to the photograph, and that alone, is proved by this circumstance: A well written and minute description of his person and dress, and also of his companion, had been published in the *Hue and Cry Gazette*, which circulates throughout the police of the kingdom, with no effect. The sergeant attended at the trial, which took place at a Quarter Sessions for Bristol, held not long ago, and proved against the prisoner one of his prior convictions; whereupon the Recorder sentenced him to penal servitude for six years. Some time since I took the liberty of submitting to the Council of this borough the advantage which might be derived from placing a photographic apparatus at the disposal of the heads of your police, with, however, no beneficial consequence beyond adding somewhat to the hilarity of the municipal debates. Through the zeal, however, of Inspector Glossop, the aid of a professional artist has been on some occasions obtained, and I have before me a collection of photographic portraits which I am assured have been found of no slight utility. If, gentlemen, when you have disposed of the bills which will be presented, you should desire to ascertain for yourselves the value of the assistance which a systematic use of photography might render to the police in the performance of their duties, I will request Mr. Superintendent Stephens to send to you such of the officers as are able to furnish you with information on the subject. Additional assistance in the detection of offenders might be afforded by such an organisation as would connect the various police forces of the realm with each other, so far as regards the apprehension of prisoners, and give unity to their operations. Gentlemen, the functions of a police force are of two kinds, very distinct from each other. One is to preserve order, and by the exertion of physical force, when necessary, to relieve our towns and counties from all danger of serious tumults. As regards this duty, I should myself be sorry to see the command of the local forces transferred to the Executive Government of the country. It appears to me that such a concentration of physical power would be unconstitutional. But as regards the function of apprehending offenders, I believe it is essential to efficiency that, as respects certain individuals among them who had displayed ability as detectives, they should be authorised to act in any part of the kingdom, and should obey, not only the commands of their local superiors, but such as might be issued by some central authority, which authority should, so far as necessary, treat these detectives, wherever placed, as members of a general body common to the British Isles. I urge these improvements, viz., an extended use of the photograph, and a unity of action in the detective police, with the greater earnestness, because they would arm the ministers of justice with much additional power over the worst and most dangerous of our internal enemies. It is not the raw novice who runs to and fro in the manner described, but the adept in crime, the daring and practised burglar, who at nightfall is miles away from the house which his confederates have marked out for spoliation, to be effected it may be by murder, who arrives in the dark, executes his project, and before the return of daylight is again beyond the reach even of suspicion. Or it is the well-dressed passenger, in the first-class carriage of a railway train, who, with marvellous dexterity, the result of careful and assiduous training, filches money, watches, and jewels, from his fellow-travellers. The consummate knave, convicted at Bristol had risen in the course of years to this height in his calling. He was accompanied too by a young woman, whose appearance and demeanour befitted the station which she and her partner assumed. They had with them a child of engaging manners, who made acquaintance with strangers, and while fondling upon them is believed to have done good service to her parents or teachers in facilitating the thefts which were the business of their journeys. Or, again, the adept may be a swindler of fashionable exterior, taking up his abode at the principal hotel of the town which he has selected for the scene of his operations, whose bankers and shopkeepers have reason long to remember both his sudden arrival and his mysterious departure. The mischief wrought by these nefarious depredators is by no means confined to the amount of property, however large, of which they despoil the owners. The example of their prosperous career, chequered only by short intervals of imprisonment, few and far between, has a most demoralising influence on all who stand in proclivity towards crime. These veterans are the recruiting officers of our enemies' forces, and neither cost nor labour ought to be spared to protect society from their machinations, by lodging them for a long term of years within the walls of a gaol. But it may be objected that, as to the facilities for crime to which I have adverted, they have existed now for a considerable period, and that their efficiency in augmenting the number of offences which can be committed with safety, whatever that efficiency may be, cannot account for any sudden disparity between the number of offences actually committed and the number of prosecutions. Nor is this objection without its weight. Yet it must not be forgotten that habits are not formed at once, but that they require years for their full development; and that with regard to the habits to which reference has been made, there is no reason for believing that such development has arrived at its maximum. Another cause, however, is at work, and in course of rapid extension, which cause only dates from the commencement of the last year, and which will, I fear, explain but too well the great apparent diminution of crime, as explained by our statistical tables. Gentlemen, in February, 1858, an order was made by the Secretary of State for the Home Department, abrogating, by one stroke of the pen, the established scale of payment to witnesses, constables, and others, whose attendance is required at criminal trials. On what evidence (any or none) this innovation was made, I know not, but it is difficult to imagine a measure so thoroughly ill-judged. It cuts down the remuneration to a point which leaves the witness a loser, even as regards expenses, out of pocket (to say nothing of loss of time) whenever he travels to a distance from his home in order to give his testimony against a prisoner; insomuch that it is becoming a common practice for injured parties to restrain their natural desire to punish the wrong-doer, from whose dishonesty they have suffered, they not being able to bear the additional burden of loss imposed on them in prosecuting the malefactor. Gentlemen, it is not difficult to imagine the effect that must have been produced by this grave error on all who would otherwise come forward as prosecutors. But its bearing on constables and other inferior members of the police is even more to be lamented. Fortunately, it does not happen to any person out of that body to be frequently called upon either to prosecute or to give evidence on a criminal trial. Not so as regards the officers of police. These men are summoned often to distant parts of the country to give evidence against prisoners, sometimes for the purpose of identifying them with criminals who have previously been convicted, and sometimes with reference to the facts of the particular case then before the Court. I have in my possession documents abundantly proving the great hardships which these public servants, humble in degree, but most important to the safety and comfort of the community, are undergoing from the working of this pernicious ordinance. I had prepared myself to prove to you, in detail, that its effect was to discourage, and in the end to destroy, the zeal of these men in their vocation, to punish those habits of close and patient observation and diligent enquiry which enable them to track and identify criminals—to set a fine, in short, upon all the qualities which distinguish a police officer above his fellows, and make him valuable to his employers and the public. But I have learnt within the last few days that a Royal Commission is sitting, charged with the duty of investigating the results of the measure upon which I have thus freely commented; and since I came here on Saturday last I have learnt, and have been very glad to learn, that the order of February, 1858, will be abrogated in its turn, and will give place to one less obnoxious to just animadversion. To the effect, then, of the existing order I attribute no small portion of the apparent diminution of crime. One fact, stated in the *Times* newspaper of the 9th instant, and which, so far as I am informed, has received no contradiction, appears to me conclusive of this question. In the West Riding of Yorkshire, says the writer, the new scale "has full swing," and from that district

Digitized by Google

the prisoners at the assizes which have just closed have fallen from an average ranging between seventy and fifty to twenty-six, "being less than half the usual amount:" while in the North and East Ridings, where the magistrates supplement the short-comings of the new scale from the county rate, the average of prisoners is more than supported. Let me add that all the information, which after some correspondence in various districts I have collected, goes to corroborate the conclusions to be drawn from the experience of Yorkshire. Indeed, gentlemen, I am so thoroughly persuaded of the enormous evils produced by the new scale, that, as it appears we must yet wait some considerable time for the construction of its successor, I venture to express my anxious desire, in which I think you will join me, that it should be immediately superseded by the provisional re-establishment of the old scale, until that to be proposed by the Royal Commissioners can be brought into action.

THE MANCHESTER AND SALFORD REFORMATORY.

At the annual meeting of the subscribers and friends of this institution held in the Manchester Town-hall—the Right Rev. the Lord Bishop in the chair. The chairman announced that the Rev. Sydney Turner was unable from indisposition to be present. He called upon Mr. Robert Gladstone, who read the following letter from the rev. gentleman:—

"Reigate, February 22nd, 1859.

"My dear Mr. Gladstone.—The system of committing young offenders for long periods of corrective detention in reformatories, instead of for short and repeated terms of imprisonment in gaols, has produced, as far as we can infer at present, a diminution of at least 30 per cent. in their numbers, wherever the system has been fairly acted on; giving good reason for believing that, if we deal with the right sort of offenders on the one hand, and provide sufficient means for placing them under reformatory discipline on the other, we may really expect to effect a complete and lasting change in the amount and cost of juvenile delinquency, and arrest a large part of the moral and social mischiefs which it entails on society.

"What is the 'right sort' of young offenders? Not children falling casually and occasionally into crime, but lads and girls who are making dishonesty their regular and chosen pursuit, and who, either by choice, or habit, or force of circumstances, belong to the criminal class. These are the ringleaders and missionaries by whom fresh recruits are constantly inveigled into this class, and whose removal and long detention under corrective discipline is of importance, not only as regards their own probable conversion and rescue from dishonesty and vicious courses, but as regards also the safety and welfare of the community, especially the poorer classes and working men, whose children are the victims of their persuasion or example.

"The boys and girls of this class, in our large towns, are usually well known to the police. A list could, no doubt, be soon made out for Manchester. If the magistrates fixed their attention steadily on these, and systematically committed them to a reformatory, as soon as they had the opportunity, for a long term of detention, a great and increasing effect would be produced. I should advise that no young offender of the lighter and more occasional sort should be sent to a reformatory, except under special circumstances, as orphanage, very bad parents, &c. At the same time sufficient means for the reformatory detention of this class of juveniles needs to be provided.

"We have schools enough to meet the wants of the country districts and smaller towns. There seems every reason to think that the reformatories in the agricultural counties will have to receive cases from the large towns to keep up the number of their inmates; but juvenile crime has not been dealt with so earnestly or so adequately in any large town except Liverpool; and some additional accommodation, probably to the amount of 200 or 300 children, will be required to give any force to our operations in the more populous districts.

"I hope that a further effort will be made in Manchester, either by private contribution or by grant from the borough rates, to provide school room enough; making Blackley efficient, and filling up all vacancies there; and providing for the more effectual dispersion of the various gangs or fellowships of young thieves that now exist in Manchester, and for the greater separation of those who have bad relatives from their old connections, by arranging for their reception into more distant schools, such as the North Lancashire, the Cumberland, the Liverpool (at Newton, and in the *Akbar*, &c.), Bradwall, Liverpool Girls', &c.

"The act of last year (20, 21 Vic. 55), gives the borough magistracy and town council the power to vote money from the rates for such purposes; and these funds could hardly be applied more profitably or in the end more economically.

"It would be a *sine qua non* in connection with these efforts to apply the remedy of the reformatory system effectually, that the parents' liability should be enforced; 600 cases have been brought under payment already, and I hope to see this number nearly doubled in the course of the next year. Manchester would require a special agent (such as is employed in Liverpool), and this could be arranged for were the cases to be inquired into and dealt with sufficient in number to justify the expense.

"It has hardly been sufficiently urged that the reformatory system, as now applied, looks as much (or more) to the protection of the honest as to the rescue and improvement of the criminal. The Christian naturally takes it up in a missionary spirit, and regards it in its more religious aspect as the work of saving souls from death. But the community are interested in it in a more directly selfish point of view. They have themselves to protect from the young thief's depredations, and they have their poorer neighbours to protect from his corrupting influence and association. This, of course, the State chiefly looks to. This is the ground which magistrates would take in voting funds from the county and borough rates. They know that one successful and clever young thief, left at large, makes many more. He is the centre of a continually extending circle. His crime propagates, and the cheapest and most effectual preservative that can be applied for others, as well as the best remedy for himself, is the reformatory, when made steadily a place of consistent discipline—a place in which labour, order, exertion, and self-control are steadily enforced.

I am, very faithfully yours,

"R. Gladstone, Esq. Sydney Turner."

The Chairman, after a reference to the important statements in Mr. Turner's letter, said he had carefully looked through the two reports published by the committee, and from long experience in teaching and superintending schools intended for the lower classes, he was able to say that he had never seen rules conceived in a more practical spirit of wisdom than those of the Blackley Reformatory. His lordship glanced at the several rules of the institution, of each of which he spoke in the highest terms. He then said that this brought him to a point with respect to the repression of crime, on which he must make a few remarks. He had that day visited an institution which had been recently opened in Manchester, and which deserved to be known by every one. It was for the employment of criminals after their discharge from prison, and had been opened by a man sprung from the people. There were already six persons at work, and in a few days twenty were expected. The founder hoped to increase that number, and to remunerate himself as a manufacturer, with a fair rate of profit, while he paid the criminals who came in—boys at from 4s. to 8s. or 9s. a week, and those who worked at the looms at £1 a week. The founder of the institution told him (the chairman) that he had had several applications that day. He also said that with many of those who had come, especially with some boys, it had been deliberate matter of cold and heartless calculation whether they could make more by stealing or by engaging in the work offered to them. Could this be wondered at when it was remembered that the boys were educated in vice, and taught that right was simply what was successful to them, and wrong only that which militated against their own interests? He (the chairman) earnestly commended this institution. He would urge that it should not be brought ostentatiously into public notice, lest the feelings of those employed in it should be wounded, and they should be led to imagine that they were conspicuous objects, and so withdraw. But it was right that the community should know that a great and good work had been begun, which he was perfectly convinced would restore many a person to society who otherwise would have wandered through it with every man's hand against him.

The Secretary (Mr. Phillips) read the annual report.

Mr. R. Barnes moved the adoption of the report.

The Rev. E. Brooke seconded the motion, and, as one of the committee, detailed some of the results of their work. The boys had learned to feel the reformatory a home, and the villagers at Blackley now frequently spoke of the Reformatory boys as examples of good conduct and order to others. Through the kindness of Captain Palin he had received statistics of the number of juveniles who had been committed in Manchester in the last two years; in 1857 it was 604, last year it was 488. In the same time there had been an increase in the total number of criminals from 1,647 to 1,749. This looked very much as if some good was being done by the ragged schools and reformatories. In Glasgow and Edinburgh there had been a considerable diminution of crime. And other reformatories showed similar results; 90 per cent. of those received in the Rauhe Haus, near Hamburg, were reformed; that was to say, they returned to society, and did not again fall into crime; at New York, 75 per cent. were reformed; at Mettray, 85 per cent.; at Redhill, 75 per

Digitized by Google

cent.; and at Stretton, 65 per cent. To meet the great amount of juvenile crime which still existed, it was very essential that such preventatives as ragged schools, and schools for children of the working classes, should be established. Mr. Brooke then referred to the fearful source of crime which exists in the lodging, or "doss" houses, as they are called, the keepers of which live upon what children obtain by thieving. There were many such houses in Manchester; and the cases were named of several boys now in the Reformatory who had been inmates of houses of this description, in Charter Street, and Wood Street, Deansgate. He estimated that there were about 300 juvenile offenders in this city. If accommodation could be found in reformatories around Manchester for 150 boys and 50 girls, juvenile crime in this city would be nearly done away with; because those who now live on the earnings of juvenile criminals would see that they could no longer do so; and those elder boys who now teach younger ones to thieve would be in the reformatories. The cost of keeping one boy in the reformatory was about £21 a-year; and when a boy had been sentenced, the Government found £18 of that sum. Every one, therefore, who subscribed £3 a-year virtually kept a boy in the Reformatory. Surely £500 a-year for this purpose might be obtained in Manchester. It might be thought a large sum, but it was nothing compared to the amount lost to the community every year by the plundering of juvenile thieves.

In responding to a vote of thanks, the Lord Bishop called attention to the fearful fact named in the report that 19 children from the heart of Manchester, on their admission to the Reformatory, did not know the name of Christ. He thanked those journals in this city which have recently advocated the claims of the institution, and then stated some of the results which had come under his own notice of the efforts of the late Rev. J. Clay, of Preston, for the reformation of adult criminals. He urged the necessity of ameliorating the condition of the dwellings of the working and lower classes; and concluded by impressing the importance of influencing the members of the City Council with a determination to put down the "doss" houses.

THE RESCUE SOCIETY.

There is very sound sense in the following observations made by Mr. Carleton Tufnell, Her Majesty's Inspector of Metropolitan Schools and Reformatories, which we extract from the report of the Committee of Council on Education, for the year ending March, 1858.

In reference to Refuges and Reformatories, Mr. Tufnell observes:—

"I have had an opportunity of witnessing every variety of work and mode of management and arrangement that has been devised, and I think it may be useful to give the opinion I have formed respecting the conditions under which the objects of these benevolent institutions will most likely be attended with success.

"The primary condition appears to me to be, that what is called the 'family system' should be adopted; in other words, that a refuge or reformatory should contain few in number. It would be inexpedient to lay down any fixed rule on this point, as there are some instances where, owing to the unusual energy of the managers, the difficulties arising from large numbers have been successfully surmounted. But I believe that, generally speaking, it would be wise not to have more than fifty inmates; and those institutions that do not contain more than half that number are among the most efficient I have seen. In my last year's Report, I mentioned in terms of praise the establishments founded by the 'Society for the Rescue of Young Women and Children,' (Office, 11, Poultry,) and I continue to think them worthy of commendation. In the Camden Town Family Home, which belongs to this Society, of the 20 inmates whom I found in it last year, 12 had obtained respectable situations, and were doing well. The expense of maintaining it had been £15 15s. per head, which includes rent of the house and every other expenditure. In the Wandsworth Family Home, which contains only 16 girls, 12 have been got out to service since last year; and the cost of the establishment has been only £16 per head. In the Hampstead Family Home, though they never had more than 26 in the house, 20 have been satisfactorily disposed of since last year; and not any failure in character in those who have been sent out has been discovered. The cost has been £17 18s. each inmate, but this includes the outfit of the 20 girls sent to places. One proof of the real success in reformation that has been worked in these homes is, that there is a demand for servants from them much beyond what can be supplied; a proof which, I am sorry to say, cannot always be alleged of workhouse schools.

"I have mentioned in each case the yearly cost per head, in order to show that, contrary to what might be expected, the expense of these small establishments is not proportionally greater than in large ones. This result may appear surprising, but it is not difficult to account for.

"One of the secrets of this economy lies in the fact, that in these small institutions no buildings are ever purposely erected, but a house with a small yard, of ten or a dozen rooms, is rented, and this may easily be made to accommodate 25 girls, together with a master and matron. Such small houses may readily be obtained about London at a rent under £50 per annum. Now the great economy of this plan over any other is at once apparent. If, as sometimes happens, the managers of such an institution determine to build, the purchase of the land and the erection of the house, with all its numerous *et ceteras*, will come to £2,000 at least, and the interest of this sum more than doubles what on the other plan would be paid for rent.

"But it will be objected that such a newly-built house will be far more convenient for the purpose than an ordinary one. Now experience shows that a precisely contrary result is almost certain to happen. In the new building every arrangement for saving labour and facilitating the business of life is commonly provided. Water, hot and cold, is made to flow wherever it is wanted. Drying closets of the most approved construction are put up. Kitchen ranges that cook the largest quantity of provisions with the least possible quantity of fuel, in the smallest possible space of time, with the slightest possible amount of trouble, are erected. All these things are calculated to unfit girls for the service of real life. In small families, in which they usually find places, none of these ingenious contrivances are found. I have known girls from workhouses complain that they have had to carry pails of water. Where they were brought up they had nothing more to do than to turn a cock, and water, hot or cold, came forth. Now the work of most of us in this life is that of living under difficulties, and the best training for such a state of existence is to learn to do without all these conveniences. This doctrine is especially applicable to girls of the description I am writing about, as their lot is usually cast in situations where none of the luxurious appliances for saving labour are to be found. The being accustomed to them leads to what the Americans stigmatise as 'shiftlessness,' and, I may add, entirely unfits them for that condition which on other accounts is eminently suitable to them, the life of an emigrant."

The indefatigable Secretary of the Society so strongly recommended, makes the startling announcement, that during the past year 341 applications from beings weary of a life of sin have been reluctantly rejected for want of funds to establish fresh homes, which might have been opened at a small cost to receive them. Mr. Cooper says, "They have been sent to the Society by clergymen, Scripture Readers, City missionaries, magistrates, hospital matrons, and not a few by private individuals.

"The circumstances of their position are strangely various—scarcely two of them being alike as to the cause or the consequences; but evidently they all wished to be saved. They came to us and asked us to help them out of their misery. We were compelled to say, 'We can only give you advice.'

"These applications were all voluntary. We have not sought them out. So far from having to go out to seek wanderers, we are compelled almost to avoid publicity, not being able to receive all who apply. The number we have received during the past ten months is about 400—more than half of them being *country* girls; and this is cause for great joy and thankfulness. But *when* shall we be able to say to *every* destitute young girl or penitent woman—'Here is a home for you, if you wish to forsake your sinful course?' Our benevolent Christian friends must answer."

The public may judge for themselves of these cases, as an exact account of the case of each applicant is kept, and may be seen at any time, at the Office of the Society, 11, Poultry.

THE GROTTO PASSAGE RAGGED SCHOOL.

On Tuesday, March 29th, the friends of the institution were invited to the National School-room, Paddington-street, which was kindly lent for the occasion, to witness the children's treat, to see the prizes distributed, &c. The Rev. J. C. P. Eyre (Rector) presided.

The following nobility and gentry were present:—The Right Hon. P. P. Bouverie, M.P., the Earl of Kintore, General Buckley, M.P., and Lady Katherine Buckley, Lady Jane Stuart, Lady Bell, Lady Astley, Lady Chinnery, Lady Grant, Dowager Lady Radstock, Hon. Miss Waldegrave, Mr. and Lady Jane Ellice, the Misses Scott, Lady Scott, Sir J. W. H. Anson, Bart., Miss Stuart, Sir J. D. Scott, Bart., Rev. E. Headland, Mr. Granville Ryder, Rev. A. Canney, Rev. J. P. Garrick, Rev. H. Leach, Rev. J. DeKewan Williams, Mr. and Mrs. A. D. Chapman, Mr. R. B. Wade, the Misses Wilson, Mr. George Hanbury, Mrs. Shaw, Mrs. Maxwell, Major Moore, Mr. Muir, Mrs. Elmsley and Miss Hay, the Misses Labouchere, Captain and the Hon. Mrs. Holland, Mr. Snape, Mr. Fordham, Rev. J. Minton, Rev. F. Braithwaite, the Misses Westley, Mrs. Clarke, Mr. H. L. Greville, Mrs. and Miss Eyre, Mr. Hayward, Mr. H. Ravenshaw, Mr. J. H. Pope, the Misses Heaton Ellis, Mr. P. Scott, Mrs. Trotter, Mr. and Mrs. Frith, Mrs. Homby, Miss Penney, Miss Pack, the Misses Shadwell, Mr. and Mrs. Cammell, Mrs. Colonel Chase, Miss Chase, Mrs. Evezard, Miss Woodward, Mr. and Mrs. George Hodgkinson, Miss White, the Misses Headland, Mr. Edward Levy, Mrs. and Miss Smith, Rev. W. Appleford, Mr. J. Macgregor, J. H. H. Oliphant, &c., &c.

Mr. W. J. Maxwell, Hon. Secretary, said,—That it devolved upon him to give a short statement of the past and present position of this institution. It was started by himself and one or two other gentlemen in the year 1846, as a Ragged School. Ragged Schools were then but little known, there being only a few in London. The difficulties the founders of the school had to contend against were very great, as they were looked upon as well-meaning, but not very wise, individuals, endeavouring to improve a class whom the public generally believed were incapable of improvement, and consequently the committee received but very trifling support, though the schools are situated in a very wealthy neighbourhood. However, nothing daunted they struggled on, and in 1849 added a Refuge; this has been the means of effecting a large amount of good, between 300 and 400 boys of the most destitute class have been educated and started in the world in various situations, as sailors, emigrants, &c., and from many of these the committee from time to time receive the most encouraging accounts. The income of the society is now considerable; but as a portion of it arises from the Government grant, which will this year be withdrawn, he, in conclusion, called upon the meeting to contribute liberally for the help of those who cannot help themselves.

The Rev. Chairman said,—Ladies and gentlemen, an institution like this requires no advocacy on my part; facts speak for themselves. It exists in the centre of a den of vice. There were 120 families, poor, depraved, Irish, Roman Catholics, and others, of whom no one could say how they lived, but it became obvious the way by which the poor-rates were absorbed and the prisons supplied. He was grateful to those noblemen and gentlemen who had commenced the institution. The refuge is a very interesting part of the institution; it sought to reclaim those that had fallen; to drag them out of the depth of vice, and to put them under management by which means they would be put in a fair way of doing for themselves. There is nothing more important than helping this refuge. Thieves are often sick of their life, and would gladly escape from it, if there were any way pointed out to them; but offer them a home, place before them incentives to improvement, and you put the means within their reach of raising themselves to a new position. He asked them, on the part of those who started the institution, to give it their best support. Their policy and piety in this case ran side by side. Society can never retain its position while its foundations were rotten. The State itself, your property, the law of God, all require that something be done to meet this great want. The neglect of such duty must, sooner or later, bring upon them retribution. Policy asked, what shall we do with our convicts? He (Mr. Eyre) had been told by an inspector of police that most of the robberies which had taken place in the neighbourhood of late were in consequence of the return of some ticket-of-leave men, connected with St. Giles's, whom the police had not been able to trace. Place them in a home of this kind; just touch their hearts, and what might not be done? The worthy Rector concluded an eloquent and touching appeal by referring to the Saviour's work among the low, and, if they recognized that Saviour, to show they did so by using all their power to seek and to save that which was lost.

Prizes were then awarded to six girls, who had been inmates of the school and were now at service, and who had kept their situations for twelve months. Also to thirteen boys from the refuge, ten of whom were going to Canada, and who seemed to feel the fatherly advice given them by the Rector. Prizes of books and useful articles of wearing apparel were also distributed to the deserving, who, with their smiling faces, testified their gratitude.

The band of the Yellow Shoe-Black Brigade attended, and played excellently. Altogether it was a most interesting gathering.

On Wednesday the infants had their treat, when about 130 sat down to tea, and all went off well, amidst the merry chat of the juvenile throng.

THE THIEVES OF OUR THOROUGHFARES.

The increase of robberies in the public streets, to which a correspondent calls our attention, must be a fact familiar to the readers of police reports; since hardly a day passes without some daring depredation of this kind being recorded. Practitioners in this description of plunder are evidently becoming more numerous, no doubt from the success of the devices they adopt to throw incautious wayfarers off their guard, with a view to the abstraction of whatever may be found most available. Watches and purses are the prizes chiefly aimed at; and, certainly, they are parted with sometimes under circumstances which betoken no little simplicity in the plundered party. Boys are frequently the agents in this species of robbery, in the perpetration of which the usual preliminary is an inquiry as to some particular locality, the whereabouts of a street, or even the time of day. This dodge, transparent as it is, is found to answer in more cases than might be imagined; and a street conference, lasting it may be not more than half a minute, often suffices to afford an opportunity to an expert pickpocket to effect his object. Ladies in lonely streets and squares are selected as special objects of experiment, as they are not presumed to be cognisant of the strategy of the thieves who make the streets the chief arena of their nefarious practices. Robberies on the same principle are not unfrequent in our busier thoroughfares; and in truth, in every place which offers a chance of plunder, or where dupes may be found, the professional thief is a constant visitant. The "inquiry" system, however, is that which has of late been most frequently practised, no doubt because the temporary conference which takes place is so well capable of being improved by a practised hand. Every person, therefore, will do well to be extremely careful of those by whom he may be accosted in the public streets, since a bad purpose may be fairly suspected without much chance of a mistaken or uncharitable interpretation, and the facilities for theft afforded by these casual conversations would alone justify, on the part of ladies especially, a resolve never, under any circumstances, to permit a colloquy with a stranger out of doors. The majority of persons, it is clear, are no match for the light-fingered gentry, who have made this branch of business their particular study; and the work of abstraction is generally so rapidly performed, that the only safe rule is to answer no questions, and keep at a safe distance from the parties seeking information under such suspicious circumstances. —From the *Daily Telegraph.*

The Gull.—Why the word "gull" should be employed to express stupidity, I cannot at all comprehend, for the gulls are very knowing birds indeed, and difficult to be deceived. If a piece of bread or biscuit be thrown from a boat, it remains but a very short time on the surface of the water, before it is carried off by a gull, although previously not a bird was visible. But if a number of gulls are flying about, and a piece of paper or white wood be thrown into the water, there is not a gull who will even stoop towards it, although to the human eye the bread and the paper appear identical.—*The Common Objects of the Sea-shore, by the Rev. J. G. Wood.*

Notices to Correspondents.

Our correspondents are requested to observe that we cannot be answerable for the insertion of any articles received after the 22nd of the month, or Advertisements after the 27th, though we shall always endeavour to meet their wishes.

N.B.—As "The Philanthropist" will be published in future by Mr. Tweedie, 337, Strand, the Editor requests that all communications may be forwarded to him there, where they will receive immediate attention.

Notice.—All sums due to "The Philanthropist" for Advertisements, and for Subscriptions from this date, to be paid to W. Tweedie, 337, Strand. No other person is authorized to give Receipts.

Jan. 1st, 1859.

**** Attention is called to the following scale of charges for Advertisements :—*

SCALE OF CHARGES FOR ADVERTISEMENTS.

	£	s.	d.
Five lines and under	0	2	6
Every additional line	0	0	4
A column	1	15	0
Half-page	2	5	0
A page	4	0	0

Charitable Institutions, 3d. per line.

N.B.—Advertisements in the first and last pages 1d. per line extra.

NOTICE.

Contributions in Answer to our Advertisements.—We have to acknowledge the receipt of £5, from Mrs. Bass, in answer to the advertisement headed, "*The Orphan Daughter of a Clergyman*," *&c., &c.* We take the opportunity of stating, that we shall not in any case allow begging advertisements to give ourselves or our office as references, where we have not previously ascertained, so far as may be, the genuineness of the case. The lady, to whose advertisement we have alluded, has been reared with every comfort around her, and is now completely dependent upon a few friends. This we can vouch for; and we believe that a small sum, judiciously applied, might be of essential service, in enabling her to open a school, for which her education eminently fits her.

AND

SOCIAL SCIENCE GAZETTE,

May 1, 1859.

THE REFORMATORY AND REFUGE UNION, INDUSTRIAL EXHIBITION AND SOIREE.

Many, if not most, of our readers were, of course, present at the anniversary gathering of the friends and supporters of this society on the 13th and 14th of the past month. These will readily bear testimony to the general satisfaction which was felt—to the pleasure with which the labours of "the Arabs" were inspected, and the gratification which the account of the Union's operations during the past year elicited on all hands. It may seem almost superfluous to repeat our strong conviction, that the Union stands forth pre-eminently practical and to be admired, when it annually collects its friends, not, as the generality of societies, merely to acquaint the assembly with its progress and its wants—not merely to put into requisition the well-known powers of Mr. Harker, at the London Tavern or elsewhere, but to witness the most pleasing and satisfactory evidence of the capability of the idle, the outcast, and the criminal, to be transformed into industrious and useful citizens; to be compelled by positive evidence to acknowledge, that hands reared in idleness, and hearts darkened by ignorance and evil, can, by the application of the proper means, under Divine blessing, be led to shake off these barriers to solid happiness, and become clever artificers, civil neighbours, and good members of a Christian community. One feeling alone seemed to check our complete satisfaction. It seemed impossible to avoid the reflection, that if these poor neglected ones could, when attended to and taught, turn out such goods, and manifest such skill, it must surely have been far wiser to have expended the same money and care on them, or even more, before they became involved, through the want of this money and care, in a career of sin, idleness and poverty. Our readers may depend upon it that the time will come, however remote it may appear, when preventive efforts will take as strong a hold on the public mind, as those of a reformatory nature now appear to do. The time will come, when not only the value, but the absolute importance, of rearing our young to industrial occupations, will be so apparent, that the difficulties which, unquestionably, surround its general adoption will be fairly faced and overcome and the large present necessity for Reformatories will be superseded by the general introduction of the industrial element into our national education. Already is the acknowledgment becoming almost universal, that many of the inmates of our reformatories and refuges are criminal, or nearly so, from very lack of that species of training which they there imbibe. And when once this shall be fairly acknowledged, the expense, which is after all one of the main obstacles to its introduction, will be looked upon as a secondary consideration, even if it should exceed, which we are disposed to doubt, that which is now demanded for our Reformatories, when in many cases it is too late. Oh, that some of the noble-hearted men who belong to this union, and who at this, as at other gatherings, prove their earnest longing for the social advancement of their poorer brethren, would give themselves up specially to the consideration of this subject. Could we but find some few earnest-minded noblemen and gentlemen with means and influence to make the experiment, we verily believe that we could lay before them a scheme, which, while admitting, it may be, of much modification, and local adaptation, would lay the foundation of a most valuable and important change for the better in national education. Meantime, and under the present state of things, Reformatories and Refuges, are, like our noble hospitals, institutions of a most valuable nature; as such they are acknowledged by the public, and countenanced by the legislature. Both to the institutions themselves and the public, the services rendered by the Reformatory and Refuge Union are of the deepest importance, and we refer with pleasure and satisfaction to the account which we have elsewhere given of their late anniversary. We have too frequently expressed our strong commendation of the practical and valuable nature of this Union's operations to need any remarks on this head. We desire to draw attention to some remarks made by the Right Rev. the Bishop of London on the occasion, which claim every Christian Englishman's full regard and consideration. After paying a just tribute of praise to the important aid which the Reformatory and Refuge Union can and does render to magistrates who may desire to commit boys or girls to Reformatories under the Act, but who are frequently at a loss to know what institutions would be fitted or ready to receive them,—his ordship went on to observe, "that it was

Digitized by Google

the duty of his hearers to inquire how it was that Refuges for homeless poor were necessary, when it was a part of the law of the land that a provision of this kind should be made in connection with the workhouses." He referred to the frequently recurring accounts of the sad condition of the casual wards, and contended that if the machinery of the poor-laws were properly carried out, they would meet the necessity which had given rise to these Refuges for homeless poor. And he then made the following strong and sensible remarks,—"How is it that these casual wards in our workhouses are not properly conducted? I believe that it is largely owing to the fact that the upper classes, to whom Providence has given wealth and leisure, neglect their duty with regard to the administration of the laws for the relief of the poor. Instead of performing their duty, the conduct of these affairs is left by them to men who, from their education and from their general habits and associations, are not very likely to have much sympathy with the poor. Hence the scenes in our casual wards. The fact is, there seems a tendency, year by year increasing, to let the administration of the relief of the poor fall into the hands of a lower and lower class of people. Gentlemen should do their duty in this respect, even at a considerable sacrifice of personal convenience, and take a more active interest in parochial arrangements than they had hitherto done." This is strong and sound language; it comes from a high authority, and carries conviction to the senses, and we most sincerely trust they will have the effect, which his Lordship so evidently desires, of bringing about some change with regard to this matter. That a change is absolutely necessary cannot be denied, when such cases as that lately recorded at Kington, in Herefordshire, are even possible. It may be said to be an exceptional case; we can only say, thank God for it. But even admitting it to be so—and the exception lies, we think, mainly in the fact of the poor man's *death*—still will it be a burning disgrace upon the character of our country, if such a thing shall be possible, without eliciting from high authorities, at least, a stern rebuke for the cruelty which ejected the suffering man from the care and attention which both law and humanity should have tendered to him in his necessity. Lest our readers should be unacquainted with the story, we will briefly here place it on record. It appears that on the 2nd of April one Joseph Brown, otherwise John Fitzpatrick, being homeless, penniless, weary and sick, obtained in the town of Kington the accommodation of a night's lodging from the parochial authorities. Becoming too ill to be moved, he remained several days; finally he became rebellious against the authorities, tearing up his bed-clothes and attire. It does not appear whether he was incited to this by any ill-treatment, fancied or real; but, notwithstanding his illness, it is at once assumed that he is an impostor, and he is turned out of doors by the relieving-officer, and left to wander whither he pleased. The next day he is found by that officer, just outside the town, and given into custody. He remains in custody, pitied and cared-for by the police, all that night; morning comes, and he is suffering very much from diarrhœa, is too weak to walk, and is assisted into court by two attendants. According to the report of the local paper, "the magistrates, on the evidence of the relieving officer, and after hearing the surgeon's opinion, committed the man to prison for one month, with hard labour, as a vagrant." He is then conveyed to Hereford, and is so weak as that he has to be almost carried from the railway station to the county gaol. The surgeon is at once sent for by the gaol authorities, but his services are now too late: within two days he is removed from the scene of his misery by a more merciful hand. At the inquest, which necessarily follows, a verdict is returned, "died from prostration and exhaustion produced by an attack of diarrhœa." Directly, indeed, the verdict may be consistent with strict truth, but indirectly it manifestly falls far short of it. Can any one now doubt the necessity of the change which the Bishop of London so strongly urged?

We have extended these remarks to a greater length than we had intended, or than is perhaps consistent with our main object, when we commenced them, of drawing attention to the late meeting of the Reformatory and Refuge Union, with a hope of inducing the public to give to them a yet more extended support, that they may enlarge their operations. We are not the less firm in our persuasion that of late years few associations have been formed for so valuable a purpose. None have carried out their intentions and objects more vigorously and perseveringly, and none can better deserve the continued and increasing support of the good and great throughout the length and breadth of the land.

LABOUR IN PRISONS AND UNIONS.

The more we reflect upon the present mode of administering both the poor and the criminal law in reference to man's labour, the stronger becomes our conviction of the suicidal folly of neglecting, under these, or indeed under any circumstances, the fundamental law of the primæval age, that man "shall eat bread by the sweat of his brow." Every one, to whom have been given ability and the opportunity to provide for his own natural necessities, ought unquestionably to use the ability and embrace the opportunity, and, failing to do so, is not only justly amenable to censure as regards himself, but to a certain degree of compulsion where his refusal acts detrimentally to his fellow-men. Our laws recognize the possibility, nay the frequent probability, of men who are well able, under favourable circumstances, to support themselves and their families, falling into distress and want. This may be brought about by accidents over which they had no control, by negligence or folly, or by positive crime; in each and in every case the law wisely makes provision that those who are so reduced shall be attended to and cared-for. A discretionary power must always, of course, be vested in some authority to prevent imposture. This discretionary power may, perhaps, in some cases be misused either accidentally or by fixed intention; the misuse arises, however, not from any defect in the law, but from its maladministration, and thus the intentions and purposes of the best of laws may be frustrated and thwarted, so as to bring discredit on the law itself. The two branches of the law to which we have alluded are especially open to this evil, more particularly that relating to the relief of the poor.

Now there is one point on which we think the administration of the law to criminals and paupers is peculiarly open to objection—we mean in the labour exacted from those who are its subjects. Both human and divine laws, as well as the dictates of compassion, bid us haste to relieve distress in whatever shape it may appear before us; but neither the one nor the other can make it obligatory upon us to support those who *can* support themselves but *will not;* and most assuredly no fair argument can justify us in positively hindering those from supporting themselves who have both the power and the will to do so. And yet, what is the actual case? A man becomes poor,—it matters not by what circumstances reduced,—he

Digitized by Google

requires relief, and it must be given to him. As the Poor-law is at present administered, that man applies to his Parish Union, which is under obligation to afford him relief. And what follows? There is, generally speaking, some uniform mode of work given to all, irrespective of their fitness for it. There may be apparent reason in making this labour distasteful and hard, so as to deter the idle from throwing themselves on the parish. But the reasoning is not sound; for to the idle, labour is distasteful *as labour;* and wisdom would suggest to try and remedy the idleness by making labour agreeable. Moreover, the kind of labour offered is one at which very little can be earned, and that little, in many cases, hardly; and no cognizance is taken of the fact, that many so employed at what they are totally unfitted for, are not naturally idle, and have been, gifted with talents and skill, by which, if allowed to use them, they could well repay whatever might be expended upon them during their temporary poverty. Similarly, or we should say with even greater fatuity, a man becomes criminal; and again, without reference to his capabilities, he is employed at hard labour, in too many cases positively doing nothing. How, in both these cases, one broad fact stares us in the face. The pauper and the criminal must both be fed, clothed, and housed. It is equally clear that these three necessaries must be paid for; and if those who are fed, clothed, and housed, are either unable or unwilling—or die, prevented by law, or otherwise, from paying for their own expenses, they at once assume the shape of a demand on the public at large. Surely there can be no reasonable argument found against the principle, that the man who makes a demand upon the public support should be compelled to do what in him lies to lessen that demand.

There are few men who have not some powers implanted in them by which they can earn a sufficiency to pay for their actual necessaries. And there are many who are able to earn abundance, not only for themselves, but others. We hold that, whatever a man's capabilities may be in this matter, they may fairly and honestly be taxed to the fullest extent, so long as he remains chargeable to others. His skill and labour, so to speak, become the property of those others for the time being. If it be said, that one man can earn £3 a-week, another 10s., and another, possibly, nothing; and that the first should not be compelled to support the others; the answer is obvious:—that the former has less right to become a burden on the public, and becoming so must pay the greater penalty. But, if the principle for which we contend be conceded to us, we at once admit that the mode of carrying it out is involved in great difficulty. Generally speaking, every one who comes upon his country either as a pauper or a criminal, should, we think, be set to that employment which shall be most adapted to his antecedent habits. We should object, very strongly, to either a pauper or a criminal being *taught* any *skilled* trade, the acquisition of which, in other circumstances, could only be secured by an expenditure of money; this would be an act of decided injustice. But it is hardly less so to check and suppress valuable skill and labour, and then tax the public to supply the deficiency which our foolish restrictions create.

THE BOOK SOCIETY FOR PROMOTING RELIGIOUS KNOWLEDGE AMONG THE POOR.

A very interesting meeting was held at the London Coffee-house, Ludgate-hill, on Wednesday evening, April 20th. The Right Hon. the Lord Mayor presided for a short period, but was evidently suffering from great indisposition, and on his retiring, his place was supplied by the Rev. Dr. Barber, a very old supporter of the Society. The Book Society is now 109 years old, and its operations appear to be rapidly and usefully extending. The large room was completely filled on the occasion, both at the *soirée* and at the public meeting which followed. Up to the present time, the rule of the Society has been that every subscriber of one guinea per annum is entitled to books to the amount of 20s. gratis, and at reduced prices; and every subscriber of 10s. 6d. to books to the amount of 7s. 6d. But free grants of books could scarcely be expected under these circumstances. A fund, however, was commenced on the occasion alluded to, for the purpose of enabling the Committee to respond to some of the calls made upon them. The proposition met with general approval, and we have reason to hope that the appeal to the public for this fund will not be without success.

Surrey Society for the Employment and Reformation of Discharged Prisoners.—The meeting which we announced for the 19th of April, at the Horns, Kennington, has been postponed, as the Committee found that the expected dissolution of Parliament interfered with a very large number of the friends and supporters of the Society. It is now resolved, as we understand, not to hold it until June.

NATIONAL ASSOCIATION FOR THE PROMOTION OF SOCIAL SCIENCE.

LIVERPOOL LOCAL COMMITTEE.

At a Meeting of the Council, held at St. George's Hall, on the day the Liverpool Meeting of the Association closed (October, 1858), it was resolved—

"That it be recommended to the Association to appoint the local officers of the Association at Liverpool (with power to add to their number), to constitute a local Standing Committee of the Association, in Liverpool, having for its object the collection and digestion of information as to the condition of, and means of promoting, Social Science in the district; and that the Committee be requested to report to the Association at its next meeting."

The above resolution, being embodied in the report made by the Council, on the same day, to the Association at large, was confirmed; and a Committee was formed accordingly, of which Mr. Joseph Hubback was elected Chairman, and Mr. J. T. Danson, Secretary.

Having made the necessary preliminary arrangements, and having received from the Council a grant of funds sufficient to meet its expenses during the current year, this Committee now addresses itself to all who may be disposed to co-operate in the labours it has been charged with. Its purposes may be described as those of the Association at large, with the exception that they are confined to Liverpool and the surrounding district.

In order to effect these purposes the Committee proposes—

1. To collect information as to existing (local) social evils and their fit remedies, and the available means and best methods of applying such remedies.

2. To afford a centre of communication to which such information may be imparted, and from which it may be drawn.

3. To provide a medium through which means of social reform, suggested by the experience of other localities, may be published and made available in this; and

4. To afford, annually, an opportunity of considering, as far as may be, in the presence of the parties immediately concerned, such portions of the information thus obtained as it may be expedient to impart to the Association at large, at its next annual gathering.

The first efforts of the Committee will be directed to the formation of a series of statements, as accurate and complete as may be, of the social evils of the locality now existing, and apparently within the scope of remedies already applicable, or which may shortly become so. It may be safely inferred that all investigations of this nature will, in proportion to the accuracy of their method, and the truth of their results, rapidly receive such confirmation as may be requisite to enforce the authoritative application of fitting remedies.

The Liverpool Committee suggests the following topics, as worthy of early attention:—

LAW AND JURISPRUDENCE.

I. Foreign Debtors.—Whether it be expedient that the power of attaching the goods of foreigners, for debts due in this country, already legally exercised in Scotland, in some parts of England, and in

Digitized by Google

foreign countries, should be uniformly extended to all parts of the United Kingdom?

[A paper on this topic will be found in Vol. II. of the Transactions of the Association.]

II. Service of Writs.—Whether the Writs of the Superior Courts of England, Scotland, and Ireland, ought not to be serveable with effect in either of the other two parts of the United Kingdom?

III. Execution of Judgments.—Whether final judgments obtained in the Superior Courts of England, Scotland, or Ireland, might not be safely enforced, without delay, and with small additional expense, in either of the other two parts of the United Kingdom?

IV. Foreign Shipping.—Whether the 504th section of the Merchant Shipping Act, already declared to be applicable only to British vessels, might not be equitably extended to Foreign vessels coming under British jurisdiction?

V. Scurvy.—Is the law regulating diet on board ships in relation to scurvy effective for its purpose?

VI. Courts of Reconciliation.—What, probably, would be the effect of instituting such Courts, to which parties contemplating litigation might resort, in the first instance, for mutual explanation, and the advice of a competent authority, on the matters in difference?

EDUCATION.

I. The Privy Council System.—What have been its results in your district? What its defects? And the apparent remedies?

II. Schools not under the Privy Council, of all descriptions.—Their Statistics in your district? How they operate? How apparently defective?

III. Local Supply of Schools.—Is it defective, or otherwise, in your district? And with what effect, especially on the social condition of the district?

IV. School Payments.—Their amount, and how determined in your district? And how far connected with the intelligence, or the occupations, or the migrations, of parents?

V. Kind and Degree of Education.—What, in your district, mainly determines the time spent at School? What provision is made for industrial and domestic training, and for the continuance of education after leaving School?

VI. Pupil Teachers.—Are they, in your district, usually persons in good health; and how does their occupation affect their health?

CRIME.

I. Prevention.—Can you suggest any means by which the punishment of Crime can be rendered more certain, and therefore more effective for prevention—(1) as to detection; (2) as to information to the authorities; (3) as to prosecution; or (4) as to conviction?

II. The Criminal Tendency.—Can you state, and authenticate, any facts illustrating the connection of the criminal tendency with (1) criminal parentage; (2) defect of early training; (3) evil associations; or (4) a defective or insecure provision for merely physical wants?

III. Idleness.—To what is the distaste for regular industry, frequently observable in connection with crime, most commonly to be referred; and in particular what observed facts mark its connection with (1) defective organisation, and (2) defect of early training?

IV. Prostitution.—From what classes, and mainly through the operation of what external causes, do women in your district become prostitutes? In what manner, and under what circumstances, do women most commonly leave that condition?

V. Reformation.—How far is this favoured, or obstructed, by the management of your gaol? Are you personally acquainted with the management of any juvenile or other Reformatory in your neighbourhood? and if yea, can you state how it is supported and managed, and the results of its operation?

VI. Crime Unpunished.—Can you mention any class of criminal offences which commonly escape punishment? and if so, what course would you recommend to secure an enforcement of the law?

VII. A Discharged Prisoners' Aid Society is said to have been attended with good results in Birmingham, Wakefield, and some other towns: do you think such an agency in Liverpool desirable?

PUBLIC HEALTH.

I. Infant Mortality.—Can you state, and authenticate, any facts bearing upon the mortality, in your district, of children, from birth up to three years of age?

II. Lodging-Houses.—Can you state any facts showing the influence of the registration of common lodging-houses on the health of the inmates? And what additional regulations, if any, do you think desirable?

III. Drainage, Ventilation, and Supply of Water.—Have these topics received, of late years, increased attention in the districts you are acquainted with? State what improvements have been made or are in progress; and what are admitted to be necessary, though not yet entered upon. Can you state any facts showing the actual operation, as affecting these topics, of the Public Health Act, or of the Local Government Act?

IV. Waste of Manure.—Can you furnish any precise statements illustrative of the loss incurred in this form by present modes of disposing of the feculent matter and rubbish daily accumulated in towns?

V. Public Hospitals.—Can you furnish, as to any such institution, a statistical statement of (1) the income, and from what sources; (2) the expenditure in detail; (3) the number of persons relieved, distinguishing in-door and out-door, and the classes to which they belonged; and (4) any authentic results, upon the public health of the district, of the relief thus afforded?

VI. Better Knowledge.—Can you suggest any means, the efficacy of which has received the sanction of experience, whereby a better knowledge of the laws of Health may be diffused, especially among the less-informed classes of society?

SOCIAL ECONOMY.

I. Pauperism.—Its more prominent and provable causes, as actually observed: physical, intellectual, and moral?

II. Inquiries by the Labouring Classes.—The best means of inducing and enabling the more intelligent among the labourers for wages, in our large towns, to undertake for themselves a scientific investigation of the social condition of their class, and the available means of improving it?

III. Example.—Its social influence—in the household, in the factory, on the farm, and elsewhere—in transmitting from each class to the one below it either good or bad habits and impressions?

IV. House-room.—The causes of the present defective house accommodation of the labouring classes, and the effective impediments to its improvement, as evinced by experience?

V. Dwellings of the Labouring Classes.—Have you noticed any improvement in the structural arrangements of the more recently-erected dwellings of the labouring classes? What are the principal defects of such dwellings in your district? To what extent has the abolition of cesspools and the substitution of water-closets for privies been effected? Does overcrowding in dwellings other than common lodging-houses prevail to an extent prejudicial to health? Are the legal powers to enforce improvement now in existence brought into use; and are they sufficient to effect what is desirable in reference to these matters?

VI. Intoxication.—Why this habit is so much less generally prevalent now than it was thirty years ago?

It will be observed that the five departments of inquiry undertaken by the Association are such as to embrace the entire field of social reform; and that, consequently, each department is more or less closely connected with several of the others.

Thus *Jurisprudence and amendment of the Law* has an immediate and close relation to crime, and to wrong-doing in all its forms. It has also a direct bearing upon pauperism, and is more or less intimately connected with every part of the framework of society.

Education has another, but scarcely less close, relation to crime; and has, above all, so large a share in the character and conduct, and especially in the capacity for good, not only of individuals, but of whole classes of the community, and thence in every personal ability or tendency to uphold, or to alter, for better or for worse, the entire social structure as it is, that it might, with some show of reason, be deemed of deeper import than any one of the other departments.

It were needless to enlarge upon the connection of *Punishment and Reformation* with *Law*, and with *Education*, as well as with the general security and progress of society.

The social arrangements tending to promote or to deteriorate the *Health* of the whole body of the people bear directly and powerfully upon every project for adding to the length or to the virtuous enjoyment of life in any section of it.

And in the department of *Social Economy*, which embraces many topics not to be conveniently dealt with under any of the preceding heads, will be found none which is not more or less intimately allied

Digitized by Google

with kindred subjects already so dealt with.

It is apparent, therefore, that an accurate classification of the particular subjects of inquiry to which those who are disposed to aid the Committee may direct their attention, is, in the first instance, of little moment. The results, if duly elicited, will be readily referred to their proper department, when complete. But the Committee are desirous, at the outset, of urging upon all who may be so disposed the expediency of adopting, from the first, and rigidly adhering to, a regular and methodical course of investigation, as being, in all cases, the most effective in the end, and the only one likely to lead to conclusions worthy of an earnest and candid inquiry; and they trust they may be pardoned for further suggesting that the discovery of truth upon these topics may be materially facilitated by discarding, on the part of the inquirer, all feeling likely to interfere with a clear perception of the facts as they are, and by cordially receiving and acknowledging all effective aid, from whatever quarter it may come. They may also add that they unhesitatingly invite, from all who may enter into communication with them, the fullest and most candid expression of whatever convictions may be deliberately entertained, touching the topics in question.

It is the intention of the Committee to hold, during the current year, two General Meetings of persons interested in the promotion of Social Science in Liverpool and its vicinity.

Review.

How to Manage a Baby. London: Groombridge and Sons, 5 Paternoster-row.

This is one of the first series of tracts issued by the "Ladies Association for the Diffusion of Sanitary Knowledge," and, like many others, speaks with authority; for it is manifest that mothers can speak much from experience. At any rate, none can gainsay the importance of the subject. For whatever be the career, babyhood must have been passed through; and certainly much more of the comfort of age depends on the proper care of this period than may at first sight appear. It is sad to think that forty babies out of every hundred born in this country die before they have lived five years. The ladies say "we kill them by our bad management."

The instructions appear to be very minute, and clearly written; and dull indeed must that mother or nurse be who fails to understand them. Full instruction is given about the first washing, and dress,—these instructions are perhaps hardly suitable for our pages, but we strongly recommend them to such of our readers as may be mothers, or have any influence among their poor neighbours in like position. On the article of food, teeth-cutting, sleep, exercise, &c. we commend the following remarks:—

Food.—After a new-born baby is washed and dressed, it is very common to give it rue and sugar, butter and sugar, castor-oil, water, into which a hot cinder has been thrown, or something of the sort. We have heard of a man in America who swallowed a large fly, and then sent a spider down to catch it; now, that was just as sensible as it is to poke rue, castor-oil, and such nasty things down a poor baby's throat; *it needs nothing of the kind, and it is wrong and cruel to give it.*

A baby does not need feeding at all for four or five hours after it is born, and the best plan is to let it go to sleep until the mother's milk comes, and she is well enough to suckle it, which she generally is by the time it wakes. Old nurses are generally quite miserable if they are not allowed to give baby gruel, or something, at this time; but the mother must insist that it shall have *nothing but a little wholesome leaving alone.* If the mother's milk does not come in five or six hours, the baby must be fed with a little good, new cow's milk, mixed with about half as much warm water, and sweetened with a little sugar. The milk must never be boiled, and should never be given warmer than blood heat.

It sometimes happens that a mother cannot suckle; and very often she ought not if she can. Our tract called "*A Few Words to Young Mothers,*" tells when it is wrong to suckle. And sometimes a poor mother goes to suckle some rich lady's baby with the milk which belongs to her own little one, which very often dies for want of it. It is true it is a great help to a poor woman to go and earn high wages as a wet-nurse, but still she ought not to do it; and if she knows what is right, and means to act up to it, she will never thus rob her baby of strength and life. Many other women are obliged to work in factories, or to go out cleaning and washing, a long way from home, so that they cannot suckle their babies above once or twice in a day. If a woman is really obliged to do this, it is a very great misfortune, both to her child and herself, and she ought to try every way to get work to do at home. For if a baby is fed ever so well by hand, it cannot be nearly so healthy as if it were suckled by a healthy mother.

Some women, instead of not suckling their babies often enough, suckle them too much, letting them suck at any time, and all times in the day or night, whenever they cry or are restless. Now, any one with common sense ought to know that a baby does not want suckling every time it cries; for it cries through fifty things beside hunger—if it is too cold or too hot, it cries; if a pin pricks it it cries; if its frock is too tight, if noise disturbs it, or light dazzles it, it can but cry; and yet whenever it begins crying, some mothers catch it up and begin suckling it! Now, this foolish plan weakens the mother, and must disturb the child's stomach, and do it a great deal of harm.

In the day time, once every three hours is quite often enough to suckle a baby for the first three months; and in the night it should not be suckled at all, after the first fortnight, from the time the mother goes to bed at ten or eleven o'clock, till four or five o'clock in the morning. To let a baby suck in the night does it no good, but a great deal of harm, besides disturbing the poor mother's rest. A baby may as easily be brought to take the breast at regular and proper times, as at irregular and improper ones; and every mother ought to train her child to regular ways. Some mothers may say, "Ah, if I don't give my baby the breast, just when he pleases, he'll kick and scream till he's black in the face." Well, if he does kick and scream for what he ought not to have, that is no reason that it should be given to him; and the sooner he is taught that it is of no use to put himself into bad tempers the better. If a mother wishes her child to be healthy and happy, she should never let it master her by screaming; she should try to soothe and quiet it, but if it keeps on screaming only through bad temper, the best way is to lay it quietly down and let it lie until it leaves off. But a healthy child will not often cry; much crying is generally a sign of something wrong,—either the child is unwell, or a string cuts, or something else is uncomfortable. A kind mother should look all over to find out what is amiss.

When a baby is about three months old, the mother should begin to suckle it less often than before; from three months, until the time it is weaned, once in four or five hours is often enough to suckle it.

Nothing beside the mother's milk should be given to a baby until it is weaned. Many women have their baby on their lap at meal times, and put pieces of meat, pudding, and all kinds of food, from red herring to cucumber, into its mouth. All that can be said of this is, that it is very wrong and very stupid. It would be quite as wise to set a baby's hands to drive a plough, or to dig, or to do any other grown-up people's work, as it is to set its little stomach to take grown-up people's food. Then, after being thus crammed, baby gets ill, and old women say, "Ah, po-o-o-r lamb, it's got the wind, it shall have a little dill-water." Baby wants no dill-water, but baby's mother wants a dose of something not to be got at the druggist's—common sense. Not only does improper food make children ill, but it often kills them outright. Only a few days ago a woman gave a raw apple to a baby of five months old. It ate it, and in a few minutes began coughing, turned black in the face, and died, through choking, before the doctor had time to come to it.

People sometimes stand round a baby's coffin and say "Ah, poor thing, it's a happy release," and seem to think after all, it is not a very bad thing for a baby to die. But it *is* a bad thing, and a *very bad thing;* for though discontented people say this world is a miserable place, it is a great blessing to live long in it, and a very great evil to die so young that the soul has not had time to become so good or so great as it might be. And although a baby who dies will be very happy in heaven, it would be far happier if it lived to be a good man or woman, and then died. And it is also

Digitized by Google

a *very wicked* thing to let a baby die through wilful bad management; the Bible says, "Thou shalt not kill," and it just as wrong to kill a baby by inches, by carelessness and neglect, as it is to kill it at once with a knife or poison.

Almost always, when about twelve months old, baby should be weaned; but if the mother is very strong and the baby is weak, it may be suckled sixteen or even eighteen months, but never longer than that time. Some women who are not very strong, suckle their babies a year and a half, or even two years; this plan is a very bad one, it weakens the mother and does her much harm, though she may not feel it at the time. It may be taken as a general rule that a mother may begin to wean her baby when it has three or four teeth through, and quite wean it when it has eight or ten through.

About a month before the time at which the mother means to leave off suckling, she should begin to suckle less often, and give her baby, once or twice a day, a little good new milk, mixed with about a quarter as much warm water, and sweetened with a little sugar; when the whole is given to the baby, it should not be warmer than blood heat. When baby is quite weaned, milk sweetened, but without any water, is best. A little milk should be bought twice a-day, so that baby may always have it fresh and good; it is much best to have it always from the same cow. It is easy to get good milk in small towns, but in London, and many other large places, it is often very bad and very dear. If the mother lives in any of these large towns, she should take care to buy a little of the best milk at a good milk-shop, and never buy cheap, skimmed milk; good milk costs a little more, it is true, but a mother will lose nothing by buying it, for she will not want so much physic for her child if it is well fed. The milk should be put into a boat, and given to baby when it is hungry, so that it may be more willing to take it. When it gets accustomed to take it, a little good, stale bread, soaked in hot water, should be put to it. And the more food baby takes, the less often should the mother suckle it, until at last she weans it altogether. If she weans in this way, little by little, it will not fret so much after the breast, and her milk will not be so troublesome to her as it would if she had left off suckling all at once.

When baby is quite weaned, bread and milk, or oatmeal and milk, should be given it, at seven o'clock and eleven o'clock in the morning; and for dinner, at about three o'clock, a little Indian-meal pudding, or wheat-meal pudding, should be given; then, for supper, at about seven o'clock, a little bread and milk, or oatmeal and milk again. Of course these hours may be altered to suit different people's convenience, but it is well to let baby's meals be given regularly four hours apart. Our tract called "How to Cook,"* shows the best way to cook oatmeal, and make the puddings we have named.

When a mother is too weak or too ill to suckle, it is, as we have already shown, a very bad thing for her poor baby, and if very great care is not taken of it, it will certainly die. Still, if it is a strong child, and is very well fed and managed, it may be brought up pretty well by hand.

It should be fed with good, new, cow's milk, sweetened with a little sugar, and mixed with half as much hot water, so that the whole is about blood heat. The milk should be given to baby from a glass sucking-bottle, with a little cork, or vulcanized India-rubber nipple. Only just enough milk to feed baby once should be put into the bottle at a time, and always after it has been used, it should be washed out well, and the nipple should be taken off, and put into a cup of clean water, until it is wanted again. The milk should never be boiled, for the hot water which is put to it will make it quite warm enough; boiled milk, too, is very unwholesome. If the bottle, nipple, and saucepan are not very clean, the milk will be sour, and baby will not often take it; and if it does, it will do it more harm than good.

Until the first four teeth are through, nothing but milk should be given to baby. Many women think milk alone is not strengthening enough, so they put bread, arrow-root, biscuits, or baked flour to it. So far from doing good, all these things do very much harm, and they are the cause of the greater part of the deaths of babies. A young baby's stomach is made to take milk alone. It now and then happens, it is true, that a baby cannot take milk; when this is the case, baked flour, or prepared barley, may be given. It is a good rule that "if the food agrees, go on giving it, if it does not, try something else."

Another very common thing is, to give babies to much food. Only a few weeks ago, a baby three months old died very suddenly, and the doctor found out that the mother had that day suckled it, given it three cups of arrow-root, and some milk and water; in short, he said she had *crammed it to death*. In the same town, another woman gave a hearty supper to two sucking infants before putting them to bed, and between three and four o'clock they were found quite dead. Here, again, the doctor said that the great mass of food in the stomach caused death. If such things as these will not teach us a lesson, we are past all teaching.

A baby brought up by hand should be fed just as often as its mother would give it the breast if she suckled it; and when the first four teeth are through, it should be fed in the same way as babies when they begin to be weaned.

From the time a baby is weaned till it is eighteen months old, it should be fed four times in a day, but never more. Some mothers give their babes little bits of different things between meals, at any time and at all times. If they are making an apple-pudding, baby gets a piece of apple; then, perhaps, they go into a grocer's shop, and he gives baby a fig, or perhaps a neighbour gives it a little cake; so it is eating almost all day long. But if a mother wishes her baby to keep well, she should not give it a morsel of anything to eat except at its regular meal times; no, not even so much as a biscuit or a sugar-plum. When baby is about eighteen months old, three meals in a day will be quite enough for it. For breakfast and supper, bread and milk, or oatmeal and milk, are very good food. The bread should be very good, and at least two days old. It should be first soaked for a few minutes in hot water, then the water should be drained away, cold new milk put in its place, and a little sugar put to the milk. For dinners, wheat-meal porridge, Indian-meal porridge, baked whole-rice pudding and milk, and stewed apples and bread, are very good food. Our tract called "*How to Cook*," shows the best way of cooking all these things. No meat, fish, fruit pudding or pie, or vegetables, should be given to children under two years old. For drink there is nothing so good as milk or water; tea, coffee, beer, porter, wine, or anything of the kind, should *never* be given to young children.

Cutting the Teeth.—If children are badly managed, they often suffer much pain, and have fits and convulsions, when they are cutting the teeth; but healthy, well-managed children generally suffer very little. When a child is cutting its teeth it should have less food, and more water should be put to the food, and the child be allowed to drink water as often as it pleases; there is nothing so good to cool the hot little mouth and gums. Something that the child may suck helps to ease its gums. Some people give it a piece of coral or an ivory ring, but these are too hard; the best thing is a penny square of India-rubber, with a piece cut out at each of its corners. This is handier to get into the mouth than an Indian-rubber ring.

Sleep.—Babies need much sleep; when they are very young almost all their time is passed in eating and sleeping. After the first few months they do not need so much sleep, but they still want much more than grown-up persons. For the first two years babies ought to have one or two hours' sleep in the middle of the day, and twelve hours at night.

A mother should always try to get her baby to sleep at the same times every day; but if it will not go to sleep at the regular time, she should NEVER, NEVER GIVE IT SLEEPING STUFF OF ANY KIND, for it is downright poison; it kills thousands of weak children outright, and does much harm even to the strongest.

Babies should never even be rocked or tapped to get them to sleep, except when they are ill, and then they may be very gently rocked a little in the arms or the cradle. Rocking and tapping not only do a baby harm, but they also give very much trouble to the poor mother.

A baby should not sleep at night in any of the clothes which have been on it in the day-time, for they are all soaked in sweat from its skin. They should all be well shaken out, and hung over a chair all night, so that the air may get to them, and make them sweet and wholesome ready for the next morning. For the first month a baby should wear just the same number of clothes in the night as in the day, but after that time a night-gown and shirt will be enough for it to sleep in.

It should not sleep in the bed with its mother, but in a crib by her side, unless the weather is very cold, when it is best for it to sleep with her that she may keep

* "How to Cook," Groombridge and Sons, 5, Paternoster-row. Price 1d.

Digitized by Google

it warm. But there is very much cause to fear lest it should be overlaid, or stifled to death by slipping under the bed-clothes. This very often happens, especially when children lie with a person who sleeps very soundly.

A bag filled with chaff, dried moss, cocoa-fibre, Indian-corn leaves, sea-grass, or horse-hair, makes a very good bed. These are much better than feathers, and, besides, some of them are so cheap that even a poor mother can afford to have the bed filled afresh whenever it begins to smell bad. The green, soft, long moss which grows on shady banks and hills, is the right sort for beds. It should be gathered in warm, dry weather, well picked and washed clean, and spread in the sun to dry. When it is quite dried, the bunches should be pulled apart; it is then ready to put into the bed. Very nice pillows may be made of the same moss. As the beds of young children are often wetted, they should often be filled afresh, so that all may be sweet and clean. Directly baby is out of its bed, the bed-clothes should be all stripped off and hung over a chair, and the window be thrown widely open to let the fresh air come in to sweeten the room, bed, and bed-clothes. Great care should be taken not to smother baby up with too many bed-clothes, for too much covering makes it very liable to take cold; and if the clothes are too heavy on its chest it cannot breathe properly. The mother should be careful, too, not to let the bed-clothes cover its mouth and nose. Then, on the other side, she must take care that baby has enough covering to keep it comfortably warm. She cannot be too careful about all these things, for, as above half a baby's time is passed in sleep, it must be of great consequence that it should sleep comfortably. It is a good plan to look at baby often when it is asleep, to see that it is not uncovered, or that the clothes have not slipped over its mouth and nose. Sometimes, too, a baby catches a flea from some dirty person, and this will often disturb it for hours if it is not taken away. In the day-time baby will be warmest down-stairs in a cradle. The little bed and pillow for the cradle may be made of the same moss.

Great care should be taken to have plenty of fresh air in the rooms where children sleep; it costs nothing, and nobody can be well without it.

Going Out-doors.—In summer, baby should be taken out-doors when it is three or four weeks old; in winter, it ought not to go out until it is five or six weeks old. In fine, bright weather, it can hardly be out too much. Some people seem quite afraid to let their babies be out-doors; but they ought to know that a baby is like a flower—it cannot grow strong and beautiful without plenty of fresh air and bright light. If a plant is kept away from fresh air and sunshine, it grows weak and sickly; and so do little children, as any one may see by taking a walk up the dark, dirty streets of large, crowded towns, and noticing the pale, miserable faces of the children who are playing there.

Some mothers send their babies out-doors with little girls who are not strong enough to carry them properly. This is very bad for the baby, and for the poor little girl who carries it: so, if a mother really cannot go out with her child herself, nor get any one to carry it properly for her, it is even better to keep it in-doors than have it badly carried.

Baby should never be carried upright until it is, at least, six months old; before that time it should be laid carefully over both arms, and lie just as it does in bed. It should be changed from one arm to the other every ten minutes, because if it always lies on the same side, and with one eye always turned from the light, it becomes cramped, and will be very likely to squint. It also does the mother harm to carry the child always on the same arm, for when she does so, one side of her body will become tired and weakened through being used too much, while the other side will be weakened through being used too little; this is the way many young women get crooked. The mother must take care also not to squeeze baby too near her chest when she is carrying it, for its bones are very soft, and they may be easily bent if its limbs are squeezed.

Walking.—People talk about "teaching babies to walk," but they do not need teaching, for they will be sure to get up and walk when their legs are strong enough, and it does them harm to do so before; in this, as in very many other things, babies would be all the better for being left to themselves. But this does not suit some mothers who are in a hurry to see their children walk, such mothers cannot rest content without putting their children into leading strings, or go-carts, or leading them with the hand. All they generally get for their pains is the sight of their children's bandy legs and crooked ankles, caused by being forced to walk before the time. Who would be a baby!

But though baby should not be hurried in walking, it should be allowed to keep moving all day long while it is awake, for its limbs cannot get strong unless they are used. The best plan is, to put a piece of soft matting and a piece of carpet on the floor, and put baby down upon them to stretch, roll, and tumble about, like all other young creatures. If it has a ball or a rag doll to crawl about after it will be "as happy as the days are long," and will, besides, be very little trouble, and be making its limbs strong, ready to walk by and bye. It is a great pity to accustom a baby to be nursed, for it only does it harm, and gives the mother a world of trouble into the bargain. Of course, when baby is on the floor it must be watched, lest it should put its head into the coal-scoop, its toes into the mouse-trap, or do some other of those things which babies are so clever at. In the summer it is a good plan to spread the matting and carpet on the grass in the garden, and put baby down on them, to use its limbs in the pure air and light. In short, wherever it is, and whatever it does, it should keep moving all the time. The birds, the beasts, the fish, and even the creeping things, are scarcely ever still five minutes together in the day-time, moving brings life and health to all things—babies among the rest.

Talking.—If the mother wishes baby to talk early and plainly, she should let it make all the noise it pleases; this is the only way to strengthen its lungs, and make it speak well. Children ought not to be still, they ought to be allowed to shout, laugh, and crow as loudly as they can; and if any poor bachelor does not like the noise, he must go to live somewhere else, or stop up his ears with cotton-wool. Baby never ought to be insulted, either by being told about "tootsy-pootsy," "namby-pamby," or any of that nonsense, but should always be spoken to in good, plain English, such as the mother would wish it to speak.

Some children, when they begin to talk, let their tongues run like an express train, so quickly that they get quite out of breath, and begin to stutter. Whenever they do this, they should not be laughed at and played with, but should be at once stopped, and bidden to speak more slowly, or to keep still, or they will, perhaps, get into a painful habit of stuttering, which will trouble them all their lives.

Vaccination.—A baby should be vaccinated when it is about three or four months old. The best plan is to get the matter straight from the cow; but if this cannot be done, great care must be taken to have the matter from a very healthy child, or the child vaccinated may take in the seeds of some bad disease.

Physic.—Some mothers are very fond of giving their children physic. This is a very wrong and dangerous thing to do; for, if a child is not ill, physic must do it very much harm; and if it is ill, nobody but a doctor knows what is the right sort of physic to give it. If a woman's clock wants cleaning, she takes it to a clock-maker; if her saucepan has a hole in it she does not try to mend it herself, but takes it to an ironmonger; and she does quite right, for she does not know the right way either to clean clocks or mend saucepans. But if her baby is ill she very often does not go to the doctor until she has first physicked it herself, although curing illness is much harder than clock-cleaning or saucepan mending. Clever doctors, who have been learning about illness all their lives, often say that there are still very many things about it which they cannot understand. How then can a woman, who has not any of a doctor's learning, know how to cure illness. The best thing we women can do is, to learn how to keep ourselves and our children well, and leave curing illness to those who understand it.

But, if we managed our children properly, they would very seldom be ill. A child is made to be healthy and to live long, and if it sickens or dies it is almost always through our stupidity and bad management: on almost all babies' gravestones might be written *Crammed to Death*, *Starved to Death*, or *Physicked to Death*.

Let us all ask ourselves whether these things ought to be so, or whether it is not high time to stop, and learn to do our woman's duty towards the little helpless ones which are given us.

Correspondence.

To the Editor of the Philanthropist.

SIR,—I am much honoured by being even the subject of an attack by the editor of the *Irish Quarterly*. If, however, he condescends to break a lance with so slow-witted an Englishman, he will expect me to defend myself as well as I can.

Now, with all due deference to his judgment, when he accuses me of "two very grave mistakes" I think the energy and rapidity which we so much admire in his writings have carried him a little beyond the mark, and on looking again he will agree with me that, "there's no mistake at all."

The first—he says—is that I assume that the question in dispute is simply one of priority of idea. If he had said that one comparatively small, yet not unimportant, part of the question was that of priority of idea, he would have been wholly right; but I think I have before said that so small a part do I deem it, that I feel sure that either Sir R. Jebb or Captain Crofton would gladly give up all claim to priority of idea, could the success of the system be thereby advanced one jot. Still, though a comparatively small part of the question, it is one which ought not to be lost sight of—*suum cuique tributo*—and both have sufficient that neither need grudge the other.

The second mistake I am charged with is, that "I suppose that some system like the intermediate prisons has at some or any period been even attempted by Col. Jebb in England." This I confess I do believe; whether I am mistaken in doing so is the question. I believe that the Refuge—as it is commonly called—for women at Fulham, is as nearly identical in design with Captain Crofton's intermediate prisons as such an institution for women can be with one for men; nor do I see that the calling the one by a dissyllabic and the other by a heptasyllabic name can make so important a difference as the excellent editor seems to imagine. The Refuge at Fulham is, I think, not what is usually, or perhaps strictly, called a Refuge—to which the inmates voluntarily come for help at their most trying period, viz., that of liberation—but in truth a prison, only a less strict and harsh one, to which certain women who have passed their earlier and more penal stage in Brixton are removed, some time previous to the expiration of their sentence, to fit them, by greater liberty, for the entire freedom which is shortly to be allowed them. If Captain Crofton's intermediate prisons are more or less than this I have misunderstood them.

Still, though the Refuge is a term not strictly applicable to the fact, and somewhat calculated to mislead, it has the advantage (in this very short life with so much to do in it,) that it is five syllables shorter. If Captain Crofton would abbreviate his name, as railway guards do those of the stations, and simply call Smithfield The Medit— it would be a great advantage to those who take an interest in the subject.

But seriously, if the excellent editor supposes, as I am inclined to fear, that I undervalue the improvements in "the mode of releasing convict prisoners," introduced by Captain Crofton, I can only say that he has either misread or misunderstood all that I have ever said or written on the subject. I do fully believe that his system works well in Ireland. I feel sure that there would be at first some difficulty in introducing it in England; probably considerable difficulty—possibly a few failures. But what great object is ever to be attained without some difficulty and risk of failure. The most apparent difficulty is the disinclination of the English people to take discharged convicts into their employ. But I say, without hesitation, that I feel sure that the public dread of adult convicts now, is no greater than was their dread of juvenile convicts five years ago. We have sufficiently lived down the one, because the public have discovered that the boys sent to reformatories were not *all housebreakers*, but that many were sent there for pulling and eating turnips; and, therefore, though naughty boys, well deserving of punishment, were not quite such objects of terror as one or two Welsh gentlemen—Sir Benjamin Hall amongst others imagined, when they vehemently opposed any reformatory being tried within many miles of their houses. We have, in most parts of England, as I say, lived down this absurdity.

Very many men, however, still believe that all convicts are old and hardened criminals. We shall live down this absurdity, too, when the public know a little more about them; and then Captain Crofton's system will be one of the greatest improvements we have seen since the days of Howard.

But while I say this, as I always said it, I fear that I shall but little assuage the wrath of my good friend the Editor, because I cannot say that we owe nothing to our English Director of Convicts. And, in truth, I must here differ from him entirely, and say that I heartily rejoice to see that the Queen has granted one of the highest honours of Civil Service to one who, in the course of a long and arduous service, has steadily improved our Convict system to so great a degree, that having found it a system entirely of hulks (probably the worst form of prison known since Howard's day), he can now boast that the last hulk has been broken up. Can we say that even the honoured letters K.C.B. are too high a reward for Sir Joshua Jebb? I think not. I do not maintain that the system is perfect, nor do I believe that any system is or will be perfect in this world; but I do think that the improvements Sir Joshua *has made* have well deserved his honours, irrespective of any more improvements which may be made hereafter.

I remain, Sir, faithfully yours,

J. B. LL. BAKER.

Hardwicke Court, April, 1859.

P.S.—The Government have lately called for a return of all boys *committed* to our Reformatory and discharged before Christmas, 1857, with an account of their present state. This set me to drawing up also a list of *all* the boys who have been in the Reformatory at all, whether voluntary, or under conditional pardon, or committed. I must ask your readers to look at the *explanation of terms*, or they will misunderstand the terms *Good, Bad, Lost*. Of the latter I have reason to believe above half to be doing well, though I have not heard of them for six months or more. I feel sure that not above a quarter *can* have been convicted without my knowledge, and I have not the least reason to believe that one has been so.

Romanist	6
Died	3
	119

Of the twenty-one bad, (*i. e.* re-convicted,) five are boys who absconded, and three of the others are since recovered; one emigrated; two enlisted (one of the latter of these died in India). Several others are hopeful.

EXPLANATION OF TERMS.

GOOD—means known within three months to be going on well.

IDLE—Not doing well, but not convicted.

BAD—Convicted.

LOST—Not heard of for three months or more: these, of course, are often turning up again.

COUNTRY—Placed out in country work, whether with masters or their own parents.

TOWN—Ditto, town work.

SEA—Either in the Royal Navy or merchant service.

ROMANIST—Removed to Romanist Reformatory, in which case I enquire no further about them.

DIED—Either at the Reformatory or soon after.

NATIONAL ASSOCIATION FOR THE PROMOTION OF SOCIAL SCIENCE.

SIR,—As you have permitted "A Member" of the Association to find fault through your columns with the manner in which the meeting at Liverpool was conducted; and also with the editing of the last volume of the "Transactions," you will probably permit me, as a member of the Council, and one of the Secretaries on that occasion, to offer to that gentleman a few words by way of explanation.

The Editor of the "Transactions" is perfectly competent to defend himself. It may be that the determination to give some degree of preference to local papers was not a sound one; but if it be exercised (as I believe it was in this instance) only to the extent of giving priority where upon every point of intrinsic merit the local paper in question was equal or superior to those it was preferred to, I think the rule a just one, and perfectly in accordance with the avowed purposes of the Association. The meeting was held in Liverpool, partly at least, in order to elicit such information as Liverpool could afford in elucidation of a great national subject. And as its cost was also, for the most part, defrayed by the inhabitants of Liverpool, it does not seem unfair, or inexpedient, that Liverpool papers on Liverpool topics, being of equal general merit, should have a preference in publication.

The individual who *read four* papers, and sees *three* of them *printed*, has, however, to remember—(1) That only two of them are printed in full; (2) That one of those so printed was in no respect of a local character, and that it was read by him as the delegated representative of *the Statistical Society of London;* and that the other, which was local only as concerning the entire foreign trade of the kingdom, he read as the similar representative of *the Liverpool Chamber of Commerce.* These bodies could not appear in person; and that the two happened to select the same individual to represent them will hardly be imputed to him for blame; though he may well assume that the honour of being printed in full was accorded rather to the bodies he represented than to himself. The paper partially printed is on a local topic, and it was read by a local secretary. This is the "one fact" adduced by your correspondent, as proving an undue preference of local papers. Perhaps he might have found another had any other member present combined the same duties.

I am, Sir, yours obediently,
J. T. DANSON.

Eldon Chambers, Liverpool,
April 7th, 1859.

BANKRUPT AND INSOLVENCY LAWS.

HOUSE OF LORDS.—MONDAY, FEB. 7th.

THE first of the government law reforms was introduced by the Lord Chancellor, in a lengthened speech descriptive of the history and present state of the Bankruptcy and Insolvent Laws, the reports of commissioners upon them, and of the government measure for their reform. The new bill was founded on the one introduced last session by the Attorney-General, but which during the recess had undergone considerable revision. Acting upon the report of the commission of 1840, it was proposed to clear the way by restraining, not abolishing imprisonment on final process. In future it was only to be permitted in cases apprehensive of the debtor's absconding; where the debt had been fraudulently incurred or vexatiously defended; and where it was due in respect to any damages recovered in any action of tort. In all other cases no imprisonment for debt would be allowed. The Insolvent Court would thus be deprived of a greater part of its functions, and would be done away with; but the commissioners would be retained to see how far they might be necessary to carry out the new bill. Then came the question of abolishing the distinction between the trader and non-trader; this could not be done entirely, and the government proposed that upon these three grounds alone should the non-trader either have the benefit of the act or be exposed to its provisions:—first, where he himself applied for the benefit of the act, when his property might be distributed among his creditors; secondly, where he left the country for the purpose of defeating or delaying his creditors, or where, being abroad, he remained there with the same object; thirdly, where, a judgment having been obtained against him by a creditor, upon a summons issued he failed to satisfy that judgment or to enter into some arrangement for that purpose. To meet the possible vindictive dealing of a creditor in the case of an estate tail in remainder, the 95th clause prevented him selling it without the consent of the debtor during the existence of the prior estate, but leaving the debt a charge upon the estate when it fell into possession, although the debtor might then have obtained an order for his discharge. Another provision would probably excite discussion, as it set the non-trader free after his discharge, in the same way as a bankrupt, in respect to the acquisition of new property. With respect to the administration of debtors' estates, it was thought desirable to give creditors a greater power of interference than they at present possessed, and it was proposed to be done in this manner:—

Their lordships would find clauses in the bill providing that at the first meeting of creditors for the choice of assignees, the majority in value of them might, if they chose, agree to dispense with the official assignee altogether, and allow the assignees of their choice to have the management and control of the affairs of the bankrupt or insolvent in the course of liquidation; but it had been thought that the creditors might possibly require the experience of an official assignee, and therefore they would be enabled to select that officer as their trustee. When, however, that officer was so selected, he became to all intents and purposes the trustee of the creditors, and lost his character as official assignee. There was another very important provision—namely, that though proceedings might have commenced in insolvency, and the Insolvent Court got possession of the affairs of the insolvent, yet if the creditors and debtor, in the course of the investigation, considered that it would be to their advantage that the affairs of the debtor should be liquidated by arrangement, they might take the business away from the Insolvent Court, and convert it into a private arrangement. In accordance, also, with the wishes expressed in the petitions he had referred to, there were clauses which it was thought would facilitate the liquidation of the affairs of insolvents, under the control of the Court, but with an inspector appointed by the creditors. Their lordships would also find some important clauses with respect to private arrangement by deed.

Next as to certificates—the distinction of first, second, and third class, at the caprice of the Commissioner, was to be abolished, and no debtor was to remain uncertificated for more than two years. The suspension of the certificate would apply to those cases which were peculiar offences under the bankrupt law or administration, but not to those very important cases which rose to the class of misdemeanours. These latter were only to be punished after regular trial and conviction by a jury in a superior court. The salaries of official assignees at the present time, from fees, ranged from £500 to £2,000. It was impossible to equalise them fairly in the bill, so it was proposed to give certain persons power to equalise them after they had experience of the working of the new act within a certain *maximum* and *minimum*. The office of broker was to be entirely done away, and the anomaly of an inferior officer like the messenger receiving £1,500 to £3,000 a-year, he left to be dealt with by some future legislation. In conclusion, the Lord Chancellor called attention to the new language and style of the measure introduced:—

Those who were accustomed to the ponderous character of the provisions of modern Acts of Parliament would perhaps at first be startled, but certainly he thought in the end would be pleased, at the simple, short, and concise style in which the provisions of this bill were expressed, rendering them perfectly intelligible even to those who were not acquainted with the subject.

He also stated that the consolidation of the Bankruptcy Laws had not been attempted, as it was thought better that the amendments should be first dealt with.

Lord Brougham expressed his general concurrence in the measure, particularly in the abolition of imprisonment and of the distinction between traders and non-traders. Some objections to matters of detail he left for a future stage. Lord Campbell regretted that consolidation was not provided at the same time with the amendment. Lord Cranworth agreed with the Chancellor that in a case of great amendments in the law, like the present, it was best to deal with them first, and consolidate afterwards.

COTTAGE IMPROVEMENT — REDHILL.—HOMES FOR THE WORKING CLASSES.

Every one knows how badly our labouring classes are lodged. While in most other respects their social *status* has improved, the houses they live in remain for the most part as bad as ever. But the evil is not one of those that remain unremedied for want of being talked about. It is known to be a great social defect. Sanitary reformers write pamphlets upon it, clergymen preach about it, learned societies report upon it, farmers' clubs and agricultural societies talk it over, Parliament passes enactments respecting it; but with all the oceans of talk, the barrels of printing ink, and the hours of discussion spent upon the subject, labouring men lodge pretty much as they always have done. We do not say that those gentlemen who have taken the matter in hand have not used their best energies, and been prompted by the best motives; but we do assert that they have not generally judiciously applied the means adapted to the attainment of the end desired. It has been too much the practice to place the improvement of the dwellings of the working classes in the same category as the distribution of prayer-books to the Iowa Indians, and the sending of curates to distant colonies;—well-meaning people, who only know one mode of doing good, willingly place their hands in their pockets, and draw forth a subscription when applied to. But for the purpose in question, this method can never be productive of any considerable or permanent benefit. The evil is of too great a magnitude. Mrs. Partington could as successfully stem the ocean-tide with her mop, as mere unassisted philanthropy provide against over-crowding of our labourers' dwellings. There is but one way of better housing the working-classes, and that is by making the business a profitable investment, by demonstrating to commercial men that it will "pay." An experiment of this description has now been in operation at Reigate for more than two years, conducted by the Redhill and Reigate Cottage Improvement Society. To the character and objects of this society we have previously had occasion to call the attention of our readers. Originated by a few philanthropic gentlemen who desired to improve the wretched accommodation found in the homes of the working classes of their own neighbourhood, the society erected near the Redhill Junction 19 cottages, which were completed in March last. These cottages are erected in an excellent situation: they are of a character far superior to those tenanted by workmen generally; they are let at rents lower than those generally paid for accommodation of the worst kind, and they yield the proprietors a profit of five per cent. on the outlay, the directors of the society declaring that five per cent. on capital could not be got more satisfactorily or safely in any other quarter. These facts more than confirm the truth we are endeavouring to illustrate. What has been done at Reigate could be much better done elsewhere, because, as those who are acquainted with the locality are aware, the Redhill and Reigate Cottage Improvement Society labours under local disadvantages which few other places present. The place is in a state of transition from a small, thinly-scattered neighbourhood, to a large and important population; consequently, land for building purposes is extremely dear, and landowners are disposed to hold, knowing that the market price will rise yet higher. From the great demand for villa residences, also, it is difficult to obtain sites for the erection of dwellings of a less pretentious character; and hence, amid the rapid accession of a wealthy population, necessarily accompanied by an increase of the labouring class, the latter becomes more and more huddled together, while the ornamental dwellings of their more wealthy neighbours continue to raise their roofs as if by magic, and chequer the charming landscape. To the members of the Redhill and Reigate Cottage Improvement Society belong the praiseworthy task of endeavouring to restore the balance. In addition to the nineteen substantial cottages already erected and tenanted, the society are about to erect twelve others, for which invitations for tenders are advertised. It is to be hoped that the society's experiment, the successful issue of which is now beyond all question, will be the means of propagating the conviction that it is possible, and even easy, to provide our poorer neighbours with the opportunity of appreciating the decencies of life; and this, too, not only without degrading them into recipients of charity, but realizing, at the same time, a fair commercial remuneration. Let us hope that the day may come when all industrious and worthy men and women will obtain from the growth of science and the advancement of civilization, what the birds of the air and the beasts of the field derive from nature—a resting-place, where the pure air of heaven may be breathed unpolluted, and a refuge unclouded by the foreshadowings of disease.

MR. WARREN ON THE RELATION BETWEEN MASTER & SERVANT.

At the opening of the Hull general quarter sessions, Mr. Recorder Warren, in charging the grand jury, said:

"I deeply regret to observe no fewer than six cases of servants robbing their masters: offences which are evidently on the increase here, and are of a very serious character and deadly example. Gentlemen, what is to become of a busy and great commercial community like this, if the fundamental, the universal and necessary relation of master and servant—the bond of trust and confidence—comes to be lightly esteemed and rent asunder with impunity, or even without occasioning serious outcry against the prevalence of such an evil? It loosens the very keystone of the arch of commercial society—nay, of society at large; for how universal is the relation of master and servant! The enormity of this offence in the eyes of the Legislature is evinced by the fact that it has made the offence, even when committed for the first time, punishable with no fewer than fourteen years' transportation—now, of penal servitude, in the discretion of the judge, on a consideration of all the circumstances of the case; and I feel cases of this description to be often very difficult and harassing to be dealt with. I have passed some very heavy sentences, in clear and strongly-marked cases of perfidious violation of trust, of the kind of which I am speaking; and yet I lament to say that they are on the increase. It is hard, and would not be just or true, to lay the blame, as a general case, on the employer, and say that he gives but a small salary, or low wages, and that temptation proves therefore irresistible to the poor and underpaid servant. Where that relation is contracted, it is contracted by both parties voluntarily ever and deliberately; and the plea of inadequate remuneration, when offered by the servant who has robbed his master, is one that cannot for a moment be entertained, however, under special circumstances, he may become legitimately an object of merciful consideration in meting out punishment. No, gentlemen, the fault will generally be found to lie, not on the side of an exacting, an oppressive, or a negligent master, whose carelessness makes temptation almost irresistible—but on the side of a wickedly-disposed servant, who contracts loose notions of *mine* and *thine*, or rather has never had right notions really instilled into his mind, or has lost them—who is surrounded, nowadays, with alarmingly increasing facilities for contracting immoral and vicious habits, for creating an appetite for guilty indulgence, and a fierce irresistible craving after the means of obtaining them. Gentlemen, I am not saying all this with the sort of comfortable complacency of—so to speak—a drawing-room moralist, but with the deep convictions derived from no little judicial experience obtained from trying many such cases, noting their circumstances of extenuation or aggravation, and hearing the confessions of convicted offenders, with whom I have afterwards painfully conversed in the gaol of this place. I have heard the convulsive sob and seen the streaming unavailing tears of those whom I have summoned from their cells to give them words of kindly counsel and expostulation, while they confessed that they had first gone wrong through frequenting low theatres, and especially low public-houses, and indulging in demoralising pursuits—one leading on to another, till at length a sullen recklessness took possession of the early victim of vice; a sudden desperate necessity *made* its own opportunity; and the victim has stood before me—as he had not long before publicly stood before us all there — trembling, heart-broken, and blighted in name and character, reflecting wretchedness and ruinous discredit on perhaps a poor but virtuous and honourable family. I could give you at this moment descriptions of scenes I have witnessed, and disclosures made to me, which would, unless I am mistaken as to the stuff you are made of, as honourable and feeling men, bring tears into the eyes of every one of you. But I forbear. Within an hour or two's time you will have experience of the circumstances which have forced from me, on reading the depositions, these observations, in the discharge of my judicial duties in this place."

THE FIRST PUBLIC DRINKING FOUNTAIN IN LONDON.—On Thursday afternoon, April 21, the interesting ceremony of opening the first public drinking fountain, was performed by Mrs. Willson, the daughter of the Archbishop of Canterbury, in the presence of a large concourse of people. The fountain is situated at the corner of Giltspur Street and Skinner Street, by St. Sepulchre's Church. The hour fixed for the ceremony was three o'clock, and long before that hour a vast number of people of all descriptions assembled in the vicinity. Shortly before three o'clock Mrs. Willson arrived at St. Sepulchre's Church, where that lady was received by Lord Radstock (who was accompanied by Lady Radstock and the Hon. Miss Waldegrave), the Rev. J. Jackson, the incumbent), Mr. Harvey, the chairman, and Mr. Potter, the vice-chairman of the West London Union, and a large number of other influential personages. Mrs. Willson was conducted to the fountain, which was uncovered, and displayed a crystal jet of water. She then spoke as follows:—"I am deputed to express the hope of his Grace the Archbishop of Canterbury and his family that the fountain now to be opened may be only the first among many similar erections, and that the supply thus given of pure water may prove in every respect as beneficial as it must always be agreeable." Mr. Potter then handed to Mrs. Willson a handsome silver cup, which she filled with water and drank of. Lord Radstock then briefly addressed the assemblage, pointing out the great good that must result from the erection of these fountains, and on behalf of the association formed for their construction expressed a confident hope that many people would avail themselves of this cooling draught, and also that it would be the anxious endeavour of all persons to prevent any damage being done to the fountains. The Rev. J. Jackson also made a similar appeal to the public to protect the fountain from damage. The proceedings, which only occupied a few minutes, then terminated, and the company adjourned to the vestry-room, where a very interesting address was presented by a deputation from the butchers of Newgate Market to Mrs. Gurney, the wife of Mr. Samuel Gurney, M.P., thanking the hon. gentleman for his kindness and liberality in giving the fountain to the public, expressing a belief that the greatest possible benefit would accrue to those engaged in the market from the existence of so great a boon. The assemblage then dispersed, and a number of people partook of the refreshing liquid. It was computed by persons appointed to watch that the average number of drinkers was eight per minute.

REFORMATORY SCHOOLS, &c.—The number of children in reformatory schools in Great Britain, on account of whom grants were made from the 2nd of June, 1856, to the 31st of December, 1857, amounted to 5,823; the total amount of 50s. capitation grant to £7,707; the amount in aid of teachers' salaries to £6,924; the amount in aid of rent to £2,201; and the amount in aid of purchase of tools to £6,362. The subscriptions and donations amounted to £52,541.

NATIONAL ASSOCIATION FOR THE PROMOTION OF SOCIAL SCIENCE, 1858.

Paper read in the Punishment and Reformation Section.

REFORMATORIES AND RAGGED SCHOOLS: their Comparative Economy, &c.

"This most valuable contribution to the statistics of Reformatory work, has, on the representation of several leading members of the department, been published separately, in order that those particularly engaged in the management of Reformatories may be able the more readily to avail themselves of the detailed information which it contains."—*Vide Transactions of the Association*, 1859.

PRICE ONE SHILLING.

ON JUVENILE CRIMINALS AND REFORMATORIES, and the means of rendering the Perishing and Dangerous Classes serviceable to the State. By JOSEPH ADSHEAD, Author of "PRISONS AND PRISONERS," &c. Reprinted from the Transactions of the Manchester Statistical Society.

"An able and useful pamphlet." — *Lord Stanley's Address at Bristol*, 1857.

Published by W. TWEEDIE, 337, Strand, London.

REFORMATORY FOR JUVENILE MALE CRIMINALS under 16 years of age.—The HOME in the East, Old Ford, Bow, near London.

PRESIDENT,
THE EARL OF SHAFTESBURY.

TREASURER.
JOSEPH CRANE, Esq.

BANKERS.
MESSRS. HANKEY & Co.

HONORARY SECRETARIES.
A. J. SCRUTTON, Esq., 81, Old Broad Street;
THOMAS SCRUTTON, Jun., Esq., 3, Corbet Court, Gracechurch Street.

GOVERNOR.
Mr. J. W. GORDELIER, at the Institution.

Fifty youths are maintained at an annual average cost of about £1,000.

In addition to the ordinary operations of the Institution, the following efforts call for special funds:—

New workshops, with appropriate fittings, newly erected at a cost of £300.

Emigration of seven youths to Canada in April next, £85.

Contributions in aid of either of the above objects are earnestly solicited, and will be gratefully acknowledged.

APPEAL to the LADIES.—The SANATORIUM for CONSUMPTION, at Bournemouth, was founded in 1855, for the reception, from all parts of the kingdom, of consumptive patients, whose state of health may be such as to afford good reason to hope for their recovery by proper attention, and a residence in a dry and salubrious climate. The Institution has been very successful in relieving the wants of such patients, especially in the female department, where the applications for admission are so numerous as to far exceed the present means for affording relief.

In the erection of the building, and in the management of the Institution in its infancy, a heavy debt has been incurred, the interest on which adds considerably to the annual expenses. To raise a fund for the payment of this debt, and for the extension of the usefulness of the Charity, it has been suggested by some friends of the Institution that, instead of holding a bazaar, as was at first proposed, a special appeal should be made to the ladies, inviting them to unite their efforts in collecting each a certain sum for the purposes above specified. The ravages of the insidious and fatal disease, to the treatment of which this Institution is devoted, must undoubtedly have been experienced by every lady in the land, either in her own family or amongst her friends, and, therefore, in making this appeal, every confidence is felt that a ready response will be given by those to whom it is addressed, in behalf of those, especially amongst their poorer sisters, who are suffering from this great calamity.

The amount of the debt is £2,768. An old and valued friend of the Institution has liberally offered to make a donation of £500 towards the liquidation of this debt, provided that the remainder of the sum, amounting to £2,268, can be raised in the manner suggested.

The plan proposed is that each lady should undertake to collect £20 by the end of September next, the sums so collected to be placed in the hands of three trustees, for the purposes above specified, and to compose a fund to be called the Sanatorium Special Fund. Should any lady, however, collect the sum of £31 10s., she will become entitled, by the existing rules of the Institution, to the privilege of nominating one patient, of either sex, annually, for five years.

Collecting cards may obtained of the Secretary, at the Sanatorium, who will also gladly furnish full particulars respecting the Institution.

It is requested that ladies intending to become collectors will kindly send their names and addresses to the Secretary, who will shortly publish a list of the names received.

THOMAS EYRE MORGAN, *Sec.*

PLAYGROUND AND GENERAL RECREATION SOCIETY.

The SECOND ANNIVERSARY FESTIVAL of this Society will be held at the FREEMASON'S TAVERN, Great Queen Street, on THURSDAY, the 19th of MAY, 1859. The Most Hon. the MARQUIS OF WESTMINSTER in the Chair.

FIRST LIST OF STEWARDS.

The Lord Bishop of St. Asaph.
The Lord Dynevor.
The Lord Ebury.
Thomas H. Bastard, Esq.
Thomas Bermingham, Esq.
John Ivatt Briscoe, Esq., M.P.
W. G. Carter, Esq., F.S.A.
Joseph T. Clover, Esq.
Montague Gore, Esq.
Samuel Gurney, Esq., M.P.
James Heywood, Esq.
Blanchard Jerrold, Esq.
Charles F. J. Lord, Esq.
James I. Macintosh, Esq., M.D.
Charles Ratcliff, Esq.
W. Jesse Street, Esq.

Tickets for Gentlemen, £1 1s. each: and for Ladies (admitting them to the Gallery, after Dinner), 5s., including Refreshments. To be had of the Secretary, at the Offices, 97, Newgate Street; by whom Donations and Subscriptions will be thankfully received.

EDWARD WEST, *Secretary*.

OUR HOMELESS POOR.—CONTRIBUTIONS to the General Fund, Refuge Fund, and Female Mission Fund, in connection with the Reformatory and Refuge Union, are earnestly SOLICITED. Bankers—Smith, Payne, and Co., 1, Lombard-street; and Ransom, Bouverie, and Co., 1, Pall Mall East. See Third Annual Report, to be had on application to the office of the Union, 118, Pall Mall, S.W.

ROBERT HANBURY, Jun., } Hon.
STEPHEN CAVE, } Secs.
CHARLES GWILLIM, Sec.

A MATRON is wanted for a small Home for Discharged Female Prisoners. She will be required to live with the young women and instruct them in reading and writing, and in the general duties of household service. Salary £30, with board, lodging, and washing.

☞ Written applications, stating full particulars, to be sent, on or before the 10th of May, to the Assistant Chaplain, County Prisons, Maidstone.

Price Twopence.

THE EVILS OF WET-NURSING.
A WARNING TO MOTHERS.

One of a series of Tracts published by the Ladies' National Association for the Diffusion of Sanitary Knowledge.

"An excellent Association."—LORD SHAFTESBURY.

"So many and so serious are the moral and physical evils arising from the abandonment of children by their mothers, to assume the office of *wet-nurses* for hire, and especially so great is the mortality of infants thus forsaken, that it is questionable if anything can justify such a proceeding, either on the part of the woman, or of the family so employing her."—DR. CONQUEST.

"Medical men have it greatly in their power, as conscientious *advisers*, to stay the custom referred to."—M. A. B.

[We do not hold ourselves answerable for the opinions given in our correspondence.—Ed. *Phil.*]

Observations on Illegitimacy in the London Parishes of St. Marylebone, St. Pancras, and St. George's Southwark, during the year 1857.—Deduced from the returns of the Registrar-General, by William Acton, Member of the Royal College of Surgeons, and Fellow of the Medico-Chirurgical and Statistical Societies. Read at the Statistical Society, May 17, 1859.

The author began by stating that there are questions, and Illegitimacy is one of them, from the consideration of which—whatever of disagreeable or repulsive the task may involve—the advocates of social progress must no longer shrink. Social evils claim as urgently to be investigated and discussed as physical plague-spots.

No social evil more constantly and obtrusively presents itself before us than ILLEGITIMACY; yet, curiously enough, it has no literature. He had looked through the lately published catalogue of the library of the Statistical and other societies, and failed to find mention of the word.

In the year 1856, according to the Registrar-General's statistics, 42,651 illegitimate children were born in England and Wales, exclusive of Scotland; and in the latter country, 2761 illegitimate children came into the world during the year 1858.

These figures, on the same authority, show that out of 388 illegitimate children that died in 1857, the large proportion of 326 died before they were one year old. The most fatal period is found to be between the ages of one month and three months. During this, 110 perished. Death seems to overtake few under a week old; and it would really appear from these statistics, that, notwithstanding all the misery of the mothers, and the destitution they undergo previous and subsequent to their confinement, the illegitimate child is born healthy and would survive, if the mother could at one time nourish it and gain her livelihood.

In speaking of the occupation of the mother, Mr. Acton showed that domestic servants figure most largely, for they amount in his tables to 194. The fact that a large proportion of the mothers of illegitimate children have been in service, is very important, and he thinks justifies the philanthropist in more urgent appeals to the ladies of England to again take these women into their households as wet-nurses, at once benefiting themselves, their offspring, and the mother, who might thus often be saved. He especially called attention to the fact that the registrars of both Marylebone and St. Pancras have noticed that in four cases the father has married the mother since the birth of the child. This he considered very encouraging, as bearing out the opinion he had advanced elsewhere, that if the woman be cared for these marriages would be much more common. In prosecuting his inquiries he had met with much corroborative evidence bearing out opinions he had long since advocated, that marriage, within her degree, is the most natural, safe, and certain way in which the mother of an illegitimate child can be permanently assisted. He stated he was well aware that some disinclination still exists in the minds of many sensible people to assist women who have given birth to illegitimate children; but he was not the less sure that not the least result of the ventilation of the great social evil question had been the growth of Christian charity in this respect.

As regards the occupation of the fathers, it appears from the returns of the Marylebone workhouse that no less than twenty persons coming under the denomination of labourers were the alleged fathers of illegitimate children, which favours the position that the promiscuous herding of the lower classes contributes largely to corrupt the morals of the female poor. Male domestics next appear as the most numerous class of fathers. Bearing in mind what had been shown in a preceding table, that 194 mothers were themselves domestics, it would appear as though the present system of keeping a large number of single men and women in households is productive of a large proportion of illegitimate children.

The author next states that thirteen women could not name the father of the child. In a few, a very few, of these cases he was ready to admit the female's inability, out of a variety of paramours, to fix upon an individual; but he fancies it much more often happens that a woman in her first pregnancy, when confined in a workhouse, declines to indicate the father of her child, either from womanly consideration for his feelings, or in the belief that he cannot afford to pay for her confinement, but may make her an honest woman by marriage as soon as he can save a little money. The tenderness in the first of these cases is too often undeserved and thrown away, and, in the second, the hopes of the victim are too often found delusive.

The author then entered upon the subject of *difficulties of affiliating the child.* His hearers might suppose that a relieving officer would be enabled to assist a large portion of these 170 women to recover from the fathers of their offspring the usual 1*s.* 6*d.* or 2*s.* 6*d.* a-week for the support of the children, as well as some pecuniary compensation towards the expenses of the parish, on account of the lying-in. Such an officer will, however, (turning to the Act of Parliament), inform the ratepayers that he is expressly forbidden to interfere in this matter. Debarred, then, from legal assistance from the parish during her lifetime, the mother's usual course is to apply to a magistrate, who, on the payment of two shillings, will grant her a summons to be served on the putative father *if he can be found.* This is, however, no easy task, particularly in cases where such father (as often happens) has changed his place of abode, and has obtained employment in some distant part of the country, with a view to conceal his whereabouts. Be it moreover understood that the female must deposit in the hands of the summoning officer a sum to cover the expense of making these distant inquiries. But supposing the summons served and the putative father present, the magistrate, provided *the mother's statements can be corroborated by other testimony in some material particular,* can only adjudge him to pay any sum not exceeding 2*s.* 6*d.* a-week towards the maintenance of the child, until it attain its thirteenth year. Magistrates and relieving officers all agree on the hardship of this course; yet, in the present state of the Bastardy Law, there is no alternative, and it is only by the preceding cumbersome machinery that a seducer can be reached. And then after all, the regular payment of the weekly allowance is by no means secured to the woman by this plan, as no security is taken for it. The man, if so disposed, can walk away, adopt a new hiding-place, and set the unfortunate at defiance. The mother may, it is true, again appeal to the magistrate; and he, after swearing her that she is not married, that the father has not paid the sum ordered, and that the child is still alive, may, on the payment of an additional sum to cover new expenses, issue his warrant for the apprehension of the recusant. But, asks the author, can the majority of mothers be expected to undergo the expenses of this ordeal?

The practical working of the present bastardy law is to force the mother upon the parish for relief. Mr. Tubbs says there are now eighty-five persons receiving the weekly pittance of one shilling each from the parish of St. Marylebone, because they have not taken the necessary steps, or, having taken them, have failed to recover from the father of their bastards. Moreover, on the 1st of January, 1858, no less than 14,427 children were charged, under similar circumstances, upon the parochial rates, in 629 unions and single parishes in England and Wales, out of the existing large population of 16,628,399 souls.—Shamefully small as is the pittance referred to, now doled out to the bastard mothers of the metropolis, can anything be more oppressive than that the expense of it should fall at all upon the ratepayers.

Digitized by Google

Can anything be more iniquitous towards the unfortunate women than this system? Should not the Act, which alike debars the relieving officer from assisting the mother, and from procuring the reimbursement of the charges the parish has been put to, be at once repealed? The author suggests that parishes should have the same power given them of recovering the sums they have expended from the fathers of illegitimate children, as they now have from the fathers of legitimate ones. Such an enactment would have a healthy tendency in checking seduction and relieving the rates, while at the same time it would remove one of the most crying evils of the present poor law. From the judicial statistics for England, in 1857, it appears that 5,816 men were taken into custody for disobeying bastardy orders in the year 1857. The author stated that he could not leave this part of the subject, without recommending the re-enactment of a very beneficial section of the old poor law, as it stood before its revision in 1834. It was in those days possible, if a pregnant girl came before the parochial authorities declaring the father of her child, for the parish to take steps that her accouchement and the rearing of the child did not fall upon the parish, the latter having power to recover from the father.

Mr. Acton successively gave the ages of the mothers, as well as the causes of infant bastard mortality, forming a sad death-list indeed. He told the Society how many deaths took place in workhouses, as well as the number of inquests which are held on the bodies of illegitimate children. He then entered at considerable length into the question of verdicts that had been brought in; and showed that judges, juries, and secretaries of state show an equal disinclination to carry out the law of infanticide, in consequence of the extenuating circumstances the evidence discloses—viz., the great temptations placed in the path of woman—the destitution she has been exposed to from the neglect of the real or supposed father—the fear of degradation that follows the public exposure of her shame—and the almost impossibility of supporting herself and infant. In alluding to the recent cases of women convicted on the clearest evidence of child-murder, he showed, by the returns of the criminal statistics, that such murderesses were confined only as criminal lunatics.

The author summed up his views by stating that he sought his remedies, strange though it might at first appear, not altogether in the better education of the more exposed class of women, or in higher wages. Desirable as these unquestionably are, they will not, in his opinion, prevent seduction. To cut off the supply of harlotry, the demand, he argued, must be checked by taking greater precautions than we now do to make the SEDUCER (and this, too, is merely a conventional term) suffer either in person or in purse. He proposed the establishment of a Government Board, or other competent authority, whose duty it should be to take charge of the pregnant woman thrown out of a situation; then to afford her work and assistance until confinement; then to see to her lying-in; and then to take steps to recover damages in the name of injured and outraged virtue and society from the FATHER of the child. In doing this it would be obviously necessary, as at present, to guard against affiliating the child on the wrong person, and to see that the mother did not profit by the money so obtained; for this were no better than opening a regular and profitable market for female honour. The board suggested should invest the funds so accruing for the keep and education of illegitimate children. Were the institution a recognised and a public one, Mr. Acton thought the profession would bear him out that a good proportion of the mothers might be found situations as wet-nurses (for from this source wet-nurses are now procured, but with fear and trembling), and hence have an opportunity of recovering a position in society. The situation of wet-nurse would be acceptable and open to many thousands of women, were they cared for from the time of their exposure to that of their confinement, a period most trying to the unfortunate; and neglect during which, leads too often to their permanent ill-health, and to the birth of such sickly infants that the mothers lose all chance of being taken as wet-nurses. Further, Mr. Acton believed that, if these women were thus cared for, a large number would be rescued from their position by marriage with their first paramours, when the latter were persons in the same rank of life as themselves. By applying such natural remedies he thought that Illegitimacy might be checked, and its sad consequences much softened to the unhappy mothers. He thought some such system as the above would be preferable to the continuance of the existing Foundling Hospital, which had ceased, he said to carry out the true intent and meaning of its founder. With a revenue of the present value of £11,000 a year, and with an assured income within the present century (according to the statements of the Charity Commissioners) of £40,000 a year, this institution so wanders from its legitimate path, and from propriety of administration, that each of its inmates costs it nearly £360 before attaining fifteen years of age, besides being unhealthily and unnecessarily reared in the atmosphere of the metropolis, and has a poor start in life after all.

THE RECREATION GROUNDS ACT.

It is no slight sign of the advancement of mutual sympathy, the want of which was so much deplored by the late Serjeant Talfourd between the higher and lower classes, that the following Act passed both Houses without any opposition; the only amendment being as we understand a desire to extend it to Ireland:—

ANNO VICESIMO SECUNDO VICTORIÆ REGINÆ.

CAP XXVII.

An Act to facilitate Grants of Land to be made near populous Places for the Use of regulated Recreation of Adults, and as Playgrounds for Children. [19*th April*, 1859.]

WHEREAS the want of open public grounds for the resort and recreation of adults, and of playgrounds for children and youth, is much felt in the metropolis and other populous places within this realm, and by reason of the great and continuous increase of the population and extension of towns such evil is seriously increasing, and it is desirable to provide a remedy for the same: Be it therefore enacted by the Queen's most excellent Majesty, by and with the advice and consent of the Lords Spiritual and Temporal, and Commons, in this present Parliament assembled, and by the authority of the same, as follows:

I. Any lands may be lawfully conveyed to trustees, to be held by them as open public grounds for the resort and recreation of adults, and as playgrounds for children and youth, or either of such purposes, and for any estate, and subject to any reservation, restrictions, and conditions which the donor or grantor may think fit: But this enactment shall not extend to authorize any lands to be so conveyed for any greater estate or interest than the donor or grantor would, independently of this act, have power to dispose of.

II. Any such conveyance of land to trustees may be in the following form, subject to any modification thereof which the case may require:

'I *A. B.* do hereby convey and grant to ' , as trustees for public 'ground for the parish [*or* parishes] of ' [*here describe the Lands* '*conveyed or granted*], to be held by them 'as public ground for the purposes of '"The Recreation Grounds Act, 1859."'

And it is hereby enacted, that the grant or conveyance of such lands shall not require enrolment, nor to be by indenture, and shall be valid, although the donor or grantor shall die within twelve calendar months after the making of such grant, any of the provisions of the act passed in the ninth year of the reign of King *George* the Second, chapter thirty-six, to the contrary notwithstanding.

III. With respect to lands belonging to any municipal corporation, such grant may be lawfully made by the body corporate, with the consent of the Commissioners of Her Majesty's Treasury, signified by their executing the deed of conveyance.

IV. With respect to lands belonging to any parish, such grant may and shall be made by the trustees or feoffees (if there shall be such), or otherwise by the churchwardens and overseers of the parish, in pursuance of a resolution for that purpose of the vestry or other body having the management of the affairs of such parish, passed in meeting duly assembled for the purpose, and with the approbation of the Poor Law Board, to be testified by their seal being affixed to the deed of conveyance.

V. With respect to the appointment of trustees for holding any such grounds for the purpose aforesaid, the lord of any manor, or the churchwardens of any parish, or the overseers of the poor of any parish or township, or all or any of such persons to whom lands shall have been conveyed as aforesaid, shall be a body corporate for taking, holding, and disposing of such grounds, and instituting, maintaining and defending any proceedings relating thereto; but the management and direction of the same shall be and remain

Digitized by Google

in such person as may be named in the deed of conveyance thereof; and in case no such persons shall be so named, or there shall be a failure of such managers and directors, the Charity Commissioners for *England* and *Wales* shall have power to settle a scheme for the appointment of the managers and directors.

VI. The managers and directors may from time to time make and enforce any such byelaws, orders, and regulations for the management, preservation, disposition, and care of the said grounds, and the government of all persons using or frequenting the same, as shall be approved by the said commissioners and in accordance with the conditions of the grant; and no byelaws, orders, or regulations in any manner restricting the public use or enjoyment of the said grounds shall be valid unless sanctioned with such approbation.

VII. It shall be lawful for any person to bequeath any personal property, not exceeding one thousand pounds in amount, for the purpose of defraying the expenses of purchasing, preparing, maintaining, and preserving such grounds for the purposes aforesaid, and ornamenting the same.

VIII. This act shall extend to *England* and *Ireland* only, and may be cited for all purposes by the title of "The Recreation Grounds Act, 1859."

Statistics of Education.—Since the appearance of the article in the *Times* in reference to the "National Society for promoting the Education of the Poor in the Principles of the Established Church," that society has completed its decennial inquiry into the statistics connected with church schools throughout England and Wales. The number of scholars in Church of England week day, Sunday, and evening schools, is reported to be 1,672,445; or about 8.61 per cent. of the entire population of England and Wales. In 1847, the date of the society's previous inquiry, the per-centage of the population under instruction in Church of England schools was 8.25. There are at present 1,187,086 scholars in Church of England week day schools: 1,093,070 in Sunday schools; and nearly 55,000 in evening schools. The number of evening scholars has more than doubled since 1847. The returns embrace other particulars, especially as regards teachers, pupil teachers, and annual income. The results of the inquiry bear striking testimony to the accuracy of the report and tables of the census of education in 1851, which were issued by the Registrar-General in 1854. The National Society's inquiry was conducted by the Rev. Alexander Wilson, assisted by Mr. Flint, of the Education Commission.

REFORMATORY AND REFUGE UNION.

The Third Annual Report is, generally, such as will give extreme satisfaction to the well-wishers of reformatories, refuges, and industrial schools.

LEGISLATION.

In the early part of the year, the managers of the uncertified refuges, &c., were surprised by a communication from the Privy Council Office, to the effect that the Committee of Council on Education had determined to rescind the minute of June, 1856, and to substitute a new minute, dated 31st December, 1857. Under this minute, very small assistance was offered to institutions not certified under the Industrial Schools Act; and by certifying, it was feared that the voluntary character of the refuges would be in a great measure destroyed, and their usefulness impaired. Several meetings were held at the office of the Union; and a deputation, consisting of more than forty representatives of institutions, had an interview with Mr. Adderley on the 14th of May. The points which were urged on that occasion, and the correspondence between the Union and the Committee of Council, have since been printed; and the committee can only state, that there is at present little hope of a change being made, and that the necessity for voluntary exertion has therefore considerably increased.

The committee may mention, in passing, the great encouragement held out to such exertions by the first report of her Majesty's Inspector of Reformatories, the Rev. Sydney Turner, which, though applying only to certified reformatories, gives a cheering account of the diminution of juvenile crime, through the operations of the reformatory system, of which uncertified refuges form an important part.

CASES ASSISTED INTO INSTITUTIONS.

The committee continue to be actively occupied in procuring admission into certified institutions of children committed by the metropolitan magistrates and others. Forms of application are forwarded to the police courts, with a letter signifying the readiness of the committee to assist the magistrates in finding accommodation for suitable cases. The result is, that *twenty-eight* boys and *five* girls have been received into certified reformatories, on the recommendation of the Union; and one boy has been sent to an industrial school, certified under the Act 20 and 21 Vic., c. 48. The committee have also been the means of obtaining admission for *nineteen* boys and *eighteen* girls into various uncertified institutions, making a total of *seventy-one* children provided for during the year. The committee take this opportunity of mentioning, that they would be glad to receive from the managers of institutions early intimation of vacancies they may wish filled, and their terms.

EMIGRATION.

As emigration must be the chief outlet for the cases which are beginning to leave the various institutions in quick succession, the committee have paid special attention to this subject, particularly with reference to the reception and supervision of those sent to Canada. Some months ago, an appeal was made for funds, to enable the committee to assist in sending out the best-behaved inmates of the different institutions, with the distinct understanding that none should be assisted to emigrate whose character would make them ineligible for employment at home. A small sum has been contributed, part of which has already been expended in sending eight boys to Canada, from whom favourable intelligence has been received; and a gentleman, well known as a friend to emigration, has kindly offered to assist in providing passages for a limited number of such as can be properly recommended. Circulars to this effect having been issued, numerous applications have been received from various institutions on the list of the Union, and steps are taken by the committee to insure that the candidates for emigration come up to the specified requirements. Fifteen out of twenty-one applicants from London institutions have been already passed by the sub-committee, and are to sail early in April.

A member of the Committee visited Canada during the summer for the purpose of making personal inquiries into the condition of emigrants of this class already settled in that colony. The result of his investigation was generally favourable, and he obtained promises of co-operation from the Government Immigration Agents in the various towns.

Communications have also been received from an influential colonist in Moreton Bay, regarding a regular and comprehensive system of emigration to that colony.

SCHOOL SHIP IN THE THAMES.

The Committee are gratified to state that the expectations held out by them in former reports of establishing a Reformatory School Ship in the Thames have at at length been fulfilled. The *Cornwall* frigate has been granted by the Admiralty, is now being fitted, and will be ready in April for the reception and training, as sailors, of such boys of the vagrant or criminal class as are fitted by their love of adventure, and their more active temperament, for the risks and hardships of a seaman's life, but are excluded by the regulations of the Marine Society. They will come chiefly from London and the south of England, but suitable cases will also be eligible, under certain regulations from Reformatories and Refuges throughout the kingdom. The ship will be moored in the Thames off Purfleet, sufficiently far from London to insure that the boys will have full opportunity for boat exercise, and be out of reach of their former companions. H.R.H. the Prince Consort has kindly consented to be the patron; Commander Burton, R.N., has been appointed Captain Superintendent, and the management and regulations will be, as far as possible, those of a man-of-war.

GIRLS' LAUNDRY.

This Institution has also been called into existence since the last report. A house has been opened at Hampstead for the reception and religious and industrial training of forty girls of fifteen years old and upwards; twenty-three have already been admitted, and are so fully employed on laundry-work that the Matron has been obliged to decline several orders. The average earnings have hitherto amounted to 7*l.* per week; but it is expected that this return will be more than doubled when the numbers are complete. It should be observed that these are not reformatory cases, but that the character of every applicant is carefully investigated. Those who take an interest in the work are invited to recommend suitable inmates. For

Digitized by Google

further particulars see account published by the committee, which may be obtained at the office of the Union.

It is necessary to state that though the Union originates and assists, it does not carry on institutions, and that the laundry and the school-ship are now under entirely independent management.

FEMALE MISSION.

During the past year a sub-committee has been occupied in penitentiary cases, mentioned in the last report. After conferring with the clergy of the several metropolitan parishes, it was resolved that, without interfering with the existing institutions, a centre of action should be provided, through which all might be assisted. For this object a handbook has been compiled, which may be obtained at the office of the Union, containing brief accounts of fifty penitentiaries and homes for females. The services of two female missionaries were also engaged for the purpose of seeking out those who are desirous of abandoning their evil course, and directing them to places of shelter.

The sub-committee can now report that these missionaries have carried on their difficult work with zeal and steadiness, and have met with an unlooked-for measure of success, as their report to the subscribers to the special fund abundantly proves.* Eighty-six cases have been rescued from the streets and placed in institutions, or otherwise provided for.

PUBLIC MEETINGS.

The second annual meeting was held at Willis's Rooms on the 24th of February, and on the 18th of June there was a *conversazione* in St. James's Hall, on which occasion specimens of the industrial work of twenty-seven institutions were displayed, and proved an excellent advertisement for such articles. Samples are now exhibited in the Crystal Palace and the Kensington Museum, as well as at the office of the Union, where sales have been made and orders received to a considerable amount during the past year.

At the meeting of the National Association for the Promotion of Social Science, held at Liverpool in the month of October last, the Union was represented by one of its Honorary Secretaries, Mr. Robert Hanbury, M.P. The Paper read by him on that occasion has been published at length in the volume of the Transactions of the Association for the year 1858, page 398.

REFUGE FUND AND GENERAL FINANCE.

On the 16th day of December the following resolutions, proposed by the Rev. Sydney Turner, Government Inspector of Reformatories, were unanimously adopted by the Committee:—

I. That the Committee of Council having intimated their intention to withdraw a large portion of the assistance hitherto given to Uncertified Reformatories and Refuges, it is expedient that grants be made in aid of the efficient management and support of such Institutions by the Reformatory and Refuge Union, and that a fund be raised for that purpose.

II. That in connexion with such grants, and as a means of promoting their efficiency and good management, all Uncertified Reformatories and Refuges so assisted be regularly visited and reported on by Inspectors appointed by the Union.

In consequence of the subject of Refuges for the Destitute being prominently brought forward in the *Times* and other London Newspapers (see Appendix, p. 27)) and the issue of an Appeal by the Committee, this fund rapidly reached a considerable amount, which it is intended to distribute according to the spirit of the above Resolutions. The grants made during the year from the General Fund and Social Evil Fund appear in the balance sheet.

MISCELLANEOUS.

Among the miscellaneous operations of the year may be mentioned the publication of a new edition of the well-known pamphlet containing accounts of Institutions in and near the Metropolis;* the grants of books, obtained at half-price from the Pure Literature Society for Lending Libraries, which have been made to the Girls' Library, and the Manchester and Salford Reformatory; the recommendation of masters, matrons, and assistants to several institutions; the conducting through London of boys and girls passing to or from country institutions; and the transmission to the managers of institutions particulars of inmates absconding or dismissed.† (See Appendix, p. 26.)

No Uncertified Institution will, for the future, be placed on the list of the Union which has not a committee responsible in itself, and ready to guarantee the *bonâ fide* character of the institution.

Annexed to the Report is the following useful table of Metropolitan Reformatories, and Industrial Schools, showing in a distinct and accessible form the locality and objects of each.

* This Report may be obtained on application to the secretary.

* The Committee print these accounts as they receive them from the Managers, but they feel obliged to state distinctly that they are not responsible for the character or management of the Institutions therein described.

† The Committee urge upon the Managers of Institutions to co-operate with them on this important point.

METROPOLITAN REFORMATORIES, REFUGES, AND INDUSTRIAL SCHOOLS.

NAME OF INSTITUTION.	LOCALITY.	When Founded.	Accommodation.	What Ages Preferred.	CLASS RECEIVED, AND TERMS OF ADMISSION.
FOR MALES.					
Boys' Refuge.	Commercial-st., Whitechapel, N.E.	1853	100	11 to 14	The destitute, and those on the verge of a criminal course. Free, if unable to make any payment.
Boys' Home.*	Bridge-house, Wandsworth, S.W.	1852	100	10 to 16	Convicted or unconvicted criminals; and destitute boys from the counties of Surrey and Middlesex.
Boys' Home.†	44, Euston-road, St. Pancras, N.W.	1858	35	11 or 12	Vagrants sentioned to detention under the "Industrial Schools Act;" and unconvicted boys whose parents or friends pay from 2s. to 5s. a week.
Britannia-court Refuge.	Gray's-Inn-rd., King's-cross, N.	1853	12	11 to 16	Homeless and destitute boys, chiefly from the Ragged Schools of the neighbourhood.
Brook-street Refuge.	Henry-passage, Brook-street, Hampstead-road, N.W.	1843	20	12 to 20	Criminal or destitute from any locality. Free.
Brook-green (Roman Catholic) Reformatory.*	Blyth-house, Hammersmith, W.	1855	80	under 14	Juvenile criminals sentenced under the "Youthful Offenders Act;" admitted at any time.
East London Shoe-Black Society (Blue).	4, Mansell-st., Whitechapel, E.	1854	75	12 to 15	Destitute or neglected children from the Ragged Schools of the neighbourhood.
Field-lane Night Refuge for the Homeless.	West-street, Holborn-hill, E.C.	1849	150	under 20	The utterly destitute from any locality; expected to attend the Bible Classes of the school.
Grotto Passage Refuge.	Paddington-st., Marylebone, W.	1849	25	15 to 17	Destitute or criminal boys, free; from any locality.
Home in the East Reformatory.*	Old Ford, Bow, E.	1852	50	13	Criminals under the "Youthful Offenders Act," principally Middlesex.
Islington Reformatory.	Bryan-st., Caledonian-rd., N.	1853	33	10 to 16	Abandoned, degraded, outcast boys; 3s. 6d. per week where the parents can possibly afford it; local cases preferred.
Islington and North London Shoe-Black Brigade (Brown)	7, Paradise-row, Islington-green, N.	1857	25	11 to 14	Well-recommended boys from Ragged Schools or Refuges in the neighbourhood.
London Reformatory.	9, Great Smith-street, Westminster, S.W.	1848	80	20 to 35	Adult male criminals from all parts of the kingdom. Admitted free.
Maida-hill Refuge and Industrial School.	15, Hatton-street, Maida-hill, N.W.	1846	40	10 to 16	The depraved and destitute; without payment.

* Certified under the 17 and 18 Vic. cap. 86. † Certified under the 20 and 21 Vic. cap. 48.

NAME OF INSTITUTION.	LOCALITY.	When Founded.	Accommodation.	What Ages Preferred.	CLASS RECEIVED, AND TERMS OF ADMISSION.
Middlesex Industrial School.‡	Feltham, near Hounslow, W.	1859	400	7 to 14	Juvenile offenders in the county of Middlesex sentenced to detention under the local act.
North-west London Preventive and Reformatory Institution.	237, Euston-road, N.W.	1852	110	17 to 21	All classes from any locality. 5s. per week, if possible.
North-west London Industrial School.†	237, Euston-road, N.W.	1858	50	13 and 14	Vagrants sentenced to detention under the "Industrial Schools Act," and others on payment by parents or friends.
North-west London Shoe-Black Society (White).	1, Union-place, Paddington, W.	1857	20	11 to 14	Boys well recommended from the district Ragged Schools.
Ragged School Shoe-Black Society (Red).	29, Ship-yard, Temple-bar, E.C.	1851	75	12 to 16	Boys recommended from Ragged Schools in the Central District of London.
Reformatory Factory.	Belvedere-crescent, Lambeth, S.	1853	30	12 to 16	Destitute orphan street boys, free; others under twelve on payment according to circumstances.
School Ship "Cornwall."*	Off Purfleet.	1859	300	12 to 14	Vagrants, and criminals convicted under the "Youthful Offenders Act" or unconvicted, if fitted for the sea.
South London Shoe-Black Society (Yellow).	155, High-street, Southwark, S.	1854	56	12 to 16	Destitute boys well recommended from Ragged Schools South of the Thames.
St. Giles and St. George's Bloomsbury Refuge.	8, Great Queen-st., Lincoln's-Inn, W.C.	1852	100	12 to 16	Homeless and destitute boys, free; a few others whose parents or friends pay from 2s. to 4s. per week.
West London Shoe-Black Society (Purple).	School-room, Castle-lane, Westminster, S.W.	1857	25	12 to 16	Boys from the Ragged Schools in the West London District.
Westminster Industrial School.	56, Old Pye-street, Westminster, S.W.	1854	30	13 to 16	Well-recommended boys from five neighbouring Ragged Schools on a payment of £1.
FOR FEMALES.					
Cottage-road Home.	5, Cottage-road, Chester-square, S.W.	1856	12	9 to 13	Destitute poor children, requiring careful moral discipline. £10 per annum to be guaranteed by parents or friends.
Cripples' Home and Female Refuge.	12 to 15, Hill-street, Dorset-square, N.W.	1851	40	10 to 12	Destitute, or having depraved parents, from any locality. £8 per annum.
Elizabeth Fry Refuge.	Triangle, Hackney, N.E.	1849	30	17 to 30	Females, on their discharge from the metropolitan prisons, without payment.
Field Lane Night Refuge for the Homeless.	Hatton-yard, Hatton-garden, E.C.	1857	50	14 to 23	Servants, and other poor girls out of employment and destitute; must attend the School Bible Class.
Girls' Laundry and Training Institution.	West End House, West-end-lane, N.W.	1858	40	over 15	Girls of good character, but who need industrial training. If acquainted with Laundry-work, free; others, on a payment of £10.
Industrial Home.	Tre-Wint, Mare-st., Hackney, N.E.	1850	20	over 15	Young servants and others, without character, and on the brink of ruin. 3s. 6d. per week when possible.
Industrial Home for Girls.	125, Sloane-street, S.W.	1853	50	8 to 14	Girls exposed to peculiar temptations, or who have commenced a course of crime. Payments according to circumstances.
King Edward or Eastern Refuge.	Albert-street, Spitalfields, N.E.	1846	70	10 to 16	Children of vicious and criminal parents, or themselves such. Payments when possible.
London Society for the Protection of Young Females.	Asylum, Tottenham, N. Office, 28, New-broad-street, N.E.	1835	100	under 15	Girls exposed to sin, or actually fallen. Payment when it can be obtained.
Paddington Home and Laundry.	260, Marylebone-road, N.W.	1854	26	13 to 16	Girls who are destitute or have bad homes; from any locality. A payment of £10 per annum is expected.
Refuge for the Destitute.	Manor House, Dalston, N.E.	1805	90	15 to 25	Penitent young women, exposed to crime and destitution; chiefly from prisons. 5s. per week when possible.
Rescue Society's Reformatory for Girls.*	28, Church-row, Hampstead, N.W. Office, 11, Poultry, E.C.	1857	40	13 to 16	Criminals, convicted under the "Youthful Offenders Act." A small donation required.
(Roman Catholic) Reformatory School for Girls.*	Beauchamp Lodge, Hammersmith, W.	1857	60	13 to 16	Criminal girls, sentenced to detention under the "Youthful Offenders Act."
Royal Female Philanthropic Society.	Manor-hall, Lower Kennington-lane, S.	1822	50	over 16	Criminals, on first conviction or unconvicted; and destitute, ignorant girls exposed to temptation. 4s. per week if possible.
School for the Destitute.	Coburg-row, Rochester-row, S.W.	1853	20	8 to 12	Orphan or deserted children in perilous circumstances from any locality. Free.
School of Descipline.*	Queen's-road-west, Chelsea, S.W.	1825	40	10 to 18	Dishonest children convicted under the "Youthful Offenders Act," or unconvicted; and neglected children exposed to temptation.
Society for the Rescue of Young Women and Children.	5 Homes—various localities Office, 11, Poultry, E.C.	1853	124	over 12	Unconvicted Criminals; and those exposed to crime and depravity. Payment according to circumstances.
St. Giles and St. George's Bloomsbury Refuge.	19, Broad-street, Bloomsbury, W.C.	1852	50	12 to 15	Homeless and destitute, free; a few other cases on payment of 2s. to 4s. per week by parents or friends.
Training Refuge for Destitute Girls.	1, Lisson-street, Marylebone-road, N.W.	1850	35	11 to 19	Girls exposed to sin and misery, either orphans or having bad parents. If under eleven must be paid for.
FOR MALES & FEMALES.					
Discharged Prisoners' Aid Society.	Office, 118, Pall-mall, S.W.	1857	§	all ages	Assisted in finding employment at home, or in emigrating to the Colonies.
Dudley Stuart Night Refuge.	77, Market-street, Edgeware-road, W.	1852	95	all ages	Open during winter to all classes of the utterly desitute from any locality.
Houseless Poor Asylum.	Playhouse-yard, Whitecross-street, E.C.	1820	700	all ages	The absolutely destitute working classes, who are suddenly thrown out of employment by the inclement nature of the weather during the winter months.
House of Charity.	Rose-street, Soho-square, W.	1847	50	all ages	Distressed persons out of employment, discharged from hospitals, &c., &c., on special and trustworthy recommendation.
United Kingdom Industrial Institution.	Victoria-street, Westminster, S.W.	1858	100	10 to 16	Ragged boys and girls from the neighbourhood.

* Certified under the 17 & 18 Vic. cap. 86. † Certified under the 20 & 21 Vic. cap. 48. ‡ Certified under the 17 & 18 Vic. cap. 160. § Lodgings provided as occasion requires.
NOTE.—The Managers of several of the above Institutions are about to apply to the Committee of the Privy Council on Education for Certificates under the Industrial Schools Act.

Correspondence.

THE EDUCATION OF THE PLAYGROUND.

To the Editor of the Philanthropist.

SIR,—The following "Paper" which appeared in the *National Society's Monthly Paper* for May, contains so much sound sense, and such excellent suggestions, that you may like to place it before your readers.

The subject is one of great interest to all philanthropists, and although the writer evidently refers to playgrounds attached to schools, yet his remarks may be applied with equal truth, and with even more force, to the advantages likely to result from the use of those *public playgrounds*, proffered by the free hand of charity to the children of the poor.

The means of gaining fresh air and wholesome exercise for these poor children are so limited in their own narrow sphere, that the boon offered to them by the *Playground and General Recreation Society* can scarcely be over-estimated. Its probable effects upon the physiological constitution and moral character must be apparent to all who have considered the connexion between physical education and the intellectual and moral development of youth.

But that question is so fully discussed in the following pages, that further remarks from me are unnecessary.

I am, Sir, yours very truly,
M. A. B.

THE EDUCATION OF THE PLAYGROUND.

A Paper read before the Oswestry Church Schoolmasters' Association by a Clergyman.

"We are wont to pride ourselves upon the fact, that it has been one of the great works of our own time to restore its true meaning to the word 'Education.' If this be so, and if, in our attempts to perform the work, we may all be supposed to have now arrived so far as this, that education is no longer understood to mean 'a cramming by force into the brains of children a certain amount of "reading, 'riting, and 'rithmetic,"' but rather, according to the very etymology of the word, a 'drawing out,' instead of a 'cramming in'—a training up, that is to say, not of one faculty or another, but of the whole nature, intellectual and moral, of the animal under our treatment,—I feel that I need make no apology for what I am now going to assert, that part (and a considerable part) of this process, which we call 'education,' may be performed with advantage *in the playground.*

"And yet, perhaps, I should ask leave to say a few words, before entering directly upon the subject itself, in order to attract your attention to the importance of ever keeping in our minds, in all its length and breadth, this deep and true meaning of 'education.' We cannot be too often reminded that 'education' and 'imparting knowledge' are two very different things; and moreover, that when we speak of 'training up' and 'drawing out,' it is not the intellect alone whose powers we are to 'draw forth,' and train them to perfection, but that the moral and religious faculties also need our assistance, if we do not want to see our animal growing up a one-sided, unsightly, and a very *dangerous* animal too. Now does it not sometimes strike you, that our great temptation and our great danger, as educators of children, is that we should forget and neglect this *twofold* character of our work? Or, perhaps it strikes me as a clergyman more forcibly, because it is with the moral deficiencies rather than the intellectual deficiencies of the article produced that we are more frequently and more painfully brought into contact. But, however this be, I think there is a great danger of forgetting the moral part of education in our schools; and I sometimes question whether we are, as a body, sufficiently awake to the great need and the vast importance of imparting to the children of our poor, in every way we can, while we have them at school, a large amount of direct teaching in simple practical *morality;* and of course, when I speak of morality, I mean *Christian morality.* We make a great noise, and are very much shocked, when some gross case of stealing, or lying, or bullying is discovered; but I doubt whether we always take into account, in our direct every-day teaching and regulation of the habits of our scholars, all that we really have to contend against,—the circumstances of daily life, for instance, under which our teaching must be put into practice, or the home and other influences which are at work, and many of which we must do all we can to counteract. Of course one is tempted to linger on this subject, and seek—what I believe is to be found here—an answer to that question of the employer, which we must confess to one another sometimes disconcerts us a little,—a question which it is easy to set aside with a smile of contempt, but which it is not always so easy to answer satisfactorily,—How is it that since your grand National schools have begun to flourish, we find our servants not half so good as they used to be? This is a question we ought to *answer*, because, say what you will for intellectual education, still, when John Thomas or Jane Jones come to hire into my service, and take care of my horses and cows, the first thing I want to know is, not so much whether they can do practice, and spell 'Constantinople,' as whether they know that Jane is not to neglect her work, and purloin her mistress's clothes to go to the fair in, and John is not to get drunk, upset the waggon, and spoil the horses; and of course, *if we ever do* in any degree educate the intellectual faculty to the neglect of the moral, so far we are likely enough to turn out from our schools bad servants and bad whatever-they-may-be. But I have already lingered too long upon my preamble; and my only immediate object in reminding you of this *twofold work of education* will have been attained, if I succeed in preventing you, when I have shown, as I hope to do, that the playground may be made to have a very direct and powerful influence upon the *moral* character of your children,—if I succeed in preventing you from crying out, 'What has that to do with *education?*'

"And now, to proceed at once to the playground itself; only, by the way, asking the forgiveness of my friends from the girls' school if, simply from want of time to do more in this lecture, and inability to be in two very different places at once, I confine myself for the present to the boy's playground.

"Let us all, then, come out together, if you please; I must have the master there, as well as the boys; the clergyman too shall be most welcome, if he will accompany us, either to join our game or to look on and encourage us; and you too, fair visitors from the girls' school, we shall enjoy our game all the more if you can spare the time to come and look on. To save time, the scenes shall change somewhat rapidly while you are with us; summer shall give place to winter, and consequently cricket to football, that you may have a peep at each of England's greatest games: only let me ask you to keep your eyes and wits about you all the time, and as you gaze upon the playground, notice these three things: 1. The influence of all that is going on *directly* upon the boy. 2. Its influence *indirectly* upon the boy, *through* the *master.* 3. Its influence upon the master himself.

"1. *The direct influence of what is going on upon the boy.* It is affecting him in *two* ways, *physically* (or, if I may use an ugly word, *physiologically*) and *morally.*

"Look at that noisy game of 'rounders' over there: one boy is tearing round like a madman, from one post to another; a second is picking up a ball, with the view of hurling it at the fleeting form of the first, in such a manner that, if it hits him, it will infallibly make him smart; while all the rest are shouting, screaming, and clapping their hands, as if their friend were running "the Derby." It may seem to you very commonplace and uninteresting; but I maintain that that simple game of rounders is influencing, in his turn and in his degree, every boy who is taking part in it *physically* and *morally.*

"Let us confine our view at first to its physical effect,—its influence upon the body and health of the players. The effect of such exercise upon the human frame scarcely needs to be pointed out. The "rounders" is imparting strength, agility, evenness of muscular development to the bodies of the players (for you will observe that as that boy strikes the ball and then runs, every muscle in his body is called into action in its turn); and I maintain, that with those who in after-life have to make their bread mainly by the use of their bodily organs, even this education of the body is an affair of no slight moment. You may say that this is all very well in a boarding-school, or in a town where the effect of necessary confinement must be counteracted by regular exercise; but that, at all events in the country, the daily walk to and from school is all that can be needed. But I am not so sure of that. Look at this heavy slouching labourer lumbering along the road, with his round shoulders, his eyes fixed upon the ground, his feet draggling after him as if they would much rather have stayed at home, his whole appearance giving one the notion that he is coming to pieces at every step he takes. Now let me ask two questions about that man. 1. Is he fit to manage the threshing-machine, already in his master's barn, or the steam-plough,

Digitized by Google

which, in his son's day, may come into use? 2. What is the reason why he is not the fine athletic man that Nature intended him to be?

"The first question, as to the fitness of our labourers for the work that must fall more and more to their lot as this fast age rolls on, will, I know, be answered in the negative by any one who has ever compared a country labourer with those who live amidst the machinery of our towns, and upon whom its working depends. The *bodily* difference between a countryman and a mechanic is known *well* to every one who has seen a specimen of the former walking down the high street of his own market-town; but it is known better to any one who has seen, as I have, more than once, a dozen country boys playing a cricket or football match against a school from the neighbouring town. *Cæteris paribus*, the *town boys have it all their own way;* and while the rustics are *thinking* what they shall do next, the others have won the game.

"And the other question, 'Why is the countryman what he is?' I should answer thus: Partly, no doubt, because as a child he wore boots that he could ill carry before the muscles of his feet were properly formed; partly because he has probably overloaded at some time, or at all times, both his shoulders and his stomach; but also, in a very considerable degree, because he has always been accustomed to the *same sort of slow heavy work*, which has never called into action his natural powers of *quickness* and *agility*. Surely, then, the more quickness of eye and limb, and the greater mobility of body, we can impart to our rising generation, the fitter shall we render them for the work they will have to do, whether in town or country; and certainly the knowledge how to throw, and how to run, and how to jump, will not hinder the development of that beautiful upright form of body which God has given to none but man.

"But the rounders is doing more in the work of education than this, even if we confine our view still to its direct physical influence upon the boy. It is *freshening him up* for his work in school. Who is ignorant of the marvellous effect produced by half-an-hour's interval of play upon the work of the whole school? Who wouldn't rather take a class for its first hour than for its third? The reason is, that the exercise of the playground affects the health of the boys; and their health affects their spirits; and their spirits affect yours; and your spirits as well as theirs affect the lesson;—you only know how much if you have ever felt the perfect *agony* of trying to teach when in a bad humour.

"But I said that the playground wa salso affecting your boys—*morally*. And this is the most important point of all. Is there a great moral influence, for good or for evil, brought to bear upon the schoolboy during his hours of play? Any of you who have been at a large school yourselves will bear me out if I answer 'yes.' You know that the real life of a schoolboy, *in his own eyes*, is his life in the playground; you remember how many more boys of all sizes and character we used to rub against there, whereas, sitting at the desk in school, we had only one boy on each side of us, and were not allowed to speak many words even to them; you remember how, though we soon got accustomed to the restraint and routine of schoolwork, which were doing us a deal of good all the time, yet it was out of school that we lived our real *boy-life*, and formed our little world of thought, and first began to discriminate character in others, and build up hopes and schemes and friendships for ourselves. If, then, you would see the effect of your teaching upon the *present life* of the boy (and this is the only sure test of its probable effect upon his *future life*), go to the playground. Here he is natural, in school he must always be to a certain extent artificial; here he *acts of himself;* for good or for evil, here he forms the habits of his future life; here he chooses his own companions and his own occupation, and obeys or disobeys, according to the dictates of his own heart, the laws of God and of society: in school he must be doing not what he *wills*, but what he is *told to do;* his intercourse is almost exclusively with his master, whose eye is always upon him, and whose laws he *must* obey.

"And if the playground is the school boy's world, then the *games* of the playground are his *sphere of action*. What the senate is to the statesman, what the mart is to the trader, what the bar is to the advocate, what the schoolroom is to the master, that the cricket and the football and the other games of the playground are to the boy. They are his employment, his trade or profession, in his playground world; in them his powers of mind and body alike are called into action, in them he is brought into free contact with his fellows, in them he has a fair field for exercising before the eyes of others not only his physical prowess, not only his moral qualities, but even his religious principles; in them he has a chance of distinguishing himself before the eyes of his little world as a *man* and as a *Christian*. And, I ask, are not these most important facts for the consideration of the educator? The world of the schoolboy may be a little one, but it is as real a world to him as Cæsar's or Wellington's world was to them; and as he acts in the playground now, so he will act in the great world itself hereafter.

"Restraint may be good for a boy, but freedom is congenial to him; and we do wrong if we forget that it is for a life of freedom, of self-government, of self-reliance, not for a life of bond-service and perpetual supervision, that we have to educate him. You want to teach your boys morality and religion: teach them to practise it in the playground, and you may trust them to carry it away with them into after-life. If they find that you can enter into their thoughts, and live in their world, and tell them something in your teaching that will help them there, they will soon come to attach some reality to what you enjoin: if they once learn to test the truth of what you say by applying it to the affairs of their own daily life, then you know that your point is half gained; for one day's *experience* of the beauty of morality and the *reality* of religion is worth more to them than whole years of *teaching* on the subject.

SOCIAL REFORM.

To the Editor of the Philanthropist.

Mr. Editor.—In your issue for this month I find, under the heading "National Association for the Promotion of Social Science," several important topics of inquiry suggested, with a view to directing public attention to many existing evils, and of devising the best means for remedying them.

That social evil which is acknowledged, by general consent, as the one which exercises the most baneful influence over the comfort, the morals, and the happiness of the community, and which should, because of its predominance over all our other remediable evils, hold the highest place in the estimation of social reformers, is but lightly referred to in the enumeration of subjects in that paper deemed particularly worthy of attention. It is thus alluded to by the "Liverpool Local Committee:"—

"Intoxication.—Why this habit is so much less generally prevalent now than it was thirty years ago?"

If this question be not exactly the reverse of what the Committee intended to put, I fear the gentleman who put it have indeed an imperfect acquaintance with our national drinking habits. These, I apprehend, are much *more* prevalent instead of much *less* than they were thirty years ago, and the following population statistics and excise returns prove, unhappily, that I am right. In 1821 the population of England and Wales was 11,978,875, and they consumed 7,261,581 gallons of spirits. In 1856 the population was probably about twenty millions, and they consumed 13,964,284 gallons, besides over 600,000,000 gallons of ale and beer.

The population of Scotland in 1821 was 2,093,456; they consumed 2,558,285 gallons of spirits. Population in 1856, probably three millions; consumption of spirits, 7,402,643 gallons.

The population of Ireland in 1821, was 6,780,826; they consumed 3,340,472 gallons of spirits. Population in 1856, about the same as in 1821, (famine and emigration having taken off her million and a-half of increase), and yet they consumed in the latter period 6,936,938 gallons of spirits. Thus we see the means of intoxication running far ahead of the increase of population within thirty years.

So long as gentlemen in their committee-rooms and in their comfortable houses merely deprecate the vice of drunkenness, are found quaffing the poison which is doing nearly all the mischief they deplore; and but theorizing on the causes of social evils, this one great cause of crime and misery is at work; while they shut their eyes to it, and practically ignore its existence; the necessary result will be, that very condition of affairs which they are labouring to put an end to; but in which labours they are utterly unsuccessful, because they decline to uproot the upas tree under which so much that is good in our social and political institu-

Digitized by Google

tions perishes. I have shown, that within thirty years the increased consumption of intoxicating liquors in these kingdoms, has been immense,—indeed fearful to contemplate. Were it not that unusual exertions were made within that period, by temperance reformers, to stem this torrent of evil, the whole nation would now be plunged in, perhaps, inextricable wretchedness and misery. Father Mathew's labours in Ireland, reduced the annual consumption of whiskey in this country, from nearly 12 millions of gallons, to a little over 5½ millions; but as the enthusiasm created by that good man, has abated within the last ten years, our consumption of this poison has been again on the increase. And this increase is governed by a natural law which transmits from parent to child a stronger appetite for alcoholic stimulants; this law, if not counteracted by powerful human effort, would seriously and rapidly deteriorate our race, not alone morally, but physically also.

This destructive tendency of these poisons, I exhibited, on very strong testimony indeed, in a paper I read before the Dublin Statistical Society in February, 1858, and which paper will be found in their published proceedings.

I believe this question,—I mean the daily use of alcoholic liquors by persons in ordinary health,—is of much more serious importance to our health and happiness, than even intelligent men have yet any conception of; and its remedy can alone be found in the entire disuse of these poisons. The common traffic in them being a public nuisance, is, like all other public nuisances, a fit subject for legislative interference. It has always been considered a dangerous traffic; it has never been free. But no *regulation* of this trash can ever be effective; its entire, not its partial, suppression, can alone save society from its fatal results; public sentiment is rapidly tending towards this conclusion, and it will be happy for us when our statesmen adopt this view of the case in its fullest extent. It will be a happy day for this nation, when our wisest and best minds—when the industrious promoters of social science,—shall throw themselves ardently into this the great question of our day. Benevolent and philanthropic movements in all other directions will be shorn of more than half their value, until that great impediment to their success—the common traffic in intoxicating liquors—shall be removed out of the way. Get rid of this impediment, and the road will be greatly smoothed for the progress of other social reforms.

The encouragement given to the manufacture and sale of poisons is a monstrous error; if the farmer were to sow more tares than wheat in his field, he would be esteemed a madman, but his conduct would be sane in comparison with that of licensing a horde of men to manufacture crime, and misery, and pauperism, and insanity, and fever, and then to assemble together and make laws and raise large funds to prevent these evils, and punish the guilty party. This is, indeed, folly on a grand scale!

Poor, weak, erring, humanity, wilt thou ever muster courage and manliness sufficient to free thyself from these pitfalls in the way of thy happiness.

I am, Mr. Editor,
Yours respectfully,
JAMES HAUGHTON.

35, *Eccles Street, Dublin,*
6th May, 1859.

NATIONAL SOCIAL SCIENCE ASSOCIATION.

(To the Editor of *The Philanthropist.*)

SIR,—Allow me to offer one or two further suggestions on the above subject, as briefly as possible, in addition to those contained in the letter which you favoured with insertion in your April number.

These suggestions will refer to some deficiencies in the present Vol. of Transactions, which seems to be less complete in some respects than its predecessor (1857). I would propose the following plan to be adopted in future:—

1. That the name of every successful author shall be included in the "List of Authors," whether the "paper" contributed by them may be printed in full, in part, or only noticed in the "Summary."

2. That a list of *Members* be given each year in the "Transactions;" the names of those who are officially connected with the Association to be distinguished by an asterisk.

[The names of Associates would not seem to be of any importance for publication after their appearance in the loose lists distributed at the meeting; and for this reason—The Associates' tickets are purchased in the large majority of cases merely for the sake of the privileges they give to the holders during the meeting. *Associates* in general may be considered supporters of the ASSOCIATION in a financial point of view, but nothing more. The Friends of "Social Science" may be looked for in the *Members*, who are therefore entitled to a recognition as such, by giving them a permanent place in the Volume. Besides, such a list would be very valuable to the officers and members for purposes of reference.]

3. A list of *Public Bodies* represented at each Meeting should certainly have a place in the Transactions.

I think if these suggestions can be well considered and carried out, in addition to its other admirable arrangements, that massive volume would want nothing to make it a valuable record of the Association's annual proceedings; and, we will hope, its *progress* likewise.

I have just read Mr. Danson's letter in the current number of *The Philanthropist.* That gentleman offers an explanation with reference to his own particular case, but my opinion remains unaltered respecting the general bearing of those points to which I have alluded in my former letter.

I am, Sir, yours obediently,
A MEMBER OF THE NATIONAL ASSOCIATION.

London, May 1859.

REV. A. H. HAMILTON, Wellington, Somerset, wishes to know, in next *Philanthropist*, the address of the Society in aid of the Wives and Children of our Indian Army, if there be such a Society.

ROYAL LONDON OPHTHALMIC HOSPITAL.

This Hospital is now presented to the world as the original of the modern ophthalmic medicine and surgery, complete in every department, domestic and scientific, although yet needing enlargement, for which funds are in course of collection. The ulterior purpose entertained is the engrafting the practice of modern ophthalmic practice on all nations, by raising up native practitioners, through whose agency the number of blind may be reduced to a minimum. The united exertion and influence of Europe and America are equal to this great work, and it is understood that it is in contemplation to give free and early development to measures already in active progress, which, being under the direction of able and zealous professors, are full of hope and promise. It is believed that the blind now living very far exceed one million, nearly the whole of whom might have been rescued from that calamitous state had the ascertained means of remedy been applied in an early stage of the malignant inflammation which is the prevailing cause of the loss of sight.

THE ANNUAL FESTIVAL

of the Royal London Ophthalmic Hospital was held on Wednesday evening, May 25th, at the London Tavern.

R. Hanbury, Esq., (one of the Vice-presidents), occupied the chair, supported by Messrs. W. Cotton, Cazenove, Chater, Huggins, Streatfeild, Dalrymple, Dixon, P. Hanbury, Solly, Critchett, Watts, S. Norris, Doxatt, Eddison, Lockhart, Wordsworth, Dr. Bader, Wakefield, Hulke, Fewtrell, Hartill, Rev. T. Hugo, and others.

Upon the removal of the cloth, the Chairman proposed the health of Her Majesty the Queen, which was drunk with much enthusiasm.

The next toast was, "The Army and Navy," which was responded to in suitable terms by Mr. Martin.

The CHAIRMAN then gave the toast of the evening, "Prosperity and perpetuity to the Royal London Ophthalmic Hospital." He was assured that this toast would be responded to most heartily, not only in the customary manner, but by large and liberal contributions. He attended this festival with a deal of pleasure, having been connected with the Hospital for very many years. The Royal London Ophthalmic Hospital produced the most beneficial results, not only in the Metropolis but through the whole world. He hoped they would not allow the feebleness of the advocate to have any depressing effect upon the contributions. He was surrounded by some of his oldest friends, and he was sure it was unnecessary to dilate at any length upon the advantages of an institution such as the Royal London Ophthalmic Hospital. They who were in full enjoyment of the organs of vision little knew or little felt the affliction of those who were deprived of that great blessing; but he would have them to suppose that they rose morning after morning, but never saw the light of the sun; or that they were condemned to live day after day without beholding the wondrous creations of nature or art; would

Digitized by Google

they not, then, have some conception of the value of this institution? Yet it was computed that there were in the world more than two millions of blind persons; in the United Kingdom there were 30,000; and in the metropolis alone between 2,000 and 3,000. With such facts before them, they must deeply sympathise in the exertions of this great Hospital, which had done so much to alleviate the sufferings of those who might otherwise now have been blind. During the past year more than 400 persons have been restored to sight in this hospital; and very many more have been relieved who were suffering more or less from diseases of the eye. None could speak more favourably of the hospital than himself. He had sent up many from the county in which he resided, all of whom had returned in the full enjoyment of that blessing of which they feared they would be deprived; and he did hope that the benefits of this hospital would be extended yet farther. There was another feature in the hospital to which he would allude; it was this:—it gave to the Christian missionary the opportunity of studying the art of healing, especially the eye, so that while they were kindly administering to the heathen nations the consolations of religion, it should be within their power to alleviate their bodily sufferings.

The toast was then drunk with much enthusiasm.

Mr. William Cotton (late Governor of the Bank of England), proposed, in the most eulogistic terms, "the Health of the Chairman," to which he replied.

The Chairman then gave "The Health of the Medical Officers of the Hospital." Without their skilful efforts the institution would be worth nothing; to their exertions was mainly due the success of the hospital.

Mr. Dixon, the senior medical officer returned thanks. In doing so he took a retrospect of the sixteen years he had spent in the service of the Institution. Many changes had taken place during that period. The present very perfect arrangements of the Hospital were to be attributed in a great measure to the labours of Mr. Heathfield, who, he was very sorry to find, was absent that evening. On behalf of himself and brother officers he returned his sincere thanks.

Mr. W. Cotton then proposed "Success to Christian Missions all over the world, connected with the name of Mr. Lockhart, twenty years a missionary surgeon in China, who has founded the hospital at Shanghae, which has been so effectual in the treatment of diseases of the eye."

Mr. Lockhart, on rising to reply, was greeted with applause. He felt highly honoured by the manner in which his name had been associated with the toast just drank. Twenty years ago he responded to the call of the London Missionary Society, to go out to China as a missionary surgeon. Previous to doing so he was permitted to attend the Royal London Ophthalmic Hospital, and much of his success in China was to be attributed to the lessons he learned there. By the kindness of friends he had been enabled to found at Shanghae a large hospital, where not less than 200,000 Chinese had passed through his hands, large numbers suffering from diseases of the eye.

Several other toasts were drank and the Company separated.

The subscriptions during the evening amounted to £1,417 19s. The musical arrangements were under the direction of Mr. Francis, assisted by Messrs. Benson, Donald King, and Winn. Mr. Harker officiated with his usual efficiency as toastmaster.

INFANT ORPHAN ASYLUM WANSTEAD.

The annual meeting of the friends and supporters of this admirable charity was held May 26, at the London Tavern, the Earl of Shaftesbury in the chair, when the report was read and adopted, from which we give the following extracts:—

"The number of children in the establishment at the last annual meeting was 509. Since that period 55 have been elected, including two admitted under rule 34, and one by purchase. No less a number than 563 children have thus enjoyed the protection of the asylum during the year. Twelve children have left; one has died. The number of orphans now on the foundation is, therefore, 550, which number will be raised by the 25 candidates elected this day to 575.

"The financial condition of the charity also calls for a warm expression of thankfulness to its subscribers and supporters, but especially to Him 'whose is the silver and the gold.' Nearly every source of income indicates progress, while the annual subscriptions, the best test of public favour, show a marked increase over those of any previous year.

"Considerable expense has been incurred under the head of repairs and alterations, but it can be unhesitatingly affirmed that not a fraction has been absorbed in mere embellishment, but that the whole has been expended upon needful works, and the provision of such improvements as sanitary considerations and the development of the asylum imperatively demanded; and in consequence of reduction in other items of expenditure, the excess under this head only raises the average annual cost per child to £24 15s. 11½d.

"The following legacies are gratefully acknowledged:—Miss Marianne Burnaby, £50.; Mrs. Alice Watts (additional), £265.; George Schacht, Esq. (duty free), £1000.; Henry Alexander Stevens, £10.; Miss Mary Ann Vaux, £400.

"The subject of education is one which the committee feel to be of growing importance. Their attention has, therefore, been anxiously given to this branch of their labours. They are happy to be able to report that the infant schools have fully maintained their former high reputation.

"Of the seven boys who are about to quit the building, two have found a home in it for more than seven years, one for ten, another for eleven, a fourth for twelve, and the remaining two for thirteen years. The bare mention of these facts will be enough to enlist the sympathy of many in these youths, thus about suddenly to take their place in the hurry and strife of active live; and, at the same time, to illustrate strikingly the extent of that protection which our asylum affords to those who, in the providence of God, have been deprived of their natural guardians.

"In reviewing the past year the predominating impression seems to be the growing importance of the institution. Whilst still maintaining its affecting character of a nursery for infant orphans, it is also a great educational establishment, where hundreds of children are being prepared by useful and systematic instruction for the duties which they may be called to perform. And it is trusted that the religious influence with which it is sought to pervade the teaching, may be the means of fortifying them against those temptations and trials which they must inevitably meet.

"It only remains once more to commend the institution to the governors and the public. Though prosperity has accompanied in a wonderful manner the exertions of your committee, it must not be forgotten that the necessity for this asylum will always exist. Increased funds are therefore necessary to make permanent the benefits which it now confers. Of all the touching scenes which can be witnessed surely none can surpass that which the Infant Orphan Asylum daily exhibits—nearly 600 children, bereft of that dear relative whose protecting love and judicious counsel could least be spared."

On the vote of thanks being passed to the chairman, he expressed in warm terms his admiration of the manner in which the institution had been conducted, and assured its friends that he should be happy to do anything in his power to promote its interests.

The ballot was then taken for the election of 25 candidates out of a list of 106.

Royal Medical Benevolent College.—A general meeting of the governors of this charity was held at the Freemasons' Tavern, Great Queen-street, on Thursday, May 26th, Earl Manvers in the chair, when one pensioner and six foundation scholars were elected on to the funds. This excellent charity is established in the neighbourhood of Epsom, and has been founded by the medical profession as an asylum for their professional brethren who from ill-health or misfortune have sunk into poverty, and for the assistance of their widows in reduced circumstances; combining with its other objects a school for the gratuitous education of the orphans of medical men. The asylum is intended to maintain 100 pensioners, who must be duly qualified medical men, or their widows; and the school is designed to accommodate 200 boys, 40 of whom will be foundation scholars. The institution also grants annuities and pecuniary assistance to distressed members of the profession and their families. A portion of the building destined for the school is completed, but only five pensioners' houses, containing accommodation for 20, have as yet been built, for want of increased funds, which are consequently solicited from the profession and the public to enable the institution to fulfil its benevolent objects.

REFORMATORY AND REFUGE UNION.

MINUTE OF THE COMMITTEE OF HER MAJESTY'S MOST HONOURABLE PRIVY COUNCIL ON EDUCATION.

The labours of the Reformatory and Refuge Union to obtain from the Privy Council some alteration or modification of their last unpalatable Minute, dated 31st December, 1857, have not been altogether without result. Several deputations have been formed by the Union, in order to bring under their lordship's consideration the hardship with which the provisions of that Minute bore upon many institutions. The Committee of Council could scarcely venture to disregard completely the complaints of so important a body, constituted as it is of men of influence, wealth, and station, whose united voice on such an important subject could not but carry considerable weight.

The result has been the following Minute, which bears date 4th May, 1859; and we most sincerely trust that its provisions may prove more satisfactory to the various institutions than those of the previous Minute.

We direct our readers' attention to the 7th clause, which refers more especially to the work over which the Union more especially watches.

A copy of the Minutes has been forwarded to all the schools in connexion with the Reformatory and Refuge Union; but as some may not have seen Mr. Lingen's letter to the Honorary Secretary of the Union, R. Hanbury, Esq., M.P., we add it here verbatim.

At the Council Chamber, Whitehall, the 4th day of May, 1859.

By the Lords of the Committee of Her Majesty's Most Honourable Privy Council on Education.

Their Lordships resolved—

1. To cancel so much of the Minute dated 2nd April, 1853, as provides that the rate of aid towards building schools shall not "exceed 6s. for every square foot of area in the school-rooms and class-rooms if the plans include a teacher's residence, or 4s. if they do not include such a residence," and in lieu thereof to fix the rate of aid, subject to the condition that the grant shall not exceed the value of the local contributions, as follows; *viz.*

(*a*) 4s. per square foot of superficial area in the school-rooms and class-rooms, so long as this rate does not give more than 40s. per child, according to the number to be accommodated.

(*b*) £100 for each teacher's residence.

2. To make no grants whatever for *repairing* or *altering* the buildings, fixtures, or furniture of schools erected with the aid of grants at any of the rates in force since 2nd April, 1853; the *addition* of a teacher's residence where there was none before, and an *extension* of the school-rooms and class-rooms to meet an increase in the attendance of scholars, to be treated *pro tanto* as a new case.

3. In schools erected with the aid of grants at the rates in force before 1853, to reduce to one-half the proportion now granted (two-thirds) of the cost of new floors and of new desks and benches.

4. To allow no grants for building upon the plea that premises already in use for schools are to be settled in permanent trust for the same purpose, but to treat *the extension* of such premises as a new case *pro tanto.*

5. To cancel section 9 in the minute of 20th August, 1853, and in no school* to allow pupil teachers to be hereafter apprenticed at the expense of the parliamentary fund (*a*) in a greater proportion than *one pupil teacher for every* 40 *scholars* in average attendance during the year preceding the date of inspection, nor (*b*) in a greater proportion than *four pupil teachers to the same master or mistress.*

6. To extend (after 31st March 1860) the capitation minutes to Scotland, allowing the grant to each school where the number of pupil teachers falls within, or as soon as it falls within, the limit defined by the last section herein-before.

7. To cancel so much of the minute dated 31st December, 1857, as provides that "the sum of £5 be allowed for every "child received under the Acts 20 & 21 "Vict. c. 48, or 17 & 18 Vict. c. 74, into "industrial schools during the year pre-"ceding the date of inspection;" and, in lieu thereof, to fix the rate of aid as follows, viz—6d. for each day, up to a maximum of £7 10s. per annum for each child received as aforesaid, and being in the establishment on the day fixed for its annual inspection.

Instructions to Her Majesty's Inspectors on the foregoing Minute.

Committee of Council on Education,
Council Office, 5th May, 1859.

Sir,—I am instructed to furnish you with the following remarks upon the objects of the several clauses in the Minute of the 4th inst.:—

1. (*a*) School-rooms are often built upon a much larger scale than is ever likely to be necessary for purposes of daily instruction. The extra space, beyond a certain point, is not only superfluous, but injurious. It entails additional expense in building, in repairs, and in warming; and it originates usually in an intention to use the premises for purposes to which the Parliamentary grant is not applicable. Their lordships will agree with the promoters, at the commencement of each application, upon the maximum number of children for whom accommodation in the proposed new school is to be provided, and they will not permit the amount of their grant to exceed the rates *either* of 4s. per square foot in the school-rooms and class-rooms, *or* 40s. per head, according to the number agreed upon.

(*b*) Their lordships do not make grants for the erection of residences which are not sufficient to accommodate a married teacher, with a family comprising children of both sexes. A more limited provision is apt to prove an inconvenient form of endowment. The cost of

* The word school is here understood to mean any single establishment, *inclusively* of all separate departments.

Digitized by Google

a teacher's residence, therefore, is nearly constant, and bears a greater proportion to that of a small than of a large school-room. But small schools, no less than large ones, are benefited by the addition of a residence, and it is just to equalise the allowance in all cases.

2. The rates of aid were raised in 1853, for building schools (*only*) from 1s. 8d. to 4s. per square foot, and for building schools *with residences* from 2s. 6d. to 6s. Since that date the capitation grant has been introduced. Their lordships consider that sufficient public provision is made by these means towards providing maintaining and improving all necessary premises and furniture.

3. My lords consider it to be a sound principle, not to continue to grant more than is locally raised. Such a check affords the best security that the work is necessary, and that it will be turned to proper account.

4. Several instances have occurred in which proprietors, having built schools at their own expense, and (on quitting the neighbourhood, or from other causes) wishing to be reimbursed, have offered to convey such premises in permanent trust for education, on condition of receiving the usual grants. It rarely, or never, happens that the plans of such premises would have been approved, if they had been submitted in the first instance for examination; and the original outlay is no criterion of the value which the owners of such premises could realize by diverting them from education. You cannot too carefully impress upon the promoters of schools that my lords will not make grants *ex post facto* for building. The minute does not apply to premises which are not already in use for schools but are purchased *bonâ fide* for conversion.

5. There are few schools, in which apprenticeships are completed, that do not now furnish Queen's scholars. The reasons for special encouragement, which were legitimate in an earlier stage of the present system, have ceased. In returning to one uniform rate, their Lordships have determined also to limit the number of apprentices whom they will allow to be engaged at the public expense to the same teacher at one time. It is not, as a rule, desirable to build single school-rooms on a scale to contain several hundreds of children. But where such rooms exist, the place of pupil-teachers (after the first four) must be supplied by probationers, under the minute of 26th July, 1858; or by monitors paid by the managers out of the capitation grant; or a second certificated teacher must be retained. The number of pupil-teachers must be regulated with some regard to the ultimate demand for trained schoolmasters and schoolmistresses; and, as apprenticeships become general throughout the schools of the country, the standard of allowance in individual schools must be from time to time reviewed.

6. The operation of the Capitation Minutes in Scotland was suspended in prospect of legislation; but the continued exclusion of that part of Great Britain from public aid, which is afforded to the rest, does not appear to be justifiable.

7. Their Lordships have considered tha they might extend to industrial schools' certified under the recent acts, an increased allowance *upon the children received into them by magisterial order*, without thereby incurring those risks of abuse to which the absence of the securities imposed by the legislature might afford occasion in other instances.

I have the honour to be, Sir, your obedient servant,

R. R. W. Lingen.

To Her Majesty's Inspector of Schools.

Committee of Council on Education,
Council Office, Downing Street,
London, S.W., 17th May, 1859.

Sir,—I have the honour to enclose 100 copies of a recent minute, and I am directed to request your attention to Section 7.

Effect will be given, during 1859, to that section in favour of all Industrial Schools of which the date fixed for annual inspection falls *after* 1st August, provided that Parliament has voted the estimate for public education before that time. In the meanwhile the old rate will be acted upon.

Those institutions which, by the date fixed for the Inspector's annual visit, may fall under the old rate in 1859, will have the benefit of the new rate in 1860.

I am to state expressly that on no plea whatever will retrospective action be given to the increased rate; nor will it be treated as in force until 1st August, 1859, and then only on condition that Parliament has voted the grant for Education.

I have the honour to be, Sir, your obedient servant,

(Signed) R. R. W. Lingen.

R. Hanbury, Esq., M.P.,
Reformatory and Refuge Union.

We have elsewhere noticed the Annual Report of the Union for the past year. We may now close these remarks with a brief notice of what the Union has done in the way of emigration for approved boys. The requirements are somewhat stringent, but very justly so; for it would not be at all agreeable to the Union, nor advantageous to the Colonies, should the Committee sanction and assist in the emigration of any boys or girls of whom they have not probable grounds of hope as to their future career. The aid granted is in the shape of a grant of money, £6 each boy, leaving his arrangements for the passage, &c., entirely to the managers of the various institutions, who are thankfully availing themselves of Mr. Bracebridge's assistance in sending out the boys from Liverpool to Toronto. There have been 52 applications, of whom 28 have been approved, 15 rejected, and 9 are still under consideration. The approved applications are from the following schools:—

Boys' Refuge	2
Boys' Home Reformatory	4
Grotto Passage Refuge	4
Home in the East Reformatory	5
Castle Howard Reformatory	1
Birmingham Reformatory	3
Essex Reformatory	1
Calder Farm Reformatory	2
Leeds Reformatory	2
Kingswood Reformatory	2
Philanthropic Society's Farm School	2
	28

The following are under consideration—

Northamptonshire, Warwickshire, North Eastern, Hardwicke.	9

A scheme is also under onsideration for emigration to Moreton Bay—brought before the Union by Mr. Leslie, late secretary to the government of Victoria.

We wish we could close this without any allusion to the necessity of funds for the proper of carrying out of the Committee's plans. The public, however, seem to like to be appealed to, and we venture gently to hint that the Reformatory and Refuge Union not only wants more funds than it has, but has given fair evidence that whatever is intrusted to its care will not be frivolously wasted, but conscientiously applied to the advancement of the great cause which they have taken in hand.

INTOXICATION.

Is it the prevalence of this evil which blinds our eyes to its importance, or is it that the immense amount of monied and political influence which is derived from its prevalence checks inquiry? Are we really to believe that any of those who profess to take interest in the social well-being of the masses, apart from interested motives, fail to observe how vain is any endeavour to overcome and reduce poverty or crime, while intoxication prevails? The Liverpool branch of the National Association for the Promotion of Social Science jumps at the conclusion,—on what premises founded we know not,—that intoxication is "not so prevalent now as it was thirty years ago;" and, having so begged the question, contents itself in reference to this important subject by simply asking why it is so. We can only say, we most devoutly wish it were so, and that we could happily employ ourselves in ascertaining the reasons for a decrease. But of any very serious diminution in this important vice we should almost despair, were it not that we know in whose hands the success of human efforts rests. We have frequently expressed our opinion that the victims of this vice would

Digitized by Google

consider it to be one of the greatest boons which could be conferred upon them, if the temptations to it could be removed completely from their reach; they are well aware of the injury it brings upon them in every way; they recognise their madness and folly; they will even curse the landlord who supplies them; and yet, with the inconsistency and weakness of human nature, the glaring gin-palace, the beer-shop, and the boisterous and mirthful invitation to "come and take a glass," obliterate all former good impressions, and their minds become gradually hard and callous. Now are these men so much to blame as those who in the first instance neglect their proper education, and permit them to grow up in an atmosphere of vice almost without an effort to correct it, and then force as it were on their attention, under special license, places where their ruin may, and probably will, be fully consummated? There are many difficulties to be encountered in combating this gigantic evil; perhaps not the most insignificant is the vast numbers of those who are ready to take alarm at any movement tending to suppress the evil, because they imagine that "this their craft is in danger to be set at naught." As public journalists we are bound to resist the evil by every means in our power, irrespective of any vested interests whatever, in a craft which, while it brings great gain to its masters, yet also brings with it, by universal consent, the most abject wretchedness, vice, and destruction, both of body and soul, to its thousand victims. It may, perhaps, be to a certain extent true that the vice of intoxication is not so prevalent as it was thirty years ago, inasmuch as unquestionably, in the higher ranks of society, habits of open intoxication are beginning to be looked upon as a disgrace. But, in proportion to the population, no diligent inquirer into real facts will be long in doubt that the vice still prevails to a much larger extent than it should do among the working classes.

In connection with this subject, whatever may be the views entertained as to the success or otherwise of what is termed the total abstinence movement, one thing is clear,—that many of those who originally scouted the idea altogether are now its warm advocates, and thousands who were indifferent have joined its ranks. We are not ourselves total abstainers, but we would not venture to find fault with those who are. We come largely into contact with the criminal offspring of drunkenness, and we simply believe that, so long as the facilities for intoxication are so largely authorized by government, and the temptations to the vice so many, and the restraints and correctives on the other hand so necessarily few, there is no other remedy that we are acquainted with so likely to prevail, especially with the confirmed drunkard.

We by no means undervalue the power of religious instruction; but the class to which we allude for the most part have never had that instruction, and are now beyond it, otherwise it might be a more powerful means than the temperance movement. A right estimation of the pledges taken and made at the baptismal font may be infinitely better than the temperance movement; but that proper estimation has never been instilled, and can seldom be awakened, in the drunkard's mind. The precepts of God's word must be infinitely superior to any mortal means whatsoever; but that Word has not been taught, and the opportunity for teaching it in these cases is well-nigh gone. The grand difficulty is to *get at* the drunkard to any purpose, and the great value of the temperance movement, we think, consists in this,—that where the drunkard meets his accustomed circle, and simply expresses his awakened conviction of the evil, and his *intention* to avoid it in future, it is expecting a rare amount of moral courage to hope that he will be able to resist their ridicule and their blandishments; but if he be able to say distinctly, "I *have* taken the pledge," though he may be ridiculed for having done so, yet will he be respected for keeping his written promise unsullied. We do not scruple to say that for ourselves we have no faith in "the pledge system" as in itself inducing any better state of mind; but as a means thereto we have the highest confidence in it,—as a first step to improvement it is of the utmost importance. Many hundreds have taken the pledge, and subsequently persevered in a course of sobriety, not simply because they were pledged abstainers, but the temporary check which the signing the pledge gave to their drinking habits, the corresponding comfort which they soon discovered to arise from keeping their money, or spending it rightly, the happy faces of their family, and the gradual introduction into respectable, and in many cases Sabbath-keeping customs, the easy mind, the bodily health, and the power of attending to their religious duties, have taught them, practically, how little fruit they had of those things whereof they are now ashamed: these thank God that they were induced to sign a pledge, which was, under his providence, the first step to recovery, just as many an one has thanked God very sincerely for having been brought into prison; not for the prison itself, but for the check it applied in the beginning of a career of crime, the end of which was frightful to contemplate. They gain by it time to think, and to seek strength to lead a better life in future. The chaplain of the Borough Gaol, Devonport, in his Report at the Michaelmas Quarter Sessions, 1857, attempts to cry down the temperance movement as "false in theory and delusive in practice," and as having "existed only to prove its own weakness." Mr. Hallam evidently does not understand the movement or its progress, or he would not talk so glibly of its failure. We believe that for what it intended and expected to effect it has been eminently successful. Ninety-nine chaplains out of a hundred will at once acknowledge what has been over and over again asserted by judges and magistrates,—that the largest part of crime springs directly or indirectly from drunkenness. Nor do we think Mr. Hallam will be disposed to deny this when he calls "intemperance the presiding demon of evil of our times. It is," says he, "*the* vice of the age—the 'monster of frightful mien,' which *steeps the masses in misery and ruin.*" And yet in the very same page wherein he speaks so slightingly of the temperance movement, as having totally failed, he says, speaking of crime, "The gaunt Philistine of evil rears his defiant head, and spreads dismay among the hosts of our people. The well-timed efforts of the best and wisest of men; the increase of schools; the multiplying of churches; home missionary exertions of all kinds; the provision of innocent recreations for the poorer classes; together with the thousand-and-one institutions set on foot with the view of humanizing the depraved, instructing the ignorant, and reclaiming the vicious, *have failed one and all*, (however effective in their way), to fell, as yet, the great Goliath and lay him low." Yes, these various godly movements which he enumerates have failed, though they are as means infinitely preferable, and far more likely to be lasting, than the temperance movement, and it is precisely because they have failed, not from want of intrinsic worth, but from their inaccessibility to the drunkard, that we would desire, by any legitimate means, to bring the drunkard within their influence; and we confess we see no other method of accomplishing this than inducing him, if possible, to put a first check on his headlong career by signing the pledge. We beg to repeat to our readers that we are not ourselves abstainers, but we desire to judge impartially

Digitized by Google

of any movement having for its object the benefit and improvement of the working men, and until we are persuaded that the signing of the pledge is positively *wrong*, or that there is any other means equally simple, yet equally powerful, to put a sudden curb on a drunkard's life, we shall consider it our duty to give the movement all the countenance and support in our power.

A chaplain of our acquaintance, connected with a large prison, had frequently received the promise of prisoners that after their discharge they would keep from drink, as they found they could do well without; and many said they would take the pledge; but they generally were not long after again in their cells for the same offence, confessing that they were met at once by their old pot-companions, and were unable to hold out against them. It struck him that the power of saying "I have signed the pledge," might be a sort of safeguard for them, as well as put them upon their mettle as "men of their word." He obtained authority for signatures to be taken during the period of imprisonment, announced that it could be done, and said no more, but left the thing to work. Some of the regular gaol birds soon expressed a desire to sign, and these received their cards on discharge, and *not one has since appeared within the walls of the prison*, though many of them may be said previously to have almost *lived* in prison, consigned over and over again to short and almost useless punishment for being "drunk and disorderly."

This is testimony of some importance of a distinctly opposite character to that of the estimable chaplain of Devonport. We shall be glad to hear from him what remedies he does apply to his drunkards, and with what success. Our main object is to draw attention to the extreme importance of dealing with the monster vice "Intemperance," in some vigorous way, and we trust the Liverpool local council of the National Association for the Promotion of Social Science will issue some such questions, in addition to their present solitary, and we think mistaken one, as may draw attention more pointedly to the evil, whether as regards its causes and consequences, or its prevention and probable suppression.

PLAYGROUND AND GENERAL RECREATION SOCIETY.

In physical powers of endurance it is well known that few nations, if any, can be at all compared with the British Isles. This superiority, acknowledged in all our wars, both as regards the officers and the men, owes its origin unquestionably, in a great measure, to the manly sports in which our young in all ages have been accustomed to engage, in their intervals of holidays, or in their daily recreations in their playgrounds. Our ancestors, well aware of the paramount importance of bodily health and vigour, and of their powerful influence on the mind, looked upon a playground as a necessary appendage to every school aiming at prosperity. And it was with the same view, probably, that they gave great encouragement to the manly sports and amusements in which the poorer population were so frequently engaged on the village green. But time has rolled on, and improvements in society generally have given a new feature to the face of most things. Playgrounds still remain attached as a proper appendage to the higher class of schools, but the poor suffer greatly in this particular respect by what may be termed the commercial advancements of the times. Population increases everywhere; land becomes increasingly valuable; modern gin-palaces and beer-shops introduce their deadly allurements into the village sports, whereby abuses are engendered and fostered, until the well-disposed in the locality feel themselves afraid of mingling as of old with those on whose labour they depend, though we cannot believe them one whit less willing than formerly to promote the well-being of their poorer brethren. These scruples are, however, far from correct or justifiable. It is rather the duty of the more fashionable gentry to endeavour by every means to check the introduction of abuses, by their presence and support, than to discountenance altogether the harmless sports, on which their own want of watchfulness has tended to bring discredit.

In the meanwhile the village becomes a town, the town grows into a city, and the village green becomes an aristocratic square.

> "Where Hodge's children may no more be seen
> In sport with rising nobles, as was meet.
> The latter still may pace what was the green,
> The former know no Plaistow but the street."

One by one is each spare green spot removed from the poorer children, who are powerless to resist, unil their only hope of recreation and amusement is confined to the crowded thoroughfare, or the noisome alley. This is plainly unjust to the poor children, and in the highest degree injurious to society at large. It is impolitic in the extreme to neglect the training of youths who are to be the future sinews of our farms, our factories at home, and of our army and navy abroad, in the hardy habits only to be properly acquired in youth, and to leave them a prey to the vice and contamination which unrestrained and unwatched street amusements are pretty sure to induce. The children will have their amusement and play, it is a very instinct of nature, implanted in their little minds by a higher power; and if they cannot trundle their hoops, or fly their kites, if they cannot play at trap-bat, cricket, leapfrog, rounders, prisoners' base, &c., lest the honourable Mr. This, or the Rev. Mr. That, should be flung from a startled horse, or overturned in his elegant barouche; or lest Mr. Somebody else sitting in his chambers, or returning quietly from them, should be smitten by a tipcat in the one, or disturbed in the other by noisy shouts of boys at play,—if, we say, these are held as valid reasons for checking innocent play—and the children cannot therefore find place or opportunity so to enjoy themselves, they have, as it would seem, no alternative from resorting to the less noisy, but more dangerous amusement of gambling, or the still more destructive allurements of the penny gaff.

With these impressions we are extremely pleased to find that the Playground and Recreation Society are at length in a position to make a manifestation of their intentions. A most excellent piece of ground, at Camden Town, running in fact entirely along the rear of Camden Street, is now, as we understand, in the hands of the committee, and as it is the first they have succeeded in procuring, it will, we hope, be opened with considerable *éclat*, and be well watched by those who desire to ascertain the real value of such a Society. We do not know that we can do better than to introduce here some extracts from a very sensible article which appeared in the *Standard* of the 23rd, while commenting on the anniversary dinner lately held at the Freemasons' Tavern. Before doing so, however, we may observe that the Marquis of Westminster, who presided on that occasion, intimated that he thought he had an acre of land which he could make over to the Society for its purposes, and that he spoke of the site in Camden Town as being objectionable on account of its distance. Our readers will bear in mind that the playground in Camden Town is not intended for the inhabitants of Southwark, but simply for its own neighbourhood; and the desire of the Society is to procure, if possible, sites of land for similar purposes, in any and every locality where the poor children are deprived of their proper amusement by

Digitized by Google

being driven to the streets. The *Standard* remarks that—

"The question is how to clear our streets of juvenile vagrants, to allure them to spots where they could play to their hearts' content; but always under a kindly and watchful supervision. Surely this is applying the maxim that persuasion is better than force, in a very wise practical manner. The homeless child, wretched as is his condition, will have play any how; it is is in vain that you try to beat it out of him. He is still young, and this turn for sport is in all young things; it is, then, a refined and even subtle philanthropy to convert this skittish inclination to purposes of permanent good. The Playground and General Recreation Society was founded with the object of supplying what is properly regarded as a natural want in all children to the poor nomads of the streets, under a regulated system and judicious superintendence. Among the patrons and committee are the names of some very practical as well as charitable men, persons who would not lend their sanction to any association not likely to prove thoroughly successful as well as beneficial. The inquiry has long presented itself—what are we to do with these vagrant street children? They gambol; they play at pitch and toss; they use obscene language; they thieve when they can; they elude the police by dodging across the roads and under horses and carriages. All this time they are working their own ruin. But the main object is sport. With them to lark is to live, and rather than be without their fun they would do any amount of mischief or dare any peril. Now, this bias for play is not bad in itself; it may be the counterpoise for the amazing mental activity of the young. Everything is new to the beginner in our world. From the lowest stage of animal life to man's high perfection, each young creature has everything to learn. The turn for sport evinced by them may be only a kind of necessary compensation for the exertions their faculties must undergo in order to master their natural position, whatever this may be, in the scale of creation. The Playground Society, then, is not only practical: it is, without hyperbole, truly philosophical. It does not attempt to whip the play out of the child, but to use it for high purposes with the idiosyncracies of the juvenile always in view. But beyond the necessary sport there will ever be a tendency to run to it as a refuge for idleness. People seek pleasure for the want of more exciting employment. Beggar children spend their lives between vagrancy and play. If the latter should become a system with them, only to be taken up at intervals and under proper directions, are not the possibilities many that the same regularity and method will guide their other pursuits? Besides, play need not be all mere recreation; it may contain elements of very useful instruction. Gymnastics are in themselves a capital bodily training, and contain some germs of mental calculation, and much heart and courage, before any one can excel in them. It is in this way, too, the Playground and Recreation Society endeavours to convert the sportive propensities of our City Arabs into means for developing their limbs and exciting a manly emulation. A motive is induced for system and exertion, a healthful and useful stimulus is given to activity and energy. Who knows what noble aspirations may seize the child who becomes master in these feats of skill, agility, and strength? May not a naval or a military hero be found in this first school of observation, calculation, skill, and intrepidity? Or some clever engineer or mechanical genius? The chances are very many that these places of recreation will turn out anything but a thief; while the street corners, where boys now throng for play or gambling, are the nests where roguery and vice are engendered and thrive. In fact, any one disposed to write a moral essay on this interesting subject could not fail for lack of forcible and apposite arguments. But our purpose is a little more practical.

The Society is now in its third year. It has gathered around it many patrons and friends; it has obtained the sanction of the Legislature for its proceedings; it has just held its second anniversary; and we believe it is in a fair way of permanently working out the good for which it was founded. But it is still only in its infancy; it has no large funds, or generous donations, or ample subscriptions, to fall back upon. The Society, in fact, is like its objects—not only young, but poor. That it shall not long continue so, must be the care of the benevolent British public. There is something really very pleasing and thoroughly English in this association. They give play to the poor child, but at the same time they allow him his freedom. He is not condemned to a reformatory, or even provided with a refuge—very useful institutions in their way; but he is taught to play, as children ought to play, to a good end. Here is an object for the money boxes of our children. Surely the captains of Eton, Westminster, Harrow, Rugby, and our other public schools, might well show their lead, by heading a subscription for this truly juvenile charity. And older people, who grow young again in the sports of little ones, may convert a five-pound note to a less benevolent purpose than to enticing vicious children from the streets and their evil courses, to spots consecrated to health and recreation. At this season, we should like to see the proceeds of a game of cricket or two, or a sturdy boat race, applied to this institution. It ought to cast itself on Young England for support, and rely on it; while, no doubt, more matured benevolence will not be wanting. In truth, there is so much ingenuity, as well as goodness, in the scheme, that we could not bear to see it otherwise than flourishing. This Playground and General Recreation Society is one of those types of modern British benevolence, whose exponents are to be found in our new parks, our summer excursions, our baths and wash-houses, and our model lodging-houses. There is something of human kindness and a family consideration and feeling about all of them. This is the Conservative socialism of England, differing *in toto* from the revolutionary. It is therefore we feel bound to plead the cause of the new progress so frequently; and foremost in the van we certainly place this Society for providing playgrounds and recreation for the wandering children of our great cities.

CERTIFIED REFORMATORIES.

It is not every county which has a Mr. Barwick Baker in it, with the will as well as the tact and the facilities of keeping the worst of the lads within bounds and order. Nor is it to be denied that as we approach the metropolis, that is in point of number and density of population, the young vagabonds who are the proper objects of the Reformatory Schools Act become more and more difficult to deal with. There is a certain degree of sharpness and daring about the young London gaol-bird which we do not expect to find in rural populations, and but rarely even in less crowded and manufacturing towns. Hence it is that we attach considerable importance to a movement which has emanated from the authorities at the Home in the East, and is, as we understand, completely in accordance with the views and experience of Her Majesty's Inspector of Reformatories. The suggestion is that a strong application should be made, backed by all the influence which can be brought to bear, as well from individuals as from all the certified Reformatories, to the Secretary of State, to permit Parkhurst to be certified under the Act, for the reception of young criminals who are likely to prove unmanageable themselves, and exercise a most baneful influence on those with whom they may be associated in the Metropolitan or other Reformatories. The Rev. Sydney Turner, while still closely connected with the Philanthropic Farm School, took a leading part in an agreement made between the Reformatories and the magistracy of the county of Surrey for the reception of an annual number of boys from Surrey, sentenced under the Act, and he made it an express stipulation that incorrigible and hopeless cases should not be sent there. This stipulation might have been strictly consonant with the means and appliances available at Redhill for the detention and control of troublesome cases; but it most unquestionably went far to stultify the Act; because so long as the incorrigible leaders of the boy-gangs were at liberty it is quite clear that they would continually recruit their broken ranks, and supply by new dupes the places of those whom this act separated from their *confrères* by long periods of confinement. The Home in the East, with probably less facilities for restraining turbulent ones, and fewer means of effecting the

Digitized by Google

recapture of runaways, yet seems to have acted more in accordance with the *spirit* of the act, and to have endeavoured, like Mr. Barwick Baker, to put a more effectual check on juvenile crime, by dealing primarily with the worst and apparently most hopeless cases. The committee of management have not positively shut their doors against any, but generally has taken all for whom they have had space.

It was quite within the bounds of probability that no evil should have arisen from this unrestricted admission; but any one who at all knows the character, and we would add the talent, of the young London thieves, especially those who are leaders of gangs, would be perfectly prepared to hear that such lads might lay deep plans for rebellion and escape, collected as they are in what is virtually a prison, though without the strong barriers of a prison; being perfectly well aware that a long period of detention awaited them, having ample facilities for communication one with the other, and requiring but a word of encouragement to instigate them to organize their plans for resistance and escape. A disturbance of some such sort has taken place at the Old Ford Reformatory, which might scarcely be worth further allusion to, but that it gives a fair ground for pushing vigorously for the boon to which we have alluded—the certifying of Parkhurst. A large number of the cases dealt with under the Act are boys whose parents are to them worse than no parents at all, and whose circumstances are such as to render it a positive act of charity to remove them from their home associations, and keep them under the authority of proper teachers for a lengthened period. Whatever such boys are in danger of becoming, many of them are at present quite young in crime and are perfectly capable of being trained with ease to better things; but if they are necessarily associated in the Reformatory with those who have become adepts in crime, young as they are, who glory in telling of their misdeeds, and who bring to bear on them the powerful weapon of ridicule, these young hopeful ones soon imbibe false notions and become contaminated by the others, and thus the object for which they were consigned to the Reformatories is altogether defeated. This is a difficulty which must always exist, more or less; but it would be immeasurably diminished if Parkhurst were certified and received those who show that all feeling of shame is deadened in them, who are apparently hopeless. It must be borne in mind that there is a wide distinction between the lad who enters voluntarily into a Reformatory and the lad who is sent there against his will knowing that there he must stop for a very long period, as a sentence of the law. The former soon understands that he is fed, clothed, and taught, as a pure act of voluntary kindness towards himself, for which he can feel grateful: the latter realizes nothing as a source of gratitude; he imagines that what is done for him is done as a matter of compulsion and law; and the springs of mutual sympathy are dried up. Therefore, the certified reformatories should be distinct from the voluntary; but as this can hardly be at present, at least let us keep from these reformatories, so far as we can, everything that would be likely to interfere with the salutary influence of their discipline. The worst cases should be vigorously dealt with, but there is no place so adapted for their reception as Parkhurst; and as at the present time we believe it is by no means full, probably a proper application made at once would lead to this desirable consummation, especially as it will be, we understand, heartily backed by the new government Inspector of Reformatories, the Rev. Sydney Turner.

HULL DISCHARGED PRISONERS' AID SOCIETY.

We make the following extract from the second report of the above society:—

It should ever be borne in mind in what a destitute condition most prisoners are at the time of their discharge from gaol. After a few months passed there, either in the hard labour of the treadmill or at other comparatively lighter work, it must be expected that in general their spirits should be broken, and their physical powers weakened, and that they should return to liberty in a very low and dejected state, almost entirely unfitted for some time to engage in any employment that requires strength of body or energy of mind. Amid the general want of work experienced in the town, at some periods of the year, it is found difficult for labourers, or other workmen, of even unblemished character, to meet with employment. And that difficulty is increased in a tenfold degree to a person just released from confinement. If he is a native of the town, he is frequently prevented by shame from seeking employment from those parties for whom he has formerly worked, and if he asks it from others to whom he is not known it is not unusual for a reference to be requested to his last employer. In both cases he is disappointed, and is thus obliged to go elsewhere for those means of support to which he has deprived himself by his previous bad conduct. For it seldom happens that a former master is in a position to take back a person of this description, as he has in the meantime filled up his place. And should the released prisoner be a person from some place at a distance from Hull, he is then much less likely to obtain employment. Being, therefore, thus thrown among strangers, without the means of obtaining a living, without money, or friends, or character, and not knowing what to do, or whither to go for his next meal, is it a thing to be wondered at, if in such a deplorable dilemma he is again overcome by the first temptation that is offered to break the laws of the country? It is in these, and such-like cases, that the value of this unpretending but highly useful society is felt, as many a discharged prisoner is, by a little timely aid, prevented from again having recourse to those dishonest practices that have led to his punishment and disgrace.

Neither should it be forgotten that many of the persons so relieved are among the most depraved characters, and therefore it cannot be supposed that every one who is assisted by this society will be reformed. Many disappointments must be expected, and many have been experienced, but not more than in other cases of distress generally; for it is well known by persons who are in the habit of going among that class of the community, that a great deal of imposition is practised—and in truth cannot be guarded against by the utmost vigilance. In many cases, discharged prisoners are almost compelled to beg or to steal, as they cannot starve. But after all deductions, necessarily arising from the circumstances of the parties whom we assist, much good has been effected; many a good resolution, formed by a prisoner in his solitary cell, has been carried out; much evil has been prevented; and though some re-committals, as will be shown, have taken place, they are not more numerous than might have been anticipated. Several of those who have been accustomed to infest our prison from time to time, for several years, have been sent away from the town to their distant homes; while others, from the temporary but much-needed relief thus afforded, have been furnished with the means of supplying their present wants, and been helped till they met with some employment.

The number of cases relieved in the course of the year has been 151; which is 23 more than in the last year. Of these, 54 have been women, and 97 men. The total sum expended has been £24 3s. 1d.; of which £8 4s. 3d. has been laid out in the purchase of second-hand clothes, shoes, &c.

Of the discharged prisoners who have been sent to places distant from Hull, 14 have been sent to London; 2 to Gainsbro'; 3 to Beverley; 3 to Newcastle; 3 to York; 2 to Selby; 3 to Grimsby; 2 to Liverpool; 1 to Leeds; 1 to Louth; 1 to East Retford; 1 to Manchester; 1 to Bradford; 1 to Doncaster; 1 to Bridlington. 21 have been assisted with money to leave the town, and as far as is at present known, they have all done so with the exception of three women. One of these is living in respectable service, and it is feared two are doing wrong, though they have not been recommitted.

Letters have been frequently sent, in the course of the year, to the friends of those who were on the point of leaving the prison, reminding them of their liberation,

Digitized by Google

but in many cases no reply has been received. In a few instances the letters have been returned to the Secretary from the Dead Letter Office in London. On the other hand letters have been received from some expressing much gratitude for the assistance afforded. One young woman, who had money given her to go to the neighbourhood of Leeds, writes: "I am getting on very nicely, and I hope, in the course of a few weeks, to be able to send you that money which I promised to return to you, and which I was very thankful for the loan of. I have an engagement for a month to a gentleman as servant, and I hope to stay longer, if it pleases God to give me health and strength, as I suit very well." Another woman, to whom money was lent, has returned 2s. 6d. A young man, sent to York in October last, writes: "I was glad to hear that you received the stamps (24) all right. You must, if you please, excuse me for not writing before now; but the reason is, I thought I would send you some good news. I am glad to let you know that I have got some good work, and I intend to keep it."

It is pleasant to have to record such instances of gratitude and honesty, though the falsehood and deception practised by many have a tendency to harden the hearts of benevolent persons in their efforts to do them good. In a letter from the Chaplain of a goal in a neighbouring county, the following remarks are made with reference to a young woman, whose friends had been requested to take her back, and try to get her employment in the silkmills, where she had formerly worked. He writes: "After considerable trouble, with the assistance of one of our detectives, I have had an interview with the girl's brother and sister, whom you mention in your letter. Her statement to you is correct as to having a brother of the name of ——, and a sister named ——, but her address to them is wrong, and therefore they could not receive your letter. From their account the girl appears to have led an irregular life at N., where she might have had work at the factories, or a situation as servant, but utterly disregarded the best advice. Could they be assured that she would be a reformed character, and not a disgrace to them, they would be glad to see her with them again. Otherwise they have no wish to see her here again. They are Irish Roman Catholics, and seem very poor and unable to write or read, and therefore requested me to make this statement to you, and to say they could not assist her with money." He goes on to say, "after a period of 39 years as Chaplain to our prisons, how seldom I have been able to place any confidence in the expressions of repentance or intentions of reform in such characters. Their resolutions are no sooner made than broken. However, we must still continue to pity and pray for them, trusting that God may, by his holy Spirit, do for them what we cannot." It thus appears that the hopes of the reformation of this class of prisoners are as discouraging in other large towns as they are in Hull.

We would add, in conclusion, a few brief remarks on some of these cases that have been relieved, in order that the real circumstances of discharged prisoners may be the better seen, and thus more sympathy excited towards so unhappy a class of the community.

"W. S., a Hull man, labourer, wife has pawned all the furniture, clothes, &c., while he has been in gaol, to support herself."

"J. H., a single man, a tailor, quite destitute, gone out of town, on his way towards Liverpool, where he has friends."

"M. F., a single woman—not a prostitute—on her way from Newcastle to London, sent to her father in London by steamer."

"C. F., single, a Prussian sailor, speaks but little English, sent to London, where he expects to meet with a ship to take him to his own country."

"J. H., a watchmaker, respectable in appearance, married—during his imprisonment, his wife sold all their goods, and is gone away with another man—paid for him 5s. to get his tools, &c., from the lodging-house where they were detained: went with him to North-street, and saw the truth of what he said—gone into Lincolnshire with the expectation of obtaining work."

"H. McG., a tailor—has been in the army during the war in the Crimea, had two silver plates on his head covering wounds, several wounds in various parts of body and arms: wife in Lincoln—gave wistcoat and coat, as he had nothing on but trousers and shirt."

"S. P., aged 73, and wife, M. P., aged 61, were sent to gaol, the former 21 days and the latter 14 days, for begging. They are very poor—nearly blind—have been some months in Hull. The woman left seven days before her husband, and went to the workhouse—she came to the gaol to meet her husband, and both leave the town to make their way towards their own parish."

"M. A. H., single—has been on the streets: was in gaol 11 weeks waiting for Sessions. Parents dead, very thankfully accepted the offer to be sent home; intends to leave off her bad ways. Paid for her lodgings, and for boat, &c., to Gainsborough."

"C. B., a married woman—husband a labourer—one child of 11 years of age died while mother was in prison: eldest daughter, who worked at the mill, became a prostitute. Husband often out of work: two children at home—the whole wretchedly poor: gave clothes, shoes, food, &c.

"A. M., a young woman of good character; parents in Hull; gone to West Riding to relations, expects to be employed as a servant.

"M. L., a single woman, of weak intellect, has been in gaol about 40 times in the last few years: generally lives, when out of gaol, among prostitutes, for whom she does every servile work. Paid for her passage to Selby by the steam-boat."

"M. W., a single woman—destitute—brought up in the Union of Oldham; has been five years in a Lunatic Asylum—does not know where to go or what to do on leaving the gaol."

The above may be considered fair samples of the prisoners relieved. And to assist in endeavouring to raise such fallen and destitute fellow-creatures, is the chief object of the Society.

Of those who were assisted by this Society, viz., 87 males and 41 females, from April 1857 to April 1858, only seven males and three females were-recommitted, of whom two have been since sent to Reformatories, and one to penal servitude, while the rest, as far as is known, have not again subjected themselves to punishment.

Of those relieved by the Society, viz. 97 males and 54 females, from April 1858 to April 1859, five males and seven females have been re-committed (one male in Leeds) and one of them sent to penal servitude. The rest, viz., 92 males and 47 females have up to the present time nothing new laid to their charge.

It is trusted, therefore, that this plain and simple statements of facts, regarding these discharged prisoners, will induce those to continue their aid who have hitherto, either by donation or subscription, assisted in restoring to society some of those who, by their crimes, have brought disgrace and punishment upon themselves, and that those who have hitherto not given us a helping hand may come forward and aid us in our endeavours, with God's blessing, to relieve the wants of the destitute and "convert the sinner from the error of his ways, and thus save his soul from death and hide a multitude of sins."

J. Selkirk, *Secretary.*

PLAYGROUND AND GENERAL RECREATION SOCIETY.

On Thursday, May 19th, the second Festival of this Society took place at the Freemasons' Tavern. The Marquis of Westminster presided, but it was very evident that the fact of the Queen having fixed that day for the celebration of her birthday made a considerable difference in the attendance, as many were thereby prevented from being present. That their absence was no indication of lack of interest in the well-doing of the Society was proved by these absent ones sending their contributions towards its funds.

"The Marquis of Westminster occupied the chair, and among the gentlemen present were, Sir B. Heywood, R. A. Slaney, Esq., M.P., Revs. D. Laing, E. Spooner, W. Owen, H. J. Hatch; Mr. Lusignan, James Heywood, Esq., C. Ratcliff, Esq., Dr. Mackintosh, Dr. Jolit, Mr. E. Perry, Mr. Montague Gore, Mr. T. H. Bastard, Mr. W. H. Collingridge, Dr. Spicer, Mr. W. Jesse Street, Mr. E. West, the Secretary, &c. &c.

"After the usual loyal toasts had been honoured, the Marquis of Westminster proposed the toast of the evening, "Prosperity to the Playground and General Recreation Society," He said he regretted the absence of the chairman of last year, Mr. Charles Dickens, as he also regretted that Mr. Dickens's suggestion that the ladies should join them at these dinners had not been carried out. The noble marquis pictured the sad state of the children of the city, who were unable to trundle a hoop without being pounced upon by the police. They must all know it was not

Digitized by Google

the children only, but the whole country, that suffered from the rising generation being deteriorated. Debility of body would produce weakness of mind, and the children placed in that calamitous position were unable to play the part that was expected from every free-born Briton. The Committee had looked about to see where they could find a sufficient space for the amusement of those children. He was told there was ground to be got in the neighbourhood of Camden Town, but the distance was objectionable. A place had been spoken of in Smithfield, and an application respecting it had been made to the present Chancellor of the Exchequer, and to the Corporation of London. The Chancellor of the Exchequer gave a most favourable answer, so far as he was able to do. The powers of the Government were not quite clear, but he believed there was an understanding that no objectionable building should be erected there, though the Government could not promise that an appropriation of the ground could be made in the manner desired for the use of the children. The Corporation, a great, powerful, and useful body, did not, however, give the deputation from the committee the encouragement they anticipated. The great difficulty in their way was the enormous expense that must be incurred, but they should endeavour to meet it, because it was most important that the objects they had in view for the benefit of those children should be effected. He understood that a covered sewer at Chelsea was to be converted into a playground, and that the ends of it could be effectually blocked up, so as to form a place of recreation for children. It might be naturally asked why he (the Chairman) did not give the ground himself. It so happened unfortunately that the whole of the property was so leased that it was quite unattainable, with one small exception, but he was happy to say there was something like an acre of land, which they would be able to appropriate for the purpose.

R. A. Slaney, Esq., M.P., then proposed the chairman's health, and he rejoiced to see his lordship engaged in assisting in the desirable object of providing open spaces for poor children "in populous cities pent." He had himself endeavoured to promote the movement in his place in the House of Commons, and what had been done for the people in regard to Primrose-hill, Kensington, Victoria, and Battersea Parks gave them strong hope for the future. He believed that by renting, buying, &c., the society would accomplish much good for the future generations of men and women.

The Chairman returned thanks, and proposed "the Stewards," which was acknowledged by—

Mr. Charles Ratcliff, of Birmingham, who said there were three distinct places of recreation at Birmingham, one purchased in part by working men, and that a large portion of working men composed the committee of management. He trusted that London would soon have the same advantages, and concluded by gracefully thanking the noble chairman for his kind offer of an acre of land in Belgravia, expressing a hope that others would be thereby invited to give land in other localities where the want was so pressing.

Mr. Heywood proposed "the Committee," to which the Rev. D. Laing, who originated this movement, responded. He said the children of the poor were hunted out of every place to which they went for play, they were lonely and neglected in the streets, and he hoped the Society would soon be enabled to render their lot more cheerful.

The Chairman then proposed "Sir B. Heywood, and the Shoeblacks' Society."

Sir B. Heywood acknowledged the compliment, and alluded to the delight the shoeblacks experienced in their trip, last summer, to Mr. Alderman Finnis's park, as an example of the motto, that "all work and no play makes Jack a dull boy."

The Rev. H. J. Hatch proposed "The Press," thanking them for the generous and unsolicited aid they had already given to the movement; acknowledging that the main difficulty to be overcome was the fact, that where playgrounds were most wanted, there, from the density of the population, land was necessarily dearer; and that, without the aid of the powerful body who composed the Press, the Society could hardly hope to succeed. Mr. Hatch took occasion to answer the noble Chairman's statement, that the ground in Camden Town was "objectionable on account of its distance," by reminding him that each playground could only be *intended for its own locality;* and although, at the first, some might perhaps come to it from a distance, yet it was the object of the Society to provide grounds, if possible, in the midst or immediate vicinity of any thickly populated part of the metropolis. The toast was acknowledged by the Rev. W. Owen.

The proper compliment was then paid to the Ladies, and to Mr. West, the secretary, who had given his valuable labours from the commencement of the Charity.

Mr. West, who had been for some time seriously indisposed, responded, and expressed the pleasure he felt at the cordial manner in which his name was received.

The proceedings were agreeably enlivened by the excellent vocal performances of Miss Fraser, Mr. G. Buckland, Mrs. Young, Mr. H. Buckland, and Mr. Donald King. The toastmaster was Mr. Coussins.

BROMPTON HOSPITAL FOR CONSUMPTION AND DISEASES OF THE CHEST.

The eighteenth annual meeting of this charitable institution was held at the hospital, on Thursday, May 26th. At three o'clock there was Divine service in the hospital church, conducted by the chaplain, the Rev. E. B. Allen; at four o'clock the annual court of governors was held in the board-room to receive the report of the committee of management, and to elect a new committee of management and a committee of auditors for the ensuing year. The Earl of Manvers took the chair; and among those present were the Hon. P. Pierrepont, General the Hon. T. Ashburnham, the Rev. Sir H. Foulis, Bart., Dr. Roe, Dr. Pollock, Cosmo Duff Gordon, Esq., R. Trotter, Esq., General Dowling.

The Hon. Secretary read the report and financial statement for the last year. At the end of the year 1857 there were 116 inmates; and there had been admitted during the year, 551; making a total of 667 patients. Of these there were discharged, greatly benefited in many cases, 400; died, 98; remaining in the hospital, 169. The large number of deaths was owing to the fact that nearly the whole of the cases were quite hopeless when admitted, a circumstance to which the committee called especial attention. The applications for admittance continued to increase, and 120 such applications remained on the books at the end of 1858. The out-patient department had steadily maintained its eminently useful character. Out of 3971 new out-patients attended by the physicians, and supplied with medicine gratuitously during the past year, many came from long distances, from Sussex, Kent, and even more distant counties. Owing to the pressure of debt and the insufficiency of income, last year, the committee were compelled to close an entire wing, and suspend the admission to 80 beds. It was, however, most satisfactory to state, that by the liberality of the friends of the institution, the committee had been enabled in November to re-open the ward, and all the beds of the institution, nearly 200 in number. The donations had increased from £3472 7s. in 1857, to £6089 15s. in 1858. The annual subscriptions and church collections were nearly equal. The legacies received had increased from £851 to £1624. The general receipts had increased from £8100 1s. 6d. in 1857 to £11,725 7s. 5d. in 1858. The whole of the buildings had been put into a state of perfect repair. The committee rejoiced in the continuance of those memorials of interest in the charity—legacies; and they trusted that from this source they might be able, at no distant date, to clear off the mortgage on the hospital property, and present themselves before the governors as entirely free from debt. Just before the last court the committee had appointed Mr. Henry Dobbin to the vacant post of honorary secretary; and they reported their entire satisfaction with his subsequent conduct.

The Chaplain read his report, which was a satisfactory document generally, but contained no item of special interest.

The Hon. P. Pierrepont moved the adoption of the reports.

Mr. T. Haghan seconded the motion, which was carried unanimously.

The Rev. Mr. Niven proposed the new committee of management, consisting of the Duke of Norfolk, Lieut.-General the Hon. T. Ashburnham, the Hon. J. W. Percy, Captain the Hon. F. Maude, R.N., the Rev. Sir H. Foulis, Bart., Sir Peter Van Notten Pole, Bart., J. H. Allen, Esq. R. J. Ashton, Esq., F. J. Augarde, Esq. J. Ball, Esq., R. Dickson, M.D., C. Few jun., Esq., Otho Hamilton, Esq., T. Howard Esq., the Rev. W. W. Robinson, Granville Ryder, Esq., Captain Philip Smith, Harrington Tuke, M.D., Samuel Whitbread, Esq., M.P. (old members), and new members, consisting of the Hon. A. Kinnaird, M.P., the Rev. S. M. Barkworth, R. C. L.

Digitized by Google

Bevan, Esq., T. M. Bridge, Esq., J. D, Gex, Esq., and Cosmo Duff Gordon, Esq.

Mr. Shaw seconded the motion, which was carried unanimously, R. Trotter, Esq., the Rev. C. J. Goodheart, and the Rev. J. E. Bowden, withdrawing in order to avoid a ballot.

The Rev. Sir H. Foulis, Bart., moved the appointment of James Graham, James Green, William Hasleden, and J. Carter Wood, Esqs., and Dr. Harrington Tuke, as auditors.

Granville Ryder, Esq., seconded, and the motion was carried.

The Rev. Sir H. Foulis then moved a modification of rule 18, extending the privilege of nomination to clergymen making a collection of six guineas in favour of the hospital.

This amendment of the rules was unanimously agreed to.

The proposed alteration in rule 19 with reference to the admission of in-patients, of which notice had been given, was withdrawn.

Thanks to the medical officers and the chairman closed the proceedings, which were entirely of a business description.

FEMALE MISSION IN CONNEXION WITH THE REFORMATORY AND REFUGE UNION

THE following is the report of the sub-committee, and is very satisfactory:—

18, *Pall Mall, S.W., March* 31*st*, 1859.

The subject of fallen females having been brought prominently forward a year ago in some of the public journals, a sub-committee of the "Reformatory and Refuge Union" was formed to enquire into the question, with a view to devise some scheme of practical good in the least expensive and most effectual manner.

After various conferences with the clergy of the several parishes in the metropolis, and the managers of some of the existing Institutions, it was resolved that a centre of action should be provided through which Institutions might be assisted, and where contributions could be received from those who are desirous of aiding in the rescue of this unhappy class.

For this object a Handbook* was compiled and published, containing a short account of 50 penitentiaries and homes for females in London and the provinces, with particulars as to the amount of accommodation, ages received, terms of admission, &c.

The services of two Female Missionaries were then employed for the purpose of seeking out those who were desirous of leaving their evil ways, and directing them to places of shelter and protection.

The Sub-Committee who undertook their weekly superintendence can now report that these missionaries have carried on their difficult work with zeal and steadiness of purpose, and have met with an unlooked-for measure of success.

Out of a large number of cases which have engaged attention, *eighty-six* appeared to be penitent and anxious to reform, and therefore were placed in homes, or penitentiaries, or otherwise provided for. In some instances the necessary sum for their admission has been paid by the Union, and it is believed that the managers of these institutions have felt the value of the agency thus employed. Arrangements have been made by which one of the missionaries is able to receive these women *at once* into her house until a suitable refuge is provided for them.

About 16,000 tracts and handbills have been distributed in the parks and streets, as well as in houses of bad character, into which the Missionaries have gained admission at considerable personal risk and self-sacrifice.

Hospitals have been visited in the hope of permanently benefiting those who were compelled by illness to leave for a time their evil course of life.

Efforts have always been made to test the sincerity of those who are the special object of the care of the sub-committee, and although there have been some disappointments, yet on the whole there is much ground for encouragement, as will be seen by the statement of cases annexed to the report. We have not space for the insertion of these, but an application to Mr. C. GWILLIM, 118, Pall Mall, will procure the report.

The receipts for this special object during this year have been £421 14s. 6d. and the grants to institutions with cases, payment of missionaries, and incidental expenses £315 15s. 10d., leaving a balance in hand of £105 18s. 8d.

The importance of such a work as seeking out the penitent and raising the fallen women of London cannot be overstated, and it is hoped that funds will not be wanting to enable the sub-committee to carry on their labours with fresh earnestness and activity.

* To be had at the Office, 118, Pall Mall, S.W.

SHIPWRECKED MARINERS' SOCIETY.

THIS great national benevolent institution held its twentieth annual meeting at Willis's Rooms on the 20th of May. The Right Hon. Earl Manvers, one of the vice-presidents, in the chair. Amongst those present we observed Sir Charles Rowley, Bart., Admirals Sir George Westphal, Bertie C. Cator, Charles R. D. Bethune, C.B.; Captains (Royal Navy) Hon. Francis Maude, C. R. Egerton, Gambier, Ward, Heaslop, Young, Lean. Revs. R. H. Baynes, Aubertin, Ray, J. M'Connell Hussey, J. T. Foster, Hamilton, Esq., R.N., Wm. Stuart, Joseph Payne, Thomas Bermingham, Richd. Lewis, Esq., Geo. A. Brograve, Esq. After introducing the objects and operations of the society to the meeting.

The noble Chairman called upon Francis Lean, Esq., the secretary, to read the report, which stated that year by year the committee had to regret a growing increase of casualties among the shipping; last year no fewer than 3329 were recorded by Lloyd's, of which 1170 had occurred on the coast of the United Kingdom. The society, however, in the midst of this distress, had done everything that humanity required; thus 5037 shipwrecked persons have been clothed, fed, and forwarded to their homes, and 3168 widows and orphans, making a total of 8205 persons who had been promptly relieved in their extremity by the honorary agents on the coast (of which there are 500) during the past year, and 77,089 persons have experienced the blessings of the charity since 1839. The amount of relief had exceeded the income in the last two years by 2176*l.*

The number of vessels now carrying the society's flag amounts to 3035, and the number of fishermen and mariners subscribing had reached to 43,000; the quarterly magazine, *The Shipwrecked Mariner*, which publishes its operations, continues to do good service, and to more than pay its expenses. Legacies to the amount of 315*l.* had been reported. The committee had awarded five gold medals and 14 silver medals as rewards for praiseworthy exertions in the saving of life from shipwreck on the high seas, or coasts of the colonies. The interesting subject of an hospital, similar to Greenwich, for the aged, disabled, and worn-out mariners of the mercantile marine, towards which the society had voted 5000*l.*, remained in abeyance, owing to various circumstances; the hospital committee were, however, ready to assume their labours upon the first opportunity.

The society was stated to have provided effectually against the benevolent public being importuned by beggars professing to have been shipwrecked, as all genuine cases were promptly relieved by its agents. They therefore confidently appealed for increased support to Christian liberality to be enabled to carry out its benevolent designs on behalf of half a million of our maritime population.

The report was then adopted, and various resolutions having been passed unanimously, the proceedings terminated, after the usual vote of thanks to the noble chairman.

BUILDERS' BENEVOLENT INSTITUTION.

ON the 26th May, the friends and subscribers to the above valuable institution assembled at the London Tavern, Bishopsgate-street, for the purpose of electing one male and one female, out of fourteen candidates, to become recipients of the benevolence of the institution. Mr. Thomas Piper (president) occupied the chair.

The object of this institution is to give relief and grant pensions to decayed members of the various branches of the building trade and their widows; also for affording temporary relief to workmen in case of accident. The stock amounts to between £6000 and £7000, which is now invested in the Three per Cent. Consols. The present is the fourteenth election of pensioners.

The chairman, in opening the proceedings, called the attention of the meeting to the object of their presence on this occasion—viz., the election of one male and one female from a list of 14 candidates, whose hard fate had pressed them upon the charity of others. He regretted that

Digitized by Google

they were only able to elect one-seventh from the list of candidates who had sought their aid, but he hoped the time would soon arrive when three-fourths instead of one-seventh would be provided for. Their institution, different from others of a similar character, had been supported by their own class, which was evidenced by his position before them on the present occasion.

The election was then proceeded with, and on the return of the scrutineers the number of votes received by each candidate was announced, together with the names of the successful parties.

The chairman said he was sorry to find that the full number of votes had not on this occasion been made available, but he hoped that if all went on well they would have another election in November, when some of the present unsuccessful candidates would be able to congratulate themselves on being elected.

Votes of thanks were accorded to the chairman and the scrutineers, which being responded to with an expression of their willingness to assist in the cause of charity, the proceedings terminated.

THE MENDICITY SOCIETY.

On Saturday, May 21st, the annual meeting of this society, instituted in 1818, was held at the house in Red Lion-square; the Marquis of Westminster presided, supported by the Earl Grosvenor, Lord Calthorpe, Lord Egerton of Tatton, Sir Archibald Murray, Bart., Sir John P. Boileau, Bart., General Kenah, Admiral Cator, Captain Stopford, R.N., Captain J. F. L. Wood, R.N., &c.

The noble chairman briefly opened the proceedings by alluding to the death of Mr. Foster, a vice-president, who, in addition to the assistance given during life, had bequeathed 1500*l.* to the society.

Mr. Allen read the report, which commenced by congratulating the subscribers on the decrease of mendicancy and pauperism. The expenditure last year had been 3125*l.* 18s. 3d., while in 1857 it was 3315*l.* 15s. 8d. During the year 442*l.* had been received in the shape of legacies. The number of cases which had been registered in 1858 was 329, and in 1857, 354; the average of the seven preceding years being 496. The number of cases unregistered in 1858 was 5165, and in 1857 6467; the average on the seven succeeding years being 6936. The number of meals given during the past year, had been 43,836, and in 1857, 54,074. The amount spent in relief in 1858 was 845*l.* 1s. 8d., and in 1857, 1046*l.* 19s. 2d. Of 591 vagrants apprehended by the society's constables, 298 had been committed by the magistrates, and the others had been sent to work at the society's establishments, or sent home to their own parishes. The number of begging letters sent for investigation in 1858 was 3687, and in 1857, 3817; being an increase over the seven previous years. The sum of 863*l.* 17s. 6d. had been disbursed to applicants by begging letters. The report then went into the details of several cases to show the necessity which existed for such a society, and concluded by recommending it to the support of the public as one likely to give great assistance to real distress, and greater discouragement to fraud and imposture. The financial statement showed the receipts for the year (including a previous balance of 305*l.* 9s. 10d., and cash in hand of assistant manager 150*l.*) to have been 4075*l.* 14s.; and after all expenses there remained a balance of 949*l.* 15s. 1d. The stock of the society amounted to 7313*l.* 4s. 2d. Three per Cent. Consols, and 500*l.* Exchequer Bills.

On the motion of Lord Calthorpe, seconded by General Kenah, the report was approved and ordered to be printed for circulation.

Admiral Cator then moved the thanks of the meeting to her Majesty for a continuance of her Royal patronage and support to the society.

Sir Archibald Murray seconded the motion, which was agreed to unanimously.

A similar acknowledgment was then made to the Prince Consort, the Duchess of Kent, the Duke of Cambridge, and the other members of the Royal family; and after the transaction of some routine business, the proceedings closed with a vote of thanks to the noble president, and Captain Wood, the manager.

CHARITY BEGINS AT HOME.

(From the *City Press.*)

When the *Times* made its noble appeal in behalf of the destitute poor, it asserted that money was expended in sending the Gospel to the shores of Africa when it was wanted to feed the poor at home. Regarding this as the thoughtless assumption of a writer not familiar with the statistics of charitable institutions, we have since been endeavouring to collect materials for a truthful statement of the amounts severally expended at home and abroad in charitable and religious objects, and present the following table as the result. Mr. Low's excellent work on London charities might be allowed to settle the point raised by the able writer in the *Times*, but, as many charities have risen since that work was compiled, and others have undergone material changes as to income and operations, we have endeavoured to obtain later and more complete information where necessary. In some instances our figures will be found to differ but little from those of Mr. Low, published six years since.

There are in London, 12 Hospitals for general purposes; 46 for special purposes; 34 Dispensaries; giving relief to 365,956 persons every year. Income	£300,000
12 Societies for the preservation of health, benefiting 39,000	40,000
17 Penitentiaries and Reformatories	2,500
15 Charities for relief of the Destitute, benefiting 150,000	25,000
14 Charities for Debtors, Widows, Strangers, &c.	30,000
4 Jewish Charities (exclusive of 20 minor Jewish Charities)	10,000
19 Provident Societies	9,000
27 Pension Societies, benefiting 1,600	58,968
23 Trade Societies of a purely charitable nature, exclusive of self-supporting Societies	113,467
126 Asylums for the Aged, benefiting 3,000	87,630
9 Charities for Deaf, Dumb, and Blind, 19 persons	25,000
21 Educational Societies	72,247
13 Do. Asylums, exclusive of Schools supported by Government, 1,777 persons	46,465
60 Home Missions, many of which extend their operations beyond the Metropolis	400,000
5 Miscellaneous, not admitting classification	3,252
7 Church of England Foreign Missions	248,533
7 Dissenting Foreign Missions	211,135

The above represent a total yearly income of £1,678,445. We add five other societies included by Mr. Low in his summary, as not being susceptible of classification, and we have an income of £1,681,697. If we separate the societies of a purely domestic character from those whose operations are wholly or in part conducted in foreign lands, the result will be as follows:—

Home Charities	£1,222,029
Foreign Missions	459,668

The amount spent in Foreign Missions, therefore, is just one-third of that devoted to the relief, instruction, and reformation of the poor, the ignorant, the unfortunate, and the vicious in London alone; showing how wide may be the discrepancy between generalities and particulars.

Review.

Instructions for the Management of Open Boats in Heavy Surfs and Broken Waters. London: Charles Knight and Co., Fleet-street. Price 3d.

This is a little book, but one of more importance than many a more cumbrous volume. It is issued by the Royal National Life-boat Institution; and unquestionably no vessel should be without one or more, in order that those who have the charge of ships' boats may make themselves masters of its valuable hints. It does great credit to the Institution from which it emanates.

Management of Boats in Heavy Surfs—The Admiralty have ordered the circulation of the useful and practical little pamphlet issued by the National Life-boat Institution on the management of boats in heavy surfs throughout her Majesty's fleet. It has also been ordered to be distributed amongst officers of the coast-guard; and the Trinity House Corporation have sent it to all their light-house keepers and pilot stations. The information contained in the pamphlet has been obtained practically from boatmen and fishermen resident on different parts of the coast of the United Kingdom, and the instructions it contains are of the utmost value to all persons who have to land in boats through heavy surfs. On such occasions too many boats, from mismanagement, broach-to and capsize, and their crews too frequently lose their lives. It was the constant recurrence of such disasters that impelled the National Life-boat Institution to publish the pamphlet, which ought to be circulated by thousands amongst our seamen, boatmen, and fishermen.

A STARTLING FACT.

There are, within the boroughs of Manchester and Salford, above 2,000 places licensed for the sale of drink. From data supplied by the Licensed Victualler's Association, it appears that an average of upwards of £660 is annually expended in each, making a total of £1,400,000. The following list of goods, at fair prices, will show what comforts and conveniences might be procured by the people by a proper expenditure of this sum, bearing in mind that there are in the two boroughs nearly 80,000 families :—

100,000 yds. Superfine Broad Cloth	at 18s.	℔ yd.	£90,000
100,000 ,, Silk for Dresses.....	3s.	,,	15,000
200,000 ,, Gown Print	6d.	,,	5,000
100,000 ,, Linen	1s.	,,	5,000
200,000 ,, Shirting Calico.....	6d.	,,	5,000
100,000 ,, Flannel...	1s.	,,	5,000
100,000 ,, Woollen Plaid, Alpaca, &c.	2s. 6d.	,,	12,500
20,000 ,, Carpeting	3s.	,,	3,000
30,000 Silk Hats.....	10s.	each	15,000
20,000 Women's Bonnets.....	5s.	,,	5,000
20,000 Women's Sunday Bonnets	10s.	,,	10,000
100,000 Children's Bonnets and Cloth Caps.	2s. 6d	,,	12,500
20,000 Women's Shawls	10s.	,,	10,000
20,000 Sunday Shawls	20s.	,,	20,000
100,000 Pairs Men's Woollen Stockings	1s. 6d.	pair	7,500
100,000 ,, Women's & Children's, ditto.....	1s.	,,	25,000
50,000 ,, Men's Shoes.....	9s.	,,	22,500
100,000 ,, Women's & Children's, ditto	5s.	,,	25,000
30,000 ,, Blankets.	15s.	,,	22,500
50,000 ,, Sheets.	7s.	,,	17,500
5,000 Iron Bedsteads	25s.	each	6,250
5,000 Flock Beds in Good Ticks	12s.	,,	3,000
1,000 Feather Beds	60s.	,,	3,000
1,000 Mahogany Chests Drawers	60s.	,,	3,000
10,000 Sets of Cottage Chairs....	20s.	,,	10,000
100,000 Sacks of Flour	60s.	,,	300,000
50,000 Sacks of Potatoes.....	7s.	,,	17,500
200,000 Tons of Coal	10s.	,,	100,000
10,000 Sets of Knives and Forks	5s	,,	2,500
100,000 Railway Fares to London and back by Excursion Train, 17s. each.....			85,000
4,000 Aged Men, allowance of £20 a-year each			80,000
4,000 Aged Women, ditto £10 a-year each			40,000
200 Sunday Schools, donation of £50 each..			10,000
20,000 Children Week-day Scholars, at 6d. per week			26,000
10,000 Youths ditto 1s. per week			26,000
40,000 Families a Weekly Newspaper at 5d. ea.			43,333
80,000 Band of Hope Reviews, or one for every family every Month in the year, or 960,000 copies			2,000
40,000 Families supplied with a copy every Month of the "British Workman and Friend of the Sons of Toil," or 480,000 copies at 1d			2,000
Pay all the Poor's, Police, and Highway Rates of Manchester and Salford, say.....			150,000
Give £500 each to the Royal Infirmary, Southport Charity, Free Library, Lying-in-Hospital, Blind Asylum, Deaf and Dumb Institution, Female Penitentiary, Lock Hospital, the Sanitary Association, and the Ragged School..			5,000
Pension off the following persons as no longer required by a sober people, viz. :—			
20 of the Gaolers at 30s. a-week each			1,560
200 of the Police Constables, at 20s. per week each			10,400
2100 Publicans, Gin Vault and Beer Shop Keepers, 30s. a-week each			156,780
Surplus remaining			3,677
			£1,400,000

One glance at the foregoing statement will show the industrious working men and women of Manchester and Salford some of the fearful *sacrifices* they are making of the substautial comforts of life and home by supporting liquor-vending establishments. The Merchants, Manufacturers and Traders, may also see how their interests would be promoted were the vast capital, now worse than wasted, turned into legitimate channels of industry and honourable commerce.

FACTS ARE STUBBORN THINGS.

Let every man and woman look at these facts, and then act as conscience and common sense will surely dictate.

WET-NURSES FROM THE FALLEN.

If any benevolent person or persons can devise some means by which single women seeking situations as "Wet-Nurses" can be otherwise employed, and could aid in practically carrying out some scheme with the view of checking the pernicious practice, they would contribute to the amelioration—perhaps suppression—of many evils which are involved therein.

These women are for the most part—morally and physically—very unfit persons to be received into private families.

This question of hiring *Wet-Nurses* from the *Fallen* forms one corner—and a very important one—of the "great social evil."

The increased want of *Wet-Nurses* has grown out of the artificial state of society, which has obtained to a lamentable degree of late. It is an evidence of an abnormal condition of things, requiring an earnest and combined effort in the direction indicated, in order to help to re-establish the relation between mother and child on a more natural and proper basis; and which relation cannot be interfered with and set aside without the most disastrous consequences, not only to individuals, but to society at large.

Let such philanthropic persons as may feel interested, and willing to co-operate in the furtherance of this cause, visit the various *Lying-In Institutions* of the Metropolis, where may daily be found numbers of these misguided women (with their infants, whom they are about virtually to sacrifice by deserting) waiting to be hired as "Wet Nurses." Show them that other occupations offer which may be undertaken without incurring the hard necessity of parting with their babe.

It would be for ladies an especial work of mercy, to find such employment for these women. If other doors were open, that of *Wet-Nursing*—which ought to be the last resource of all—would be speedily closed. The remedy for this evil, however, lies mainly in the hands of *medical men*, also with *mothers* of the middle and upper ranks.—(See Tract on "The Evils of Wet-Nursing," advertised below.)

Price Twopence.

THE EVILS OF WET-NURSING.

A WARNING TO MOTHERS.

One of a series of Tracts published by the Ladies' National Association for the Diffusion of Sanitary Knowledge.

"An excellent Association."—Lord Shaftesbury.

"So many and so serious are the moral and physical evils arising from the abandonment of children by their mothers, to assume the office of *wet-nurses* for hire, and especially so great is the mortality of infants thus forsaken, that it is questionable if anything can justify such a proceeding, either on the part of the woman, or of the family so employing her."—Dr Conquest.

"Medical men have it greatly in their power, as conscientious *advisers*, to stay the custom referred to."—M. A. B.

London: Groombridge and Sons.
Brighton: W. Simpson.

NORTH EASTERN REFORMATORY.

—A separate and Special Fund, in accordance with the Rules of this Society, having now been subscribed for the maintenance of a Chaplain, the Committee will receive Testimonials from clergymen of the Church of England, on or before the 21st of May.

The stipend will be £100, with £20 additional from the Rev. H. K. Collinson, Vicar of Stannington, to whom the Chaplain will be licensed as Curate to the Bishop of the Diocese.

The parish of Stannington contains a population of 1000. The Vicar is resident, and has hitherto performed all the duties himself.

Reformatory School, Netherton,
Northumberland, 27th April, 1859.

ST. STEPHEN'S DEVONPORT.—AID

is earnestly SOLICITED for the MISSION WORK in this parish, especially to help friendless, outcast, fallen women to turn from their impurity and sin; to protect children of our sailors and soldiers in Day and Sunday Schools, and other young persons in Evening Schools, from the temptations to irreligion, scepticism, infidelity, and degrading vice, to which they are constantly exposed in the lower parts of a seaport and garrison town; to erect substantial buildings of simple design for the Schools, which already contain on an average of the year, more than five hundred scholars, but which are now carried on temporarily in very inconvenient buildings and wooden sheds, from which they may be ejected; to erect a Parsonage-house, towards which aid will be contributed by the Gally Knight Fund, and the Queen Anne's Bounty. A valuable site and other aid will be given for the School buildings, if the 1000*l.* which is still required be provided within a reasonable time. A site has been given also for the Parsonage-house.

"Who gives quickly will double his gift."

Subscriptions are received by the Rev. G. W. Procter, 8, Ker-street, Devonport, Perpetual Curate of St. Stephen's; or by the banks of Messrs. Sir J. W. Lubbock, Bart and Co.; and Messrs. Barclay, Bevan and Co., London; or of Messrs. Hodge and Co.; and Messrs. the Devonand Cornwall Banking Company, Devonport.

ROMISH PERSECUTIONS.

A SPECIAL APPEAL TO THE BENEVOLENT AND ALL WHO VALUE THE RIGHTS OF CONSCIENCE.

A WIDOW LADY, Daughter of a Roman Catholic Gentleman, of extensive literary fame amongst his party, having renounced Romanism, has been not only cruelly cast out by all her former friends and relatives—her own father and brothers being in the number—but is incessantly harassed by their bitter taunts and persecutions, because she firmly refuses to return to that faith she so conscientiously abjured.

Not long ago, a Lady, a District Visitor in the parish of Islington, a clergyman's wife, was present at an interview between this poor convert and her brother, a bigotted Romanist, when he declared, "that if his sister would only consent to return to the Church of Rome, make confession of her sin, and read her recantation in the chapel in the presence of the priest and congregation, she would be received and welcomed back by her family and friends, and amply provided for during her life." Her answer was, "that she would rather die first;" then said he: "you may go and starve! for one penny you shall never get from one of your family while you remain a Protestant." The Lady Visitor states, that at the moment this unnatural speech was made, the poor convert was in the most wretched destitution, without money or friends. Having suffered much in mind and body since her conversion from Rome, chiefly arising from the inhuman persecution to which she has been subjected by her unnatural relations, and being of a delicate constitution, unused to poverty, and brought up in comparative affluence, she is unable to earn her bread in any situation where hard work would be required. A few Clergymen and Christian friends to whom her case has been thoroughly known and who are deeply interested in her behalf, have ventured to present this appeal in the hope of raising a small fund by voluntary contributions, which may enable them to set her up in a light business in which she may earn her living without fear of family or priestly persecution, and find rest and shelter in the household of faith.

References may be made to the following clergymen:—The Rev. I. Brock, Protestant Institute, 2, Hornsey-row, Islington; Rev. Robert Maguire, Islington; Rev. W. Vincent, Park-cottage, Barnsbury-park, Islington; by whom donations will be gratefully acknowledged.

THE SOLDIERS' DAUGHTERS' HOME.

The annual meeting of the Soldiers' Daughters' Home, at Hampstead, for the maintenance, clothing, and education of the daughters of soldiers, was held on Saturday, June 18th, in the lecture theatre at the United Service Institution, Whitehall-yard; General the Hon. George Upton, C.B., M.P., in the chair. The Bishop of Sodor and Man was present, but took no part in the proceedings.

The proceedings having been opened by prayer,

The Secretary read the following report:—"When it is considered that in less than four years this national asylum has been founded, endowed, and permanently established on its own freehold property, and is out of debt; that since the first year of its institution there never had been less than 100 inmates (now 165), and that all this has been done without the help of a Royal Commission to raise funds, and without any assistance whatever from Government, the committee cannot but recognise the fulfilment of the promise, 'Leave thy fatherless children, I will preserve them alive, and let thy widows trust to me.' The Soldiers' Daughters' Home is still the only asylum in the kingdom for the daughters of the whole British army; the Commissioners of the Patriotic Fund have indeed very wisely followed in every respect the good example set them by the committee of the late Central Association, and have set apart a portion of that noble fund for the erection of an asylum at Wandsworth for 300 girls, the daughters of soldiers and sailors. But this asylum is not yet completed, nor will it be open, in the first instance, to any but the daughters of Crimean soldiers and sailors, nor will the number of soldiers' daughters admitted be as large as that already admitted into the Soldiers' Daughters' Home, because at least one-half of the 300 girls will probably be the daughters of sailors. The number at present in the Hampstead Home is 165, and the committee rejoice to add that twenty-five more girls, the daughters of soldiers who have served or are serving in India, will be immediately admitted, in consequence of the welcome addition to the funds by the Church collection on the Day of Thanksgiving, viz. £7000. The committee desire most heartily to express their sincerest thanks to the clergy of the United Church of England and Ireland, and to their congregations, for thus rescuing from a state of destitution twenty-five daughters of those noble solders who have reconquered India. The best thanks of the committee are also due to Lieut.-General Sir William Codrington, K.C.B., for the Crimean Army Endowment Fund, by which the admission of two soldiers' daughters is secured for ever; and the committee acknowledge gratefully the courtesy with which Sir William Codrington has placed in their hands the nomination of these two girls. All has been well at the Home during the past year; while other similar asylums have suffered from diptheria and scarlet fever in a remarkable manner, the Soldiers' Daughters have been wonderfully spared all such visitations. One girl has died during the year from an incurable disease, which had proved fatal to her brothers and sisters, The six girls who have been placed in service continue to give much satisfaction Some of them have now been upwards of a year in their situations, and have had their wages raised by their kind mistresses. A constant communication is kept up with each of them by their friends at the Home. In conclusion, the committee are deeply thankful to be able to report that, at their request, the widow of an officer of rank in the army has most kindly undertaken the honorary superintendence of the Home. This was all that was wanting to make this asylum a complete home; and they commend their work to the prayers and continued exertions of their friends and supporters, with a solemn conviction of the deep responsibility involved in the training of 190 souls for time and for eternity."

The Chairman remarked that those interested in the welfare of this institution owed a deep debt of gratitude to one who had most effectually pleaded the cause of the fatherless and destitute, and by means of the Powys Endowment Fund had set the institution on its legs at an early period of its existence. The charity affected the best sympathies of our nature; and all ages and classes in the country and its dependencies must, therefore, feel the necessity of supporting it. Besides this, the recent occurrences of the war in the Crimea and the Indian mutiny had excited throughout the country a strong sympathy for the army. And to this cause, among others, must be attributed the extraordinary result of the collection in our churches on Thanksgiving-day. Very much was due to the prestige and the known character of his early friend and comrade, through whom the institution originated, and by whom under God's blessing it prospered. He need hardly say that he alluded to the excellent chairman of the committee, Major Powys. Suppose a soldier died, and his widow was left with three or four children, the only resource for them was too often the parish. As a soldier and as an officer who had long served her Majesty, he must say he thought we should endeavour to rescue the children of soldiers from such an unfortunate position. And he urged on all present the importance of their strongly recommending the claims of the institution among their friends and acquaintances.

General J. T. Boileau remarked that it was indeed matter of congratulation that the Home had been built, furnished, and endowed for ever. He said "for ever," because he believed that as long as time endured England and Ireland would exist as a separate and independent nation, and if so we should require an army, and there would be soldiers' children to support. At present the institution had beds unoccupied. Upwards of 100 children were knocking for admission, and the committee hoped in a few months to open the door to about half that number. The children were comfortably lodged, their food was of the best quality, every attention was paid to their morals and their education, and abundant means were provided for exercise and amusement, and the committee invited inspection of the Home. Those who paid a visit would be able to tell the soldier who was still upholding the interests of the country and defending its honour in foreign countries that his child was taken care of, and that he would be able to receive her back without her having been exposed to the temptations of out-door life, or to the incentives to vice which are almost necessarily the consequence of an abject condition. He moved the adoption of the report, and the reappointment of the officers and managers of the Institution.

Colonel A. G. Burrows seconded the motion, which was then put and carried.

Major the Hon. L. Powys moved—"That the cordial thanks of this meeting be tendered to the clergy of the United Church of England and Ireland for their most generous collections on the Day of Thanksgiving." The £7000 collected on that occasion had been invested, and it would be called the "Thanksgiving-day Endowment." The principal would never be touched, but the interest would be applied to the maintenance of a number of girls in the Home. The institution received a large sum of money from the collections made on the Day of Humiliation, and on the commemoration of the battle of Inkermann; but much below that received on the present or most recent occasion. The magnitude of the amount was the more remarkable owing to the extent of the competition for the pulpit aid. Several clergymen wrote to him that they had received as many as sixteen circulars requesting help; but the preference was largely given to this institution. A week ago a soldier of his own regiment, the 60th Rifles, came to the Hampstead House. He had been twice wounded at the siege of Delhi, and had consequently been invalided and brought home. He had a motherless daughter; and he did not know what to do with her. He was obliged to live in barracks at Winchester; the daughter was obliged to live out of

Digitized by Google

barracks—not a safe place for a young girl. If those present had seen the happiness expressed by that soldier when he found at the institution a home for his daughter they would never forget it. The man who had twice been wounded at Delhi wept tears of joy when he saw his daughter in such a happy home. The committee had just given admission to five children whose parents had been burned to death, or died in hospital, owing to the catastrophe of the recent burning of the *Eastern Monarch;* and he trusted that they would be supported in accepting the children without any formality. He had sometimes been asked how were the children instructed in religion without a chaplain? He replied, that the children regularly attended the services in the parish church; and that the rector of Hampstead (the Rev. T. Ainger) was one of the vice-presidents of the institution, that both he and his senior curate took the deepest interest in the school, and that at the late confirmation thirteen girls of the Home renewed after due preparation the promises and vows of obedience made for them by their sponsors. Under these circumstances, and the parish church being close at hand, it was not considered that either a chapel or a chaplain was necessary. He might just mention that a book, well known to the clergy as a standard work on theology, he meant Butler's "Analogy of Religion," was written in the Home, which was called "Vane House," from its having been formerly the abode of Sir Harry Vane, who built it, and subsequently sold it to Bishop Butler, who lived there, wrote his book there, and died there.

Colonel J. M. Hogg (1st Life Guards) seconded, and the motion was carried.

Thanks to the chairman having been voted by acclamation—,

The chairman returned thanks. He believed that there was only one other institution in the United Kingdom which admitted the child from the cradle, and kept it till the completion of its education. By this course—by taking the child as early as possible—they entirely prevented its exposure to the contamination of bad example which all children must encounter in large towns; and he believed it was impossible to calculate how early bad example began to take effect on the child.

The meeting then broke up.

SCHOOL SHIP SOCIETY.

We draw the attention of our readers to the account of the final establishment of this society at a meeting under the presidency of the Marquis of Westminster, on Wednesday, June 15. It is impossible to conceive the value of this School Ship, and we rejoice to see that, like every other thing which has emanated from the Reformatory and Refuge Union, all has been thoroughly and practically done. It is possible that something may eventually be found to have been overlooked; but it is clear that extreme care has been used, and we hope to be able in future numbers to verify our prognostications of the usefulness of the School Ship Society.

The *Cornwall*, which lies off Purfleet, has been certified under the Act (17 and 18 Vic. cap. 86), and a form of questions to be filled up in reference to any applicant has been already prepared. The following are the rules of the Society:—

REGULATIONS OF THE THAMES SCHOOL SHIP SOCIETY,

Established in April, 1859, *for the purpose of training as Sailors boys of the vagrant and criminal class belonging to London and the Southern Counties.*

1. The Society shall consist of all annual Subscribers of half-a-guinea and upwards, and of all donors of five guineas and upwards, in one sum.

2. The management of the affairs of the Society shall be vested in a Patron, President, Vice-Presidents, and Committee.

3. The Committee shall consist of the Treasurer, Honorary Secretaries, and not more than twenty members, who shall be either donors of ten guineas in one sum or subscribers of one guinea annually. H. M. Inspector of Prisons and Reformatories shall be *ex officio* a member of the Committee.

4. The Treasurer and Hon. Secretaries and five members of the Committee who have been the longest time in office shall retire annually, but shall be re-eligible at the annual general meeting, at which, also, all vacancies shall be filled up.

5. In the absence of Patron, President, and Vice-Presidents, the Treasurer shall be *ex officio* Chairman of the Committees.

6. An annual meeting of the members of the Society shall be called in April or May, by advertisement, giving notice of at least five days. The Committee shall have power to summon a special general meeting on any emergency by a like notice. At such annual or special general meeting ten shall be a quorum.

7. The Committee shall have control over the funds of the Society, and full authority to engage or remove its officers and servants.

8. The Committee shall provide all food and stores, and whatever else may be necessary for the management of the School Ship, and no money shall be expended without their consent. All cheques shall bear the signatures of three members of the Committee.

9. The Committee shall have power to make or alter the rules for the management of the ship, and shall appoint Sub-Committees, for visiting the ship, regulating admission, and for all executive purposes.

10. The Committee shall meet for business once in each month; three shall be a quorum.

11. The Treasurer shall pay all monies received into the hands of a banker to be named by the Committee, and he shall at the annual meeting, exhibit a statement of the financial position of the Society, with a balance sheet, which must have been audited by two auditors, not members of the Committee, to be appointed at a general meeting of the Society.

12. Special meetings of the Committee may be summoned at any time by the Treasurer, Hon. Secretaries, or any two members of the Committee; at such special meeting five shall be a quorum.

13. At all meetings every question shall be decided by the majority; and when the numbers are equal the Chairman shall have a casting vote.

14. In all notices of meetings the business to be transacted shall be mentioned.

BYE-LAWS OF THE SCHOOL SHIP, CORNWALL.

1. The Visiting Sub-Committee shall visit the ship at such times as they shall think proper. They shall thoroughly inspect every department, and shall enter in a book whatever they find to be contrary to the rules, and also whatever suggestions they may think material, stating the date of their visit and signing their names. And in case any Visitor should be unable to attend to his duties, he shall procure a substitute from among the Committee.

2. The Captain-Superintendent shall have the sole charge of the ship, and shall take care that all persons serving on board punctually discharge their duties. He shall be responsible for the good government of the establishment, and for the due execution of all regulations.

3. The Captain-Superintendent shall have power to punish any boy who shall be guilty of immorality; be disobedient, idle, or negligent at work; or who shall wilfully damage or destroy any property belonging to the Institution, or to any other boy; or shall pass beyond the boundary to which he is restricted; or shall be guilty of any offence against the rules of the Institution. He may punish any such offender by depriving him of the privileges allowed to his class, or degrading him to a lower class; or by solitary confinement, with or without any alteration of diet, for a period not exceeding three days; or by withdrawing a portion of the ordinary diet of his class, giving him bread and water for a period not exceeding three days; or by moderate corporal punishment. In case any boy shall be guilty of any offence for the punishment of which the authority of the Captain-Superintendent may appear to him to be inadequate, he shall report the particulars of the case to the Visitor, with a view to the boy being dealt with according to his directions or according to the provisions of the law.

4. The Captain-Superintendent shall record all punishments inflicted by his authority, or by that of the Visitor, specifying the date, the nature, and extent of the punishment, and the cause thereof.

5. The Captain Superintendent, or, in his absence, the Schoolmaster, shall keep a Log Book, wherein is to be inserted everything of importance relating to the establishment; and shall deliver a report of the state and condition of the ship, and of the conduct of the officers and the boys, at such times as the Committee may require.

6. The Captain-Superintendent shall keep a book, called "The Register," containing an account of all the boys received on board and discharged from the ship, with particulars of their history and conduct, and shall make out the Monthly and

Digitized by Google

other Returns, Quarterly Accounts, &c., required by the Home Office and Treasury.

7. The Captain-Superintendent shall pay attention to all supplies received on board and shall be responsible that the quantities and qualities correspond with the orders given to the respective tradesmen.

8. All applications for admission must be brought before the Committee; and, except in cases of emergency, no boy shall be received on board without an order signed by one of the Committee, and, in case of the boy being committed, the warrant of commitment shall also be produced and handed over to the Captain-Superintendent with the boy.

9. No boy shall be received unless certified after medical examination to be strong and healthy, nor unless he be under fifteen years of age.

10. No boy shall be suffered to go or to sleep out of the ship without leave of the officer in command.

11. No officer or person belonging to the establishment shall take any gratuity, on pain of dismissal.

12. No strangers shall be admitted on board without the permission of the officer in command, who shall request all visitors to insert their names in a book to be kept for that purpose, and shall carefully guard against the intrusion of improper visitors.

13. If any boy's conduct after he has been on board the ship two months entitles him to the indulgence, his relations or guardians, not exceeding two in number, shall be allowed to visit him from time to time. All letters to or from the boys shall be open to the inspection of the Captain-Superintendent, who shall have authority to retain the same if they appear to him unsuitable. The boys are prohibited from receiving money or any present without the permission of the officer in command.

14. Prayers shall be read and religious instruction given in the morning and evening of each day; and on Sunday, in case of the boys not being able to attend at any church on shore, Divine service shall be performed on board the ship.

SCHOOL SHIP SOCIETY.

At a meeting of the subscribers to the School Ship Society, held at the office of the Reformatory and Refuge Union, 118, Pall Mall on Wednesday, June 15th, 1859. The Marquis of Westminster, K.G., in the chair. Present: William Gladstone, Esq., J. E. Johnson, Esq.; Stephen Cave, Esq., M.P.; Captain A. Boyle, R.N.; Charles Ratcliff, Esq.; G. H. Chambers, Esq.; Rear Admiral Sir G. Back; Captain Shuttleworth; Captain Fishbourne, R.N.; Thomas Tilson, Esq.; Rev. Sydney Turner; Captain Burton, R.N., &c. &c.

Mr. Cave, in reporting on the steps which had been taken for the formation of the School Ship Society, stated—

That the Society had originated in the feeling of many friends and supporters of the reformatory school system that it would be very desirable to have a reformatory in the Thames, on the plan so successfully pursued at Liverpool in the *Akbar* School Ship.

That, in consequence, application had been made to the Admiralty for the grant of a ship suitable for the purpose.

That the Admiralty had accordingly granted the *Cornwall* frigate, had liberally assisted in reference to the necessary stores and fittings, and had moored her for the Society at Purfleet in the Thames.

That Mr. Robert Hanbury, M.P., Capt. Boyle, R.N., the Rev. Sydney Turner, and himself had acted as a provisional committee, to obtain the necessary funds, and make the requisite arrangements.

That they had obtained a certificate under the 17th and 18th Vic. cap. 86, from the Home Department, which had been granted on the 2nd of May.

That they had obtained subscriptions to the amount of of £2,836 12*s.* 6*d.*, of which £2,557 0*s.* 6*d.* had been received.

That the expenses hitherto incurred in providing the necessary furniture, mess stores, &c., had amounted to £183 18*s.* 11*d.*; in addition to which the Society were indebted in the sum of £188 9*s.* to Messrs. Green, who had kindly undertaken the necessary alterations and fittings of the cabins, decks, &c.; and owed about £100 for hammocks, oufit, bedding, mess furniture, &c.

That the sum of £1,600 was on deposit at Messrs. Overend, Gurney, and Co., and that the balances at the bankers were,—at Messrs. Barclay and Co., £380 19*s.* 1*d.*, Messrs. Ransom and Co., £337 16*s.* 6*d.*, petty cash in his hands, £4 6*s.* 0*d.*

That they had engaged with Commander A. Burton, R.N., as superintendent of the *Cornwall*, having selected him out of several highly eligible candidates, as on the whole most qualified to undertake the management of the institution, from March 16th, 1859, at a salary of £200 per annum, and personal allowances.

That Mr. John Smith, recommended by Lieut. Veitch, formerly superintendent of the *Akbar*, had been engaged by them as boatswain at £5 per month and rations, and Mr. Oram as schoolmaster at £60 per annum and rations; that five other men had been engaged, viz., boatswain's mate, cook, and two seamen, at £3 per month, and rations, and a carpenter at £4 per month and rations.

That two boys had been received under sentence, and two more had been committed but were still serving their previous term of imprisonment.

That they had arranged with Mr. Vidal, of Aveley to attend the institution as medical officer, at £20 per annum, from June 7th, 1859.

That they had carefully considered the regulations and bye-laws that it would be advisable to adopt for the constitution of the society and for the government of the ship, and begged to lay the same before the meeting.

That F. M. H. R. H. the Prince Consort, K.G., had kindly consented to become the patron of the School Ship Society.

At the conclusion of Mr. Cave's statement the following resolutions were passed unanimously:—

Resolved—That the arrangements detailed and reported in the foregoing statement be approved and adopted.

That the scheme of regulations and bye-laws now laid before this meeting be fully sanctioned and adopted.

That the Most Noble the Marquis of Westminster, K.G., be requested to accept the office of President of the School Ship Society.

That the following noblemen and gentlemen be elected vice-presidents of the society:—The Most Noble the Marquis of Salisbury, K.G.; The Right Hon. the Earl of Shaftesbury; The Right Hon. the Earl Darnley; The Right Hon. the Earl of Lichfield; The Right Hon. the Earl Ducie; Viscount Ingestre, M.P.; Lord Lovaine, M.P.; The Lord Bishop of London; The Lord Radstock.

That Robert Hanbury, Esq., M.P., be elected treasurer.

That Stephen Cave, Esq., M.P., be elected hon. secretary.

That the following gentlemen be elected members of committee from the 1st day of July next, viz.—Captain N. de St. Croix; J. E. Johnson, Esq.; George Vaughan, Esq.; James Nicholson, Esq.; William Gladstone, Esq.: Captain Luard, R.N.; W. B. Hume, Esq.; William Phillipps, Esq.; Captain A. Boyle, R.N.; Thomas Tilson, Esq.; Captain Richard Stopford, R.N.; William Klein, Esq.; Henry Green, Esq.; Joseph Colling, Esq.; Charles Ratcliff, Esq.; Captain Shuttleworth, with power to add to their number four other members.

That G. H. Chambers, Esq., be elected one of the auditors of the society, with power to the committee to appoint another.

That the committee be summoned for Wednesday, the 6th July, at four o'clock, at 118, Pall Mall, with the consent of the committee of the Reformatory and Refuge Union.

That the best thanks of this meeting be and are hereby conveyed to Joseph King Martin, Esq., master-attendant of Sheerness Dockyard, and the other officers of that establishment, for the readiness and kind interest they have displayed in carrying out the liberal arrangements of the Board of Admirality as regards the fitting and preparing of the *Cornwall*.

That the Honorary Secretary be requested to express to the Right Hon. Sir John Pakington, M.P., and the Board of Admiralty, the respectful thanks of the School Ship Society, for the kind liberality with which they have encouraged and assisted the efforts of the Society for the establishment of a Reformatory School Ship in the Thames.

That the thanks of this meeting be and are hereby given to the most noble the Marquis of Westminster, for his conduct in the chair this day.

NORTH-WEST LONDON PREVENTIVE AND REFORMATORY INSTITUTION.

The anniversary dinner of the patrons and friends of this institution took place on Thursday, June 2nd, at the London Tavern. Sir Stafford Northcote, Bart., M.P., was in the chair. The Chairman was supported on the occasion by Mr. T. B. Baker, of Hardwicke Court, Glouces-

Digitized by Google

ter; Mr. S. Cave, M.P.; Mr. H. D. Seymour, M.P.; Captain Colville; Mr. George Moore; Mr. G. W. Latham; Rev. Sidney Turner; Rev. Canon Dale; Mr. Under-Sheriff Jones; Mr. R. W. Lingen; Mr. P. C. Glyn; Mr. T. D. Hill; Mr. H. Haggard; Mr. W. J. Maxwell; Dr. Madge; Mr. J. D. Mocatta; Mr. John Griffith, &c., &c.

The usual loyal toasts having been given,

The Chairman, in proposing that of the "The Army and Navy," remarked that one-fourth or one-fifth of the young men who had gone out of this institution had entered one or other of these services, in which the spirit and the energies which had previously been so ill-directed as to render them a curse to society, were now made useful for the defence of their country. He commended the present First Lord of the Admiralty for having relaxed the rules which made it difficult for the boys who left reformatory schools to get into the navy.

Captain Colville, Governor of Coldbath-fields Prison, acknowledged the toast.

The Chairman then proposed the health of the president, committee, and trustees of this institution. He observed that the tendency of public opinion had lately been to substitute preventive and reformatory discipline for mere punishment in the treatment of young offenders. This institution dealt with the class between the ages of 16 and 25, including those who were not mere boys, but young men coming into the world. It had begun with small means, and had been carried on with great difficulties; it could not yet be said to have perfectly succeeded, but it contained all the elements of success, and it deserved encouragement. It was, no doubt, easier to undertake the reformation of young children under sixteen years of age, and so far as they were concerned the reformatory system had had a fair trial and had produced a very considerable reduction of juvenile crime. In France, it had been found that, although those sent to Mettray and other such places were reclaimed, there was during the last four or six years a much larger proportion of committals than formerly, because the treatment of the children was so good that it was considered quite a boon to be sent there, and parents were desirous to obtain for their children such an education and such a start in the world. In England, however, this, which some people were afraid of, had not been the result. Not only the reformatories had actually reclaimed a considerable portion of those committed to them, but the number of juveniles committed for trial and punished was enormously decreasing in England concurrently with the extension of the reformatory system, although the unwillingness of magistrates and others to prosecute young offenders was of course diminished. Within the last three years the number of juveniles under 16 committed in this country had fallen to half what it was before. This was not due to an increase of crime generally. The total number of commitments in 1856 was 113,000; in 1857 it was 120,000; and in 1858 it was 118,000, but the number of juvenile commitments in the first year was 14,000; in the second year it was 10,000; and in the last year it was 7,000. Such, however, had not been the case with the class between 16 and 25 years of age. He was sorry to say the returns of that class showed no sensible diminution of crime, but that was because the reformatory system had not been so extensively applied to them, and the energy of his friend, Mr. Bowyer, who had done so much for this institution, with the limited means and scanty leisure at his disposal, but with his heart earnestly in this work, had met with so few imitators. Since the last meeting two new departments had been added to this institution, one for the training of masters, and one for the reception of younger boys for industrial training. These were both most important, and enhanced the claims of the institution to public support. He had been informed by a gentleman who was now preparing a very accurate census of the criminal population of this country, that on the 30th September last the total number of what might be called the criminal and dangerous classes actually at large, including known thieves, vagrants, suspected persons, prostitutes, and others below the age of 16, was 18,800 for the whole of England. To these must be added the number in gaol at the time, from 1,000 to 1,500, and the number in the reformatories, perhaps 2,000; so that the total number of juvenile criminals might be taken at from 22,000 to 23,000, and he thought that was a very manageable number to deal with. It would be perfectly feasible to produce a beneficial impression upon such a mass, and we might look forward to a great improvement within the next few years. In the meantime he trusted the present company would come forward to help this institution to pay off its debts, which amounted to rather more than 2,200*l.*

Mr. G. J. Bowyer, the founder of the institution, acknowledged the toast, and read the list of subscriptions, amounting to between 500*l.* and 600*l.* He observed that in this institution the error was not committed of making the inmates too comfortable, and some of them went away because, as they said, the food was not so good as they could get in prison. He believed there were only two adult reformatories in the kingdom, though almost every county had its reformatory for juvenile offenders, or was connected with one elsewhere. One adult reformatory was the North-west London Institution, and the other, which was in Smithfield, had fallen from a hundred to about forty inmates. The North-west London Institution had just been deprived suddenly of the Government grant, which it formerly received, and had been obliged to go to an expense of 1,700*l.* to set up an industrial school department, or else the whole Government aid would have been taken away from the institution. That was the reason why the institution had been obliged to get into debt. He could not refrain from making it known, moreover, that the amount of the capitation grant given to this institution was no more than 5s. per head per annum for lads above sixteen and under twenty years of age, whilst the amount granted to juvenile reformatories was 7s. per head per week. The latter was an over-payment, whilst the former was a most miserable pittance. The results of this institution had been satisfactory, as showing the conduct of its inmates after their leaving. Of these young fellows 74 had emigrated, 83 were established in different trades, 35 in service, 58 in the army and navy, and 54 restored to their friends.

Mr. Bowyer having concluded, the company was addressed by Mr. Stephen Cave, M.P., the Rev. Canon Dale, Mr. G. Moore, Mr. R. W. Lingen (Secretary to the Committee of Council on Education), Mr. B. Baker (founder of the well-known reformatory school at Hardwicke, in Gloucestershire), Mr. E. Latham (the patron of a similar institution in Cheshire), and the Rev. Sidney Turner, whose zealous efforts in the same cause are well known. The proceedings then terminated.

WORKHOUSE VISITING SOCIETY.

If the interests of the poor were better consulted than they are; if the administration of relief to them in their distress were under better regulations; if, when admitted to their "homes" as they should be, but are not, they were better cared for, the country would be at infinitely less charges, and our prisons would lose a large portion of their expensive inmates. "The Workhouse Visiting Society" is a very opportune movement, and one which deserves in every way well of the public.

The first meeting was held on Tuesday evening, the 17th June, at the rooms of the National Association for the Promotion of Social Science, in Waterloo-place, when there was a numerous attendance of the committee, members, and friends of the society.

Letters were received from several gentlemen regretting their absence, amongst whom were Lord Shaftesbury, the Bishop of Oxford, Mr. Sidney Herbert, Rev. Canon Dale, Rev. Canon Champneys, Sir B. Brodie, Dr. Bence Jones, Dr. Farr, Mr. Rashleigh, Mr. Roundell Palmer, &c. After the committee meeting, at which some business was arranged, the report was read by Mr. Hastings, general secretary of the National Association, giving an account of the progress of the society during the ten months of its existence, during which time communications had been held with persons connected with above thirty Unions, respecting the plans of the society, several workhouses having adopted them. The report also gave a short description of the different classes of inmates which it was proposed to benefit, and for which the present machinery and the small staff of paid officials is quite incompetent.

The Right Hon. W. Cowper, M.P., who presided, then addressed the meeting, explaining the general objects of the society, and showing the large field of work which was here open for exertion.

The Bishop of Bath and Wells followed, giving his experience of the needs of workhouses, from his former position as chaplain to a large Union, and men-

Digitized by Google

tioning two instances he had known of the appointment of drill-sergeants as masters, with their wives as matrons, chosen for the post for no other reason than because they were wives of the masters. The Bishop also spoke of the talent and ability that might be found even in pauper schools: many years ago, when trying to find pupils for a newly-opened school, he selected fifteen from the pauper schools at Norwood, then an educational experiment, where one thousand miserable-looking children were collected together; of these fifteen children, three were now ordained clergymen, three held considerable official positions, and the rest were high in the calling of schoolmasters, for which they had been trained. The Bishop spoke also of the greater advantages of prisons over workhouses, in their superior officers, quiet and orderly management, &c.

The Rev. C. P. Eyre, rector of Marylebone, confirmed these opinions, and urged the appointment of superior officers with a more liberal salary, the management of workhouses being quite as difficult, if not more so, than of prisons, because in the latter coercion can be employed, and in workhouses it cannot; there is, therefore, the greater need for judgment and discretion and mental superiority in the managers: till this change was effected hopeless would be all our efforts for improvement. He had himself witnessed two elections of a Master since he had been in London, and such a collection of candidates as the advertisement produced he could not have imagined. He also spoke of his own experience of a country workhouse school for many years, of the promising first class of girls, equal to those of any National School in the kingdom, but of the sad failures in their after lives; their grievous returns to the workhouse wards in sin and shame, unable to resist the temptations that beset them in places of the lowest character and description. Yet even then they were not hopeless, with proper care and management. Some of those who fiercely set the Master at defiance were brought to tears and contrition by softer treatment, and one who was considered hopeless and was the terror of the house was changed by the influence of a lady who undertook to teach a class of these women in the workhouse. Mr. Eyre spoke also of the importance of an improved class of nurses, who should be responsible for their important and arduous duties, and also urged gentlemen to come forward as guardians, and not leave the management and expenditure of enormous sums of money solely in the hands of the lower class of tradesmen, encouraging them to do so by the assurance that though in a minority they would surely gain an influence by tact and discretion.

During this speech the Bishop of London arrived, and spoke in favour of the objects of the society. He had had experience of two large Unions in the north of England, in neither of which was there a chaplain; in one the Master, who was a striking likeness of Dickens's portrait of a workhouse master, performed the duties of chaplain to the thousand inmates, armed with a formidable stick to enforce his instructions. Here, then, at least, must have been ample room for the admission of visitors to instruct and console. He urged the work upon ladies as one not interfering with home duties, but which would bring a blessing upon themselves and their families, as well as to those they visited. The society had his hearty sanction and co-operation.

Stephen Cave, Esq., one of the secretaries of the Reformatory and Refuge Union, added his testimony as to the need of improvement in workhouse schools, by which numbers would be stopped from becoming subjects for reformatories. Children in pauper schools were wholly under the power of the managers, in apparently favourable circumstances for training, yet the lamentable results were known to all. His experience of the reformatory work led him to urge most strongly a greater care of pauper children as the only wise economy.

The Rev. E. Kempe and Rev. H. Blacket also spoke, and were followed by Mr. Corrie and Mr. Allen. The former, as a guardian of the poor, urged a ventilation of the subject as the only hope of obtaining the various reforms and remedies needed, and especially advocated the admission of lady visitors; he could see no objections and difficulties that need stand in the way of success. He spoke of his knowledge of one poor patient who went into the workhouse many years ago, and of his interest in the cause of workhouse management ever since.

Mr. Allen gave some of the results of his wide experience of workhouse visiting, and pointed out the various ways in which visitors might assist not only the inmates but the guardians also, by obtaining admission into various asylums and institutions for those who had no means of helping themselves when once shut up in the workhouse. Several cases described showed how frequently this might be done.

Mr. Hastings mentioned that in some instances the plans of the society had been objected to as being contrary to the Poor-law rules, but, on the contrary, the Poor-law Board had expressed their readiness to sanction them in every way.

Subscriptions and donations were requested towards the general expenses of the society (the chief of which consist in the quarterly publication of the Journal), and also for the Workhouse Library Fund.

It is hoped that this first occasion on which the claims of workhouse inmates on the sympathy of the public have been advocated, will be the means of widely extending a knowledge of and interest in the cause.

NATIONAL ORPHAN HOME.

ANNUAL FESTIVAL AT THE STAR AND GARTER.

The annual festival in connection with the National Orphan Home, Ham Common, was celebrated at the Star and Garter, Richmond, on Wednesday, June 22nd. The Right Hon. the Earl of Shaftesbury presided, and the company included several of the nobility and gentry, with many of the clergy. This asylum was first established in 1849 to provide an asylum for female orphan children whose parents had died of cholera. It is now established to provide a home and maintenance for orphan children of both sexes, and contains about 100 children. The present building is inadequate to the wants of the institution; and it is proposed to erect, when sufficient funds can be obtained, a building to receive about 200 orphans.

After dinner, the *Non nobis Domine* was sung, and

The Chairman, having given the usual loyal toasts, including among the names of the royal family, the patron of the institution, His Grace the Duke of Cambridge, K.G., the children of the asylum, neatly dressed and with smiling countenances, passed down the room and sang a hymn composed for the occasion. This institution ranks among the first of our noble charitable asylums, and fully deserves the support of all interested in the welfare of those who have lost the careful attention of their parents, and, therefore, are the more deserving objects of charity.

The noble Chairman, in proposing the toast of the evening, remarked that this toast was proposed out of order, as he was compelled to leave, and his sincere friend, the Rev. Mr. Brown, would not allow him to leave until he had given them that toast. He felt that the toast, "Success and prosperity to the National Orphan Home," required but little introduction, especially after the interesting sight they had just witnessed. There was nothing very different in the character of this institution to similar ones, beyond that which struck him in glancing over the papers that had been furnished him, for he found they admitted children to that home from the ages of two to fourteen. Those persons who had had experience in matters relating to the poor, knew that the children of tender years were exposed to many privations, and it was necessary, in order to shape the character of the children, that they should be under training when they were young. He believed that all the children that had passed through the Home had answered the fullest expectations of the promoters, and with reference to the children they had just seen, he felt assured all were full of hope. This institution was very catholic in its operations, for it admitted children from all parts of the kingdom, and no denomination was excluded, and the only ground of complaint was that there were many children waiting for admission for want of accommodation, and they were in want of funds to erect a new building. No doubt but that this was very common with all other institutions, and he had heard that the best way to make societies and institutions more active in their operations was to get into debt. Now he thought a chronic debt was bad, but a spasmodic one no doubt was a benefit; for then no sooner was one debt cleared off than something else was carried out to benefit the institution, and other methods were resorted to to liquidate the debt. When a young man, he studied a science which at that time was very cold and rigid in its character, he referred to the science of political economy; but since that time what a glorious change had taken place. They had now arrived at the glorious principle that led them to recognize their

Digitized by Google

fellow-men, who were placed in less favourable stations in life, as they ought to, and had seen an example of the principle that evening in the children who belonged to that noble institution, to advocate the claims of which they had met together. He was not going to make a tirade against the present system adopted in our workhouses, but when he saw the difference in the appearance of the children belonging to a workhouse, and this and kindred institutions, it made his heart rejoice to know that God had put it into the hearts of men to establish these institutions. Although the children educated in both establishments were perhaps similarly fed and clothed, yet the children educated in workhouses lacked the gaiety, the joyousness, and other things that were peculiar to children, but in the sparkling eyes and joyous countenances they had seen that evening that the children were not only being educated in the common acceptation of the term, but those who had charge of them gave as far as it was in their power that domestic training so requisite in the education of the young. He was afraid that the future of those trained in a workhouse was anything but hopeful, and the effect of the training would be seen in after-life. Another great feature in this institution was its manageability; it was within compass, and the children could be singled out and have proper care bestowed on them, and they were able to introduce to some extent domestic society, and give, as far as possible, a compensation for the loss the poor children had sustained in the death of their parents. No amount of schooling could make up for the want of that training which the child received in being brought up directly under the eye of a parent. He again repeated, therefore, that one great advantage of this institution was its manageability and small compass. They were living in a free country that possessed the most liberal institutions of any country in the world, and the people of which were every day rising into more importance, and it should be a matter of grave and serious deliberation with those whom God had highly favoured to exercise in the best manner possible that wealth and influence that had been given them for the benefit of others, who were less favoured, for this they were bound to do. By this method all classes would become united, and the working classes would be found grateful, loyal, and true. They would not seek to pull those above them down, but by every honest and legitimate means would endeavour to raise themselves up to an exalted position. These matters were of great political and social consideration. The future glory of England depended upon the future race of parents, and they should use every means with the rising generation to train them up so as to wipe away the foul stains that now existed on the social systems of the country. He then referred to the purposes for which the Orphan Home was established, and spoke in eulogistic terms of the institution. In conclusion, he observed that great responsibility rested upon those who had knowledge of an evil, and were tardy in doing their utmost to remedy it. He urged upon the company the necessity of giving their assistance to this institution, and asked them fully to realize the situation of these children, to imagine themselves placed in a similar situation, and then gave all present the motto of "Do unto others as you would that others should do unto you." He had much pleasure in proposing "Success and prosperity to the National Orphan Home."

The toast was heartily and enthusiastically responded to.

A vote of thanks having been accorded to the honourable Chairman, he retired amid the plaudits of the company, stating that he should inform her Majesty that he had been detained by these orphan children.

The chair was occupied for the remainder of the evening by Vice-Admiral Sir G. B. Lambert, K.C.B.

Several toasts having been duly drank,

The Rev. R. Whittington, M.A., one of the honorary secretaries, read the first list of subscriptions, amounting to £712 17s.

In responding to the toast of "The Committee of the Institution,"—

The Rev. T. G. P. Hough said that on behalf of himself and his brother committee; he returned the company sincere thanks. The Committee were most anxious as to the welfare of the institution, and he urgently appealed to those present to assist to obtain the new building. He was happy to say that the Bishop of Winchester had become President of the institution, and he was about to make a statement, but he hardly knew whether it was proper, and that was that the Rev. Joseph Brown was about to be made a vice-president. That esteemed gentleman had found it necessary, under the good providence of God, to retire into more private life, but it was not on account of unwillingness to continue the duties of honorary secretary, but he found it necessary on account of his health to enjoy the quiet and peaceful repose that would be a benefit to himself. In the Rev. Mr. Brown they would still find a counsellor and a friend, and although the rev. gentleman had been exalted to a prominent position, he would still be at work, for they might make sure that the Rev. Mr. Brown would die in harness.

The Rev. Joseph Brown, M.A., rector of Christchurch, Southwark, acknowledged the toast of the Hon. Secretaries. He impressed upon the ladies the necessity of preparing for a fancy bazaar in aid of the funds of the institution, that was to take place next summer, and to which he hoped they would obtain Her Royal Highness the Princess Mary as patroness. He referred to the assistance given by the medical gentlemen, and said that many thanks were due to them for their aid. He also said that much credit was due to the officers of the Asylum, who assisted most materially in promoting the interests and comfort of the children. He heartily thanked them for the kind manner in which they had drank his health.

The Rev. R. Whittington, M.A., in responding, thanked the ladies for their assistance at the asylum, for they visited the institution and attended to the comfort and welfare of the children. Although they would lose the Rev. Mr. Brown as honorary secretary, they intended to keep him upon the committee; for that gentleman, with another who had since gone to his rest, were the founders of the institution. He then spoke in very eulogistic terms of the Rev. Mr. Brown's conduct as secretary, and said that gentleman was one of the best friends to the institution.

The Chairman then gave "The Ladies," which met with universal approbation.

The last toast of the evening was "The health of the Chairman," proposed by the Rev. Joseph Brown.

A special train left Richmond at eleven o'clock to convey the company to town.

During the latter part of the proceedings, the Rev. Mr. Whittington announced the entire amount of subscriptions received as £861 17s.

The musical arrangements, which were of a most satisfactory character, were under the direction of Mr. Henry Buckland.

Mr. Harker, as usual, proved an efficient toast-master.

THE CRIPPLES' HOME,

HILL-STREET, DORSET-SQUARE.

The annual meeting of the friends and supporters of the Female Refuge, Infant Nursery, Public Laundry, and Cripples' Home, was held at Willis's Rooms, King-street, St. James's; the Right Hon. the Earl of Shaftesbury in the chair.

The Secretary read the report, which stated that the committee had much pleasure in informing the subscribers that the work committed to their care continued to prosper; that through the Divine blessing, and the aid of kind friends, they had been enabled to extend their premises and increase the number of inmates to forty, the greater portion of whom were crippled. A sick ward had been added, which had not yet been used, though early in the spring, before it was opened, it pleased God to remove two of the cripples, one rather unexpectedly, the other after a short illness from consumption. Three of the girls of the institution, from good conduct, had been promoted as assistants, receiving a small sum per annum as wages. Three had been sent in the spring to Canada, with whom a constant correspondence was kept up; and through the liberality of a kind lady three more were about to sail for New Zealand, under the care of a missionary and his wife. The mark system had still been carried on, and other prizes and rewards were given as encouragement. The Laundry had been for some time self-supporting. Four of the girls had been drafted off to the West-end Laundry recently opened. The nursery had been found to work well. Since it was opened 15,671 babies had been received, and the mothers who sent their children to the nursery expressed their gratitude and looked upon it as a blessing. The Cripples' Home, in which the girls learned straw bonnet and other work, continued to excite much interest. After dwelling on the advantages of this branch of the institution, the report stated that twenty-six inmates had been received this year; twenty had been disposed of in the following manner:—some to situations, emigration, West-end Laundry

Digitized by Google

placed in other institutions, and restored to their friends.

The income of the charity for the year amounted in subscriptions and donations to £847 12s. 6d., being an increase of £351 0s. 2d. on the year. A further sum, however, was required for the enlargement of the premises, and to provide a sick fund, to send the weakly children from time to time to the sea-side.

The Earl of Shaftesbury then addressed the meeting, and said that the very name of the Cripples' Home was a sufficient argument in itself, and it required therefore no forcible appeal from him to show the great usefulness of such an institution. The Female Refuge had proved of the greatest benefit, not only to the inmates, but to society at large. The next branch, the Laundry, was most beneficial, as it was exceedingly desirable that the girls should be trained to habits of industry. The third thing was the Infant Nursery, about which the argument had been raised that it tended to remove the affection of the mothers from their children. But they must bear in mind that those mothers were obliged to go out to work, and in those cases it was a great boon to have a nursery in which their children would be cared for properly. It was needless for him to tell them the many means which were resorted to by women to keep their children quiet while they were at work; by the administration of "Godfrey's Cordial," "Quietus," and "Black Drop," and he knew one case where a small piece of flannel which had been dipped in laudanum was tied in the poor child's mouth to keep it quiet. He need not tell them the injurious effect that laudanum would have on so young a child, by making it ricketty and bringing on hydrocephalus. Taking all these things into consideration, he thought it must be admitted that these infant nurseries were of the utmost importance, and he wished them God-speed. His chief sympathies, however, were with the Cripples' Home, and he wished them to direct all their energies towards its support. There were two valuable orthopædic hospitals in this metropolis, both valuable institutions; where on one visit might be seen a number of poor children as different in shape as the twenty-four letters of the alphabet, and on the next visit they might see, by the application of science, that all those children had been made straight. But then those children who have not been cured were taken into the Cripples' Home, and taught to earn a livelihood for themselves, instead of remaining helpless members of society. This proved that those institutions worked well together. There was one thing they must look to, and that was they were remedying that which they had themselves created; for from the first the poor children began to degenerate from the foul atmosphere which they breathed from the day of their birth. They must, therefore, consider it a duty to correct those evils which society itself had created. His lordship then proceeded to express an opinion that the work was essentially work for women, and, rejoicing that this was purely a ladies' society, concluded by promising to the movement all the support which his health, strength, and time would enable him to give.

The meeting was also addressed by Dr. Routh and other gentlemen, and the proceedings terminated in the usual manner.

THE PLAYGROUND AND GENERAL RECREATION SOCIETY.

The full development of our rising generation, whether in a physical, moral, or religious point of view, make it absolutely necessary that the children should have some place of recreation under proper regulations, other than the public streets, which become necessarily more and more crowded, and more and more contaminating in their influence, as buildings increase in number. Nor is this the only point from which we may view the matter: the convenience of passers by should be consulted; and this can now only be at the expense of the recreation which is necessary to children, or at the risk of a capture of such toys as they may chance to procure, by the police.

On the other hand, the yearly increasing density of the population renders the providing and keeping in order of such places almost impossible without a very considerable outlay of money; unless, indeed, those who have the means will follow the example of the Marquis of Westminster, and place land at the disposal of this Society for the purpose.

The objects of the Society are such as fully justify very liberal contributions from the public, and we sincerely hope that funds will be forthcoming. The Society held its general Annual Meeting on Tuesday, June 21st, at Willis's Rooms, the Earl of Shaftesbury in the chair.

In opening the proceedings the noble chairman said that the business upon which they were met required little explanation and less argument. The title of the Society was sufficient argument, and they were there assembled to resolve the question how the operations of the society might be best carried out. There were two ways open to them. Some persons advocated the intervention of Government, while others considered that the objects in view ought to be accomplished by private assistance. He himself did not consider this a case for Government interference, because, while he admitted that the Government were bound to supply parks and to care for all sanitary improvements, he thought that private amusements and recreation ought to originate with and be carried out by private individuals. Everyone who had occasion to walk through the crowded streets of the metropolis must have seen how necessary it was that the numbers of young children of the poorer classes should have some place free from the fetid odours of damp lodgings and narrow alleys, where they could play without risk to themselves and annoyance to the passers-by. A proper amount of play and exercise was essential to the health and full development of the body, and necessary to strengthen the capacities of the mind to receive the benefits of education. But not only physically was it of great importance that children should have proper playhours and proper playgrounds, but also on moral grounds, as they would be kept in a better frame of mind and temper. How, he asked, was such an end to be accomplished? It was easy enough to obtain land for playgrounds in the suburbs, but in the centre of a large city, where every inch of land was valuable, it was an almost insuperable difficulty. A very liberal proposition had been made to the Society by the Marquis of Westminster. The noble marquis proposed to devote an acre of ground near St. Barnabas at a nominal rent of about sixpence a-year, for the purpose of forming a playground. If the Society accepted the offer they would have to put the land in proper order, and to build a small house upon it for the use of the keeper. Of course, this could not be done without funds. In advocating a liberal subscription he said that by the contribution of a small sum a very large amount of moral improvement might be effected in the condition of young children, and that those who contributed would go far to abate those evils which were a degradation to this country and to the religion which we professed.

Mr. West, the secretary, then read the report, from which it appeared that the society had been most active in its efforts to obtain a site for a playground in the metropolis, and had at length found one well adapted for their purpose in a thickly peopled part of Camden-town; and that arrangements were now in progress for its purchase. The Committee had also called the attention of the Government to the advantage of retaining part of Smithfield open, and had received an assurance from the Chancellor of the Exchequer that the part belonging to the Crown should be preserved in an open condition. A request to the First Commissioner of Works, that a portion of each metropolitan Park should be enclosed and made available for school treats under the superintendence of a park-keeper, met with the same ready acquiescence. Communications had likewise been addressed by the committee to the mayors of large country towns, soliciting them to hold public meetings in aid of the objects of the society. The report concluded by thanking the press for its effective and unsolicited efforts in forwarding the cause.

The report was adopted unanimously, and various resolutions were passed, after which a vote of thanks to the Chairman terminated the proceedings.

Justices of the Peace.—It appears from a Parliamentary return issued, that 1,070 persons have been appointed to act as justices of the peace in the several cities and towns of England and Wales since the 1st of January, 1850. The return was moved for by Mr. John Locke.

Review.

"Prevention Better than Cure;" or Suggestions in Favour of Establishing Refuges of Virtue for the Assistance of the Honest and Industrious Poor, and for the Promotion amongst them of sound Education and Morality. By An Officer of her Majesty's Civil Service in Ireland. William J. Battersby, 1, Westmoreland Terrace, Ranelagh, Dublin, and by all other booksellers. Price 4d. 1859.

We gladly give place to the following extracts from this little *brochure*, which will sufficiently indicate the tone of feeling manifested by the writer. We must express our regret that he overlooks the danger of lessening the responsibility of parents; otherwise this suggestion is worthy of consideration.

Much has of late been done, especially in Ireland, for the amelioration of the criminal, and for the promotion of a real and lasting reformation in his habits and tastes; *but the root of the evil has not as yet been struck;* the cancerous germ still lives; and we are content to wait until the individual succumbs to its power, before we will stretch out a hand to help him.

This error appears to be almost the rule of society. How many a noble character has been permitted, during his life, to pine in obscurity?—how many a genius of mighty power has been left to wither in a debtor's prison, or perish in a garret, at whose funeral nobles and princes have contended for the honour of bearing his pall? A *crisis*, a *catastrophe* is necessary before we can be roused from our apathy! This is a fatal error, and one that must be evident to the meanest capacity; for is there not more wisdom in the prevention than in the cure of evil? We must endeavour to save our children from crime, and place them beyond temptation; we must prevent the honest poor man from a sacrifice of his self-respect, by providing him with means to support himself and family, instead of leaving him to fall into beggary and degrading pauperism. We must save the virtuous girl, endowed perhaps with talents and abilities, from sinking into listless indifference and hopeless despair, ending in the blasting of her fair name and the destruction of both body and soul. We must, if possible, avert the horrible, but too common agonies of the poor father and mother, who see their good and virtuous offspring, after fruitless struggles with their hard and bitter lot, sink deeper and deeper still in infamy and crime to procure the necessaries of life.

I freely admit that when the poor victim of misery *has once fallen*, our machinery for his restoration is, comparatively speaking, perfect. To this object alone, it would appear, has the attention of most of our philanthropists been turned.

It is a terrible mistake; for does not he who, by timely aid, enables an individual to sustain himself in honest industry, and to rear his family in virtue, confer a far higher boon on society, than he who restores a fallen outcast who has scandalized religion by his crimes, and polluted the community by his evil example?

However good therefore refuges for the fallen may be, refuges for the virtuous must be infinitely better. However valuable a reformatory for guilty youth may be, surely a system whose aim is anterior to, and whose object is the prevention of, *crime*, must be of far higher value.

We must anticipate the crisis, avert the fall, and do our best to preserve from pollution the innocent and pure.

The mode to effect this appears to me simple, inexpensive, and, I firmly believe, practical.

I. I would propose to have attached to each Poor-house Union in Ireland a "Refuge of virtue" for the children of the poor, in which to receive all those in the district who are orphans or destitute, and those who have no near relations to take care of them,—that we should seek out the little street vagabonds living by beggary, or by any other means *short of actual crime*, and collect them together in these refuges, where they would be lodged, fed, trained, and instructed in their religion, and in useful trades, according to the tastes and abilities they might show, and where their future prospects can be attended to when they have arrived at a sufficient, age to provide for themselves.

These Refuges must have nothing to do with the "Union Schools" at present in existence, which are, in most cases I fear, seminaries of evil rather than of good, and the total abolition, or essential alteration, of which I consider to be a necessary preliminary. To prove the necessity of this step I will quote the words of the Recorder of Dublin, a few days since, when passing sentence on some girls who had been born, bred, and educated in these nurseries of vice, for attempting to set fire to the place. He says:—

"You have all pleaded guilty deliberately, and without appearing to have the least shame for it, of the very atrocious crime of setting fire, or attempting to set fire, to the public establishment in which you were supported and brought up. I have said before that I have seen very little good from those who are supported and brought up there. They have all the disgrace of idleness upon them, and it seems as if they could not be taught anything useful under the system adopted in the Union. This is not the first case of the kind; for there have been numerous cases similar to this before this court and before the other tribunals of this city. There is nothing I find so difficult as to account in any way for the extraordinary crimes that are committed in this Union. There are benevolent persons trying to do some good to these inmates; but there still appears to adhere to the establishment a curse of idleness, and the absence of any feeling of independence," &c. &c.

The Editor of a Northern Periodical of great influence and long experience, speaking of the pauper children, says:—

"Brought up without the slightest idea of domestic affection, having loose and ill-arranged notions of industry, the pauper children in workhouses are sent into the world at a certain age to battle against the difficulties and dangers of life, and they go on that warfare totally unprovided for a successful encounter. The transition from the hot-bed system carried out in the workhouse to the more healthy action of self, (that self-energy which must be kept up by those who support themselves out of doors), is generally too powerful for the moral strength of the young pauper of either sex. If habits of industry are necessarily neglected, the boys become drones, the most worthless as well as the most mischievous of all society's offshoots. If a correct history could be obtained of the unfortunate females who nightly infest our streets, it would be found that a large proportion of one class of them had been *brought up in the workhouse.*"

The *Dublin Evening Post*—whilst we write, thus most pointedly speaks on this most important subject:—

"The Irish workhouses now contain little more than thirty thousand inmates, and about one-sixth of that number are in the two Dublin workhouses. In those institutions which, in fact, should be models for the rest of Ireland, a system of idleness and demoralisation has been going on for years under the eyes of the Commissioners, which, as we said on a former occasion, has transformed our paupers into criminals.

"At the annual meeting of the Mendicity Institution, held the other day, Mr. Corballis, Q.C., a gentleman well qualified to offer an opinion on such a matter, made the following remarks, as to the extravagance of the present system of supporting our poor, compared to what existed when the poor had been relieved by the voluntary contribution of the citizens:—

"He wished to express his regret that, when the poor law first came into operation in this country, the mendicity was not made in Dublin a substitute for the poor-house. He was not opposed to the principle of the poor law; but he believed that in Dublin the mendicity would have been a more useful institution than the workhouse. Many years ago, before the workhouses were established, the number of poor obtaining daily relief at this institution was nearly 2,000, who were relieved by voluntary contribution, at a cost of £12,000. This fact would illustrate the advantages of the mendicity. The two workhouses of Dublin were now maintained by the public money at an expense of nearly £50,000 per annum. How much more economical would it therefore have been to have adhered to the old system. He did not mean to say that in some respects the poor-house did not offer superior advantages, for it gave both residence and clothes; but he (Mr. Corballis) believed that the majority of the poor people would prefer living in their crowded garrets to suffering separation from their nearest relatives, as they did in the workhouse."

"Here, it appears," says the *Evening Post*, "we have £50,000 a-year levied off the already overtaxed inhabitants of our city, who get, in return, the training of thieves and vagabonds, for the punishing of whom additional taxation becomes necessary. Surely such a state of things should be put an end to. The Government should at once take up the matter. It is no party question, but one of justice to the citizens of Dublin. The entire system of the Irish poor law should be inquired into," &c. &c.

"We are now at the commencement of a new session, and we trust it will not terminate without the reformation of this the most important of our social institutions being carried into effect."

After other remarks of an irrelevant nature, and rather of a political character, the same journal adds:—

"More than a year has elapsed since we felt bound to call the attention of the Government to the state of our city workhouses. We then asserted what we now repeat, that the condition of those institutions is a foul stain on the social position of the city of Dublin. Since then no step has been taken by the Irish Poor Law Commissioners to have the matter inquired into, with a view to remedy the demoralised state of

Digitized by Google

those establishments. Our police offices and Commission courts disclose crimes and offences, committed by the inmates of the North and South Dublin Union Workhouse—particularly the latter—which are truly disgraceful in a civilised country."

I think I need say no more to prove the absolute necessity for the abolition of those "Union Schools," so long "tried" and found so thoroughly "wanting"—as a preliminary step to the establishment of the refuges of virtue I am suggesting.

Mr. THOMAS O'HAGAN, the learned chairman of the Quarter Sessions held at Kilmainham, referring to the "Reformatory Schools" established by a recent Act (21 and 22 Vic. cap. 103), passed in the last session of Parliament, uses these words:—

"Men doubt the possibility of reclaiming convicts hardened in iniquity, but no one ever denied that children *partially corrupted* may be restored to the ways of well-doing; and it is for us to say whether they shall perish or be saved. In Ireland we have special advantages and encouragements—little hereditary crime—offences mainly of impulse and occasion—a ductile and impressible people, quick to respond to the appeal of kindness, and reverently docile to the teachings of religion. In no country in the world, perhaps, are the facilities for the *reformation* of the *young* so great as in our own."

If this be the fact respecting those children who have been already "partially corrupted," how far easier must it be to keep those still pure and innocent, and whose only crime is poverty, from falling into vice! "*Reformatories*" are necessary for the criminal portion of our youth, but the refuges I propose would be a means of preventing crime, and consequently diminishing the expenses and taxation of the country. "*Ragged Schools*," and other places of a similar description, when properly conducted with a due regard to conscience and religion, are valuable in their way; but at the termination of school hours the poor children hurry back into the streets, and home again to dens of squalid misery, too often sinks of drunkenness and vice! What we require is a *permanent home* for such as these.

In addition to the school "refuges" above proposed, I would suggest—

II. "Refuges for virtue," in which decent but poor adults of both sexes might separately be sheltered during temporary distress, from want of employment or other untoward circumstances, and where their industry, during their residence in the establishment, would defray, in part at least, the expenses of their maintenance, and also form a little fund for their own requirements when departing therefrom. Magdalen asylums and criminal refuges are useful, and even necessary, to carry out the immediate objects they have in view; but still they are solely for the benefit of *offenders* against the laws of their country and their God; we plead for something better than any of those, namely, a "Refuge" where persons *still innocent, still unsullied by crime*, but struggling with want and misery, may dwell, and where we can offer to tempted innocence and heroic honesty a shelter and a home. "*Dormitories*," also, are good and useful, even if they receive, only for the night, the houseless wanderer. But we ask a residence for virtuous and distressed women, who, desirous of work, even skilled in labour, are unable to obtain it, and whilst often fit to be ornaments, are too often driven (for want of a little timely assistance) to resort to vice, and so become the outcasts and the pests of society. Alas! how often is poverty made to appear the deepest crime of which humanity is capable!

By the preventive system I propose, an individual's self-respect will never be forfeited. In the school refuges, honesty and industry will be inculcated from the dawn of reason, self-reliance will have its due weight, and the stigma of crime, which must always remain branded on the brow and on the heart of the criminal, however complete his reformation, will be averted from our rising generation; whilst the refuges for virtuous adults, (who, though unable to support themselves and perhaps their aged parents or near relatives, and who, too proud to beg, too honest to rob, without assistance must perish from hunger and want) would become establishments not only for succour to the distressed, but where, without loss of honest pride, the inmates of both sexes might be enabled to maintain themselves, and in time make the institutions self-supporting. This view of the matter, in addition to its other advantages, has peculiar claims on public attention and support; for, if properly established and duly carried out in each Union, the Refuges of virtue would be the means of decreasing the county expenses. It requires no argument to prove this; for an institution that would prevent crime, increase labour, diminish pauperism, and advance honest industry, must tend to lessen the expenses attending poor-houses, gaols, convict prisons, penitentiaries, and reformatories. Every individual whose self-supporting labours enable him to live, so far from being an incubus on the country, like the pauper and the criminal, becomes a profit and an advantage, as well as an honour, to society.

It is the duty of every one to assist in improving the *social condition of our fellow-men*, and, in order to do this effectually, virtuous industry and honest labour must not only be preached up and praised, but it must be also *rewarded* and made to *appear* "the best policy;" for if not, we shall assuredly find the majority of the struggling and poorer classes falling from want into vice, from destitution into crime. It is, I regret to say, a glaring fact, that, however opposed to the intentions and benevolent wishes of philanthropists, there is much in our present system which appears to offer a premium to vice. For it cannot be denied that the lot of the convict is, on the whole, (if he conduct himself properly,) preferable to that of the ragged, half-starved, but *honest* son of toil; or even to that of the unoffending pauper in the workhouse. Again, the training, education, and instruction in useful trades, enjoyed, gratis, by the juvenile criminals in a "reformatory," are advantages that the poor but virtuous youth of both sexes must sigh for and seek to obtain *in vain*.

All we claim for the honest poor is EQUALITY with the criminal; that he may enjoy equal rights, equal benefits, equal advantages as to diet, clothing, lodging, training, education, and instruction in useful handicrafts and trades, with the convicted felon!

All classes of the community, whether unsound in mind, as the idiot or lunatic, whether diseased in body, blind, deaf, infirm, debased in soul, the prostitute, the juvenile thief, or the adult criminal, all are provided with receptacles, such as asylums and reformatories, for the cure of their physical or moral leprosies; but the *virtuous* poor have no refuge (we mean of any extent beyond a few isolated asylums); they excite no pity, and therefore no pleading voice is raised in their behalf.

Many, I doubt not, will be surprised to learn that, at the moment at which I am now writing, there exists in our own city, under what is considered the highest patronage, a "Society for promoting Education and providing industrial employment for Females in the *East*;" and this, alas! whilst our own poor girls and boys, our own honest neighbours of both sexes here in the *West*, are forgotten and uncared for!

Charity should, indeed, begin at home, and though the "females in the East" may be worthy of our sympathy and attention, surely we should first succour our own deserving and innocent poor. If we are to listen to the far-distant cry of distressed females, "Come over and help us" (see 7th Report of the Society), should we not more promptly respond to the agonizing appeal of our own Irish sons and daughters at our very doors!

A wide field of usefulness and Christian charity seems open to the exercise of individual exertion and private benevolence amongst us; and were Committees formed in each district for such a noble object, vast good would accrue, and a fair trial would be given to our "Refuges of virtue."

III. These Committees might also inquire and report on another class of most deserving objects, and suggest practical means of ameliorating their sad condition. They, doubtless, will find, in most of our parishes and districts, virtuous females who languish in the forlorn garret of poverty, or damp cellar of distress, who are compelled *to remain at home*, if home it can be called, to watch the last sighs of their aged and infirm parents, using their best efforts for their support, but unable to *obtain* sufficient work for their existence. Many of those amiable individuals, with good character, of industrious habits, might, by giving a moderate *security* through such a Committee, be enabled to meet the pressing wants of their *peculiar position*.

Whether we regard the national prosperity, the public welfare, or the private interests of individuals, these proposed Institutions, we believe, will have great claims upon all concerned. Their objects are to instruct and to educate the youthful mind—to advance the young in useful trades or occupations, and to diminish the number of those who otherwise might outrage the laws of God and of society.

Thus, under Providence, will they be the means of breaking the chains of unholy confederacies, depriving the wicked of successors, the gaols of inhabitants, and stern justice of its infatuated victims.

Dublin Castle, March 10th, 1859.

The Philanthropist,

AND

SOCIAL SCIENCE GAZETTE,

July 1, 1859.

Last month we gave our readers a brief summary of Mr. Acton's "Observations on Illegitimacy," in certain London parishes, reserving the expression of any opinion on his speculations for our present number We are bound in the first place to give him great credit for diligence and accuracy in the compilation and analyzing of statistics. No fault, we believe, has been found with his *brochure* in this respect; and, so far, he has deserved well, both of the public in general, and of the Statistical Society (before whom his paper was read) in particular. But while assenting generally to his premises, and recognising fully the existence of the mischiefs of which he complains, we cannot but disagree with several of his conclusions, and altogether doubt the efficacy of some of the remedies he suggests for the mitigation of what is now called, by common consent, "*the* social evil."

After classifying the alleged fathers of illegitimate children, Mr. Acton makes some severe remarks on male domestic servants, and on the results of the present system of keeping a large number of single men and women together in households. To a certain extent he is right; but still it ought not to be forgotten that in a considerable number of instances the servant is merely put forward *by arrangement* as the father of the illegitimate child, to conceal the frailty of Paterfamilias himself, or some scion of his house. This qualifying fact will not, we imagine, be questioned by any person of extensive experience and knowledge of the world. Again, in speaking of the inability of the mother in many cases to name the father of her illegitimate child, Mr. Acton expresses his opinion that this arises in a *very few* instances from the variety of her paramours, but much oftener from a tender regard for the interests of the father. Now when we consider how generally it happens that a *faux pas* of a single woman, more especially in the lower ranks of life, leads to a succession of intrigues, we cannot help thinking that Mr. Acton has in this particular represented what is really the exception as the rule, and the rule as the exception.

These points, however, are of comparatively slight importance. But in discussing the question of the difficulties attending the affiliation of illegitimate children under the present system, Mr. Acton has fallen into a more serious error. These difficulties, which we have no need to particularize here, are twofold; relating in the first place to the mother, and secondly to the parish. With respect to the latter, Mr. Acton proposes that parishes should have the same power given them of recovering the sums they have expended from the fathers of illegitimate children as at present from the fathers of legitimate ones. With this recommendation we are inclined to agree. We have no wish to rescue the seducer from any of the consequences of his own iniquity; but we must emphatically protest, however harsh our opinion may at first sight appear, against any serious alleviation of the condition of the mother, whether by pecuniary means or in respect of the difficulty of obtaining the corroborative evidence now required by law as to the paternity of her illegitimate child. We must not forget that where no higher motives of self-respect, morality, and religion, exercise their control over a woman's conduct, there is no bond to restrain her, no force to counteract the impulses of nature and the temptation of circumstance, but the prospect of certain misery and possible ruin resulting from the sacrifice of her chastity. To weaken this force, to lighten in any degree the pressure of this bond, would, in our opinion, be a most serious evil to society. We yield to no one in sincere compassion for the fallen, but we cannot allow that feeling to induce us to sanction any device which would render the precipice less formidable to others.

Lastly, as to the selection of wet-nurses from among fallen women: before dealing with Mr. Acton's treatment of this question, we cannot resist expressing our delight at the crusade which has lately been commenced against the habit of wet-nursing generally. We earnestly hope that the tract which has lately been issued by the "Ladies' National Association for the diffusion of Sanitary Knowledge" on "The Evils of Wet-nursing," combined with the practical efforts of the ladies themselves who are taking an interest in the subject, will eventually lead to the destruction of a wrong and unnatural custom. There is no doubt in ordinary cases that a wet-nurse must either neglect her own or her foster child. If young Hopeful does not suffer young Hopeless must. This is a hard alternative. Consequently the obligation of honesty is frequently overpowered by the force of nature. Madame Shylock is cheated of a portion of her "pound of flesh." If by a questionable convention of society a lady is merely thought "a clever creature" who is successful in smuggling over a few months' supply of eau-de-cologne, or a modicum of Brussels lace, a poor mother may be half forgiven the artifices which sustain her own child at the expense of her mistress's. We may imagine even a tolerably conscientious nurse, in order to snatch a little time to look after a child that is her own, soothing the "little asperities" of one that is not, with "Godfrey's Cordial," or "Mrs. Johnson's Soothing Syrup." We can scarcely be surprised if a less scrupulous hireling administers now and then even stronger potions with an

Digitized by Google

object so praiseworthy. Even a petty theft or so may to the partial mind of maternity appear to deserve a softer name, if not to be absolutely sanctioned by the high motive of promoting her own little darling's welfare. However, the general question we are content to leave to the championship of the ladies who have gallantly put on their armour to fight this battle—Our affair at present is with Mr. Acton. Ignoring the evils of the general system, Mr. Acton proposes to employ "fallen women," under restrictions which he no doubt considers sufficient, as wet-nurses. We must do him the justice to state that we think his proposition has been understood in too wide a sense, and therefore attacked somewhat too strenuously by our contemporary, *The Lancet*. Nevertheless with the physiological arguments adduced against Mr. Acton's scheme we entirely coincide, and though that scheme may have been unintentionally misrepresented in some degree, the reasoning applies to the scheme *in toto*. Take the case most favourable to Mr. Acton's view—the employment, for instance, as wet-nurse, of a domestic servant who has been known only once to go astray, and whose character is otherwise good. Now it has been shewn most clearly that not only the physical condition, but the *moral disposition*, of the nurse is of very serious consequence. Can the latter, in such a case, be possibly satisfactory? Even admitting that it may, what security can we have as to the former point? When a woman is known to have erred once, how can we be sure that she is not at the very time of her employment as nurse, carrying on a second intrigue—an intrigue which may possibly be the means of directly contaminating the infant committed to her charge? "Can a corrupt tree bring forth good fruit?" As to the appeal which is made to us by Mr. Acton and others to adopt their system on charitable grounds, with a view to 'rescuing' the unhappy mothers of illegitimate children, it must of course, if such a risk would be incurred, be entirely disallowed. And even independently of any consideration of the actual danger involved, it appears to us for the reasons we urged before against another of Mr. Acton's propositions, that this proposal ought not to be accepted. With the purpose of doing good, we should be paving the way to an immense amount of evil. By systematizing even so slight and apparently merciful a provision for the mothers of illegitimate children, we should be aiding the increase of illegitimacy. It would surely be a false compassion to encourage a plan which would detract ever so little from the punishment of vice. Anxious as we are to further any sound plan for promoting the restoration of the fallen, we cannot support a scheme which would inevitably involve this lamentable consequence.

Our opinion, then, in the whole question is that the system of wet-nursing should be generally abandoned. We doubt indeed if it ought to be resorted to in cases where it has been usually thought *necessary*. Some of the strongest men and fairest women have never "hung upon the breast" at all. The readers of Adam Bede may not have forgotten that the lovely and eloquent Dinah Morris was, if we may believe 'such an honest chronicler' as Mrs. Poyser, "fed with a spoon by her Aunt Judith." If a child were really "born with a silver spoon in its mouth," the spoon might, on an emergency, be utilized at once. However, if wet-nurses are employed only when a medical adviser thinks it requisite, there would, at all events, be no need to extend the class from which they are select d so fatally low as Mr. Acton has recommended. His proposition, if adopted, tends in some measure to accelerate that degeneracy which time itself brings about rapidly enough.

Damnosa quid non imminuit dies?
Ætas parentum, pejor avis, tulit
Nos nequiores, mox daturos
Progeniem vitiosiorem.

SALTLEY REFORMATORIES.

Who shall deny the advantages of the Reformatory system, when we find a lad, one of a family who seem all to have been more or less troublesome to magistrates and judges, so completely remodelled in one of our Reformatories, as not only to have merited being taken by the hand at once in a distant country, but to have become so satisfied with his position as to give scope to fraternal affections, and to send home money for his brother to be sent out to him! We will not deny that many examples equally encouraging may have been produced by other Reformatories, we feel it not only may, but must so. There is, however, a peculiarity in the accompanying letter from a lad who was trained at the Saltley Reformatory; it clearly shows that while the boy has learned to do what is right, and shows a brotherly affection to his family, he does not allow that affection to get the better of his common-sense. We understand that the writer, besides the brother for whom he writes, has another who was and perhaps is a sad rascal: he had been in prison many times, and was finally sent to Pentonville Prison, where, about two years since, he severely maltreated one of the officers. The Saltley Reformatory may look upon this lad with great satisfaction, and the knowledge of his conduct will have its due effect upon the minds of the other inmates. The letter is dated Christchurch, Canterbury, New Zealand, March 30, 1859, is addressed to the Right Honourable C. B. Adderley, Esq., and has the advantage of being written, not by the boy, but by one who has watched his conduct, and can thus offer independent testimony to the genuineness of the case. After a few preliminary remarks the writer says:—

"I cannot refrain from trespassing upon your attention for a few moments, and I believe you will be much gratified at learning the subject of my communication.

"You will remember probably the boy James H——, whom you sent out in the *Egmont* from Saltley Reformatory. He has gone on very well from the first, was for a long time servant at the bank in this town, but latterly, thinking to better himself, took a trip to Sydney.

"He returned from thence about a month back, bringing with him, as he informed me, some goods by way of a small trading speculation. He now wishes to help out a brother from England; and I have thought that it would be very satisfactory to give you such substantial evidence of his success and good conduct as is implied by his coming forward to advance money to his brother. I beg therefore to enclose a bill of exchange for the sum of eight pounds five shillings. He wishes the money to be used in the payment of his brother's passage, but not to be sent to him, lest he should spend it. I feel greatly pleased at being able to report so favourably of H——."

EMPLOYMENT OF THE FALLEN.

We have elsewhere entered somewhat largely upon Mr. Acton's suggestion of the employment of fallen women as wet-nurses. Having protested strongly against such a course, we would offer a few remarks as to their position and claims for our consideration, lest it should be thought that we were regardless of them. There is no small difficulty attached to the employment of this class. It is not comparable with any other criminal class; for the simple reason that, while others have to battle with their difficulties and loss of character alone, those to whom we are now specially alluding have the additional incubus of their children. Hence the difficulty; because, while anxious to restore them in the spirit of meekness, it is not easy in the first place to see in what way and how far we may help them without appearing to give encouragement to the

Digitized by Google

sin which has placed them in the position of degradation from which we wish to raise them; nor, in the second place, to find the kind of employment that they might undertake and *still fulfil their maternal duties*, with which we should be extremely cautious about interfering. There cannot be a question with any right-minded persons as to the importance of this condition in any question as to their employment. The neglect of maternal duties induces a large amount of infant mortality; and by relieving these mothers of the burthen which their sin has brought upon them we set aside or do violence to a natural law, which decrees that the mother is the only fitting guardian to her child in the earliest and most dependent days of its existence. The child being unlawfully born does not release the mother in any way from her maternal duties to her offspring; on the contrary, her responsibility to her infant is increased in consequence, and her obligations to society require that she should make this, the only reparation in her power, for having outraged its edicts. Her position is unquestionably one of extreme difficulty; and in looking for a mode of employment whereby such an one can fulfil her duties, and yet earn sufficient both for herself and child, we must steer on one side clear of encouragement to vice, and on the other of any inducement to her to abandon her child or transfer her maternal obligations to a stranger. Will our readers turn this problem over in their minds? We shall be thankful for any suggestions on this difficult subject.

ADULT REFORMATION.

How comes it that, while the benevolent and Christian view of dealing with criminals, in the spirit of meekness, instead of, as heretofore, wholly in wrath, has taken such a strong hold on the public, yet the stream of public charity, and the aid of Government in this matter, have tended almost exclusively towards the young? There are abundant institutions where criminals may hear the voice of kindness and forbearance, which is so novel to them, where they may learn habits of industry, where they may be separated from evil companions and evil temptations, and where all is done that sympathy can suggest to encourage them in good and religious habits, and to eradicate their evil ones. But these are confined in their operations to the young. There are but two institutions having for their special object the treatment of adults in that manner which has been found to work so satisfactorily in the case of juveniles. There still obtains to a certain extent, in some quarters, a foolish and false notion that adult criminals cannot be satisfactorily dealt with except by severe measures of penal discipline,—that to manifest kindness and forbearance towards them is like throwing pearls before swine, who will trample them under-foot, and turn again and rend you.

Those who have been careful to examine the matter have seen abundance of proof, both at the Preventive and Reformatory Institution in the New Road, and also in the original Adult Reformatory in Great Smith Street, Westminster, that adults as a class are as amenable to good impressions as the juveniles, and even more ready to avail themselves of opportunities, which have hitherto been denied to them, of earning a living in decency and honesty.

We do not propose here to enter into arguments in favour of criminal reformation. Those who are likely to take interest in our pages must have already given their adherence to the attempts which have been so successfully made, under the full belief that it is expedient in every way to encourage restoration to society, in those whose folly has cast them for awhile beyond it. But we do desire very sincerely that the matter of adult institutions should be more considered than it is. The London Reformatory for adults, and its sister institution in the Euston Road, have abundant proof that as fair a per-centage of the inmates committed to their care turn out eventually well as in the generality of institutions; and certainly sufficient good results have accrued to warrant a steady perseverance in the plan. Yet what is the case? The Reformatory in Smith Street has been compelled to reduce its numbers for want of support, and it may be questioned whether it will not shortly be compelled to close its doors against *all* applicants, or even discharge those already under its care. On the other hand the institution in the Euston Road only contrives to exist by the most arduous and persevering attentions of the honorary governor to the collection of funds, when the public should enable him rather to devote his time to the work of instruction which he has undertaken. It is well known that his exertions in this matter are almost incredible; but, while we give him the honour due for such exertions, we feel that it is a fictitious state of things, when an institution, the internal management of which demands so large a share of his attention, is compelled to trust mainly, if not completely, for the funds without which it could not of course exist. It would almost seem as if the public had yet to be reasoned with as to the possibility of adult reformation, or the expenses necessarily incident to it; whereas both are not only proved by facts, but acknowledged by everyone who knows anything of the subject.

Now the real fact of the matter is that the adult reformatory system has never had a fair trial. Had the liberality and care which has wholly flown towards juveniles been permitted to take cognizance of elderly criminals,—had not a false feeling been created by the fact that hundreds have been discharged after the expiration of their sentence, with positively no alternative but to return to their old resources, and bring a double amount of odium on discharged criminals,—in short, had the care of the adult met with a similar consideration to that of the juvenile,—there is abundant presumptive evidence that similar pleasing results would have followed. But what is the case? As we have said, there are two adult reformatories, open to the inspection of all, and such as never fail to satisfy those who really visit them and judge for themselves. Yet is one almost fading away, and the other existing wholly by the begging exertions of one who could scarcely be equalled. And in the meanwhile the Government makes its grant of 7s. a week for the juvenile, allowing the payment to continue for four or five years, during which the lad should by his training become also valuable by his labour; while it only allows 5s. for the adult from sixteen to twenty-one, for one year; and for those above that age refuses its aid altogether. It appears to us that this is a matter of considerable importance, and one which legitimately falls within the province of the Reformatory and Refuge Union to consider. Mr. Baker of Hardwicke is, we know, anxious in the matter, and there requires but a proper agitation of the matter to induce a better feeling, and afford to adults who may be desirous of regaining their lost character the same advantages which have been so liberally and so successfully placed within the reach of the juveniles.

THE CRIPPLES' HOME.

In Hill Street, Dorset Square, there is a plain unpretending row of houses, with a gateway between the first two, and a board announcing "the Cripples' Home, Female Refuge, Infant Nursery, and Public Laundry. Here some thirty or forty inmates, the greater part of whom are crippled, are busily engaged, either in

Digitized by Google

making a variety of hats, bonnets, baskets and mats, or, so far as their physical condition will admit, in laundrywork or cookery. The names which occur in the gentlemen's visiting committee and the ladies' committee are a sufficient guarantee to the public of the *bonâ fide* character of the Institution, and we believe it has seldom or never been visited by those who have the power as well as the will to help their fellow-creatures, without eliciting very substantial evidence of the approval which it incites.

There is something especially painful in the contemplation of poor cripples, deprived to a great extent, and in many cases almost entirely, by an allwise Providence, of the means of earning a livelihood, and it not unfrequently happens, that coupled with the crippled state of the body, there is an injured state of the vital functions, weakness, sickness, and ill-health. All honour, then, to an institution which takes care of such! It is gratifying to find, from the report for the past year, that twenty have been fairly provided for, in situations, by emigration, or placed in the "West-end Laundry" or similar Institutions.

The inmates of the Cripples' Home are instructed in straw-bonnet making, in all its various branches in the hope of thus enabling them eventually to earn their own living. In their spare time they are taught a great variety of basket and mat work.

We commend the Institution to the sympathy of the kind public.

BRITISH LADIES' SOCIETY.

The bazaar to which we drew attention in our last, has, we are happy to say, proved, under divine permission, very satisfactory. It was a sight not to be easily forgotten by those who had the happiness to be present on the occasion. The weather was all that could be wished, and the various stalls were scattered about, under the shade of a mass of beautiful trees, through which a long path wound in the most picturesque manner. The company was both large and good. The committee have just reason to be grateful that their humble efforts on behalf of poor fallen creatures have been so bounteously blessed by One whose chief pleasure was to seek and restore the lost ones of his flock.

[FOR THE PHILANTHROPIST.]

It appears that there is a temporary glut in the labour market of the British North American provinces, so that for the present those countries do not afford an outlet for the boys of our Refuges. We are glad to hear, therefore, that the Reformatory and Refuge Union have been in communication with a gentleman commercially connected with the Cape Colony, and who has already been instrumental in sending youths thither. From this gentleman some valuable information has been gained, which the Union has communicated to us.

It appears that, owing to events which took place a few years since, there is a strong feeling at the Cape against all who have ever been convicted, or even charged with crime; so that boys so circumstanced cannot be sent to South Africa; but for those who do not come under this category, and who have received industrial training, and have either attained some proficiency in a trade or are used to farm labour, there is a good opening. Boys under sixteen years old should not be sent; indeed, eighteen is a better age. The bigger a boy is of his age the better. Probably 100 boys a year might be advantageously placed, and indeed more, when the public works now projected shall be carried on. Cartwrights, wheelwrights, and harness-makers are particularly in demand in the district of George.

The climate is so good that boys apparently weak here would soon become robust and healthy.

It is of the greatest importance that any boys who may be sent to South Africa should be consigned to some person who would take care of them and put them in the road to employment, since, if turned loose on shore, they would probably fall among the low coloured population, and go wrong. There are some gentlemen in different parts of the colony who would not object to take care of youths: if a large number, however, are to be sent, it would be necessary to organize some system.

Some expense must be incurred in sending the lads out, since the Colonial Emigration Commissioners cannot take boys. The cheapest and best mode which remains is to place them in merchant ships, three or four in each ship, as ship's boys to work as required on the passage. By this mode the passages can be obtained at from £8 to £10 each. The boys, however, should have the means of supporting themselves on their arrival until they get into work: this cannot be estimated at less than from £1 10s. to £2 each.

The Reformatory and Refuge Union will, we understand, be happy to aid any persons desiring to obtain information on this subject.

THE ROYAL HUMANE SOCIETY.

The anniversary festival of this institution, of which her Majesty is the munificent patron, was held at the Freemasons' Tavern, on Thursday, June 16th, Mr. Byng, M.P., acting as chairman. Among the company, about 150 in number, were Sir Benjamin Hawes; Sir Walter Stirling; Mr. A. W. Kinglake, M.P.; Mr. Frederic Dundas, M.P.; Mr. W. Hawes, and several other patrons and friends of the society. The institution, established far on to a century ago by a few benevolent gentlemen, has for its main objects to collect and circulate the most approved methods of recovering the apparently drowned or dead, to suggest and provide suitable apparatus for the preservation and restoration of life, and to bestow rewards, honorary and pecuniary, on those who assist in carrying out its beneficent aims. From first to last it has done most signal public service in this work of mercy and humanity. One of the earliest and staunchest of its supporters still lives, Mr. Benjamin Hawes the treasurer (father of Sir Benjamin Hawes), now in his 90th year, who until this occasion has never missed attending its anniversary meetings for the long period of 73 years consecutively. During the past year, 165 cases of rescuing or attempted rescue from drowning have been brought under the notice of the society, comprising 190 persons. Of these 179 were successfully treated, but 11 were, unfortunately, beyond recovery; and 31 of the number were instances of attempted suicide. They have also in the same interim conferred and distributed 23 silver and 43 bronze medals, 86 pecuniary rewards of various amounts, and have awarded their thanks in 21 other cases to persons, some of whom are women, who have been instrumental in saving life from drowning. Out of 165,000 persons estimated to have bathed in the Serpentine during the last summer only 21 casualties occurred, not one of which, owing to the prompt attention of the society's men, proved fatal. During the winter of 1857-8 the skaters and sliders on the ice in the parks and Kensington-gardens were estimated at 50,000, of whom 60 were rescued by the appliances of the society from a watery grave. Of these eight were saved in Hyde-park, ten in the Regent's-park, fifteen in Kensington-gardens, and twenty-seven in St. James's-park. There are besides 241 stations in different counties at which the society's drags and apparatus are kept. It should be stated, to the honour of the medical officers of the institution, of whom there are several, all of them highly skilled by experience in the resuscitative art, that they render their invaluable services altogether gratuitously. The names of those benevolent gentlemen are not even to be found in the list of committeemen and others, printed with the annual report, so that they may be literally said "to do good by stealth." The persons to whom the Society's medal was distributed last night by Mr. Byng, for saving life during the last year, were Mr. Henry Myers, Mr. A. Stamers, Mr. T. J. Wynne, son of Lord Newborough; Mr. T. D. Lees, a blind man at St. Andrews, Fife; Mr. J. Fosse, Chevalier of the French Legion of Honour, and merchant at Beaucaire, who has rescued upwards of 60 persons from drowning in his time; Lord Hastings; Miss Rowbotham, of Woolwich, aged 16; May Hectorson, a woman in humble life, in the Shetland Islands; subconstable Stephen Hartney, of Cork; and Thomas Griffiths, of Bridgewater, who has saved no less than 18 lives. The achievements performed by some of these persons were absolutely heroic, and the relation of them last night frequently elicited enthusiastic cheers from the company.

PARKHURST.

The following circular has been forwarded to the various institutions throughout the country by the committee of the "Home-in-the-East," who are anxious that "Parkhurst" should be certified under the Act for the reception of juvenile offenders :—

"Home-in-the-East Reformatory,
"*Old Ford Bow, London, E.,*
"*May 25th*, 1859.

"Dear Sir,—The Committee of the Home-in-the-East have had their attention specially drawn to a circumstance in connection with boys received under the 17th and 18th Vic. cap. 86, which they consider to be of great importance in the successful conduct of certified reformatories.

"The youth, when received into the reformatory, must be, to a large extent, unknown as to character and previous habits to the governor of the institution.

"It will, therefore, occasionally happen, that a boy is committed for a term of years, who, from his previous habits and training, is *altogether* unfitted to be an inmate of such an institution.

"The Act of Parliament does not make an adequate provision for dealing with such a case; it only provides for a removal if another reformatory can be found willing to receive, but naturally another institution is unwilling to admit a lad under such circumstances.

"The onus, therefore, appears to rest on the institution to *detain* the lad, even although it may be quite evident that his conduct is producing a very bad influence on the other boys, at the same time that his reformation appears hopeless.

"The remedy which suggests itself to the Committee of the Home-in-the-East is as follows:—

"That application should be made to the Home Secretary to have Parkhurst (a penal school for boys) certified for the reception of criminal youths, and that power should be given to the Home Secretary upon proper representation to order the removal of a youth from a certified reformatory to Parkhurst.

"The Committee of the Home-in-the-East will be glad to know whether you consider such a plan would be beneficial, and also whether you would be willing to join in promoting the measure proposed, by a joint note; by a deputation to the Home Secretary; or by individually at this time pressing the question on the authorities.

"I am, dear Sir,
"Yours very truly."

The replies to this have been so satisfactory that, acting under the advice of Mr. Baker, of Hardwicke, and Mr. Garnett, M.P., both of whom are leading men in the reformatory movement, the Committee of the Home-in-the-East have prepared the following memorial to her Majesty's Home Secretary, which has been sent to each reformatory for signature :—

"*London, June 16th*, 1859.

"*To the Right Honourable Her Majesty's Secretary of State for the Home Department.*

"Sir,—Your memorialists are and have been for some time past actively engaged in the conduct of those reformatories, since the rise of which the juvenile crime of England has diminished 45 per cent in two years.

In 1856 ...	13,981	*Commitments of youths for England, under 16 years of age.*
„ 1857 ...	12,501	
„ 1858 ...	7,622	

"That while we feel thankful for the success already obtained, yet all of us have suffered more or less inconvenience from a cause, to the remedy of which we would respectfully beg to call your attention.

"We have every reason to believe that the degree of liberty enjoyed by the boys in a reformatory, acts most beneficially on their minds and tempers, and that the general reduction of that liberty would have a bad effect on the reformatory system itself, and on the individuals brought within its influence.

"But there are occasional and exceptional cases, in which a stronger power of coercion than is convenient in most reformatories is desirable. When a boy is committed by a magistrate to a reformatory, it is nearly impossible that the magistrate, or even the police should be able accurately to know his temper, or how far he can be trusted; nor can the manager of the reformatory discover it till he has passed through a certain period of probation. If then the boy turns out upon trial to be so determined a runaway, or of so violent a temper that the system which has the best effect on others will not avail with him, the law, at present, provides no means of subjecting him to a stronger rule, except by sending him to prison for three months, at the end of which time he must be received back into the reformatory—probably more sullen, and less inclined to submit to the lighter rule, than before his imprisonment. And he must be *detained* there till the end of his sentence—as we feel strongly the inconvenience of allowing a boy to escape, and of giving thereby a premium on misconduct.

"Your Memorialists are informed that the prison for young offenders at Parkhurst is at present by no means fully occupied, and so far as we can judge from the present decrease of the juvenile crime of the kingdom, is not likely to become more so.

"That the prison of Parkhurst is of exactly the description required for such boys as either from repeated attempts to abscond, or from extreme violence of temper, are unsuited to the milder rule of our reformatories, and that if that prison could be certified as a Reformatory, so that when a strong case was proved, her Majesty's Secretary of State might order the removal of a boy thither from any other reformatory, a very important boon would be granted to your memorialists; their power of still further diminishing the crime of the country would be materially increased, and from the dread of passing into a more strict and penal condition, an unruly inmate of a reformatory would have a wholesome fear of absconding, or offending against the system therein established."

We understand that it is then proposed to bring the whole matter before some leading reformatory advocate, and to arrange a deputation to place the matter fairly before the Home Secretary. This movement has our most hearty concurrence; but we cannot help thinking that the opinion of the governors and chaplains of gaols should be got, for we are strongly of opinion that it would be found to coincide fully with that of the Committee of the "Home-in-the-East.."

The Carrageen Moss.—To preserve it for esculent purposes, it must be washed in fresh water, and then left to dry, when it soon becomes horny to the touch, and resists pressure. If boiled, it subsides into a thick, colourless jelly, that is thought to be very nutritive, and is employed for many purposes. Invalids take it in their tea, or epicures in their blanc-mange. Calico-printers boil it down into size, and use it in their manufactures. It is said to be a good fattening substance for calves, if boiled in milk; and, lastly, pigs are very fond of it when it is mixed with potatoes or meal. It is sometimes known by the name of "Irish Moss." It will grow in an aquarium.—*The Common Objects of the Sea-shore, by the Rev. J. G. Wood.*

REFORMATORY AND REFUGE UNION.

The following Resolutions have been adopted by the Committee, and have our cordial concurrence :—

I.—That no uncertified Institution, supported by or seeking public contributions, be for the future placed on the list of the Union, which has not a Committee responsible in itself, and ready to guarantee the *bonâ fide* character of the Institution.

II.—That the Secretary shall request every such uncertified Institution to send in a list of its Committee, and, if requisite, shall communicate with some of the members named for the purpose of making any inquiries that may seem necessary.

III.—That a Supplement be prepared, to accompany the Pamphlet, giving the names of the Patrons, Officers, and Committee of every such uncertified Institution, with their places of abode.

Our readers will be glad also to find that the Committee have taken the trouble to classify the Provincial Reformatories so as with that of the Metropolitan, which appeared in our last, to form a complete list, which cannot fail to be of great service.

PROVINCIAL REFORMATORIES, CERTIFIED UNDER THE 17 & 18 VIC. CAP, 86.

NAME.	POST ADDRESS.	When Founded	Accommodates.	What Ages Preferred.	CLASS RECEIVED, AND TERMS OF ADMISSION.
FOR MALES.					
Agricultural Colony (Roman Catholic).	St. Bernard's Abbey, near Loughborough.	1856	300	8 to 12	Roman Catholic Juvenile Delinquents sentenced to detention —from any locality.
Bedfordshire Reformatory.	Northeyn Turvey, Newport Pagnell.	1857	30	13 to 15	Boys sentenced to detention—from the County, free; from other counties, on payment.
Berks Reformatory School.	Three Mile Cross, near Reading.	1855	30	12 to 14	Boys sentenced to detention—from all parts but London, 3s. per week in every case.
Bradwall Reformatory School.	Sandbach, Cheshire.	1855	60	under 11	Boys sentenced to detention—from any locality.
Buxton Juvenile Reformatory.	Marsham, near Norwich.	1853	40	10 to 16	Boys sentenced to detention. Limited chiefly to Norfolk.
Calder Farm Reformatory School.	Mirfield, Normanton.	1855	100	10 to 14	Boys sentenced to detention—from any locality, on payment of 2s. 6d. per week.
Castle Howard Reformatory.	Welburn, near York.	1856	80	12 to 14	Boys sentenced to detention, having been previously more than once convicted. Limited to N. and E. Ridings and City of York, and town of Hull.
Cumberland Reformatory School.	Stanwix, Carlisle.	1854	40	8 to 16	Boys sentenced to detention—from Cumberland and Westmoreland. A few received from Yorkshire and Lancashire.
Devon and Exeter Reformatory Farm School.	Brampford Wood, Exeter.	1855	30	10 to 14	Boys sentenced to detention from the county of Devon. From other counties at £7 to £10.
Essex Reformatory School.	Harlow.	1857	30	12 to 14	Boys sentenced to detention—from the county, or from other places in exchange.
Glamorganshire Reformatory.	Howdref Ganol, near Neath.	1857	30	under 16	Boys sentenced to detention—from the county free; from other counties at 2s. per week.
Hampshire Reformatory School	Eling, Southampton.	1855	50	under 15	Boys sentenced to detention—from the county free; from other places on payment.
Hardwicke Reformatory.	Near Gloucester.	1852	45	14 to 16	Ditto ditto.
Herts Reformatory.	Bengeo, Ware.	1857	50	under 14	Ditto ditto.
Kingswood Reformatory.	Kingswood, near Bristol.	1852	55	11 to 14	Boys sentenced to detention—2s. per week expected with cases from a distance.
Leeds Reformatory School.	Adel, near Leeds.	1857	50	10 to 13	Boys sentenced to detention—chiefly from Yorkshire.
Leicester Juvenile Reformatory	Peckleton, Hinckley.	1855	34	under 14	Boys sentenced to detention—from any locality.
Liverpool Farm School.	Newton, Lancashire.	1859	80	under 16	Boys sentenced to detention, and free cases on small weekly payments—from any locality.
Manchester and Salford Reformatory.	Blackley, near Manchester.	1855	50	12 to 15	Boys sentenced to detention, and others brought by their parents or applying voluntarily; *as a rule* limited to local cases
Milborne Reformatory.	Milborne, near Blandford.	1857	20	13 to 16	Boys sentenced to detention—chiefly from Dorset; or other counties under peculiar circumstances.
Monmouthshire Reformatory.	Ty-Draw, near Pontypool.	1858	25	under 15	Boys sentenced to detention—from any locality.
Northampton Society's Reformatory School.	Tiffield, Towcester.	1856	30	11 to 14	Boys sentenced to detention, who have been previously convicted. Boys from other counties on payment of 2s. 6d. per week
Norfolk Reformatory.	Catton, near Norwich.	1857	15	about 16	In connexion with the Buxton Reformatory, from whence the best-behaved boys are transferred.
North-Eastern Reformatory.	Netherton, near Morpeth.	1853	120	10 to 12	Boys sentenced to detention—from Northumberland, Durham, Newcastle, and Berwick-on-Tweed.
North Lancashire Reformatory.	Bleasdale, near Garstang.	1857	45	12 to 15	Boys sentenced to detention—from the county of Lancashire N., S., and W. R. of Yorkshire.
Philanthropic Society's Farm School.	Redhill, Reigate.	1788	280	under 16	Chiefly boys senteneed to detention on payment; a limited free list.
Saltley Reformatory Institution	Small Heath, Birmingham.	1853	50	about 13	Boys sentenced to detention—from any locality.
School Frigate *Akbar*.	Rock Ferry, Birkenhead.	1856	200	14 to 16	Boys sentenced to detention, and free cases when a small weekly payment is made; from any locality—must be 75lbs. weight, and 4ft. 8in. high.
Stoke Farm Reformatory.	Near Bromsgrove.	1853	50	13 to 15	Boys sentenced to detention—from any locality, if sentenced to five years' detention.
Suffolk Reformatory School.	Thorndon, Eye.	1856	45		
Sunderland Industrial and Ragged School.	Sunderland.	1849	25	11 to 13	Boys sentenced to detention, and others who have been in gaol—from Sunderland or any neighbouring town.
Warwickshire Reformatory Institution.	Weston-under-Weatherly, Leamington.	1856	40	under 16	Boys sentenced to detention—generally limited to local cases.
Wiltshire Reformatory.	Warminster, Wilts.	1856	40	10 to 16	Boys sentenced to detention—limited to the county of Wilts.
Woodbury Hill Reformatory.	Shelsby, Worcester.	1856	33	12 to 14	Boys sentenced to detention—chiefly from Worcestershire and Herefordshire.
Yorkshire (Roman Catholic) Reformatory School.	Hulme-on-Spalding, near Market Weighton.	1856	200	10 to 16	Boys sentenced to detention—chiefly from Yorkshire. Boys from other counties on payment.
FOR FEMALES.					
Allesley Farm Reformatory.	Tile Hill, near Coventry.	1856	24	9 to 13	Girls sentenced to detention—from the county free; from other counties on payment.
Arno's Court (Rom. C.) Reform.	Brislington, near Bristol.	1856	300	10 to 13	Girls sentenced to detention—from all parts of England.
Birmingham Girls' Reformatory	Smethwick, Birmingham.	1854	45	under 14	Girls sentenced to detention, and others with whom 5s. per week for two years is guaranteed.
Devon and Exeter Female Reformatory.	Exeter.	1858	50	under 15	Girls sentenced to detention—chiefly from Exeter and Devon: from other counties on terms according to circumstances.
Girls Industrial Home.	St. Matthew's Street, Ipswich.	1857	18	13 to 16	Girls sentenced to detention—from the county free. Payment expected with girls from other counties.
Liverpool Girls' Reformatory School.	6, Mount Vernon Green, Liverpool.	1857	80	1 to 16	Girls sentenced to detention, and free cases where a small weekly payment is made—not limited to local cases.
Red Lodge Girls' Reformatory.	Bristol.	1854	60	8 to 21	Girls sentenced to detention preferred; voluntary cases on payment of 5s. per week.
Toxteth Park Girls' Reformatory.	Wellington Road, Liverpool.	1854	30	12 to 16	Chiefly girls sentenced to detention; voluntary cases on payment by parents or friends.
West Riding Reformatory Schl.	Wakefield.	1859	30	under 16	Girls under sentence of detention—from any part of Yorkshire.

Correspondence.

To the Editor of the Philanthropist.

In your last number a letter appeared from Mr. James Haughton of Dublin, a gentlemen well-known for his constant and earnest advocacy of the cause of temperance, upon the subject of the consumption of intoxicating drink.

Being much startled, both by the views, so contrary to those generally received, which Mr. Haughton puts forth, namely, that intemperance has increased during the last forty years in these countries, and by the facts which apparently support those views, I have been induced to examine the question carefully, and beg to submit to you the result of my investigation.

The main articles of strong drink consumed in this country are beer, spirits, and foreign wine. The consumption of cyder and perry, of which no returns exist, being chiefly confined to certain localities, and being very small in the great seats of population, those liquors will not materially affect the question; while British wines and mead are too little drunk to be of any importance.

With regard to spirits and foreign wines, we have exact accounts of the quantities on which duty has been paid for consumption; this is also the case with malt, which will afford an index to the consumption of beer; though, inasmuch as until 1855 malt used in distillation paid duty, and is included in the returns. The whole of it was not used in brewing; but, as this was the case all through the period over which the returns extend, it will not much affect the comparison of year with year.

I have before me a Parliamentary return (1856, No. 326,) which shows the quantities of spirits consumed in the United Kingdom (distinguishing the three divisions) from 1800 down to 1855, and the quantities of malt consumed from 1826 to 1855, together with the population of each census year. Mr. Haughton, I observe, compares the consumption of the year 1820 with that of 1826. Now, a glance at the above return will show that this comparison of two single years is quite fallacious, since the quantities consumed vary greatly from year to year, being affected probably by the price of barley, the state of trade, &c., &c. The only safe comparison is of the average amounts consumed in periods of years. Bearing this in mind, I have calculated the average annual consumption of spirits in each decennial period from 1801 to 1850, and of the quinquennial period 1851-5; and that of malt in the periods of 1826-30, 1831-40, 1841-50, and 1851-5; and by dividing each of these sums by the mean population of its period I have arrived at the average yearly consumption per head of spirits and malt in each period. The results are as follows:—

SPIRITS.

PERIOD.	Average number of Gallons charged with duty for consumption per head of the population.			
	United Kingdom	England.	Scotland.	Ireland.
1801-10	870	858	1,248	760
1811-20	743	729	988	689
1821-30	949	755	1,950	950
1831-40	1,117	839	2,535	1,266
1841-50	943	726	2,371	923
1851-5	1,046	790	2,227	1,350

MALT.

PERIOD.	Average annual number of Bushels charged with duty for consumption per head of the population.			
	United Kingdom	England	Scotland.	Ireland.
1826-30	1,381	1,983	1,490	281
1831-40	1,618	2,986	1,714	258
1841-50	1,392	1,886	1,485	202
1851-5	1,384	1,811	1,193	237

With regard to Wine a Parliamentary Return (1854, No. 464,) shews the consumption in the United Kingdom for every year from 1830 to 1853. Having added from other returns the consumption of 1854 and 1855, I have estimated (as I did in the case of spirits) the average annual consumption per head of the population for each decennial period, and for the quinquennial period 1851-5. The result is as follows:—

WINE.

Period.	Average number of Gallons charged with duty for consumption per head of the population of the United Kingdom.
1801-10	·382
1811-20	·255
1821-30	·267
1831-40	·255
1841-50	·230
1851-55	·232

It appears then (as far as can be judged by the above tables) that in England the consumption of spirits has lessened (in proportion to the population) since the beginning of the century. In Scotland the second decade shews a considerable diminution from the first; but the third decade shews a great increase over the first; and the fourth a large one over the third: since 1840 a diminution has been going on. Ireland, like Scotland, diminished its consumption in the second, and much increased it in the third and fourth decades. In the fifth there was an important diminution, which, considering that this period included both the famine and the labours of Father Mathew, is not to be wondered at. In the last period there was a large increase over the fifth decade.

As regards Malt the decade 1831-40 shews an increase in England over the period 1826-30. Possibly the introduction of the beershop system may in some degree account for this; since that decade, however, there has been a large diminution. In Scotland, as in England, there was an increase in the consumption of Malt in the period 1831-40; and there has been a diminution since, and to a much greater extent. In Ireland the consumption of Malt is so small as not to be worth considering.

The lessening in the consumption of Wine per head must certainly show an increase of temperance in the upper and upper middle classes, who are the main consumers of that beverage (the more so since it is probable that the wine-drinking class has increased faster than population generally.

As there never was any considerable smuggling of wine, nor much illegal production of malt, the accounts form, no doubt, as regards these articles, a fair index of the quantity consumed; but in considering the consumption of spirits we must allow for the large amount of smuggling and illicit distillation which took place formerly, but which is now nearly at an end.

Of this fact there can be no doubt, the magnitude of the sea-smuggling transactions on the Southern and Eastern coasts of England, fifty or sixty years ago, is well known, as is also the extent to which illicit distillation was formerly carried in Ireland and Scotland. So great was this, says Mr. Leoni Levi, (*Annals of Legislation*, vol. iv. pp. 46, 47,) that in 1821 a Commission was appointed to investigate the subject. Under the recommendation of this body the duties in Ireland and Scotland were much lowered in 1823, and those in England in 1825, at which time, it will be perceived from the returns, a great increase of duty-paying spirits took place, the number of gallons consumed being as follows:—

Year.	England.	Scotland.	Ireland.
1822	7,849,520	2,391,742	2,935,743
1823	7,157,334	2,446,145	3,633,833
1824	8,068,427	4,532,997	6,701,120
1825	7,013,338	6,142,885	9,277,422
1826	12,887,487	4,326,385	6,872,077
1827	11,072,935	4,980,168	8,273,083
1828	12,149,694	5,950,018	9,972,390

I was recently informed in Ireland that, notwithstanding that the duties are again high, there is at present very little illicit distillation in that country; this my informant attributed to the business of suppression having been handed over to the constabulary, who are much more efficient than the old revenue police. The fact that the population has been in great measure removed from the bogs and mountains, which afforded such facilities for the illegal manufacture, has probably something to do with the matter. Last year the duty was raised to 8s. a gallon, (the same as in Great Britain,) yet we do not hear of unlawful stills.

I believe that in Scotland also there is now but little illicit distillation.

To estimate either the quantities of spirits illicitly made or introduced is impossible; but that it was very large in 1820 is proved by the rapid increase in the quantity upon which duty was paid after the reduction. In the case of England, however, which consumes mainly beer, and where illicit distillation was never carried on to any very great extent, the account will be a truer index of the real

Digitized by Google

consumption of strong drink than as regards spirit-drinking Scotland and Ireland, where illicit distillation was so rife. Even as respects England, however, some allowance must be made for the smuggling of foreign spirits, which was great in the beginning of the century, and which continued to exist, to a more or less considerable extent, until the reduction of the duty by Sir Robert Peel. Making this allowance, and regarding both the consumption of spirits and malt in England, there can, I think, be no doubt that temperance has considerably advanced there, at any rate, since 1840.

Putting the above accounts out of the question, there are, as far as I am aware, no facts which would lead us to suppose that the progress in Scotland and Ireland is otherwise than in England; the same influences for temperance have been at work in those countries as here, and the duties on spirits have been raised more. Again, we find the proportionate consumption very low in the decade 1811-20, and very high, nearly double, in the decade 1831-40. Will persons who remember both these periods, say that they recollect more drunkenness in the latter one than in the former? I trow not.

Is it not, therefore, more reasonable to suppose that the very small consumption of duty paid spirits from 1811 to 1820, arose from the great extent to which illicit production was carried, and that the rapid increase in the consumption after that period was caused by the substitution of lawfully for unlawfully produced spirits? Indeed, we may fairly argue that the diminution which the accounts show to have taken place during the last fifteen years in the proportionate consumption of strong drinks, would be even greater, could we add to it the diminution in illegally produced liquor.

Even, however, if the consumption of alcoholic liquors were greater now than formerly, it would not necessarily be proved that the *propensity* to drink is stronger. With a large portion of the population the amount of drink consumed depends upon the ability to purchase it. This is proved by the fact that the consumption of exciseable liquors always falls off when trade is bad, and rises again with a return of prosperity.

Now, the agricultural labourers, who form a large part of the community, for the most part still earn such low wages, that they cannot spend any sum in drink which though not large absolutely, it may be an important fraction of their income; and their earnings were formerly less even than they are at present. The classes which are able to spend largely in drink are the miners, iron-workers, artizans, and some descriptions of town labourers.

Now these classes have increased very much faster than the rural labourers, and, therefore, the persons having, so to speak, *the command* of much drink, are now far more numerous in proportion to the population than formerly.

On the whole I trust that I have shown that there is no justification for the gloomy views of Mr. Haughton, and that we may congratulate the country upon a progress in temperance, though not so rapid at one as could be wished.

I remain, Sir, your obedient servant,
ALFRED HILL.

44, *Chancery Lane, June*, 1859.

To the Editor of the Philanthropist.

SIR,—I have read with considerable attention the report in your Journal of Mr. Acton's views on illegitimacy, and allow me space to indicate where I agree with him, and where I hold different opinions. My experience in the country is derived chiefly from what comes under my notice as a magistrates' clerk, and is therefore of limited extent; but, such as it is, it may not be without interest to your practical readers.

I will first speak of the points in which I can agree with Mr. Acton:—"He especially called attention to the fact that the registrars of both Marylebone and St. Pancras have noticed that in four cases the father has married the mother since the birth of the child. This he considered very encouraging, as bearing out the opinion he had advanced elsewhere, that if the woman be cared for, these marriages would be much more common. In prosecuting his inquiries, he had met with much corroborative evidence bearing out opinions he had long since advocated, that marriage, within her degree, is the most natural, safe, and certain way in which the mother of an illegitimate child can be permanently assisted." Doubtless: and magistrates may often do good by urging the putative father to marry the woman when her character is otherwise good.

As regards the present difficulties thrown in the way of a woman affiliating a child, I quite coincide with Mr. Acton when he says: "The man, if so disposed, can walk away, adopt a new hiding-place, and set the unfortunate at defiance. The mother may, it is true, again appeal to the magistrate; and he, after swearing her that she is not married, that the father has not paid the sum ordered, and that the child is still alive, may, on the payment of an additional sum to cover new expenses, issue his warrant for the apprehension of the recusant. But, asks the author, can the majority of mothers be expected to undergo the expenses of this ordeal?" In practice it is found that too many are deterred for want of means.

"The author suggests that parishes should have the same power given them of recovering the sums they have expended from the fathers of illegitimate children, as they now have from the fathers of legitimate ones. Such an enactment would have a healthy tendency in checking seduction and relieving the rates, while at the same time it would remove one of the most crying evils of the present poor-law." This is a good idea, and I think it would work well.

Thus far I can go with Mr. Acton, but I must be allowed to differ from him when "he fancies it much more often happens that a woman in her first pregnancy, when confined in a workhouse, declines to indicate the father of her child, from womanly *consideration for his feelings.*" I have never known much consideration for "*feelings*," but have found concealment induced by a promise of marriage.

I fear his proposed "establishment of a Government Board, or other competent authority, whose duty it should be to take charge of the pregnant woman thrown out of a situation; then to afford her work and assistance until confinement; then to see to her lying-in; and then to take steps to recover damages in the name of injured and outraged virtue and society from the FATHER of the child," would have a contrary effect to what the projector would desire. But why not consider the boys, after a certain age, as belonging to the *country*, and bring them up as soldiers and sailors at the cost of the state?

I am strongly of opinion, however, that the present law works far better than the old one, under which any man who could not prove an alibi was at the mercy of any pregnant strumpet; and I am sure, also, that women in the country have become more careful since the alteration (in 1839) was made.

I have the honour to remain,
Sir,
Your obedient servant,

Clerk to the Magistrates in the County of——.

June 6th, 1859.

MR. ACTON AND WET-NURSES.

To the Editor of the Philanthropist.

SIR,—The suggestions which have been made by Mr. Acton as to the employment of fallen women as wet-nurses are far too important in their probable bearing on the character and physical condition of the rising generation to be passed over in silence. I had looked for some observations from your own pen on the subject; and you will permit me to say that if I have rightly gathered your general opinion from hints which have from time to time appeared, I do not think you agree with Mr. Acton. Yet, sir, you have acted with an apparent injustice to your readers in permitting Mr. Acton's remarks at the Statistical Society to appear alone. Even if you agree with Mr. Acton's views, it would have been but fair to have given, concurrently with the abstract of his paper, the remarks which fell from others who were then present, more especially Dr. Webster and the Rev. Mr. Garnier. The former expressed his opinion very strongly, "that the system of ladies in high life employing wet-nurses was productive of much immorality; and it always would be so, because most married women, and most husbands, much to their credit, would refuse to be parties to neglecting their own children for the sake of a stranger." And the Rev. Mr. Garnier said, "his experience showed that the mother of an illegitimate child was much more difficult to deal with than the ordinary courtezan, because the poor unfortunate child was always there to testify to her shame and burden her movements. He coincided in the view before expressed

Digitized by Google

as to the immoral results of the wet-nurse system, which was equally injurious whether the women employed were married or single."

I would observe further that Col. Sykes, who presided on the occasion, while paying a just tribute to the importance of the subject on which Mr. Acton had touched, expressed his own belief that no amount of legislation would touch it, and if any improvement were possible, it would be found in the good feeling and example of the heads of families.

This will show your readers, if you give it space, that Mr. Acton did not find the Statistical Society completely of his opinion; indeed, I think that he will experience more difficulty than he seems to anticipate in inducing the public generally to agree with him.

I am, Sir,
Faithfully yours,
A Hand-reared Reader.

THE INDUSTRIAL SCHOOLS ACT.

We make no apology for drawing the special attention of our readers to the following most important letter, addressed by Mr. Thomas James Hall, the senior police magistrate of Bow-street, to Mr. Adderley; nor will we venture to add another remark beyond the statement, that a deputation to Sir Richard Mayne on the subject is being organized by the Reformatory and Refuge Union, with a view to inform him that there are eight industrial schools in the metropolis, certified under the Act, and to urge him to instruct the police to take up children (beggars) between seven and fourteen years of age, for commitment.

MR. T. J. HALL TO RIGHT HON. C. B. ADDERLEY, M.P.

Bow-street, 21st April, 1859.

Dear Sir,—I have been so much engaged since the receipt of your letter of the 24th ult., that I have been unable to send you an earlier reply. You remark that you cannot see that the words "under any general Act," excludes children who are idle wanderers from some of the descriptions in 5 Geo. IV., c. 83. I do not remember expressing any doubt in my letter to Mr. Hardy, whether children committing an act declared by that Statute an offence may be detained in a certified industrial school. I think I stated it to be the opinion of the magistrates that, worded as the 20 & 21 Vic. c. 48, s. 5 is, children cannot be brought within its operation, unless guilty of an offence under some statute relating to vagrants. The 5 Geo. IV. divides those who fall within its provisions into three classes, of which but two need be noticed, viz., "idle and disorderly persons," and "rogues and vagabonds." The case you mentioned of a boy almost naked, lying in a doorway in a square, asking nothing, but receiving, is clearly within the former description; for section 3 of 5 Geo. IV. declares that "every person placing himself in any public place, &c. to beg, or *gather* alms," shall be deemed "idle and disorderly;" the word "gather" being separated from the word "beg" by the disjunctive "or," renders it quite unnecessary to prove that an individual charged was heard to *ask;* it is enough to show such facts as will satisfy a reasonable mind that the accused did place himself where he was found for the purpose mentioned. By section 6 of the same Act, *any one who shall find a person offending against it may apprehend him without a warrant, and take him before a magistrate, or deliver him to a constable to be so arraigned*, and if the officer refuses or omits to do so, he will be answerable for neglect of duty. With regard to offences, young persons within the metropolis will be most frequently charged with begging, or alms gathering, and in process of time very many of them will doubtless be removed from a state of vagabondism; but it will be no easy matter to enforce orders (when made) for payment of maintenance-money by parents who generally have no known or settled habitation.

The declared object of 5 Geo. IV., called the Vagrant Act, is to suppress vagrancy, and punish idle and disorderly persons and others; but no comprehensive legal definition of the term "vagrancy" is given in it,—it merely enumerates certain acts, and declares them to be offences punishable with imprisonment, treating those who commit them, who are termed "idle and disorderly," and "rogues and vagabonds," as impressed with the character of vagrants, though no element of vagrancy, in its usual acceptation, can be found in some of the cases specified in the Statute.

My answer, therefore, to your question, whether if a short Act were passed, providing that the term "vagrancy," in the Industrial Schools Act, should include every offence specified in 5 Geo. IV., is that such an enactment would work no change, as the present words, "on a charge of vagrancy, *under any general Act*," point with sufficient distinctness to the provisions of 5 Geo. IV. To your second inquiry, whether vagrancy should be described, and how, I beg to say that the meaning of the expression in common parlance is much too vague and unsatisfactory for legal purposes, and to attempt a statutable definition thereof would be difficult and perplexing in the extreme.

I am, dear Sir,
Yours faithfully,
(Signed) Thomas James Hall.

THE NUDE FEMALE MODEL OF ART.

We have been favoured by the secretary and committee of the newly organised Glasgow Magdalen Institution, with the following document in reference to this subject:—

Copy of letter from the Hon. Bouverie F. Primrose, Edinburgh, to Charles L. Ryan, Esq., of the Treasury.

"*Board of Manufactures,*
"*Edinburgh, 18th March*, 1852.

"Sir,—In reply to your note of the 4th inst., moving, at the instance of Lord Haddo, for certain returns of the sittings of the female model in the Life School of Design in Edinburgh—if the returns be taken for a year, the female model has sat *nine times a fortnight* during nine months in the year, therefore in all *one hundred and sixty-two times*, and always *wholly nude*. In the earlier origin of the School there were some most imperfect and futile attempts to avoid total nudity; but the school in its character has always been for the study of the nude, drapery not being regarded as the object of a Life School.

"By Treasury warrant of 25th Feb., 1858, the Life School has been withdrawn from the Board of Manufactures, and transferred to the Royal Scottish Academy.

"I have the honour to be,
(Signed) "B. F. Primrose.
"To C. L. Ryan, Esq., Treasury."

With reference to the above, we are informed that when the School of Design was first opened in Edinburgh, not a single woman could be found in Scotland to submit to the humiliation of being exposed before the students; and for some years women were sent from London by government. Latterly, however, the temptation held out *by a public grant* has overcome the female repugnance to exposure. To this extent the standard of female morality in Edinburgh had been lowered by an application of the public money. We may add that in the Royal Academy of London, and similar institutions throughout the country, the nude female model is constantly used.

These startling facts need no comment. They must disclose a state of matters of which the general public has hitherto had no conception. Surely it is time that a decided stand was made against an appropriation of the public money for an object so detestable.—(*From Glasgow Courier of June* 21.)

Surrey Society for the Employment and Reformation of Discharged Criminals.—Sermons were preached in behalf of this, the oldest Society of the kind, at the parish church, Richmond, on Sunday the 13th February; in the morning, by the Rev. H. J. Hatch, secretary; and in the evening, by the Rev. H. Dupuis, vicar. The result has been an addition to the funds of the Society of £50 8s., including several annual subscribers. It was stated that 985 prisoners had been assisted on their discharge in one way or other; though owing to want of funds seventy-nine had applied to be sent into Reformatories on their discharge, as the only mode of delivery from a course of life from which, humanly speaking, there appeared no other means of escape, and it was even feared that some of those now doing well in reformatory institutions would have to be discharged, and thrown back on the world. The Surrey Society was founded in 1824, and ought not to be suffered to relax its efforts for want of funds. Several anecdotes were given by the evening preacher, indicative of the beneficial results of such a Society; and it was apparent that much interest was felt for a class who have hitherto been thought beyond recall. It is in contemplation to hold the annual meeting at "The Horns," Kennington, of which timely notice will of course be given.

GOVERNESSES BENEVOLENT INSTITUTION.

The anniversary dinner of this Society was held at St. James's Hall, on Monday, June 9; the Right Hon. the Viscount Ingestre in the chair.

The objects of this Society are all in operation.

Temporary assistance to governesses in distress, afforded privately and delicately through the Ladies' Committee.

Annuity Fund.—Elective annuities to aged governesses, secured on invested capital, and thus independent on the prosperity of the Institution.

The Hon. Mrs. Ashley has most kindly opened a fund to raise all the Society's annuities to £25. Any donations which may be kindly given may be addressed "The Hon. Mrs. Ashley, to the care of the Secretary."

Provident Fund.—Provident annuities purchased by Ladies in any way connected with education, upon Government security, agreeably to the Act of Parliament. This branch includes a savings' bank.

A home for governesses during the intervals between their engagements.

A system of registration, entirely free of expense.

An asylum for the aged.

Perhaps the best service we could render to this valuable Society is the insertion of the following Table, showing to how many governesses the Society has been useful in the nine preceding years.

† This number was imperfect on account of the death of the Lady Superintendant. After this date, Queen's College became detached from the Parent Society under a separate Charter.

These numbers in nine years = 26,571.

Amount invested by governesses in Provident Government Annuities through the Society, to December 16, 1858, £174,611 19s. 4d.

Mr. Jacob Bell's Bequest to the Nation.—Those who knew the liberality of Mr. Jacob Bell will not be surprised to hear that he has bequeathed, without condition, the best of his pictures to the nation. Among them are the following of Landseer's:—"The Maid and the Magpie," exhibited last year at the Royal Acadamy; the celebrated picture of the "Shoeing," "The Sleeping Bloodhound," "Alexander and Diogenes," Dignity and Impudence," and the "Defeat of Comus." In addition to these there is "The Sacking of a Jew's House," by Charles Landseer; there are a couple of landscapes, in which Lee and Sydney Cooper have united their efforts; there is O'Neil's picture of "The Foundling examined by the Board of Guardians;" there is one of Ward's best historical pictures—"James II. receiving the news of the Landing of the Prince of Orange;" there is the "Derby-day" of Mr. Frith, which, however, has to fulfil certain engagements with the engravers before it can appear in the national collection; and, to crown all, there is "The Horse Fair" of Rosa Bonheur. This is not the large picture of the "Horse Fair," with which everybody is familiar, but a smaller edition of it, painted simultaneously. In everything but size it is a *fac-simile* of the larger canvas. Such a great public benefit is the fitting close to a life of much public usefulness.

Important to Emigrants.—The Reformatory and Refuge Union have received information, on good authority, that there is not much want of labour in Canada. It is right that such a statement should be known, lest any be tempted, without just and proper reason, to commit their children or their friends to a market already but too well stocked with human labour in a distant country, where the temptations for the idle man are equally numerous, and equally destructive of all happiness and safety.

EARLY EVIL.

The following sensible remarks appeared in the Monthly Paper of the London Society for the Protection of Young Females of June 1st.

Moral, like physical diseases, require to be known thoroughly, in order that the right kind and mode of treatment may be administered.

We must acquaint ourselves not only with their present symptoms, but their past history, if we wish to act the part of good physicians—if we are indeed attempting to effect a cure.

The peculiar evil which the London Society seeks to palliate in some cases, and in others to prevent, needs to be regarded with a scrutinizing eye, and to be probed to the very depths and traced through all its ramifications, if we hope to grapple effectively with its many attendant evils, or control and check its numerous feeding sources.

The following brief extracts from the *Edinburgh Medical Journal* for May, contain so many excellent thoughts and suggestions in connection with this subject, that they cannot fail to prove acceptable to the readers of the "Monthly Paper."

"An abundant cause of prostitution, in the lower ranks, is the force of early habits and education—education, not of knowledge, but in vice and crime. Children are born with immoral propensities; their parents are the offscourings of the earth: the first words a daughter hears are those of cursing and blasphemy; the only example her childhood sees, is that of obscenity and vice; such youth is an apt learner; and at the age of ten or twelve she may be both a prostitute and a thief, her lapsed state having proved rather a simple progress than a fall."

So much for the cause, now a few words for the remedy.

"Let every means be used to restore vicious and idle parents to habits of industry, and virtue, and honesty. And into the children let us ingraft right principles, so that they may grow up, at least in the knowledge of right and wrong, and with a consciousness on the part of the female, that she carries a priceless jewel in her honour—however plain her person—however humble her rank may be—which, without deepest shame and detriment, she dare not give away. Thus let us strive to meet the early prostitution, so sadly prevalent, due to congenital and absolute ignorance of even the barest morality, as well as to the force of vicious parental example, searing the conscience which had barely begun to live."

These remarks bear out the idea which has frequently been put forward in these "Papers"—viz.: the importance of directing the efforts of philanthropists to the improvement of the moral condition of the Home; it is there the seeds of vice are sown and flourish; it is there every evil thought and deed are nurtured, and like the tares will choke the good seed which is elsewhere planted; so that much, much is wasted and undone, of the philanthropic work now happily so prevalent.

See to it, then, ye social reformers; go to

Digitized by Google

the root of the evil; be not satisfied with "here a little, there a little,"—mere *surface work* will never repay the labourer; dig deep and wide—and God, whose husbandmen ye are, will prosper you.—"Weary not in well-doing, for in due time ye shall reap, if ye faint not."

TESTIMONIAL TO H. E. GURNEY, ESQ.—A very interesting meeting, presided over by the Earl of Shaftesbury, was held on Tuesday evening, April 19, to present to Mr. H. E. Gurney a testimonial of respect and esteem from the teachers of twenty of the ragged schools east of London. The large room of the King Edward's Ragged School and Refuge, in Albert-street, Spitalfields, was beautifully decorated for the occasion, and presented a very pleasing appearance. Upwards of 250 teachers sat down to tea. The tea having been disposed of, his lordship opened the business of the evening by stating that it afforded him great satisfaction to be present on an occasion for doing honour to one bearing the revered name of Gurney. He stated that he had been informed that the teachers present had met to testify their appreciation of Mr. Gurney's kindness in entertaining some 300 of their number at his country residence, Nutfield, and also their respect for his character as the friend of ragged schools and all other benevolent institutions. He intimated that the teachers had resolved to present to him such a testimonial as might serve to perpetuate the sentiments of esteem entertained for him by the teachers. He then in their name, and on their behalf, presented to Mr. Gurney a very handsomely framed illuminated inscription on vellum, bearing the following:—

"To Henry Edmund Gurney, Esq., from the teachers of the various ragged schools of the east of London, as an acknowledgment of his many and varied acts of benevolence, and of his desire generally to alleviate the distresses of the suffering poor; and more especially for his kind interest in the training of outcast and destitute children, this token of their esteem is presented by the teachers participating in Mr. Gurney's kindness in the autumn of 1857, when nearly 300 of their number enjoyed the hospitality of Nutfield Priory.'

His lordship, after presenting the testimonial to Mr. Gurney, being compelled by previous engagements, vacated the chair, which was then taken by Arthur Sperling, Esq. Mr. Gurney then addressed the meeting in a short and very feeling speech expressive of the great satisfaction which the presentation of the testimonial, so entirely unexpected, afforded him.

A Good FAMILY MEDICINE CHEST, with a prudent use, has saved many a life; and yet we think the idea might be improved upon, and reduced to a more simple form. Take some good Compound, such as COCKLE'S ANTIBILIOUS PILLS, and we find that the desired end may be obtained without scales and weights, or little mysterious compartments and enchanted bottles with crystal stoppers. Others might be used, but Cockle's Pills, as tested by many thousands of persons, and found to answer their purpose so well, may be set down as the best.—*Observer.*

HOSPITAL FOR SICK CHILDREN.—This institution, which was established under the patronage of the Queen, for the purpose of obtaining medical and surgical treatment for poor children, the attainment and diffusion of knowledge regarding the diseases of children, and the training of nurses, held its seventh annual meeting on the 9th February in the boardroom of the hospital, 49, Great Ormond-street. Mr. J. Labouchere, the treasurer, in the chair. The report stated that the institution had started under difficulties, and for some months after it opened parents were very loath to part with their children; but before the end of the year they saw how kindly they were treated; and from that time to the present 10,000 children were brought to them every year for medical advice. In 1855 the committee were enabled to purchase the adjoining house for £1,600, and now they were enabled to take in pupil nurses to attend upon the children. They had also turned the ground floor of the new house into an infant-nursery for the reception of infants and children during the day who were too young to be admitted into infant schools, and when mothers were compelled to get their living away from home. The total receipts were £6,701 13s. 8d., and the total expenditure was £6,566 13s. 1d. The report was adopted and the meeting separated.

HOUSE OF CHARITY.—A meeting of the friends of this institution was held in the large hall of the establishment, Rose-street, Soho-square, on Tuesday, Feb. 8, more with the view of talking over the scope and success of the charity than the holding of any formal proceedings. From the conversation which arose it appeared that the warden and committee received into the house, on special and trustworthy recommendation, the following class of persons, viz.; In-patients discharged from hospitals, and out-patients unable to do full work, wanting food, quiet, and rest, and unable to obtain either without assistance. Secondly, persons dependent, or those who by accident or sudden disease have been taken into hospitals. Thirdly, persons suddenly, and by no fault of their own, out of work, as in the case of a fire, or a bankruptcy, or death of an employer. Fourthly, persons unsuccessful in their search for friends or employment. Fifthly, persons, especially females, requiring a short respite from laborious work, but not able to afford the loss of wages it would involve. Sixthly, persons without friends in London, and waiting for the means or the opportunity to emigrate. And last of all, those for whom an asylum is desired in which they can be received on probation, before they receive further assistance towards recovering a position which they have lost by misconduct. Only for the last-named class being admissible the institution would be in every respect unique, as there is no other in the metropolis which provides a refuge and assistance to the many really-deserving persons who come under the other six heads, several thousands of whom have passed through the institution. The following cases were cited as illustrating the nature, character, and working of the charity. One gentleman was last year received into the house who was the nephew of a colonel killed at Waterloo, and of a minor canon of St. Paul's. The warden obtained for him the situation of a schoolmaster. In another case the homeless and destitute family of a clergyman imprisoned for debt, who had parted with everything in order to support him, were received and maintained.

AN EX-PUBLICAN ON DRINKING FOUNTAINS.—The following little episode at the meeting of the Islington Vestry on the 21st ult., as reported in the *Clerkenwell News*, will amuse our readers:—The Sanitary Committee, in their report, recommended "that five public drinking fountains be erected, one in each of the following places:—Islington-green, Holloway-road, Lower-road, Liverpool-road, Caledonian-road, at an estimated cost each, whether of iron or granite, of £12 or £15, and at an estimated annual cost of about £8 each." Mr. Harvey having moved the reference of the matter to the Committee to carry out the suggestions, we are told, Mr. Vousley said it might appear great presumption on his part; but he was not ashamed to say that he was resolved "to stand by his order." (Loud laughter; Mr. V., we understand, being a retired licensed dealer.) Would any working man stop to drink at one of these fountains if he had the price of a pint of beer? Were the rates not heavy enough without having fountains, and ornamental ones, too? Was there any difficulty in summer of getting a pint of beer? And if there was, was there any difficulty in getting a draught of water at a public-house? He had often given beer instead of water to parties who were thirsty. If the proposition for fountains were carried out, wrong would be inflicted, for *it would extinguish all the public-houses.* But he supposed that public-house keepers would be exempted from the additional tax that would be necessary to be raised. He understood that the New River Company was to supply the water. He would advise them not to be led away by such a scheme. *Apropos* of this subject, our London readers will be glad to learn that a highly-influential association is in process of formation to promote the erection of public drinking fountains in London and the suburbs, whose chief functions will be to secure their judicious distribution, the absolute purity of the water, so far as it is possible to attain this result, and architectural beauty. A large fountain is forthwith to be erected by Messrs. Willes and Co., in front of the Royal Exchange, and others at Regent's Circus and in other localities.—*Temperance Star.*

BISHOP JACKSON ON INNOCENT AMUSEMENTS AS THEY CONCERN THE CLERGY.—"Indirectly, and in addition to the more special discharge of their office in the pulpit and in pastoral visiting, the clergy also may contribute important aid. Whatever tends to awaken the mind and train it to other tastes and pleasures than those of sensual indulgence; whatever helps to sustain the principle of self-respect, by the feeling that conduct and character are observed by kind though watchful eyes; whatever provides innocent, if not improving, occupation and amusement for

Digitized by Google

leisure hours, and fills those voids which are the opportunities of vice ;—contributes in its degree to raise the moral tone, to evade the force of temptation, or to strengthen the power of resistance, and to assist the growth of habits of thoughtfulness and self-control. You will find then, reverend brethren, your pains well bestowed on the improvement of your day schools. * * * * * * * * * ; on the establishment of parochial libraries, and in some instances reading rooms ; on the supply of a useful and wholesome literature, by the employment of book-hawkers ; on the encouragement of lectures, music classes, and even well-regulated cricket clubs and other schemes of innocent and healthful amusement.—*V. pp.* 23, 25—*Bishop of Lincoln's Charge, October*, 1858.]

THE PURPLE-DYE SHELL *(Purpura)*.—Let any one look among the rocks at low water, and plenty of the purple-dye shells may be found tolerably close together. When a sufficient number are collected, they should be killed by placing them in fresh water, after the shell has been pierced or broken, as otherwise the animal shuts itself up so tightly that the water cannot gain admittance. When the creatures are quite dead, the colouring matter may be found in a yellowish-looking vessel, that derives its colour from the substance contained within. There is very little of this colouring matter in the vessel. Now, if this yellow substance be spread on white paper, and placed in the sunshine, a blue tinge enters the yellow, making it green. The blue gradually conquers the yellow, and the green soon becomes blue. Another colour, red, now makes its appearance in the blue, and turns it into purple. The red becomes gradually stronger, and in its turn almost vanquishes the blue, but does not quite succeed in doing so ; for the blue, having taken so much pains to turn out the yellow, will not entirely vacate the premises, and, coalescing with the red, forms a deep purple, the red very much predominating. So we have here all the primary colours fighting for the dominion, and yellow, the most powerful of the three, forced to retire before its complementaries. —*The Common Objects of the Sea-shore, by the Rev. J. G. Wood.*

JUDGE STRONG practised in Jefferson County, and a prisoner being arraigned for theft, who had no counsel, the court appointed young Strong to that service, directing him to confer with the prisoner, and give him the best advice he could under the circumstances. He retired with his client to an adjacent room for consultation, and when an officer was sent to inform them that the court was waiting, Strong was found alone, and returned with the officer into the court-room. "Where is your client?" demanded the judge.—"He has left the place," replied the lawyer.—"Left the place!" cried the judge. "What do you mean, Mr. Strong?" —"Why, your honour directed me to give him the best advice I could under the circumstances. He told me he was guilty, and so I opened the window and advised him to jump out and run. He took my advice, as in duty bound, and by this time he is more than two miles off."

SALE OF WORK BY LADIES OF LIMITED MEANS.—The public are respectfully informed that, in consequence of larger premises being required, the Association have removed the Sale of their work from counters 266, 267, 268, Soho Bazaar, to 16, Berners Street, Oxford Street. Orders for all kinds of plain and fancy work will be thankfully received by the Secretary, at the Office, 16, Berners Street, between the hours of 11 and 3 o'Clock.

DOMESTIC SERVICE.

IT is proposed that a MEETING shall be held towards the close of JULY, for the purpose of taking into consideration the best means of improving the conduct, and raising the moral condition, of DOMESTIC SERVANTS.

It is a question possessing great interest to Clergymen and all philanthropic persons ; being in itself a *social evil* of no small magnitude, besides contributing numbers of victims to the "Great Social Evil."

Several noblemen, and other influential individuals who are interested in Social Reform, are expected to attend and address the Meeting.

Further particulars will be duly announced through the leading journals. In the meantime any one wishing to take part in the proceedings, or who may desire to offer written suggestions (giving their real name and address) may communicate with A. B. C., care of Messrs. BOOTH, Booksellers, Regent Street, London, W.

SPECTACLES—MICROSCOPES—TELESCOPES.—FINE STEEL FRAMES, with REAL PEBBLES, 6s. 6d. ; ditto, Best Glasses, 5s. 6d., 4s. 6d., 3s. 6d. ; Solid Gold, 20s. ; Silver, 10s. 6d.

BERNARD DAVIS, 430, EUSTON-ROAD, Regent's-park (close to Trinity Church), Optician to the Opthalmic Institutions. Country residents can be accurately suited by stating age, &c. Enclose stamps, or P. O. order, payable Upper Baker Street, London.

MICROSCOPES, equal in power to the largest made, in mahogany cases, 21s., 17s. 6d., 12s. 6d. Ditto, with all necessaries for every purpose, in upright Mahogany Cabinet, magnifying 60,000 times, £4. 4s., warranted.

POCKET TELESCOPES, define 10 miles, 10s. 6d. ; ditto, 20 miles, 21s.

BERNARD DAVIS, Optician, &c., 430, Euston-road, Regent's-park (formerly called New-road).

SUMMER DIET.

BROWN & POLSON'S

PATENT CORN FLOUR.

"THIS is superior to anything of the kind known."—*Lancet.* Obtain it from Family Grocers, or Chemists, who do not substitute inferior articles : The most wholesome part of Indian Corn, and preferred to the best Arrow Root ; for Breakfast boiled simply with milk ; Dinner or Supper, in Puddings, warm or cold, Blancmange, with Stewed Fruits of all kinds, and especially suited to the delicacy of children and invalids.—Packets, 16 oz., 8d.

Paisley ; 77a, Market Street, Manchester ; Dublin ; and 23, Ironmonger Lane, London.

HEALTH AND ECONOMY.

AGAVA, the best substitute for Horse-hair. This is a new and Patented article for Stuffing, and now very extensively used in preference to Horse-hair, being free from the great objection to the latter, that of breeding and harbouring vermin. It possesses every advantage necessary in a material for stuffing Mattresses, Furniture, &c.—elasticity, durability, and non-susceptibility to damp ; and for invalids or hospital purposes is invaluable, as it is perfectly clean and cool, and will not convey infection. In addition it is lighter than horse-hair, and half the price.

Can be had of all respectable upholsterers in the United Kingdom.

For price, and other information, apply to D. WALTERS & SONS, 14, Wilson Street, Finsbury, E.C. Sole Agents to the Agava Patent Hair Company.

INKS FOR EXPORT, &c.

G. BELL and CO. beg to call the attention of Buyers to their superior PRINTING INKS and WRITING FLUIDS—Blue and Red, for use with Metallic Pens—Copying, Blue-Black, Violet-Green, Black Bordering, Ruling and Japan Ticket Inks of first-rate quality. All large purchasers treated on liberal terms. Lists sent free by G. BELL and Co., Wellington Street, St. Luke's, E.C.

CIVIL SERVICE, Merchants, Civil Engineers, and Surveyors' OFFICES.—Foster's Initiatory Counting-house, 161a, Strand, next door to King's College Gate.—This Institution is intended as an intermediate between school and business, where gentlemen are thoroughly prepared to perform the duties in the above.

PHRENOLOGY APPLIED TO CHILDREN may lead to the avoidance of many of the errors so frequently committed in their education and subsequent destination. During Mr. DONOVAN'S long and extensive practice as a consulting phrenologist, his attention has been particularly directed to this most important branch of cerebral science. Consultations from 9 to 6 daily. Free Lectures on Monday evenings, as usual. 1, Adelaide Street, Trafalgar Square, W.C.

Established 1800.

CHASSEREAU AND ROBERTS, PRACTICAL DYERS AND CLEANERS, 198, BLACKFRIARS-ROAD (Two Doors from Surrey Chapel), at OLD KENT ROAD (Twelve Doors South of the Swan), and at 46, CASTLE STREET, Hemming's-row, Leicester-square.

All the modern and most approved Processes applied in every Branch of the Trade. Strict attention paid with regard to punctuality and cheapness.

SAVINGS' BANK DEPARTMENT.

SOUTHWARK, METROPOLITAN, and PROVINCIAL FREEHOLD LAND and HOUSE SOCIETY.

TRUSTEES.

Thomas Pillow, Esq., Edward Collinson, Esq., and W. H. German, Esq.

FIVE PER CENT. ON DEPOSITS.—Dividends payable on and after the 1st of January and the 1st of July.

Offices: 4, Wellington Chambers, London Bridge, Southwark.

RICHARD BRETT, *Secretary.*

Prospectuses forwarded on application.

SPECTACLES and STEREOSCOPES, by GEORGE COX, Author of "Spectacle Secreta."—Photographic Apparatus DISSOLVING VIEWS, Telescopes, Achromatic Microscopes, and all Optical, Mathematical, and Philosophical Instruments. The Sight carefully suited, at the Manufactory or at the purchaser's residence, and any article exchanged after trial. Prepaid orders carriage free.—GEORGE COX, 5, Barbican, E.C., Inventors' and Manufacturers' Agent. Established 150 years.

HARD WATER rendered as SOFT as RAIN WATER by the

HOLLAND PATENT COMPOUND,

perfectly uninjurious and cheap means. Sold in packets of 1s., 6d., 2d., and 1d., at our Agents, and some of the most respectable Oil and Colourmen, Grocers, and Chemists.

We beg to call the attention of the public, and especially of the Managers of Philanthropical Institutions, Laundries, &c., to this recent discovery, which supersedes entirely the use of soda, and is highly recommended by Dr. A. W. Hoffman, F.R.S., for washing and domestic use. All water softened and purified by its agency makes superior tea, remains quite sweet for several months, and is particularly adapted for shipping purposes.

For large quantities and particulars, apply at DE JONG and Co.'s, 8, Baynam Terrace, Camden Town, London, N.W.

ESTABLISHED 1810.

JAMES FLOOD,

AUCTIONEER, SURVEYOR, APPRAISER, AND UNDERTAKER,

Valuer of every description of Property, and for Probate-Legacy Duty, &c.

Estate, House, Scholastic, Business, Medical and Clerical Agent;

84, WELLS STREET,

NEXT 64, OXFORD STREET, LONDON, W.

GLANVILLE'S HYDROSULPHATE of IRON MIXTURE, a certain and expeditious cure for Cholera, Diarrhœa, Dysentery, and Bowel Complaints, Spasms, Pains, Sickness, Cramp in the Limbs or Stomach, Weakness of the Chest, Stomach, and Bowels, General Debility and Nervousness. Hundreds of testimonials of its wonderful effects: recommended by eminent medical men.

Manufactured only by the Proprietor, 3, Clifton Terrace, West Brompton, London. Sold by all Chemists and Druggists. Price 1s. 1½d, and 2s. 9d.

THE HAIR.

THE BEST MEANS to ADORN it is to use CHURCHER'S TOILET CREAM, which imparts fragrance, softness, and beauty to it, and is admitted to be the most economical article for the purpose extant. Price 1s., 1s. 6d., and 6s.

Decidedly the best Hair Dye is BATCHELOR'S INSTANTANEOUS COLUMBION, in the New York Original Packets. Price 4s. 6d., 7s., and 14s.

Sold by Hairdressers, and by R. HOVENDEN, Wholesale Perfumer, &c., No. 5, Great Marlborough Street, (Three Doors East of the Pantheon), W., and 57 and 58, Crown Street, Finsbury Square, London, E.C.

WHY GIVE MORE?—Excellent TEAS, Black, Green, and Mixed, are now on sale, for Family Use, at 2s. 8d. per pound, at NEWSOM and Co.'s original TEA WAREHOUSE, 50, BOROUGH, near London Bridge Terminus. Established A.D. 1745.

J. W. & T. ALLEN, Manufacturers of Officers' Barrack Furniture, and Military Outfitters (see separate catalogue, 18 and 22, Strand.

TO RELIGIOUS AND PHILANTHROPIC SOCIETIES.

JOHN READ, Bill-Poster to the National Temperance League, and various other Institutions, 19, YORK STREET, BLACKFRIARS ROAD. Men and Boards supplied. Orders by Post promptly attended to.

PERSONS about to Decorate should inspect SILAS TUCKER'S splendid assortment of PAPER HANGINGS, at his Warehouse, 234, HIGH HOLBORN, ten doors East of Little Queen Street, London. Estimates given for every kind of Decoration; also for General Repairs in Town and Country.

FOR LADIES.

NICOLL'S PATENT HIGHLAND CLOAK is a combination of utility, elegance and comfort. No lady having seen or used such in travelling, for morning wear or for covering full dress, would willingly be without one. It somewhat resembles the old Spanish Roquelaire, and has an elastic Capucine Hood. It is not cumbersome or heavy, and measures from twelve to sixteen yards round the outer edge, falling in graceful folds from the shoulders; but by a mechanical contrivance (such being a part of the patent) the wearer can instantly form semi-sleeves, and thus leave the arms at liberty; at the same time the Cloak can be made as quickly to resume its original shape. The materials chiefly used are the soft neutral-coloured Showerproof Woollen Cloths manufactured by this firm. The price will be Two Guineas and a Half for each Cloak; but with the Mécanique and a lined Hood a few shillings more are charged. This department is attended to by Cutters, who prepare Mantles of all kinds, with Velvet, Fur, or Cloth Jackets, either for in or out-door use. These at all times—like this Firm's Riding Habit—are in good taste and fit well. Female attendants may also be seen for Pantalons de Dames à Cheval, partially composed of Chamois. As no measure is required, the Patent Highland Cloak can be sent at once to any part of the Country, and is thus well adapted for a gift.

H. J. and D. NICOLL, Warwick House, 142 and 144, REGENT STREET, London.

NICOLL'S NEW REGISTERED PALETOT has all those advantages which secured such general popularity to Messrs. Nicoll's original Paletot; that is to say, it avoids giving to the wearer an outré appearance, so that professional men, and all others, can use it during morning and afternoon, in or out of doors. Secondly, there is an absence of unnecessary seams, well known to secure a more graceful outline, as well as to effect a great saving in wear; the latter advantage is considerably enhanced by the application of a peculiar and neatly-stitched binding, the mode of effecting which is patented. Great exertions are being made to supply Messrs. Nicoll's agents throughout the country and the colonies with an assortment of this new garment simultaneously with the display in London, but it is necessary to inform the public that all Messrs. Nicoll's manufactures may be distinguished by a trade mark, consisting of a silk label attached to each specimen; to copy this is fraud, and may be thus detected: if the garment is dark-coloured, the label has a black ground, with the firm's name and address woven by the Jacquard loom in gold coloured silk; if the garment is light-coloured, the label has a pale drab ground, and red silk letters. Each Paletot is marked in plain figures, at a fixed moderate price, and is of the best materials. In London, the NEW REGISTERED PALETOT can alone be had of H. J. & D. NICOLL, 114, 116, 118, 120, REGENT STREET, and 22, CORNHILL.

A NEW DEPARTMENT FOR YOUTH, &c.

H. J. and D. NICOLL recommend for an outside Coat the Havelock; and for ordinary use the Cape Suit, such being well adapted for Young Gentlemen, as exhibiting considerable economy, with general excellence. Gentlemen at Eton, Harrow, Winchester, the Military and Naval Schools, waited on by appointment. A great variety of materials adapted for the Kilted or Highland Costume, as worn by the Royal Princes, may be seen at

WARWICK HOUSE, 142, and 144, REGENT STREET.

IZZARD, Manufacturer of PREPARED PIPE CLAY, for cleaning and whitening stone staircases, entrance halls, conservatories, &c., without any unpleasant smell whatever; Polishing Paste for cleaning chimney and all kinds of plate glass, polished metals, brass, &c.; Paste for cleaning marble chimney pieces, busts, ornaments, &c.; Prepared Fuller's Earth, for taking out oil, grease, &c.—38, Great Pulteney-street, Golden-square. Sold retail by most of the principal oilmen, grocers, turners, &c., throughout the kingdom. Beware of imitations: none is genuine unless signed "JAMES IZZARD."

WHAT WILL THIS COST TO PRINT? is a thought often occurring to literary minds, public characters, and persons of benevolent intentions. An immediate answer to the inquiry may be obtained, on application to RICHARD BARRETT, 13, MARK LANE, LONDON. R. B. is enabled to execute every description of PRINTING on very advantageous terms, his office being furnished with a large and choice assortment of TYPES, STEAM PRINTING MACHINES, HYDRAULIC and other PRESSES, and every modern improvement in the Printing Art. A SPECIMEN BOOK of TYPES, and information for authors, sent on application, by RICHARD BARRETT, 13, MARK LANE, LONDON.

Printed for the Proprietors, by RICHARD BARRETT, 13, Mark Lane, London; and sold by W. TWEEDIE, 337 Strand.

July 1, 1859.

FRIENDLY SOCIETIES IN SCOTLAND.

A REPORT by the Registrar of Friendly Societies in Scotland has been presented pursuant to the Act 18th and 19th of Victoria, cap. 63, and printed by order of Parliament. In the course of this report, the writer, in the true antiquarian spirit of old Jonathan Oldbuck, notices the existence of "burial clubs" among our Roman conquerors, and shows how much the law of Scotland is founded on, and how largely its principles are derived from the Roman law. He refers to a work of Mr. Kenrick, on *Roman Sepulchral Inscriptions*, bearing on the subject of burial clubs. Mr. Kenrick says,—"As I have not seen the existence of burial clubs among the Romans noticed in any work on Roman antiquities, I will give some extracts from a monument referred to. It was found at Lanuvium, a town of ancient fame for the worship of Juno Sospita, about 19 miles from Rome, on the Via Appia. The inhabitants of this town appear, out of flattery towards the Emperor Hadrian, in whose reign the marble was erected, to have formed themselves into a college for paying divine honours to Diana and Antinous; a singular combination, which shows at once the degraded condition of the people, and the heartless formality of the established religion which could be prostituted to such a purpose. The privilege of forming a college, or, as we should say, a body corporate, was most sparingly conceded and most jealously restricted under the Emperors, who dreaded all secret associations as nurseries of treason. With this primary object of forming a college of the *Cultores Dianæ et Antinoi*, they combined that of a burial club, not forgetting the festivities which formed so important a part of all acts of religion among the Romans. To prevent disputes, the laws of the association were inscribed on marble, and probably set up in the temple of the two deities. An *amphora* of good wine was to be presented to the club by a new member, the sum of 100 sesterces (about 15s.) was to be paid as entry money, and five asses (little more than 2d.) per month as subscription. Their meetings were not to take place oftener than once a month. If any one omitted payment for (so many) months (the marble is here mutilated,) no claim could be made, even though he had directed it by will. In case of the death of one who had paid his subscription regularly, 300 sesterces (2*l.* 5*s.*) were allotted for his funeral expenses, out of which, however, 50 were to be set apart for distribution at the cremation of the body. The funeral was to be a walking one. If any one died more than 20 miles from Lanuvium, and his death was announced, three delegates from the college were to repair to the place where he had died, to perform his funeral, and render an account of it to the people. Fraud was to be punished by a fourfold fine. Twenty sesterces each were to be allowed to the delegates for travelling expenses, going and returning. If the death had taken place more than 20 miles from Lanuvium, and no notice had been sent, the person who had performed the funeral rites was to send a sealed certificate attested by seven Roman citizens, on the production of which the usual sum for the expenses was to be granted. If a member of the college had left a will, only those named in it could claim anything. If he died intestate the quinquennales or magistrates of the municipium, and the people generally, were to direct how the funeral should take place. If any member of the college in the condition of a slave should die, and his body, through the unjust conduct of his master or mistress, should not be given up for burial, his funeral should be celebrated by his bust being carried in procession. No funeral of a suicide was to take place. There are many other rules tending to preserve order and promote good fellowship, but these are all which relate to the burial club." This curious document is an additional proof how much ancient life resembled modern life, when we obtain a view of it, as it were, *intus domique*, through the medium of its monuments.

PRISON EMPLOYMENT.

WE may not of course take it for granted that every one can feel sufficient interest, whatever they ought to do, in the well-being of prisoners, their prospects, and the system under which they are dealt with, to wade through a bulky Blue Book of 143 pages. If there be any who do feel sufficiently for the peculiar position and trials of prisoners, we can safely promise them much instruction from the perusal of the recently published Annual Report of the Directors of Convict Prisons in Ireland, for the year ending December 31st, 1858. The more we consider the question, the stronger becomes our conviction that Captain Crofton's intermediate system, as adopted in Ireland, is founded on just and proper principles, and calculated, more than any system with which we have been made acquainted, to effect a permanent change in the character and habits of all classes of delinquents. The system has so well answered in all respects that it becomes a matter of wonder that the magistracy, more especially those whose province it is to act as visitors to gaols and houses of correction, do not seriously take into consideration how far they might introduce a similar system into the establishments under their care. Would there be any difficulties in our English prisons more insurmountable than they were in the sister kingdom? We think not. Gladly shall we hail a commencement in this direction. Lest all may not have facility of perusing the Blue Book to which we have alluded, and indeed for the benefit of those who do not understand the principles on which prisoners obtain gradual improvement in their position until their entire freedom, we would draw the attention of our readers to the following notice, which the Irish Government has approved of being promulgated to the convicts. It will be most important to observe that the remission of the term is, in Ireland, accompanied by a condition of subsequent good conduct. The inestimable advantage of this condition to society and to the well-intentioned criminal will be apparent.

NOTICE.

1. The Act of Parliament passed in June 1857, provides that sentences of penal servitude are to be of the same duration as sentences of transportation previously awarded, instead of the sentences of shorter extent under the act of 1853—thus, a sentence of *four years' penal servitude* under the act of 1853, stands in place of a sentence of *seven years' transportation;* whereas for the same offence under the recent act of 1857, the sentence awarded is liable to be one of *seven years' penal servitude.*

In the case of the shorter sentences under the act of 1853, the whole has to be spent in imprisonment, a certain proportion, in the case of well-conducted prisoners, being allowed to be passed in intermediate prisons; but in the case of sentences under the recent act, the terms being longer, a portion is allowed to be remitted on licence towards the end of the sentence, if the conduct of the prisoner shall have been deserving of this indulgence.

2. The named periods of removal to intermediate prisons are the earliest possible, and apply only to those of the most unexceptionable character, and no remission of the full sentence will take place unless the prisoner has qualified himself by carefully measured good conduct for passing the periods in the intermediate prisons prescribed by the rules, and any

Digitized by Google

delay in this qualification will have the effect of postponing his admission into the intermediate prisons, and thereby deferring to the same extent the remission of a portion of his sentence.

3. Convicts under sentence for "Life" will not be eligible for consideration for remission under twelve years; in the event of their misconducting themselves they will not be eligible at so early a period, and may be retained even for "Life."

4. According to the requirements of the colony of Western Australia, a certain number of convicts may be sent from this country from time to time; the selection will be made from the well-conducted at about half the period of their sentence. Convicts under "Life Sentences" will not be eligible for removal until eight years from the date of their conviction.

5. It will be quite evident to the convicts that their future position depends upon their own exertions, and that the importance of the classification in force in the prisons and of the marks regulating it, has been much increased by these rules.

6. It will be necessary, therefore, that each convict should make himself thoroughly acquainted both with these rules and the classification which is to govern them as quickly as possible, for which every facility will be afforded him. He will thus learn the importance of preserving a good character in Mountjoy Prison as well as on the public works.

7. There may be cases of crimes of such a heinous description as to preclude offenders from being treated in the ordinary manner; these will be dealt with specially by the Government.

The following scale shows the earliest periods at which prisoners convicted under the recent act may qualify themselves by *unexceptionable conduct* for admission to the privileges of the intermediate prisons:—

SCALE.

Sentences.	Fixed Periods of Imprisonment. In ordinary prisons. Years.	Months.	Shortest period of Detention in intermediate Prisons. Years.	Months.	Periods of Remission on Licence.
3 Years.	2	2	0	4	he periods remitted on licence will be proportionate to the length of sentences, and will depend upon the fitness of each convict for release, after a careful consideration has been given to his case by the Government.

By Order,

WALTER CROFTON, *Chairman.*
JOHN LENTAIGNE, } *Directors.*
I. S. WHITTY, }

A perusal of this notice will show—

1. That in the first or ordinary prison stage of detention the convict is made to feel sensibly from first to last that it is only through his own exertions, accurately tested by the attainment of a certain number of marks, that he can better his condition during detention by working himself into the intermediate prisons, through which he must pass for a further probation in order to receive any remission of his sentence.

2. That the probationary stage of intermediate prisons, conducted under a more modified system of discipline, and less artificial restraint, together with a system of special training adapted to the future career of the convict, will afford a more reliable test of his fitness for conditional release, and for the consideration of his case by the Government, with a view to any remission of his sentence being permitted, and to what extent.

It will be observed that this stage, intervening before release, and the periods of remission not being made a matter of compact with the convict, a more natural and more reliable course of conduct may be expected.

3. The liberty being conditional will act as a check on the criminal, and enable his licence to be withdrawn should he at any time be found undeserving of the lenity which has been shown him.

The check of the condition can an any time be withdrawn on good cause being shown, and need not be the means of detaining a man in this country, should it be for his interest to leave it.

It is quite evident that conditional liberty and registration are the only means of obtaining positive and reliable statistics of criminals, and of thereby testing the value of their prison training. It protects society, for the criminal who consorts with bad companions, and shows that he again meditates criminal courses, is at once reconsigned to the prison from which he had been liberated at too early a period; it restrains the criminal by surrounding the commission of crime with obstructions so formidable as to be of beneficial service in breaking up the class of "habitual offenders."

The incompleteness of our criminal statistics have long been a subject of great reproach to the British nation; without they were made more perfect and reliable it was evident but little unity of action against crime could take place, the result of inquiries being both meagre and unprofitable.

Some important and progressive steps have, however, recently been taken, and there is now in England a uniform constabulary system spread over the country. There is a strong desire felt for, and an intention has been expressed by the government to introduce an act for the consolidation and improvement of our criminal laws.

The multiplicity of different sentences given at the various criminal courts has long been considered to be a source of great embarrassment to those charged with carrying them out. It was not considered necessary before the passing of the act of 1853 that there should be these various sentences, seven years' transportation, ten years' transportation and upwards, then provided for the "habitual and grave offenders." There is every reason to suppose that the like sentences of penal servitude carried out, as before explained, would suffice now. It was the opinion of the Committee of the House of Commons, which sat in "1856," that sentences of penal servitude should *be much lengthened*, and made *identical* with transportation sentences, and periods remitted. It is the conviction of all conversant with the "habitual offender" that a sentence of three, four, or five years' penal servitude, with proportionate periods remitted, is inadequate to either deter or ameliorate such a class of criminals.

With a view to improvement there must be some attempt made by legislation to classify offenders and punishments, so that we may not find the "habitual criminal," after perhaps some years in the convict prisons for a burglary, sentenced to a county prison for a lesser offence to a short imprisonment. "Habitual criminals" must be recognised as a class by the law as they are by the police and those conversant with their practices. The principle is already conceded; for judicial authorities passing sentences generally very properly add to their length on *former convictions* being proved; but the practice requires to be systematized, and made to be universal. It is obvious that conditional pardons and registration may be made the means of so systematizing

Digitized by Google

last four years. Although the Commissioners say these are the children of the famine, yet they seem to have undergone great improvement since they were transferred from the workhouse to a badly-constructed and ill-ventilated building like the Blind Asylum.

This, gentlemen, is my statement. You have seen that of the Commissioners. I would now propose that both be laid before some able statistician in the city or elsewhere, and I am ready to risk my mercantile reputation on the correctness of my calculations, for I view this question as one of vital importance to the poor of this country; if I am wrong, and the Commissioners right, I am prepared to bear the entire expense of this investigation, doctors' fees and all.

The following are suggested are remedial measures, which appear to be well worthy of attention :—

SECTION VII.—REMEDIAL MEASURES.—The remedial measures that will satisfy the public must be of a very radical character, such as go to the root of the present crying evil. Foremost among which is—

I. *Good wholesome food, in sufficient quantity.* If bad food, as we have shown, be the principal cause of scrofula, we may fairly conclude that by removing the principal cause, we shall, to a great extent, remove the effect. Dr. Brodie employs some bad logic to show there is no connexion between cause and effect here. We shall leave the Doctor in the undisturbed possession of his logic, provided we get the good food. We have no doubt that the conclusion from our premises will be soon evident, in the improved health of the children.

I will say nothing of the site of the Cork workhouse, of which a great deal too much has been made, in order, it would seem, to divert attention from a real evil—bad food. My objection is not to the site, but to the system, which is based on the false and beggarly principle of cheapness, to sustain which an effort has been made to show that the cheapest food is the most nutritious. It may be for pigs and horses, but not for men and women, and young children. I have seen the water prettily analysed, to prove the existence of lime—a certain portion of lime in water is by no means unwholesome ;—I have listened to learned disquisitions on the constituent and nutritious properties of food in general, and workhouse food in particular, but have never seen the porridge, soup (a misnomer), skimmed milk, brown, bran, or Indian meal bread, carrion meat at 3d., or arrow-root at 2½d. per lb., put to the same interesting tests. The tests on these points are the tables of mortality, and the fearful prevalence of a loathsome disease.

Dr. T. Watson, in a lecture delivered at King's College, London, says—"The circumstances to which, acting separately or in combination, we must confidently ascribe the power of developing scrofula, are insufficient nutriment, exposure to wet and cold, impurity of the atmosphere, the want of natural exercise, and mental disquietude—to estimate the separate effect of each of these causes may be difficult, but their combined influence is unquestionable. There can be no doubt that *improper diet, or rather imperfect nourishment*, is one main exciting cause of scrofulous disease.

"Scrofula," as a medical gentleman (Dr. Croly, Surgeon to City of Dublin Hospital,) who has had much experience in connection with workhouses, said, the other day, "is the result of impoverished blood. Fibrin is the largest constituent in the formation of blood, and I know nothing that contains more fibrin than beef. Your food in the workhouse is terrific !"

Dr. Jacob, and I could quote no higher authority on scrofula, says—

"The practice so generally pursued of suspending the processes of growth and nutrition by denial of the usual quantity of food of proper quality, to arrest inflammatory action, requires reconsideration when it comes to be applied in scrofulous subjects more particularly. It should be recollected that persons cannot continue to live without a renewal of the blood circulating in their vessels; and it is obvious that such renewal can be effected only by the administration of food capable of affording such blood. A sufficient supply of the ingredients necessary to sustain life is also required to maintain a healthy state of the system, and without such healthy state of the system inflammatory action cannot be controlled or prevented from proceeding to the extent of effecting destructive changes of organization."

I assert, and insist, that we want, *and must have*, better food for our starving poor. We must have this, or have their blood upon us. There is an impression abroad, that if the food in our workhouses were good and palatable, too many would be pressing in to partake of it. The food in our government prisons is greatly superior, but it has not had this effect. Our prison directors have seen the wisdom of recommending that the dietary of a prison should not be penal; but who can deny that the dietary laws of workhouses are such, for within the walls *capital* punishment, or death by starvation, is inflicted for the sin of poverty.

(1.) *The young children should have a sufficiency of new milk and white bread.* If poverty must be visited with a penal dietary, the young children should at least be exempt.

(2.) *The growing boys and girls, and the able-bodied men and women, should get meat and meat soup at least three times a week.* Professor Johnston, in his very interesting and valuable work, "*The Chemistry of Common Life*," tells us that, "*a pound of beefsteak is as nutritive as three pounds of wheaten bread.* (Vide vol. i., p. 128).

(3.) *The old and infirm should be supplied with tea and coffee.* The same high authority, Dr. Johnston, writes thus concerning them :—

"It is a striking fact, that the poorest and humblest amongst us, who has his own little earnings to spend, devotes a small part of it to the purchase of tea or coffee. He can barely buy bread and milk, or potatoes and salt, yet the cup of tea or coffee is preferred to the extra potato, or the somewhat larger loaf. And if thereby his stomach is less filled, his hunger is equally stayed, and his comfort, both bodily and mental, wonderfully increased. He will probably live as long under the one regimen as the other; and while he does live, he will both be less miserable in mind, and will show more blood and spirit in the face of difficulties, than if he had denied himself his trifling indulgence. Besides the mere brickwork and marble, so to speak, by which the human body is built up and sustained, there are rarer forms of matter, as these chapters have shown, upon which the life of the body, and the comfort of animal existence, most essentially depend. This truth is not unworthy the consideration of those to whom the arrangement of the dietaries of our prisons, and other public institutions has been intrusted. So many ounces of gluten, and so many of starch and fat, are assigned by these food-providers as an ample allowance for every day use.* From these dietaries, except for the infirm and the invalid, tea and coffee are for the most part excluded. And in this they follow the counsel of those who have hitherto been regarded as chief authorities on the chemistry of nutrition. But it is worthy of trial, whether the lessening of the general bodily waste which would follow the consumption of a daily allowance of coffee, would not cause a saving of gluten and starch equal to the cost of the coffee; and should this not prove the case, whether the increased comfort and happiness of the inmates, and the greater consequent facility of management, would not make up for the difference, if any. The inquiry is an interesting one in physiological economics; and it is not undeserving of the serious attention of those benevolent minds which, in so many parts of our Islands, have found in the prisons and houses of correction their most favourite fields of exertion.

"I might add, as a stimulus to such experiments, the evident craving for some such indulgence, as a kind of natural necessity, which is manifested in the almost universal practice among every people not absolutely savage, of preparing and drinking beverages of this sort. If there be in the human constitution this innocent craving, it cannot be misplaced humanity to minister to it, even in the case of the depraved and convicted. Where reformation is aimed at, the moral sense will be found most accessible where the mind is maintained in most healthy activity, and where the general comfort of the whole system is most effectually promoted."

II. *The young children should be left with their mothers for a longer period than the rules and regulations of the Poor Law Commissioners allow, which is but two years.* I have one great objection against the whole system—it is cruel and unnatural. "Never did I visit," says Mrs. Jameson, "any dungeon, any abode of crime or misery, in any country, which left the same crushing sense of sorrow, indignation, and compassion—almost despair—as some of our English workhouses, where what we call charity is worked by a stern hard machinery; where what we mean

* See the Author's *Elements of Agricultural Chemistry and Geology*, sixth edition, page 394.

Digitized by Google

for good is not bestowed but *inflicted* on others, in a spirit not pitiful nor merciful, but reluctant and adverse, if not cruel. The epithet *charitable* could never be applied to any parish workhouse I have seen. Our machine charity is as much *charity* in the Christian sense, as the praying machines of the Tatars is piety."

The eloquent editor of the *Daily Express*, speaking of the cruel and unnatural practice of separating parent and child, says—

"To the younger children, admission into the workhouse is the entrance to the grave. To coffin-up these bright creatures within a workhouse wall is a plain violation of the laws of nature and of God. The Creator instituted the family, and hallowed the tie of parent and child. Providence never intended that the young, if poor, should be taken from the mother, their natural protector, and crowded in masses under the care of some droning pauper, selected to fill a mother's place to hundreds. Nature's laws are never violated with impunity, and in our workhouses we witness pestilence and death as the results of the centralising system, which abrogates the order set by a benevolent Creator. Look at the difference of the result, where benevolent men have carried out, as far as possible, the natural tie existing between children and their protector. The Protestant Orphan Society takes the child when God has taken the mother, but does not kill its young heart by confinement in a prison-house. The children are placed with nurses out in the open country, in the free air, and amidst a beautiful creation. They grow up strong, cheerful, red-cheeked, and spirited; and disease, much less death, seldom thins their numbers. Walk through the outskirts of our own city. The streets and lanes are crowded with a host of ruddy children, flourishing, in spite of everything against them. They are under the mother's care, or the aunt's or elder sister's. They are attended to on the first signs of illness. They have freedom and space to move about in, and they are interested by the sights they see around them. They, too, grow up healthy and strong, often upon poor and scanty fare. But they do not breathe, as they must within the workhouse, an atmosphere of malaria, generated from the infected breaths of diseased companions."

We are able here to give the opinion of Dr. Popham. Any opinion, from an officer of fourteen years standing, is valuable. He thinks the children should be left to the care of their mothers *till they are six years old.*

III. *Our poor-houses should be rendered, as much as possible, the abodes of industry,* where the youth of both sexes may be fitted for the duties of active life; in a word, they should be made self-supporting.* There are abstract philosophers who assert, that this would not be in accordance with the principles of political economy. The best political economy is to make every such institution support itself. There is work enough in this world for all, and for more than all, the hands in and outside of our poor-houses, if we only had the genius to discover it.

The following letter from a working practical farmer, which appeared in the *Cork Examiner*, contains some useful hints:—

"I may be wrong, but experience shows that potatoes must contain those hygienic properties which preserve the blood and system in a pure and wholesome state. 'Tis certain scrofula became a scourge in rural districts during the famine years, and since the recovery of the potato crop the children have visibly improved in health and animal vigour. If fifty acres of ground were attached to the workhouse, or as near to it as possible, it would secure out-door healthy employment for every child, boys and girls, from four to sixteen years of age. It may be said, that farming would entail an expensive staff—but it need not, as any guardian who has a farm, or even a kitchen garden, of his own, could in an hour or two, once a week, lay down a programme of the week's work, to any intelligent labouring man, or a gardener, many of whom must always be amongst the adult paupers. This man could oversee the directions carried out. Let from thirty to forty acres be laid down under potatoes; any neighbouring farmer would do the horse-work at so much per day. The remainder of the ground could be given to cabbages, parsnips, carrots, turnips, and onions. The most grown children—say from fourteen to sixteen years—could cut the seed; children from twelve years old could set them, trench and second-earth them; every child from five to sixteen years old could clean, weed, and thin all the other vegetable crops. I have all, or a great deal, of these works done on my farm by children, by putting two boys where I am short a man.

"As to new milk for the healthy children—believe me, 'tis needless. Give them good Indian meal stirabout and one pint of sweet skimmed milk three times a week for breakfast—bread and milk the alternate days—potatoes and milk every day for dinner, to which can be added frequently some of the vegetables, &c., of which I shall speak presently—bread and milk for supper. Potatoes are getting cheaper every year, so that when the home stock is consumed they will be as cheap food to purchase as any other. They should not be bought by contract, but a week's supply laid in at a time from the market, which would ensure their being well-picked, fresh, and no waste.

"The offal, or wash, as 'tis termed, of the house, would fatten a great many pigs—sufficient, I imagine, to give the children and aged paupers a small quantity of pork two or three times a week, and lard enough to supply the entire house. This latter I find a very useful adjunct in my kitchen when milk is scarce; my work-people use it in a kind of sauce with their potatoes. When melted with some water, flour, salt, pepper, and onions, it makes a most savoury compound. As to selling the offal, 'tis folly. A piggery could be run up for a trifle, if there be not one already. What better business could a few dozen boys and girls be turned to than cleaning out the piggeries, feeding and attending to these pigs. The potato skins, waste vegetables, and general refuse, would fatten them quite enough for he use of the house, and would thus turn to more account on the health of the inmates and useful habits of the children, than any profit the offal would make. Let as many of the pauper girls as are necessary take it in turn to cook the potatoes and other vegetables. If parsnips, carrots, and cabbage be boiled, cut up, and set before the pauper in unsightly tubs, they won't be used; but let the same vegetables be well boiled, drained, chopped, or pounded, and some of the seasoned lard melted through them, and you will find them eaten with much relish. In the country, children from eight years upwards do all this in their parents' houses; and, by taking it week about, no one particular set need be confined to the kitchen department. Fifty acres of ground, the manure of the house, and the labour of the children, would give abundance of healthful food and occupation to the inmates. As to the organisation of all this—if three or four gentlemen who understood farming would give their superintendence to this department in turn, and if a like number of practical, *persevering* ladies, would do likewise in the culinary department, all would soon work well, and in place of a diseased, incompetent set of beings, you would rear up a healthy, vigorous race, who would readily find employment through the country, and replace the labouring classes, who are drained by emigration from our shores.

"I remain, Sir, yours,

"A Working Practical Farmer."

Our "Reformatory, or Home Agricultural Colony for Juvenile Criminals for the County and City of Cork," looks like (at least in print) a practical development of what the Farmer's letter recommends. Our prisons and reformatories are leaving our workhouses far behind. There is a sore temptation presented to the poor, by the contrast which these institutions bear to our workhouses, to *qualify themselves* for places where they are better fed and better taught. As matters now stand, there is a premium on crime, not that our criminals are treated too well, but our poor not well enough, or well at all.

* *The abodes of industry.*—Dr. Barter, in a lecture on scrofula, delivered at the Imperial Hotel, Cork, on the 20th May, says—he had visited the workhouse that day, and though he had been prepared, by what he had read, to witness shocking spectacles, the reality far surpassed his anticipation. In fact, he saw no disease but scrofula, and though it may not be developed, still he was certain that it existed in a latent state. The lecturer then proceeded to explain the theory regarding the origin of cutaneous diseases, including scrofula. He said there were seven millions of pores in the human body, and unless they were exposed to the vitalising effects of atmospheric influences, the internal organs would be affected, and scrofula produced. The chief predisposing causes of scrofula, he contended, were indolence and filth, as illustrated by the habits of the domestic from which the etymology of the disease was derived. *Scrofa*, in Latin, is a *sow*, which Dr. Barter, with some propriety, styles a "*domestic*."

Kind Words to the Young Women of England, Wales, and Scotland, on a very Serious Subject. By a Lady. Fifty-fourth Thousand. Lancaster: T. Edmondson, Printer, 38, Market-place. Edinburgh: Religious Book and Tract Society, 13, South St. Andrew-street. Welch Translation: J. Williams, Bridge-street, Caernarvon. London: Wertheim and Co., Paternoster-row.

A Mother's Care for her Daughter's Safety. By the Author of "Kind Words to the Young Women of England." Fifteenth Thousand. Lancaster: T. Edmondson, Printer, 38, Market-place. Edinburgh: Religious Book and Tract Society, 10, South St. Andrew-street. London: Wertheim and Macintosh, 24, Paternoster-row.

In these two productions the public have two excellent little tracts which should be circulated as broadly as possible by all those who are anxious to stay the progress of immorality and female degradation. They are plain and simple, yet extremely forcible, and would be of much service if placed in the hands of females while undergoing their imprisonment. The price is but small, being 1d. each; 9d. per dozen; 2s. 6d. per 50; 4s. 6d. per 100. On application to the Printer, either of them will be forwarded post-free, if ordered in quantities of not less than one dozen.

THE WRECK CHART.

We have lying before us a remarkable map, the Wreck Chart of the British Isles for 1858. It is to be found in a return to Parliament, carefully prepared by the Board of Trade. The chart is of the same appearance as an ordinary map of these islands, except that the whole line of coast, from the Orkneys to the Land's End, is dotted with a series of black marks. Each mark indicates either a shipwreck or some casualty to a vessel nearly approaching that disaster. A most melancholy effect has this chart when this key to its object is given. The whole coast, particularly approaches to our great commercial cities, bristles with the dottings which indicate clearly the site where some noble ship has gone to destruction with her human freight, the tidings of which has, alas! too frequently brought woe to many a home and counting-house. All round our coast, with the aid of this valuable map, we can trace clearly the frightful work of destruction during the past year. The total number of British merchant ships, including steamers, is supposed to be 27,097, giving a tonnage of 4,558,730. These ships are handled probably by no less than 300,000 men and boys. The nature of the disaster to British and foreign ships is thus epitomized:—In 1858 the number of vessels wrecked on the coast and in the seas of the United Kingdom, was 1170; of these 354 were total wrecks, 50 sunk by collision, making the number totally lost 404. Vessels stranded and damaged so as to require to discharge cargo, 515, by collision 251, total 766; making the whole number of wrecks 1170. By these disasters the lives of 1895 persons were imperilled, of which number 340 persons or ·18 were actually lost. This is the dark side of the doleful map. It has, however, a bright side, and on that we find that by the life-boats of the National Life-boat Institution, those of local bodies, and various other craft, 1555 of of our fellow-creatures were, during the past year, rescued from a watery grave. The red dottings on this unique chart are cheering marks, as indicative of the places where life-boats and the life-preserving apparatus are to be found in the hour of distress. The latter are under the control of the Board of Trade; and as the firing of the apparatus requires some knowledge of gunnery, they are principally in the charge of the coast-guard. It is very gratifying to find that life-boats on dangerous points of the coast have, of late years, greatly increased in number and efficiency under the management of the National Life-boat Institution, whose energies in this good work are untiring. It has now eighty-two life-boat establishments under its management, and we only wish that we were able to report that it had twice that number, for there are still too many exposed points in need of these arks of mercy; and although shipwrecks will occur, notwithstanding all our precautions, yet if life-boats were more numerous on the coast, and if shipowners paid more attention to the condition of their vessels and crews before they sent them to sea, much might unquestionably be done to lessen the melancholy catalogue of disasters on the coasts of the British Isles, which it is our painful duty to report from time to time.

THE LIFE-BOAT.

The Life-boat; or Journal of the National Life-boat Institution, for the quarter, has just been issued. It commences with some admirable remarks on the wreck of the *Pomona*, on the 30th April, 1859, on Blackwater Bank, in the Irish Channel, by which no less than 385 persons lost their lives.

The mistaking the new floating Blackwater Light for the Tuskar Light, may be looked upon as the direct cause of the *Pomona's* running aground. This is, after all, but an error of judgment; one among many to which a captain may be liable, and which may be looked upon in some sort as unavoidable; though this peculiar error may indeed be avoided to some little extent if all lighthouses contiguous to, or within short distances of, each other, had such plainly distinctive marks and characters as to make the confounding one with another almost impossible, or at least improbable. With this matter, however, we would not attempt to deal. The direct cause of the very great sacrifice of life on this melancholy occasion was the absence of proper boats—real life-boats—calculated to be of service on such occasions. The observations on this head are strong and forcible, and we unite with *The Life-boat* Journal in exclaiming against the injustice, the supineness of the governing authorities, who have charge of our mercantile marine, and, above all, of the emigration department of it, which affords no better protection to the lives of our fellow-countrymen, "and whose duty it clearly is to enforce, for the protection of emigrants and other passengers, a sufficient and suitable supply of proper boats to meet such emergencies."

A list of various services rendered by the life-boats belonging to the Institution occupies somewhat more than two pages, and cannot fail to show the value of its efforts; this is followed by an appeal which we venture to append on the subject of life-boats for the coast of Scotland.

The Royal National Life-boat Institution, which has already numerous life-boat stations on the English and Irish coasts, is desirous to extend its work of usefulness to the coasts of Scotland, that every part of the United Kingdom may be provided with the means of affording succour to those unfortunate persons who by the violence of the storm are cast away, and must, too often, otherwise perish on its shores.

To enable the Society to effect this important object, the Committee venture to solicit the pecuniary aid and the general co-operation of the people of Scotland—of her great landed proprietors, the sea boundaries of whose estates are washed by the angry waves—of the merchants and shipowners of her commercial cities—of all humane persons who can feel for and have the power to aid those whom it has pleased Divine Providence to afflict.

The objects of the Institution are effected—

1st. By stationing life-boats, fully equipped with all necessary gear and means of security to those who man them, and with transporting-carriages on which they can be drawn by land to the neighbourhood of distant wrecks—and by the erection of suitable houses in which the same are kept.

2nd. By the appointment of paid coxswains who have charge of, and are held responsible for, the good order and efficiency of the boats, and by a quarterly exercise of the crew of each boat.

3rd. By a liberal remuneration of all those who risk their lives in these boats by going to the aid of wrecked persons.

4th. By the superintendence of an honorary committee of residents in each locality, who on their part undertake to collect locally what amount they are able of donations towards the first cost, and of annual contributions towards the permanent expenses of their several establishments.

To effectually attain these objects it will be manifest that a considerable expense will be incurred; amounting to from £300 to £400 for the first establishment, and to an average of £20 annually on each life-boat station.

Without, therefore, the pecuniary assistance and the hearty general co-operation of the community at large, the objects of the Society could not be carried out. Its committee of management, therefore earnnestly appeal to the benevolent people of Scotland to aid them in this necessary and philanthropic undertaking.

DISCHARGED PRISONERS.

Dr. Johnson, it is well known, was no friend to vice. On the subject of that which is now termed "*the great social evil*" his view was decided; he would have treated both male and female as common thieves, and had them tried and punished accordingly. But this feeling of abhorrence was not permitted to interfere with the goodness of his heart. The doctor's positive benevolence occasionally outstripped his virtuous indignation in this matter, as will be seen in the following anecdote, given by his great biographer. Boswell speaks of him thus:—"His generous humanity to the miserable was almost beyond example. The following instance is well attested. Coming home late one night, he found a poor woman lying in the street, so much exhausted that she could not walk; he took her upon his back and carried her to his house, where he discovered that she was one of those wretched females who had fallen into the lowest state of vice, poverty, and disease. Instead of harshly upbraiding her, he had her taken care of with all tenderness for a long time, at a considerable expense, till she was restored to health, and endeavoured to put her into a virtuous way of living."*

There are probably few who will not at once acknowledge the propriety of the learned doctor's conduct on this occasion, which is all the more remarkable from his well-known detestation of the sin of which she had been guilty; yet is it no less true that but few could be found in these days who would act likewise. We don't deny that the criminal class generally, and the peculiar class to which the above remarks allude, are gradually assuming their proper position in the estimation of a large portion of the benevolent public. Our Reformatories and Refuges, and indeed the establishment of a Society specially for their encouragement—a society countenanced and conducted by many of our first men—bear strong testimony to the truth of this assertion.

There still, however, exists a strong feeling against those who are degraded by vice and crime, and especially against the employment of any person whatsoever immediately on discharge from prison. This feeling is frequently unchristian in the extreme. There may be many, it is true, whom it would be next to useless to attempt to succour, who are so wedded to crime as to be regardless of its consequences; but there are as many in whom all the elements of a steady persevering resolution to lead a different life lie dormant, only wanting encouragement. The change of character may be complete; but the public, in general, deny all chance of a restoration. If there be no Reformatory open to receive the suppliant, he is too frequently left to himself to seek for work, and contend against difficulties which it is well-nigh impossible for him to overcome. Mr. Burt, the chaplain of the Birmingham Borough Gaol, makes a forcible appeal to the inhabitants of that borough, in a sermon recently preached in two of their churches, in which he properly submits that "after an offender has gone through the punishment which was the just and the adequate penalty for his violation of the law, he ought to be regarded as socially purged from his crime. This, he believes, is the principle of English law, and he is sure it is a just principle. Some disadvantages must pursue the discharged prisoner; but he ought not to be shut out for life from earning bread for himself and for those dependent on him by honest labour. If he is thus doomed to live without employment, without sympathy, and without hope, certainly his punishment will be excessive and unmerciful, and this ought not to be."

In this sentiment we most cordially concur; and it is on this ground that we have ever warmly advocated the establishment and encouragement of Discharged Prisoners' Aid Societies.

No one will for a moment imagine that the carrying out the objects of such societies is free from serious anxieties and difficulties. Even the very system under which imprisonments are inflicted adds to the difficulty. The short sentences generally adopted fail to affect the hearts like longer periods of imprisonment, and it is but rarely that the prostitute or the drunkard, after short sentences, is disposed to accept of effectual aid. Then, again, there are the dangers of doing too much for the criminal, and of aiding the undeserving at the expense of the really penitent. The Birmingham Society of which Mr. Burt more expressly speaks objects to placing discharged criminals in Reformatory Institutions. It does not embark itself in any trading undertaking. It abstains rigorously from employing labour on its own account, it restricts itself to finding work for the discharged prisoners in the ordinary labour market. No one can question the general correctness of these principles, and well is it for the Birmingham Society that local circumstances enable the committee to assist these objects by obtaining employment for them in the ordinary labour market. This is beyond all question very advisable. It is possible that, as in Birmingham, so also in many other places, especially in the provinces, where the labour market is supplied mainly from the inhabitants of the immediate vicinity, and where employers also are for the most part stationary, employment may be found

* Boswell's Life of Johnson. Murray's edition. 1853. p. 770.

Digitized by Google

this practice as to insure the very general incarceration of "habitual offenders" in the only place suitable for them, "the convict prisons," with sentences of sufficient length to insure their being properly dealt with.

By reducing sentences of imprisonment in the county prisons to one year; by committing the less venial offender instead of to two years' imprisonment to three years' penal servitude in the convict prisons; and by sentencing the "habitual offender" class, as before suggested, to seven years' penal servitude, and longer if the offence is of an aggravated description; crime will soon be found to be an unprofitable calling, and the mistaken lenity of recent years, giving the utmost impunity to the criminal class, be thus satisfactorily rectified. The penal servitude sentences will then be three, seven, and ten, &c., years—the increased facilities for identifying the criminal under this system are obvious. It is worthy of observation, that in 1848 (before the diminution of transportation) the number of sentences passed in England, between one year and seven years' transportation, were only 519 out of 22,900, thereby showing that a three years' penal servitude sentence, which is only two years and six months of detention, four months of which will be in an intermediate prison (see Scale), will be all that is necessary between sentences of one year's imprisonment and seven years' penal servitude. By referring to p. 13 it will be observed that the latter sentence, which is now proposed as the shortest for "habitual offenders," need only involve five years and three months detention, one year and three months of which would, in Ireland, be in an intermediate prison, in which the labour of the convict would repay his cost. A large number of this class could then be sent to Western Australia, which cannot be done if they only receive sentences of three, four, or five years' penal servitude.

It is in vain to urge that registration will impede the absorption of the criminal; we have to do in the convict prisons, for the most part, with men who make crime their vocation, and, for aught we know, will do so again; we are safer in believing that they will. The *onus* of proving the contrary lies, and justly lies, with them. Our first duty is at all events to protect the public. The convict's sentence has unexpired, and he is registered for the term remitted.

If the criminal is desirous of pursuing honest courses no one will assist him more readily than the police when it is made a regular system, and their duty to do so. We are entitled to speak with authority on this subject as registration has been carried out in this country for considerably upwards of two years, with the most beneficial effects. There is another point of view also from which to look at this question: if the liberated criminal finds a difficulty in procuring work where his antecedents are known, he has, by the means of his prison gratuity (obtained through his industry) the option of going to countries in which his industrious intentions will be furthered by a greater demand for labour; a very large number have so acted. There is therefore no case of hardship—we have hitherto too much considered the criminal—too little the community he has so long and so successfully outraged.

We have ceased to desire imprisonment to be merely retributive. The gaols under old arrangements filled too fast to make us believe them to have been deterring. New and enlightened systems have been established, consistent with the progress of the age. It is justly expected from them that they will reduce crime.

REFORMATORY SCHOOLS.

The second report of the Rev. Sydney Turner, as Inspector of Reformatories, has just reached us. Neither our space nor our time will allow us to do justice to it in this present number; we hope to refer to it again on a future occasion. Meanwhile we may briefly say that it is in every respect worthy of the reverend gentleman who has so long devoted his energies to the improvement of the young delinquents at Red Hill. His report is well arranged, very intelligible, and has as much brevity as is consistent with the importance of the measure he is dealing with.

It is satisfactory to find that his experience leads to the conclusion, not only that the Reformatory Schools have improved in their internal condition, but that a marked effect has been produced on the general amount of juvenile crime. There were in England, Wales, and Scotland, on the 31st December, 1858, fifty-eight certified schools, of which six are for Catholic children. There were, at the same time, 1830 boys and 354 girls under detention in England, of whom 1364 boys and 224 girls were in Protestant, and 466 boys and 130 girls in Catholic schools.

Mr. Turner urges strongly, that the responsibility of parents should be enforced, and says,—

"I am glad to be able to report that out of the 772 cases admitted into English reformatories last year, 644 have been inquired into by the police, in pursuance of instructions sent to them from my office, and in 340 cases the parents are paying towards the children's maintenance*; in addition to these, the parents of 257 other children admitted in previous years are under payment; the amounts collected during the last year having been 1153*l.* 16*s.* 8*d.*"

His remarks upon this will be appreciated by our readers—

"The amount is of less consequence than the moral effect of enforcing the principle. A variety of cases show that the fact of payment being thus required, and imprisonment incurred when a fair payment is wilfully neglected or refused, has made parents more careful of their children, and caused them to take more active measures to keep them out of the reformatory, and so out of prison. The weekly tax of eighteenpence, or even ninepence a week, is undoubtedly felt very stringent, even in cases where the child must have cost more at home. I have no reason to doubt but that the amount of the payments, and the beneficial influence they exercise, will steadily increase. The directing and carrying out this part of the reformatory system is the most laborious and least agreeable part of the duties of my office, involving a continuous vigilance, and, in consequence, a large and regular correspondence with the police authorities in all parts of England. I fully believe, however, that it is a *sine quâ non* of the system, not so much as a check on its abuse as an element of its usefulness. By it the Reformatory acts on the parents and the families of the offenders at home, as well as on the offenders themselves in the school, exercising a preventive influence on those, as well as a curative one on these. It is satisfactory to add, that, as a general rule, the cost at which this influence has been brought to bear, and these payments obtained, is very moderate. The amount paid for law expenses and inquiries for 1858, including the charges of special agency in London, where 119 cases have been inquired into during the year, and 210 persons are now under contribution, and in Liverpool, where 84 cases have been investigated, and 84 parents are under payment, has been 211*l.* 6*s.* 3*d.*; and, if the salaries of the two clerks now employed in the office be added to this amount, the total does not reach one half of the sum collected. In connexion with which it may be observed, that, under the common penal system of short imprisonment, gradually leading up to transportation or penal servitude, the cost of the offenders' crimes and their punishment was much heavier, and the parents altogether escaped. I gladly acknowledge the ready and gratuitous assistance I have almost uniformly received from the chief constables and other officers of police by whom the proceedings have been conducted. Our collections now spread over 125 districts, and, with very rare exceptions, are steadily and punctually attended to, the necessary reports made, and inquiries instituted with great regularity and intelligence, and each case handled with such fair consideration for the circumstances of the parents themselves, that there has been scarcely an instance of complaint. The only serious difficulties that I have had to contend with have arisen from the different views that magistrates have here and there taken of the cases brought before them, when it has been necessary to proceed by summons, or from the injudicious administration of the Poor Laws in reference to out-door relief. Such impediments are quite the exception. It has been necessary in some cases to apply the more penal provision of the Reformatory Act, in consequence of the deliberate resistance of the parents to the order which the magistrates have made on them. Such resistance usually proceeds from parties who have been most instrumental, either

* Of the remaining 128, 59 were orphans and 69 reported as destitute or deserted.

Digitized by Google

by neglect or bad example, in their children's perversion. The penalty of ten days' imprisonment has been imposed in several cases.

"I should add that the Irish Catholic parents are the most difficult to deal with, and contribute the least in proportion to their numbers. My remittance for the year to Red Hill, for an average of 260 under detention, has been 213*l.*; while that to St. Bernard's, for 300, has only been 60*l.*; and to Brook Green, for 70, 46*l.*"

Mr. Turner concludes a very sensible report thus—

"The amount contributed from private sources has been and is very considerable. For the last year it reached 13,102*l.* 19*s.* 9*d.* In regard to this, it must be remembered, that almost all the certified reformatories now in action have been, in the first instance, established, at a large cost for buildings, land, &c., defrayed entirely by private bounty. On the whole, the subscriptions under this head for the founding and starting these schools cannot be estimated at less than 150,000*l.*; a noble testimony to the sincerity and earnestness with which the promoters of reformatory agency have laboured in the cause.

"The State has fairly met and responded to these efforts, and is already reaping the advantage of them; a reduction of 40 per cent. on the number of young offenders committed to prison, and the large diminution of expense and social injury which this represents, is a result well worth the amount of direct expenditure incurred in the grant for maintenance and management from the Treasury. But I cannot but point out that the agency of reformatory schools as to the treatment of the dishonest and convicted classes of our juvenile population is not the only point of view in which their public usefulness may be asserted. Concurrent with and provoked by these there has arisen a far more active interest in the state and treatment of the honest and unconvicted classes too. Attention to the evil to be remedied has led to more attention to the causes and sources of the evil; and while the few have been doing justice to the criminal, the many have been doing more justice to the innocent, and providing greater precautions to prevent them from becoming criminals. The causes of general education, sanitary improvement, &c., have gained indirectly from the progress of the reformatory movement; many who objected to the latter having been stirred up and led by it to do their duty more thoroughly in reference to the former. I confidently hope that this emulation will continue and increase. The reformatory is at present an essential, on grounds equally of justice to the age and circumstances of the offender and of policy to the community; but none will rejoice more than the very founders and promoters of reformatories to see them made less necessary, and their numbers gradually reduced,—by the enlarged success of preventive agencies,—by better and more efficient schools, more wholesome dwellings, more kindly relations between the more prosperous and more dependent classes,—more intelligence and improvement and domestic comfort in the homes from which now so large a portion of our juvenile vagabonds and criminals are recruited."

He then appends a very elaborate detail of the condition of the several reformatories he has inspected during the year.

Review.

The Investigation into the Condition of the Children in the Cork Workhouse, with an Analysis of the Evidence. By John Arnott, Esq., M.P., Mayor of Cork. Cork: Guy Brothers. 1859.

There is something inexpressibly shocking in the following fact, as given by Professor Nielson Handcock, LL.D., "When a question arose as to the religion in which two deserted children should be brought up, in the North Dublin Union, Mr. Roper said,—'I think it a thousand pities to lose so much time about a matter of no consequence, because every man knows that, from the system of the house, not one of these children will be alive this day twelve months.'" Yet is this the quotation by which Mr. Arnott, Mayor of Cork, prefaces his letter to the Irish Poor Law Commissioners. We hope those who take interest in the management of unions will procure this letter, and they will see in the analysis of the evidence, which is appended to it, much to excite both their surprise and their sorrow. Mr. Arnott's letter is as follows:—

"We have just terminated an investigation into the sanitary condition of the Cork workhouse, the importance of which it would be difficult to exaggerate. The facts brought out, as the result of that inquiry, have taken the city and country by surprise. The contrary appears to be the case with you, who have officially ignored, or rather repudiated, both my calculations and conclusions. The high and responsible position which you occupy, as Poor Law Commissioners, gives to your statements an authority which causes them to pass current with the public. This public confidence demands, on your part, corresponding caution, especially on a subject of such grave import as the mortality among the poor and the working classes of this country. As I should be sorry to attribute to you the deliberate intention of leading the public mind astray, I must conclude that the serious mistakes into which you have fallen, have resulted either from a want of caution in examining the tables of workhouse mortality, or a want of capacity in understanding them. How you could have so far erred, as to suppose the deaths were but 3½ per cent. per annum, when they were actually over 20 per cent., I cannot imagine. I have known great license to be taken with words whose meanings are often ambiguous, but figures, the quantity of which is fixed and definite, admit of no such liberties. The only excuse or palliation of your grave offence is, that you have been for years labouring under a great mistake.

"This poor-house contest has now assumed another phase. My facts were first denied, and my 18 per cent. of deaths repudiated, but these having been proved, the legitimate and fearful consequences flowing from them are questioned, and not only questioned, but broadly contradicted. The war is now one of statistics, and the proper mode of taking them. Here I find you have left the open field of facts, where you were worsted, and have taken refuge in a fortress of figures, but you will find a want of unity amongst your hastily levied troops; or, to drop the simile, you will find your figures turned against yourselves.

"I have done my best in this Analysis, with which I now furnish you, to make the matter perfectly plain to any person of ordinary understanding, or with an ordinary knowledge of figures; but, lest I should have made a mistake, I have taken the precaution of laying my statement before some of the most competent statisticians in the country, whose testimony I beg to lay before you.

"It may take you by surprise, gentlemen, to learn that Doctor Brodie fully bears out my statement of 18 per cent. annual mortality, of all the children from infancy to 15 years of age. I made this calculation on an average of four years. Doctor Brodie has taken eight years, and they give 20 instead of 18 per cent. The total is 11,534 children, and the total of deaths 2373, something over 20 per cent. Lest there should be any doubt on the subject, I give you the following table as I find it in the Inspector's report:—

Return of the Average Daily Number of Children in the Workhouse, for Eight Years, ended 25th March, 1859, and the Deaths in each Class for each Year.

Years.	Average Number of Children in the House.						Number of Deaths.					
	9 to 15.		5 to 9.	2 to 5.	Infants.	Total.	9 to 15.		5 to 9.	2 to 5.	Infants.	Total.
	Boys.	Girls.					Boys.	Girls.				
1852	837	908	444	309	181	2679	102	69	87	136	232	626
1853	689	863	396	332	81	2361	65	58	54	79	154	410
1854	444	464	191	293	110	1502	49	46	53	79	185	412
1855	399	395	178	332	139	1433	30	24	27	62	167	310
1856	364	314	189	230	152	1279	27	32	32	54	109	254
1857	283	242	121	167	105	918	19	9	12	23	66	129
1858	215	193	79	160	101	748	11	5	8	26	102	152
1859	188	160	82	88	96	614	9	10	1	9	51	80
Total	3449	3539	1680	1901	965	11534	312	253	274	468	1066	2373

Digitized by Google

John Craig, Esq., of the Bank of Ireland, has furnished me with an able paper, containing a table, which shows, that the deaths on 868 children outside a workhouse, from birth to 15 years, should be but 33. In the Cork Poorhouse it is at least of 156. Dr. Brodie's table, which gives 20 per cent. on an average of 8 years, would make the deaths 173. There is a fearful difference between 33 and 173. Mr. Craig has furnished me with another paper, in which he shows that the deaths which have occurred in the Cork Workhouse among the children from 9 to 15, have been, when compared with a similar class outside, as *thirty-one to five*. Now, this is a class, as he very properly observes, which may be presumed to have got over infantile diseases. "*Are the public*," he asks, "*prepared to accept this death-rate as a just and reasonable one or not?*" A serious question, gentlemen. It remains with the public to answer it?

George Boole, Esq., LL.D., F.R.S., and Professor of Mathematics at the Queen's College, Cork, says—

"The Commissioners are wrong in supposing that the per-centage of deaths among the children in a given period, should be calculated on the whole number of children resident at any time within that period in the workhouse; and the Mayor is right in asserting that, *the per-centage ought to be taken on the average number resident in the workhouse during that period.*

"Reference has been made to certain years in which the total number of deaths has exceeded the average number of children in the house. Thus, in the year 1855, the average number of children in the house was 139, the number of deaths 167. It has been asked, Can the Mayor explain this? I think he gives such an explanation of it as to show that there is nothing surprising in it, except the very high rate of the mortality.

"I will just add that, while the number of children passing through the workhouse in a year does not affect the question of what the actual mortality within the walls is—*which, as the Mayor rightly maintains, depends on the average*,) it does affect the question of the causes of the mortality. That mortality, however, is so high, that whatever abatement is made on the ground of external causes, a very large remainder must be left to be accounted for by the state of things within."

Sir Robert Kane writes as follows:—

"I had previously become aware, through the newspapers, of the principal facts disclosed by your testimony, and was much shocked by the further results of inquiry. So far as I can judge, I do not see any principle of error or of fallacy in your point of view, and I should certainly under similar circumstances, have arrived at pretty nearly similar conclusions myself.

"I consider the public, not merely of Cork, but of the country generally, to be under great obligations to you, for the zealous and practical philanthropy which has animated you in your inquiries."

The following statement made by me, before the Guardians of the Cork Union, contains a correct summary of the argument, and explains the proper mode of taking Poor-Law statistics:—

"The Commissioners give my mode of computation thus, and I here beg to say I find no fault with it:—"The average daily number of children under 15, during four years past, has been 868, and the average annual mortality for the same period, including that of infants under two years of age, has been 18 per cent. Applying this per-centage to the number 868, for the first year, and afterwards to the residue in each successive year for 15 years, 95 out of a hundred, the mayor states, will be found to be dead, and only five surviving."

They go on to say, "It is very clear that if the same exhausting process were applied to England and Wales, with its known annual mortality of 2¼ per cent., the whole population would be computed to be extinct in a limited number of years."

I agree with the Commissioners, that if this exhaustive process were applied to England and Wales, or any other country, the whole population would be soon extinct. The Irish Poor-Law system, if fully worked, would destroy any population.

The Commissioners attempt to destroy the force of my argument, and to reduce my 18 per cent. of deaths, to 6 per cent., thus—and here, let me remind you, gentlemen, is the gist of the whole case, and your great error:—"That the class, or rather group of classes, consisting of children under 15 years of age, receives into it, in the course of one year, a number of classes nearly three times as great as the average daily number, *through the operation of admission and discharges*, and in the course of fifteen years there would be received into it a number of different individuals, amounting to a great many thousands."

We shall take for granted that the class of children under 15, receives into it, in the course of a year, a number three times as great as the average daily number. The average daily number is 868. Three times 868 is 2,604. Now 156 represents the deaths in the house in the course of a year. We find that 156 is 6 per cent. of 2604. True, but 6 per cent. for what length of time? For just four months. If 2604 have passed through the house in the year, and no more than 868 were at any one time in it, the average period of residence of the whole number must have been 4 months. Now, 6 per cent. for 4 months is 18 per cent. for 12 months, and 95 per cent. for 15 years.

Take the following illustration:—The average number of patients at Doctor Barter's Hydropathic Establishment at Blarney is about 150, but through the year about 1000 may have entered. Now, suppose two deaths to have occurred there in the year, would it be correct to say that those two deaths represented the mortality of the 1000 people who had passed through the establishment during that period? Certainly not; the two deaths represent no more than the average number, 150, in the house. The 860 *outside* have had their average of deaths.

Take another example—the population of Cork, which is about 100,000. The deaths are about 3 per cent. More than another 100,000 pass through and remain in the city, some for days, others for weeks, and some for months. Would it be correct in estimating the per-centage of deaths in the city, to say that its 100,000 represents as many more, or 200,000, and that therefore the deaths cannot be estimated at more than 1½ per cent.

The House Committee, under the head of Fallacy No. 1, give an illustration in point. "The average number daily in the workhouse during the year ended 25th March 1859, was 1866; during the year there were 6553 admissions, each of these remaining on an average 67 days in the house." I am prepared to take the full number, 6553; but as this number was in the house according to their showing *but 67 days*, I cannot count the mortality as so much per annum, but as so much for the 5½ part of a year. It is not understanding this which has led to such confusion.

The error here would be transparent if applied to other places. Take, for example, the soldiers in the Cork Barracks. During the year 1857 the barracks contained 1000 men. The deaths were 30, or 3 per cent. per annum on the 1000; say on the 1st of May, 1858, the 1000 marched out and were replaced by another 1000 (which were outlying around the city,) that these were replaced by another 1000 on the 1st of August, could we, in estimating the strength in the Cork Barracks for 1858, reckon more than 1000 men, or, in estimating the mortality at the end of the year, reckon the 3000 that had passed through the barracks, and say that the 30 deaths represented the 3000, and therefore that the deaths were but *one*, and not 3 per cent. If we take the mortality of the 3000 as 30 (to which we have no objection), we must take it at 4 months only, and to get the annual per-centage we must multiply this by 3, as there are three times four months in the year, which gives 90, or 3 per cent. on the whole.

These gentlemen continue their argument thus:—

"The average number of infants—

In 1852	181	deaths	232
1853	81	"	154
1854	110	"	185
1855	139	"	167

They ask—

"Can the mayor explain this?"

I will do my best to make the matter quite plain, even to these gentlemen: but before I do so, permit me to remark that I had no idea the mortality went to the fearful extent which the House Committee here assert, that is, about 150 per cent. on these 4 years. Bear in mind, gentlemen, these are your figures and not mine.

The explanation is simple enough. The average given here is the average for a year; but these infants do not live a year; their average length of life is 8 months. You must therefore take the average by the month. In order to keep up your stock of infants, who are carried out wholesale in their coffins, you must be constantly getting in a fresh supply. Suppose you have an average of 500 loaves in your store, and that during the week 3,500 have been consumed, would you see any difficulty about this to need explanation?

Digitized by Google

Compare the wholesale infanticide, revealed by the figures of the House Committee, with that which prevails elsewhere. The deaths in Sweden and Norway are greater in proportion to the population, than in Great Britain, as we find by comparing Doctors Price and Milne's table of mortality; but in Norway, out of 10,000 children born alive, but 2195 die the first year, that is a fraction under 22 per cent. The per-centage of deaths in the Cork Workhouse average from 72 to nearly 200 per cent. These conclusions are really astounding, and almost past belief.

J. Craig, Esq., of the Bank of Ireland, one of the most distinguished actuaries and statisticians in this city, has favoured me with the following statistics:—

"If the exact number of persons *alive* in the workhouse is set down each day for a year; and if the total be summed up, and divided by 365, the result will represent *the true average population for such year*, no matter how often the numbers may vary from day to day, by discharges, admissions, or re-admissions. This simple proposition has been denied and ridiculed; notwithstanding which, I here re-assert, that it is not only true, but capable of the simplest proof.

"Having ascertained, as above, the average population, if we add thereto one-half of the number of deaths which have occurred during the year, the sum will be the number (of persons) upon which we should compute the normal mortality, according to the different ages or classes into which the whole may be divided.

"It has been officially stated, that from birth up to entering on the age of 15, the children in the workhouse are divided into four classes; and that the average number in the workhouse, for the last 4 years, was as follows:—

Class 1,	from birth	up to	2 years	..	114
„ 2,	from 2	up to	5 „	.....	161
„ 3,	from 5	up to	9 „	.....	118
„ 4,	from 9	up to	15 „	.....	497
					890

"If we suppose a similar population, class for class, and age for age, outside of the workhouse, and affected by the same laws of mortality which prevail throughout the land, we shall be able to decide whether the number of deaths so calculated is so much under the number which actually occurs within the workhouse, as to warrant the grave charges which have been made, or not.

"The laws of mortality have been so ably investigated by the late Mr. David Milne, that I do not hesitate to adopt his Carlisle table, as the *basis* of my calculations below:—

AGE. Years. Years.	Per-centage who die in one year, at each age of life, or before entering next year of life.	Average yearly Number alive in the W. H. for a period of four years past.	Average Number, increased by half the usual deaths for mortality calculations.	Deaths which should occur in each class in one year.	OBSERVATIONS.
Birth to 1	16 ℘ cent.	114	82	13½ } 17	I have apportioned this class, giving more than 2 to 1 to the greatest mortality.
1 to 2	8 ℘ cent.		40	3½	
2 to 3	6½	161	165	9	In all cases I have given a greater amount of mortality than the truth, with a view of preventing cavil, *if that be possible.*
3 to 4	4 } 5 ℘ ct.				
4 to 5	3				
5 to 6	2	118	120	2	
6 to 7	1¼ } 2 ℘ ct.				
7 to 8	1				
8 to 9	¾				
9 to 10	½	497	500	5	
10 to 11	½				
11 to 12	½				
12 to 13	½				
13 to 14	½				
14 to 15	¾				
				33	Total deaths by calculation.
			907		Total alive at beginning of year.
		890			Total average throughout the year or years.

I may here remark that the calculation would not materially vary, whether we adopt the Carlisle, the Northampton, the Government, or even the Swedish tables of mortality, in such a case as this, where the intensity of mortality is so much greater inside than outside of the workhouse as it appears to be.

"By my calculation the deaths *outside* should be only 33 in a year, amongst a population of young persons of equal ages and equal numbers with the interns; and *if it be true, as has been stated, that the average number of deaths amongst the children for the last four years was* 156 *within the House, I think there is yet much room for investigation into the causes of such a startling state of things.*

"JOHN CRAIG."

Cork, June 7th, 1859.

We shall now, gentlemen, throw aside all daily or yearly averages, and go simply on the admissions, and let us compare the Cork workhouse with our Infirmaries and fever hospitals. The propriety of this comparison is acknowledged by the house committee, who say, under the head of fallacy No. 2, "The infirmaries have populations essentially the same as that of a workhouse, ever varying, constantly admitting and discharging subjects." Well, here is a fair example, and we shall go on the comparison of the admissions alone. There were admitted into the two infirmaries during the last year 1290 patients, of these there were 58 deaths, or 4½ per cent. Fever hospital admissions, 855; deaths, 33; or 4 per cent. mortality. Now, the whole number in the poor-house for 1859, including admissions, was 8439. The number of deaths that year were 366, or 4½ per cent. It therefore appears that the deaths on the whole number of admissions to the poorhouse were rather more than the deaths on the admissions to the infirmaries and fever hospital. But the workhouse hospital, if we are to believe the workhouse books, receives about one-third of the number admitted to the house, therefore the deaths on the admissions to the workhouse hospital are 13½ per cent, or nearly three times as much as the fever hospital and infirmaries. The commissioners seem to be under the impression that two-thirds of the admissions into the workhouse are diseased. The workhouse books give one-third. But as far as the children are concerned, but a mere fractional part of these are admitted as hospital patients. There were, when I first visited it, 46 children in one of the larger wards or schools, most miserable objects eaten up with scrofula, and 41 of these entered the workhouse healthy.

Take another example, that of our gaols. The committals during the last year in both were for the city 1122, and for the county 1195. Total 2317; deaths in both, five, thus showing a mortality on admissions of not less than ¼ per cent. Now, according to our Commissioners' mode of calculating per-centage on admissions, a prisoner would live 400 years. According to my mode of calculation, the daily average in both gaols being 293, and deaths 9, we get a mortality of 2½ per cent. and a life of forty years each. But take it either way, and the mortality in this workhouse is seven times greater than in our common gaols.

We have thus compared the admissions and annual residence in our Union workhouse with those of our other public institutions. We find that, on the score of mortality, it has not stood the test. It only remains to point out the magnitude of the error into which the Commissioners have fallen, of confounding the admissions with the annual residence. Say 100 paupers enter our workhouse three times in the year. This 100 will count for 300. Say another 100 of the outlying paupers enter Cork workhouse in January, Mallow in April, Kanturk in July, and Fermoy in October. All these Unions will claim them, and the 100 will be magnified, according to the Commissioners' mode of taking statistics, into 400. Here we find 200 paupers reckoned as 700. We surely need say no more in exposing this dangerous error.

I have a remark to make, in conclusion, respecting the Blind Asylum. In my evidence I said there were 50 of the present inmates transferred from the workhouse to that institution, and that out of these 30 became blind here. I am still prepared to substantiate this statement; and I am happy to add, that there have been only two deaths in the Blind Asylum for the

Digitized by Google

and so on; the misconduct of servants must cease to be a matter of unprofitable complaining, a mere idle subject of housewifely gossip. It has become a *very serious question;*—it is not simply a domestic question, it is a social one; it is a social one not appertaining merely to a class or a place, but affecting the entire community."*

A very interesting enquiry might be entered into, respecting the causes which have helped to bring our domestic institution into its present anomalous condition; but for this purpose we should have to carry back our thoughts some hundred years or more, and bring under review the aspect of social matters then; we should have to examine and to trace the changes that have set their print upon the path of progress from that time to this; we should have to mark the advances of civilization, with its causes and its influences; we should note the effects of the introduction of machinery, and the impetus it has given to commerce,—the increase of wealth to some, of employment to others, (and, alas! of *want*, withal, to many). The sequel is soon arrived at, —an accession of riches brings luxury; for the acquirement of voluptuous tastes and indolent habits springs out of the possession of means to gratify them. These enervating tastes and habits tend to weaken good influences, and to slacken the hold on *duty, which includes the idea of a proper control of ourselves, and of those who may be placed within the sphere of our domestic dominion.* Such an enquiry, though interesting and instructive it might prove on its own account, would embrace a wide range of subjects, and far exceed the limits of this paper; moreover it would little serve the purpose we have in hand; our object is not so much to prove the existence of evils, which are *self-evident*, nor to dwell upon them, but to point to an efficient remedy; such a remedy is more likely to be found if we look steadily and calmly at *facts* as they present themselves to an unprejudiced mind; we shall thus be able the better to understand their real nature, and the treatment which is most likely to suit them. In finding fault with those who take too severe a view of the defects and shortcomings of servants, we must be careful that we are not led into another and more harmful extreme—that of utter apathy or listlessness—in the matter; this would be imitating the folly of a child that shuts its eyes to what appears to be a bugbear, with the vain hope that it will vanish when no longer seen! The *reality* of a great domestic grievance is before us, and it must be dealt with; we cannot set that aside. It may be asked, then, "*What is the immediate cause, and what the special remedy?*"

We may infer from the view we have taken of past years, and the point just now arrived at, that to the want of a *wise rule* and *wholesome discipline*, in the majority of households, may be attributed much, very much, of the insubordination and general misconduct of servants.

Now were we to treat this matter strictly in its religious and moral aspect, we might enlarge upon the sinfulness of masters and mistresses in neglecting their duty, *as such;* but what could we tell them here, beyond that which is put before them very frequently by their spiritual pastor, viz., *the importance of observing their moral and religious duties, so that by precept and example they may become as a shining light in their own household!* What could we tell them more than they may find dispersed through the Epistles and Gospels in the New Testament? Nothing. No other language can speak so eloquently and so persuasively as that. It has been proved that, in a large majority of cases, moral influence alone (in these days) is ineffectual in keeping either servant or employer to their duty. Time was when the simple unsophisticated mind and mannersof the people—were seen no where to such advantage as in the conduct and aspect of the household; the domestics were considered—and they regarded themselves—as members of the *family*, partaking of its joys, and sharing its sorrows; in fact, servants in those days identified themselves with the interests of their employers, their "place" was their *home.* Such a state of things is not our lot now, but to the reappearance and realization of this happy picture, doubtless, all things moral and social are tending; a bright light has set for awhile, but it will dawn upon us again, if in faith we *work, and watch while we wait.*

Women can do much to *help on* this movement. "The servant-question is one corner of the woman-question, and a very important one, although it has been little recognised by writers on that subject." We know that "very much is being done on all sides to lessen these evils. Every one who works for the moral and mental elevation of society is doing something to bring about a better state of things with relation to servants." We are hopeful that an improved system of training the working classes—the religious, moral, and industrial knowledge that is imparted to them in these days,—will have the effect of producing a far better race of servants for the next generation; but however satisfactory the result may be, it must necessarily prove a *slow* process: we fear, therefore, that "we must look for improvement (by moral means as the result of cultivation and training) *not* to the people of the present generation, but to those of the next—we include in these remarks the middle and upper classes—who, one and all, may be better fitted, by education at school and by home training, for the duties of the station in life they may be called to; in a word, on the one side to govern wisely, on the other to serve well.

We now come to consider the especial object of this paper. The foregoing remarks appear to indicate that we should do well in this case, as in many others, where abuses creep in, and acquire an ascendancy beyond the control of moral and domestic agency, and where immediate redress seems needed, to call in the aid of the LAW. This word may possibly alarm those persons who entertain a strong objection to what they consider "*legal interference with private matters*;" if so, we will only say, that when such a state of moral and social perfection may be arrived at as to require *no* laws, to prevent or to punish, it will then be time enough to consider such objections as those; but as long as the law is a necessity of the British *Constitution*, there can exist no reason why it should not be made use of whenever and wherever it is needed, as it is here, to help to the accomplishment of a *great social good.*

But we are about to propose no violent, no subversive measure; nothing that will trample on "the rights of British subjects;" nothing to cramp "the freedom of a free people," nor cut off the liberties of any one—excepting, indeed, *the liberty of the wrong-doer.*

The annexed "rules" will be found simple and just, calculated to promote the comfort of both servant and employer; because they would, by the wholesome *restraint* and *constraint* thus exercised, help to keep both to their duty.

A system of registration, very similar to the one proposed, is in successful working in Prussia, as well as in other Continental States; why, then, not in England?

One glaring evil would be checked by the application of such rules, viz., *the practice of giving false or delusive characters*, which is a great injury to good servants, inasmuch as it is very difficult now to distinguish the false character from the true, the good servant from the bad.

By affording the employer and the employed a ready means of arranging those differences which are likely to arise out of their relative positions, we offer an opportunity of forming a good basis for a mutual, permanent, and amicable understanding. The institution of such a set of rules would present a *middle* course, which has never yet been found, and by means of which the extreme measure may be avoided of making a public example of a faulty servant, by subjecting them to a magisterial investigation (which is better avoided when the offence is slight), and on the other hand, the evil of allowing matters to go on from bad to worse may be prevented, by timely application for summary, though mild redress, at the hands of the clerk at the office proposed.

By inviting, investigating, nay *insisting on*, a true character, we perform an act of justice to the respectable, honest servant. We offer an inducement to others to earn and obtain one, and provide a means of recommendation to those who are willing to deserve it.

When we reflect upon the fact that there are in the United Kingdom 1,000,000 servants, and in London 100,000, and that it is computed that of these 10,000 are always out of place or changing—when we consider the temptations that servants are subjected to under such circumstances, especially the female portion of them—we shall be able the better to appreciate and welcome a plan which may be the means of inducing them to keep their place, and continue in honourable and honoured service.

Another startling fact furnished by the reports of institutions for reclaiming the fallen, is this,—that eighty out of every hundred young women on the streets belong to the class *domestic servants* Can we say how much of this evil is

* Law Magazine, No. 114, 1857.

Digitized by Google

increased by the habit servants have got into, of changing their places for the least cause?—thus throwing themselves out of employment with little provision, and less thought, as to their future career.

Finally—we must look upon this question in its broad and comprehensive aspect. We must reflect upon the influences that are wide-spreading, either for good or ill, which emanate from the domestic circle; and now that *social reform* is a theme that warms many hearts, and inspires many tongues, we must not lose sight of the fact, that if we hope to accomplish any lasting good in that direction—and there is a great work before us—we must begin some of that work in the *home*.

The "Home Question" and the "Woman Question," are very much one and same thing; woman is the genius of home, *one* can no more be considered apart from the *other*, than can sunlight be considered apart from day; woman is the light and the life of home in the best and fullest sense—or ought to be if she is not so—she is turned from her path of duty, and is not fulfilling the high purpose for which God destined her.

M. A. B.

N.B.—A meeting of the department of Punishment and Reformation took place on Tuesday Evening, 4th of May last, at the rooms of the *National Association*, Waterloo Place; the subject "Marine Store Dealers,"* by T. C. S. Kynnersley, Esq. After the reading of the "paper" a discussion took place with reference to domestic servants and their connexion with *marine store shops*, showing that the latter offer temptation to pilfering, as well as to wholesale robbery, by affording facilities for the disposal of the proceeds of theft, whereby servants are greatly encouraged to plunder their employers. This point, as well as several others, being discussed in a very spirited, yet moderate manner, eliciting some important information; it occurred to the writer of this paper to submit the subject, with some suggestions, to the consideration of those who are able to appreciate the difficulties of the question, and to discuss them in that spirit and with that wisdom most likely to lead to a satisfactory solution.

The great and growing importance of the subject may induce some of the influential persons present to propose some resolutions having a practical tendency; such as the setting up of a memorial signed by numerous persons of consequence, addressed to the Secretary of State for the Home Department, praying him to take into consideration the desirableness of instituting a National Registry Office for *Domestic Servants*, with rules for the hiring, &c., of the same, similar to the plan proposed in this paper.

These Registry Offices in the various localities need not interfere with the numerous SERVANTS' INSTITUTIONS called "Homes," which, as *homes*, are of the greatest benefit and value to that class. It would only be necessary to place them under Government supervision, and subject them to any rules or provisions auteorized by the State.

PRELIMINARY REQUISITIONS TO THE PROPOSED NEW RULES FOR THE HIRING, ETC., OF DOMESTIC SERVANTS.

That a clerk, or other such person, be appointed in every borough or market town, and a day in the week fixed for hearing disputes or complaints on the part of servants and employers. The said clerk to have the power of settling all minor disputes, and judgment to be entered accordingly in the office of the clerk, and attendance of either party on court-day will be unnecessary. More important cases to be referred to the Town Court; but a private hearing to be granted, under all circumstances, when so desired, whether the parties requesting it may be in the position of complainant or defendant.

In many towns a clerk, or some such person as described, already exists, whose duties would admit of this addition; his salary, of course, to be made adequate to this extra demand upon his time. The expenses incurred by this appointment, or new arrangement, could be easily repaid by a small tax, to which every householder would gladly contribute, in order to establish so great an advantage.

Rules.

1. Certificates to be issued at the office of the clerk, stating name, age, and parish of the servant who applies; the name and place of residence of last employer, length of service, date of, and reason for, leaving.

2. Any servant obtaining a situation, and any person engaging or hiring a servant, without the production of such certificate, to be liable to a fine, the amount of which fine to be decided on by the authorities.

3. The present custom of requiring "a month's warning or a month's wages"—as it now stands, to be done away with. A proper notice will be required on both sides, the particulars of which will be regulated according to circumstances, stated in the sixth rule.*

* It may be worth while to remark here upon the defective state of the law as affecting *marine store dealers*. It is very difficult to obtain a conviction, because in cases where they buy stolen goods it is almost impossible to prove a guilty knowledge; in general, there is only the testimony of the thief, and if that stands alone uncorroborated, it goes for nothing with a jury; although there may be no *moral* doubt as to the guilt of the receiver, there is, in general, no *legal* proof sufficient for a conviction.

There are very strict laws concerning "marine store dealers," but it is almost impossible to enforce them, for those enactments refer to wrecks, shipping, &c., and are construed as relating solely to articles belonging to ships and dockyards, such as ropes, chains, anchors, &c. (hence the term "marine store dealers"), but as their traffic has extended, so should the enactments be widened in their application to meet existing difficulties.

The Attorney-General will shortly bring into Parliament his *Bills to Consolidate and Amend the Statutes relating to the Criminal Law*. It is contemplated to introduce some clauses into the "Larceny Act" by which *marine store dealers* will be placed under greater restrictions.

The mere possession of stolen property will be considered punishable, if proved that it was purchased from any person under age—or, in any case, without sufficient enquries.

It is likely that these new clauses and enactments will extend to household plunder and *general dealings*, which will enable magistrates and other law officers to adjudicate in such cases much more satisfactorily than they can do now, in the existing state of the law regarding them. A remarkable case of this description was recently tried at Lewes, viz., *Regina v. Wood*.

The writer is indebted for the substance of this information to a correspondence with which she was favoured by the stipendiary magistrates acting in two of the most important towns in England.—From *Domestic Servants, as they Are and as they Ought to be.*

* The following case will show the undue advantage which servants can take of the existing law:—

"A servant who had filled the capacity of housemaid for some time, gave her mistress notice to 'suit herself that day month,' declining to give any *reason*, excepting, in a vague way, that she was very uncomfortable with her fellow-servants. To this the lady replied that she did not know of, nor did she sanction, any thing that could make her uncomfortable. The notice, however, was accepted; but, much to the surprise of the lady, the servant came to her a week after, and said she was going *that day*. A protestation was expressed against such a course, and was apparently yielded to, but the next day the mother of the young woman came to take her daughter home. She was advised to let her stay till the end of the term of notice, in order that the charge of caprice and inconsistency, otherwise unavoidable, might not accompany the character given of her when she left. The mother said, "Oh! as for that, she did not want a character for her own daughter." Upon being asked whether she was not going to service again, the mother said, "Well! to tell the truth, I have made fresh arrangements in my family, and I want my daughter to live at home." *Here* was the reason of the sudden departure. In reply to the remark that such conduct was very dishonourable, she said she thought the lady had a month's wages in hand, which her daughter was willing to give up.

Now, from advice which has been obtained from a legal source, it appears that these people were acting strictly according to the provisions of the law in such cases; but does there not also appear the need of some amendment, in order to meet such cases *justly*? Servants may think that forfeiting the wages is a sufficient compensation for the sudden loss of services: is it so, according to the law of *right* and *kindness*?

While such a thing can be done with impunity (or with the loss only of a month's wages), people will never know that they can secure their servants from one day to another. If they hear of a more *eligible situation*, which they may enter at once, they will leave to "better themselves," and leave the family in the lurch, no matter to what inconvenience they put their employers. For instance, in the case already described, the vacation just commencing has brought an accession of several members to the family circle, and this young woman leaves her duties when there is no one to fulfil them. Moreover, she left without giving time to have the articles looked over which had been in her charge. True, there was no reason to question her honesty, but the fact is stated because cases might occur in which a dishonest servant could make off with property and leave at a minute's notice (merely forfeiting a month's wages), *because* "the place is not comfortable." The *discomforts* were fabulous, of which this young woman complained—at least the fault (if any) was amongst the servants, and there was reason to suspect that she (the complainer) was the most to blame.

This case shows the want of a Registry-Office, such as was proposed in a paper read not long since at the Albion Rooms. If a simple code of

Digitized by Google

4. No servant should be entitled to a recommendation to another situation under twelve months' good service, unless sufficient reason can be shown as to the cause of leaving; such as a mutual agreement to part on account of inadequacy for the duties, from ill-health, or any other cause; to be clearly so stated in the certificate.

5. The amount of wages to be decided on between the parties; but with this agreement, that there shall be an increase, say, of a sixth part of the first-named sum for the second year, and a similar addition for the third year; then it may be supposed that after *three* years' good service there will be such an amicable understanding between the parties that no further disputes will arise.

6. After the first year's service it will merely be necessary for either servant or employer, wishing to make a change, to give proper notice, an intimation of which to be sent to the nearest office; the time of leaving to be regulated according to the convenience of the parties concerned; the servant never to leave under a month from the time of notice, unless the place they are about to vacate be filled; the wages always to be paid up to the time of leaving.

7. Certificates to be applied for at the nearest office to the parish where the servant last lived.

N.B. It is earnestly requested that a true statement may be made concerning servants leaving their places, to insure a successful working of the plan.

Employers are counselled upon the subject of disallowing *perquisites*, which system opens the door to both petty and wholesale robbery.

Let the sale or disposal by servants of any and all commodities be a strict prohibition, and any instance of an infringement of this rule becomes a THEFT, which should in all cases be referred to the decision of a magistrate, who would do well to visit the offender in that sort of fraud with an amount of punishment as vigorous as the law admits.

Let employers also have a "notice" put up at their area-door to the effect that those perambulating dealers and receivers of such commodities called "perquisites," will be considered *trespassers* if found on the premises, and will be dealt with accordingly.

---

laws relating to the hiring and dismissal of servants could be drawn up, and be enacted, so as to be put in force at the said Government offices, much trouble might be spared to servants and employers. Such cases might then be referred to the decision of the clerk of the office, and such offices would become *Courts of Conciliation*.

Many servants are surprisingly well acquainted with the loopholes of the law, and know exactly where, when, and how to get through; and you will observe that the servant in the case described took care to give notice just at the time when a sufficient sum due to her was in the mistress's hands, to compensate her (as it must be called), and to render legal proceedings unavailable.

It is to be hoped, for the sake of *both* sides, that the wholesome spirit of reform may somehow reach this matter.

Correspondence.

To the Editor of the Philanthropist.

MR. EDITOR,—I have read, with very great pleasure indeed, Mr. Alfred Hill's letter in your issue of the present month. To see this great question, which I believe to be of paramount importance to society, taken up, and inquired into earnestly, by men of intelligence and of position, must ever be a source of gratification to all who take any interest in human progress—in the civilization of our country. That the temperance reformation is a question of such a nature as to involve almost everything that is dear to man, as a social and a moral being, is a proposition which will receive very general, if not universal, assent. I do, therefore, rejoice at every fresh indication of interest manifested towards it; being fully persuaded, that every earnest man who investigates the question will soon arrive at the conclusion, that on its success—more than on any other benevolent movement of our day—depends any real advance and permanent security in the comfort, and happiness, and virtue of the people. It is my conviction, that every philanthropic effort which leaves out of view the necessity for a total abolition of our drinking customs, which ignores the value of teetotalism as a co-operative agency, must continue to fail in producing any extensively good results.

Thomas Clarkson, when a young man at college, was appointed to prepare an essay on the slave-trade; the task opened up to his mind such an amount of criminality and wretchedness, as the result of that nefarious traffic, that his whole soul was deeply stirred; and he solemnly devoted himself to the overthrow of a system so degrading to man, and so dishonouring to his Creator. Our drinking customs are not less a foul blot on our humanity and on Christianity, and should create no less decided a determination in many ingenuous minds for their total extirpation; and such, doubtless, would be the result in many more cases than actually exist, if candid inquiry dissipated the too generally existing indifference to the subject. Men do not inquire, and, therefore, they know but little of the real extent of the evil.

Mr. Hill objects to my conclusions; and, from figures which he has given, widely different results are arrived at. I have looked over my figures and I find no incorrectness in them; and they seem inevitably to point out that there was a much larger consumption of intoxicating liquors, in proportion to population, in the United Kingdom in 1856 than in 1821; or, in other words, that during these thirty-five intervening years, there was a large increase in the appetite for alcoholic stimulants. This increase, I apprehend to be in accordance with a law of transmission from parent to child, which would be constant if not counteracted from time to time by some sufficient opposing force. I shall show presently that such a force has been, and I hope still is, in operation in these kingdoms. Although I fear it is again overcome to some extent in Ireland during the past four or five years, still no reason exists, why we should relax our efforts to entirely overthrow an evil, the existence of which must ever give rise to "*gloomy views*" in every thoughtful mind.

In the *Scottish Temperance Review*, for April, 1851, there is an elaborate paper, taken from the *Bristol Herald*, on the consumption of strong drinks in the United Kingdom, from the year 1821 to the year 1850. Perhaps I might call it the most striking and carefully compiled paper that has been written on the subject; and as it to some extent bears out Mr. Hill's more sanguine views than mine, I have pleasure in laying its conclusions before your readers.

These thirty years are divided into two periods of fifteen each. The first, from 1821 to 1835, exhibits a fearful increase in the appetite for alcoholic stimulants, including rum, foreign spirits, wine, British spirits, and malt liquors. In each of these, the consumption, with occasional lessenings, increased year by year, until at end of the period, it had arisen to an increase of more that 50 per cent. on the whole. During this period, the growing appetite of the nation went on unchecked by any sufficient opposing force, and seemingly governed by that law of transmission to which I have referred, the enormous increase of consumption indicated was the result.

The second period, exhibits results of a different character, and most pleasing in their nature. From 1836 to 1850, the enthusiasm in favour of teetotalism in these lands was at its height; the sufficient counteracting force was then in operation, and the happiest results followed. The decrease in the consumption of intoxicating liquors over the whole kingdom was 19 per cent. The difference between 19 and 50 per cent. show a large increase on the whole period. In Ireland, for several years of this period, the decrease was more than 50 per cent. In these calculations, the population is taken into account. I may add to this gratifying statement, the fact, that during the whole of these thirty years, there was a very large increase in the consumption of tea, coffee, and cocoa.

We have now a large amount of facts before us regarding the actual consumption of intoxicating liquors in these kingdoms for a period of fifty years; and these facts appear to me clearly to indicate, that there is a tendency, which many imagine has the force of positive natural law operating with increased strength from generation to generation, to overstep moderation in their use, so overpowering, that no permanent improvement in the peace and comfort of society can be rationally anticipated until this great source of mischief is entirely dried up. The traffic in these destructive agents has ever been looked upon as a business dangerous to society; it has, therefore, been always hedged round with various regulations in the hope of rendering it less noxious. Experience and wisdom are now opening our eyes to the terrible danger of permitting the existence of such a traffic at all. It is quite clear that civilization has not yet found out the means of lessening crime, or of elevating the masses of the people into a condition of comfort. It is now plain to reflecting men, that a generally prosperous

Digitized by Google

and virtuous community is a state of affairs incompatible with drinking usages. These usages have long counteracted the efforts of philanthropy, and they will ever do so, so long as they are tolerated. Those who deny this proposition must repudiate the teachings of science and experience in all ages and in all countries.

I wish, in conclusion, to say a few more words relative to the hereditary transmission of the drinker's appetite, with increasing force, to his children. This is not a new idea; but it has received greater attention of late years, and the more it has been investigated the more importance it assumes in the minds of intelligent men. I do not profess to have any scientific knowledge myself on the subject; but my attention has been for some time directed towards it; and I have little doubt on my mind that there is a natural law leading to this result, as steadily as the law which governs hereditary diseases, and family and national peculiarities of form and features. If this idea be founded on truth, it is an additional powerful argument in favour of the entire abandonment of the use of alcoholic liquors, and for the legislative suppression of all traffic in them, as common beverages. Supposing my premises to be correct, our sense and reason appear inevitably to lead to these conclusions.

I may not occupy your space by any lengthened evidence in sustainment of my opinions; but I shall just mention the names of a few eminent men who support the views I am now referring to. The well known Dr. Darwin sustained this opinion in his writings. Dr. Macnish maintained the same views. So long since as 1743, Lords Harvey and Lonsdale, in the House of Lords, strongly expressed their convictions of the truth of this doctrine. In a late number of the *British and Foreign Medico-Chirurgical Review, or Quarterly Journal of Practical Medicine and Surgery*, the writings of three eminent men on this subject are favourably received—Dr. B. A. Morel, Dr. Jas. Whitehead, and Dr. Robert Knox.

Dr. Morel refers specially to the writings of Dr. Huss of Sweden, who appears to have deeply investigated this important subject; and he is of opinion that serious deterioration of the Swedish people is resulting from the operation of this law. He writes, "The danger is not future and contingent; it is a *present* evil, the ravages of which may be studied in the present generation. No measures *can be too strong;* it is better to save at any price than to have to say *it is too late*." No words can be stronger than those used by Dr. Morel to attract attention to this deeply important subject.

Mr. Neison, the eminent and well known actuary, may be appealed to as a writer who sustains these views; perhaps his testimony will be considered the more valuable by many, as he does not appear to have written with any view to sustainment of the doctrines I am now advocating, yet his conclusions clearly arrive at these results.

The consumption of spirits in Ireland for a long period, appears clearly to sustain my views. Here are the facts, as per published returns:—

Whiskey manufactured in Ireland in 1723, 133,733 galls.; in 1750, 508,540 galls.; in 1780, 1,209,416 galls.; in 1800, 3,621,498 galls.; 1820, 4,636,192 galls.; and in 1837, 11,809,603 galls.

As all calculations based on smuggling must be problematical I have not taken this point into my consideration of the subject.

Yours, Mr. Editor, respectfully,

JAMES HAUGHTON.

35, *Eccles Street, Dublin,*
11*th July*, 1859.

INDUSTRIAL SCHOOLS.

To the Editor of the Philanthropist.

SIR,—Having read with interest the review in your last number of a work recently published, entitled "Prevention better than Cure," and most fully concurring with the sentiments expressed in the extracts from that work which you give, I am induced to state what has lately been done in the parish of Kensington towards carrying out the desired objects of its author.

It was found by those who had long taught in a free District School situated in a part of the parish which is inhabited almost exclusively by the lowest class of Irish, that they met with many hopeful cases amongst their scholars, but the good influence gained over them was more than counterbalanced when the children, arriving at the age of twelve or thirteen years, were required by their parents to earn something towards their own maintenance. The character of their parents presented in most cases too great an obstacle to admit of their obtaining the employments provided for the children of more respectable parents; while, on the other hand, means were not wanting to place them in Reformatories and Penitentiaries should they yield to the temptations to vice by which they were surrounded.

But who would desire them to fall lower in sin, to gain the advantages which these institutions offer? Was there no hope of *preventing* the evils these asylums strove *to reform?* A shoe-black brigade was formed for the boys, who are also employed as crossing-sweepers and messengers; but it is to the Industrial School which was established for the girls that I wish more particularly to direct attention.

This school was opened in May, 1858, having for its object to provide a home, combined with religious instruction and industrial employment, for girls whose circumstances placed them in such scenes of temptation that but for this provision they would in all probability fall into ruin. Under the care of a matron *six* girls were at first received, but the number has now increased to *twenty*, from the ages of ten to fifteen; they are entirely clothed, fed, and trained for domestic servants. The need of giving *full employment* to this class is felt by all who have had much experience with them; and in many institutions it must be acknowledged that the proportion of work to be done is far too little for the hands employed. To obviate this, washing as well as needlework is taken in, and the former is a very remunerative employment. There is also a great deal of cooking done in the school for the poor, but more especially for the sick among them; which, while it returns a small profit, is a most useful branch of household work, and gives the girls a much more extensive acquaintance with this art than they could have if they cooked merely for themselves. The advantages thus afforded to the poor of the parish, as well as to the clergy and the district visitors, being irrelevant to the present subject, need not now be urged. Private families interested in the welfare of the school, kindly give orders for their own use.

Family prayer is held morning and evening, and religious instruction is given. Two hours a day are set apart for secular instruction, the remainder being devoted to industrial work. The sum of 2s. 6d. per week is required for the payment of each girl; in some cases this is contributed in part or in whole by her parents (which where practicable is most desirable), but as regards the greater number of the inmates their parents are either totally unable, or so totally indifferent to the welfare of their children, that this amount is defrayed through the kindness of persons interested in their behalf.

The objects of the managers of the Kensington Industrial School are twofold.

1. To endeavour, with God's blessing, to instil into the minds of the children sound religious principles.

2. To provide them with the means of obtaining an honest livelihood in that station of life to which it has pleased God to call them, inculcating the feeling that they have a character to maintain, and in earning for their own maintenance are not supported by mere lavish charity.

The school is under the presidency of the Ven. Archdeacon Sinclair, the vicar; and two of the curates fill the offices of honorary treasurer and secretary. A ladies' committee is also appointed to superintend and visit the school.

Why should not such schools as this be multiplied? In every large town, and in many large parishes, there will be found quite a sufficient number of cases to render such an institution most valuable, and why should not one be established in every locality needing it, varying in its industrial work and internal arrangements according to the requirements of the neighbourhood in which it is situated? The expense is, to a great extent, met by the payment made for, and the work done by, the inmates, and a comparatively small amount is left to be defrayed by voluntary contributions.

But, it may be asked, why not send such children to the workhouses? To be ignorant of sin is one of the best preservatives against its commission. There is that in the heart of every child which loves the evil and hates the good; and the more the knowledge of sin is increased, the more is the heart depraved by it; and, therefore, the mixture of classes in the workhouses, affording to the youthful mind the means of a greater acquaintance with sin, should be most carefully avoided. But let the quotations in your review at once negative such a proposal.

Digitized by Google

for all such as require it. Mr. Burt objects to discharged prisoners being placed in Institutions, because "the number of persons who require aid is considerable; but such Institutions, on account of their cost, can be provided for only a very small number. The consequence," says he, "is that a few are helped unduly, and the rest are left unaided altogether." We are, then, fairly left to presume, either that those who require aid in Birmingham are few in number, or at any rate that *all* requiring the aid of the Society are provided with labour in the ordinary market; for unless it be so it must inevitably follow that "a few would be helped unduly, and the rest left unaided altogether." Employment, however, is by no means so easily found in the ever-migratory population of London; and it would be useless for the Surrey or Middlesex Societies to attempt to confine themselves within the limits of the operations of the Birmingham Society. The London and suburban prisons number thousands of inmates, where such as Birmingham reckon hundreds; and whatever may be the willingness of the inhabitants of Birmingham to receive discharged prisoners into their employ —which is indeed highly to their honour— it is matter of extreme difficulty to combat the indisposition of the London public to give them such encouragement. We could wish that indisposition were removed. Until a proper feeling shall spring up in reference to prisoners, there will be but the alternative of sending them to already existing institutions, or emigrating them to distant colonies. Both these plans may have their objections, but at present in many cases they are the sole means of effectually aiding the discharged criminal. We have received several reports from secretaries of similar Societies, and purpose returning to the subject on some future occasion. We were drawn into these remarks by the perusal of Mr. Burt's sermon, to which we beg attention, as advertised in our columns. It will repay perusal to those who are interested in the well-being of our fellow-men at that most critical period of their career, when, with good thoughts uppermost in their minds, they emerge from the prison, nominally free, but so beset with difficulties, so shackled by old associations, so despised by their fellow-creatures, so barren of all means of putting into exercise their good resolutions, that we can scarcely expect from them other than a desperate return to the course from which they see escape to be so hopeless.

LADIES' ASSOCIATION FOR THE PROMOTION OF SANITARY KNOWLEDGE.

'A MORE important object than that taken up by this association can scarcely be conceived. The British islanders are proud of their country, and with justice; they can point to abundance of evidence, both internal and external, of the skill and energy with which the British nation pursue any legitimate object worthy of their regard; how apt they are to take advantage of any opportunities of increasing their substance, and how freely and readily they give of that substance when amassed, to aid their less fortunate fellow-creatures whether at home or abroad. Now there is one portion of the British public whose value as co-operators in any good work has ever been readily acknowledged by those who have had the management and control of various institutions— we mean the Ladies, or, as they were properly called at a recent meeting at Willis' Rooms, as a more honourable title, the women. But the women of England themselves seem scarcely to have been sufficiently aware of their own power, when united for a charitable purpose; they have been somewhat backward. We would not for a moment desire to see them outstepping their own proper bounds, or in any way interfering with what may be termed the legitimate functions of the men. Men do, it is true, sometimes cast aside their own proper manly functions, and are content to use their delicate fingers in the display of silks and satins to fair purchasers in linendrapers' shops. But men-milliners even would hardly be such repellant objects as women engaged in men's legitimate work. But there are occupations which are not only unfitted for men, but such as men could neither properly understand nor undertake with any prospect of success. Pre-eminently so are the operations proposed by the Ladies' Association for the Promotion of Sanitary Knowledge among the Poor. Many thousands of infants, unable of course to explain their aches and pains, are hurried away from earth by diseases which are assuredly preventible. A considerable portion of this mortality is traceable to the ignorance of mothers of even some of the common laws of nature. To impart this knowledge to mothers, either actual or expectant, is one of the special objects of this association; and it is manifest that there must be many little points requiring attention which, even if known and understood, could not be imparted by any man, scarcely even by the medical practitioner. There must be many points on which the young mother would not venture to open her lips unless to one of her own sex; many a passage in the life of her young child in which she it may be in total ignorance, outrages the laws of nature, communicable only by a sister. Maternal conference and observation are often far superior to the hints of the medical man, and will frequently have much more weight. Already has the association been of eminent service by the publication which it has so widely disseminated, and it is unquestionably gaining ground both in public usefulness and general estimation. We shall have occasion to draw the attention of our readers again to the society in our next number, when we hope to give a full report of their first annual meeting. Meanwhile, we will close these remarks by subjoining some very sensible observations which appeared lately in the *Daily Telegraph*, and with which we fully concur.

'The sterner sex have in this age, when ridicule is a power and kills, a perhaps undue horror of what are commonly termed "strong-minded women." To the men folk a philosopher in petticoats is a very dreadful object for contemplation indeed; and the very mention of a "committee of ladies" brings inevitably to the mind the picture of a number of uncomfortable-looking women, of scraggy aspect, in spectacles, who part their hair on one side, instead of down the middle, talk political economy and the "rights of women" with the acrid volubility of a Mary Woolstonscraft, or an Anna Seward, stalk about in riding habits or short jackets, keep air-pumps in their boudoirs, and the tibiæ of megatheria on their bedroom mantelpieces, denounce male accoucheurs, forswear stays, hold heterodox doctrines respecting the assumption of bifurcated nether garments by the female sex, and at home henpeck their husbands and brothers dreadfully. Strong-minded women have been unmercifully quizzed by this generation. Years have elapsed since we laughed at the farce of the "Ladies' Club;" the sartorial crusade of Mrs. Amelia Bloomer was speedily defeated in this country by the caricaturists and the small boys in the streets; and considerable discredit was brought on a really admirable cause and a more admirable woman by Mr. Dickens's humorous portraiture of the female philanthropist of Borriaboola Gha, in *Bleak House*. A conviction had somehow become firmly implanted in men's minds, that "woman's mission" consisted properly in looking pretty and having children, in tending and rearing those dear innocents with womanly affection and solicitude, in shedding sunshine by a thousand fairy household words and deeds—of which alone women have the possession and the secret —round the domestic hearth, in smoothing the brow of pain, in bedewing the pillow of sorrow with the tears of sympathy, in assuaging the cares and gladdening the hearts of their sterner, stronger partners, whose duty and whose joy it should be to

Digitized by Google

go forth into the great working world, and do battle stoutly for the dear ones they have left at home. Men thought, it may be irrationally, that all the learning of Madame Dacier and all the patriotism of Charlotte Corday—that all the philosophy of Madame Roland and all the wit of Mrs. Montague—could not compensate for the loss of the real attributes of "woman's mission"—love, tenderness, and mercy.

'We cannot deny but that in the impetuosity and recklessness of satire, we may have done some injustice to the "strong-minded women." Surely, if ever a woman existed in whom the strongest qualities of mind were combined with the most exquisitely feminine refinement and delicacy, that woman was Florence Nightingale. But while the Dorcas of the Crimea emancipated herself from the social thraldom in which, through a false sense of conventional propriety, a vast number of her sex are still held, her strong, common, womanly sense, prompted her to repudiate any absurd pretensions to abstruse acquirements, any presumptuous arrogation of the duties naturally the province of the other sex. It is for men to fight—it is for women to scrape the lint and bandage the wound. Eminently womanly as was the task so gracefully undertaken by Miss Nightingale, during the Crimean campaign, it was one that—in the English army, at least—had been left in time of war to male nurses. Florence Nightingale was the first English Sister of Charity; and the glorious example set by that angelic woman has, since the dreary days of Balaklava and Scutari, borne good fruit. Everywhere, ladies of elevated social position seem anxious to ameliorate the condition of their poorer sisters. There are no wounded warriors to tend now, thank God; but there are lying-in women to succour, there are weakly children to watch over, there are good counsels to be given to the impoverished and the ignorant—to teach them to turn their scanty means to the best account, to instruct them how to manage their children, and to diffuse some modicum of comfort through their narrow and crowded rooms. It is because we believe that the true objects of "woman's mission" are beginning to be understood that we hail most cordially the efforts made by the Ladies' National Association for the Diffusion of Sanitary Knowledge, the first annual meeting in connexion with which took place on Thursday, at Willis's Rooms. The society have, it appears, a literary organ called the *Englishwoman's Journal*, articles from which are reprinted and circulated in great numbers as tracts among the poor. We have not had the advantage of perusing this periodical; but any fears we might have entertained as to its being conducted by a junta of *Précieuses Ridicules*, and filled with disquisitions on the "*vestiges of creation*," the advantages of Bloomerism, or the propriety of extending the elective franchise to women, are dissipated, when we learn that among the supporters of the Ladies' Sanitary Association present at the meeting, of Thursday, were Lord Shaftesbury, Mr. Monckton Milnes, Sir John Forbes, Dr. Farre the Registrar-General, the Rev. Charles Kingsley, and Doctor Southwood Smith—gentlemen who, whatever may be the eccentricity of the views of some of their number, are not the less distinguished for their true philanthropy, and their unwearied labours in the cause of sanitary reform.

'The Ladies' Association are sufficiently strong-minded energetically to repudiate *in toto* the interference of gentlemen in the management of their internal affairs; but they graciously permitted Mr. Cowper to officiate as secretary *pro tem.*, and read the report of the committee at Willis's Rooms; while they were so condescending as to allow the Earl of Shaftesbury to take the chair, and address the brilliant assemblage of ladies present. The sphere of operations of the Ladies' Sanitary Association is certainly extensive. They have distributed, during the past year, more than 20,000 tracts. They have endeavoured to instruct the wives and mothers of the poor in family duties. They have pointed out the evils of "wet-nursing," the errors of weaning, and the sin of tight-lacing—a sin not indulged in to any considerable extent, we opine, by young women of the poorer classes, inasmuch as they have not the money to buy stays. In fact, they are striving to disseminate sanitary science in the dwellings of the poor; and in Lord Shaftesbury they found an eloquent declaimer against the poisonous nostrums, such as "Daffy's elixir" and "Godfrey's cordial," with which the infant poor are drugged, and an impassioned opponent of those unhealthy nuisances, perambulators. By wholesome advice and example these benevolent ladies try to obviate the spread of epidemic disease, to diminish the sickness and mortality which afflict the families of the poor, and to prevent those painful cases of deformity, crookedness, and spinal disease which are so frightfully prevalent, and which mainly result through mismanagement in nursing. The Ladies' National Association for the Diffusion of Sanitary Knowledge has our best wishes for its success; but we should wish to point out one or two opportunities for sanitary reform which have unaccountably been overlooked in the ladies' programme. Let them teach the poor to cook. Let them inculcate the necessity for paying somewhat better wages to domestic servants, and treating them somewhat more considerately than drudges and machines. Let them specially endeavour to diminish the hours of labour of sempstresses and milliners' work girls. There is scarcely any instance in which "sanitary reform" is more imperatively needed than in the crowded and pestilential work-rooms where women and girls slave their young lives away at starvation wages, to make the splendid dresses which ladies wear at Court, drawing rooms, and flower shows. If the Ladies' Association accomplish this vital point of reform, they will truly have deserved well of their country.'

REFORMATORY AND REFUGE UNION.

It always gives us great pleasure to record the doings of this Society, because what they do is ever practical and well done. There does not exist another body of gentlemen so capable of carrying into effect either the Reformatory or the Industrial Schools Act. But for their existence many a lad, now promising well in various certified Reformatories, would be still at large, from the fact of deficiency of information as to the places to which they could be consigned on their conviction; many sentenced, at the expiration of their imprisonment, to so many years in a certified Reformatory, *to be named hereafter*, would have been discharged to renew his depredations and grow older in crime. The information procured by the Reformatory and Refuge Union has in this respect been almost invaluable. For it must not be forgotten that the training of the boy in the Reformatory is not all the advantage gained. The removal of his evil influence among his companions; the wholesome fear generated by the length of his imprisonment—for it virtually amounts to that—has a very sensible effect on the juvenile rogues in the neighbourhood where he dwelt. Again, the Act 20 & 21 Vic., cap. 48, would have become a mere dead letter, but for the exertions of this Society; whereas it now bids fair to prove, as we have always thought it, one of the greatest boons ever conferred by Parliament on the poorer classes.

The following case occurred at the Marlborough-street Police Court, on the 1st of July, which had been appointed by Mr. Beadon for the examination of the father of a boy between 10 and 11 years of age, named Charles Christmas, known to the police as a determined young beggar, as to his option whether, under the Act 20 & 21 Victoria, cap. 48, he would consent to the magistrate, upon the evidence laid before him, sending his son to an industrial school, or was ready to enter into recognisance that he should not offend in the same way again for twelve months from the present date.

The father being in attendance, Mr. Oliphant, the barrister, and member of the *Reformatory and Refuge Union* Committee, who had proved the last instance of the boy's persevering mendicity, and who seemed to take a warm interest in the present proceedings, was also present, together with the secretary, to state where there were vacancies.

Mr. Beadon having explained the clause in reference to the parents of such boys, pointed out that the father had a clear option in this case, but that if he elected to enter into security for his son for twelve months, and he was detected offending again by street begging, the Act gave power to call him up and visit him with punishment, he being in that case altogether responsible.

The father, who said he was a labouring man, earning on the average 17s. or 18s. per week, decided that he would much rather his son should be sent to an in-

Digitized by Google

dustrial school, as he certainly could not be answerable he would not beg again.

Mr. Beadon said he had chosen discreetly—the boy being sent would be educated and well taken care of. He would go for three years; but the parents, by the regulations, would be allowed to see him at stated times.

The father was well satisfied, and, from further inquiries as to his circumstances, said he had other children to support, and was really unable to contribute any sum towards the boy's support.

Mr. Beadon said if such was the case he would undoubtedly be excused from doing so, but that strict inquiries would be made, and if it should be ascertained that his means permitted, he would be compelled to allow accordingly.

The Secretary informed his worship that there was a vacancy at the "Boys' Home," No. 44, Euston-road, where the boy could be at once admitted.

The required form of admission was filled up, and the boy handed over to the Asylum authorities.

This is the first case of the sort from this Court, and the third under the Act.

But this is not the only part of the Society's operations which it falls to our lot to record. Another subject on which it has manifested much zeal is—

The Emigration of Reformatory Boys to Canada.

The Committee have been engaged during the past four months in promoting the Emigration of Boys from various refuges and reformatories throughout the country. There have been altogether 59 applications, 21 of which were either rejected by the Committee or withdrawn. The 38 approved were strong healthy boys, between 15 and 20 years of age, from the following institutions:—

	Boys.
Boys' Refuge, Whitechapel	2
Boys' Home Reformatory, Wandsworth	4
Grotto Passage Refuge, Marylebone	4
Home-in-the-East Reformatory, Bow	5
Calder Farm Reformatory	4
Birmingham (Saltley) Reformatory	3
Castle Howard Reformatory	1
Northamptonshire Society's Reformatory	3
Hardwicke Reformatory	1
Essex Reformatory	1
Red Hill Farm-school	6
Kingswood Reformatory	2
Leeds Reformatory	2
	38

They were all very carefully examined as to their attainments in reading, writing, arithmetic, and knowledge of the Scriptures, and it is confidently hoped that they will turn out well in the colony, and do credit to the institutions from which they have been sent.

The Emigration Fund of the Union is now exhausted. Contributions will be thankfully received by the Secretary, at the office of the Union, 118, Pall Mall, S.W.

Lastly we must refer to their—

Grants to Refuges.

The Committee have also been engaged in the distribution of the "Refuge Fund." Applications have been received from eight institutions, and after careful inspection of each by two members of the Committee appointed from time to time for the purpose, the following grants have been made:—

Britannia Court Refuge	£25
N.-W. L. Preventive and Reformatory Institution	100
Boys' Home Industrial School	30
East London Shoeblack Society's Refuge	25
King Edward or Eastern Refuge	40
Brook Street Refuge	18
Boys' Refuge, Whitechapel	97
Islington Reformatory	30

The balance of the Fund, or a portion of it, the Committee propose to appropriate in giving capitation grants with cases received into Refuges on the recommendation of the Union.

HOME FOR CONVALESCENT CHILDREN.

The field of operations opened to those ladies who are disposed to consider and care for the little ones of our community is excessively large. We look forward with considerable hope to the benefits likely to arise from the working of the Ladies' Association for the Promotion of Sanitary Knowledge, to which we have elsewhere alluded. Pending the growth of that society to its full vigour, it is pleasing to find kindred efforts, though smaller in their scope, springing into life, and carried out energetically, to remedy some of those calamities which, in reality, will be greatly removed when the Sanitary Association begins to make its way among the poor.

It is said that fifty thousand persons die annually in London, and that of these no less than twenty-one thousand are children under the age of ten years.

Now, there cannot be a doubt that a large portion of this mortality among the young is attributable to one or other of these two causes,—either the wretched condition of the dwellings of the poor, or the want of knowledge among mothers how to rear their tender offspring, or to deal with them when suffering from the effects of the crowded localities in which they are compelled to live. The object of the Home for Convalescent Children, is to supply, so far as its means permit, the relief of change of air, kind treatment and sympathy to those whose health may be suffering from want of the blessing of pure air and proper food. The Home was originally started by the benevolent treasurer and manager, Lady Hardy, and was carried on at Millhill; but is now removed to Rumbold's Farm, Mitcham, Surrey. We have before us the First Annual Report, and the efforts and its success are so gratifying to us that we gladly avail ourselves of the following extracts, by which to draw the attention of our readers to a very humble and modest effort to benefit the poor, which fully merits their examination and support. It appears that the Home was opened on the 27th of April, 1858, on a small scale, with accommodation for twelve children only.

"Since that date nearly one hundred have passed through the Home. All have left it greatly improved in health; many, it is hoped, permanently strengthened, and the parents express the greatest thankfulness for the benefit which their children have derived from the change.

"The experiment having been thus far successful, it was thought desirable to attempt an extension of the scheme, by making it more known and by engaging a larger house.

"All those who have ever been familiar with the homes of the London poor, know well the numbers of children who pine away and die, merely from the combined effects of bad air and indifferent food; the former being much the most fatal evil.

"Even children nurtured with the greatest care, and in the most healthy parts of London, droop after a protracted residence in town; every mother is but too well aware of this. Parents who have watched the fading cheek of their own child, and then have experienced the delight of seeing the glow of renovated health and strength, produced by timely change of air, will sympathise with, and endeavour to assist, those less fortunate than themselves, who have to endure the agony of witnessing their children wasting away hourly, and of feeling themselves powerless to give them the only efficacious relief. The object of the Home for Convalescent Children is to afford this relief, by enabling the children of the London poor to enjoy the simplest, yet greatest, of God's blessings, the blessing of fresh, pure air, for a few weeks in the year.

"This, united with other comforts, is found permanently to invigorate the constitutions of the little sufferers, who have never known any change from the ill-ventilated rooms, and close courts and alleys, inhabited by their parents.

"Good air, good food, and good water, at the moment when the health is failing, may be the means, with God's blessing, of transforming sickly, helpless objects, into blooming children, likely to grow up into strong men and women.

"While their bodily health is carefully tended, and is necessarily made the chief object, their spiritual and intellectual culture is not neglected. The rudiments of an infant school system of training are attempted as far as circumstances will allow; and, though little of actual teaching can be effected with children so young, and who are only received for a limited period, perhaps a short prayer, a text of Scripture, a hymn, or a proverb, learned here in their infancy, may return to them in after years, and be a support and com-

Digitized by Google

fort in the trials and temptations of life. The utter helplessness of those, for whose immediate benefit this charity is intended, must call forth the sympathy of all who have the privilege of being able to give to their poorer brethren. To parents and others who have the guardianship of children this good work must specially commend itself.

"'*Whoso shall receive one such little child in my name receiveth me.*'—Matt. xviii. 5.

"All communications to be addressed to Lady Harding, 30, St. James's Place, London, S.W.; or to Mrs. Spencer, matron, Rumbold's Farm, Mitcham, Surrey, S."

The following are the rules of the establishment:—

"Girls are admitted between the ages of two and fourteen, boys between the ages of two and ten.

"Subscribers of one guinea annually to be entitled to send one child yearly for one month.

"Donors of ten guineas to have the same privilege.

"Subscribers of two guineas annually to be entitled to send two children yearly for one month.

"Donors of twenty guineas to have the same privilege.

"Children recommended by non-subscribers will be admitted for one month, on presenting a letter of recommendation properly filled up, and on prepayment of 1*l.* 5*s.*

"Subscribers who wish to send a greater number of children than their subscription admits of are to pay the same as non-subscribers, viz., 1*l.* 5*s.* for a month.

"Subscriptions received by Lady Harding, 30, St. James's Place, S.W. If sent by post-office order, to be made payable to Isabella Harding, 65, Piccadilly, W.

"No children suffering from any contagious disease, or having recently recovered from any, *especially from scarlet fever*, can be admitted into the institution.

"*Instructions to Parents seeking Admission for their Children.*

"1st. Letters of recommendation must be filled up by a subscriber, or by some householder acquainted with the parents or friends of the child.

"2nd. The child must be brought to 49, Great Ormond Street, Queen's Square, W.C., on Fridays, at two o'clock, to be examined by the medical officers of the institution, *without whose certificate of fitness the child cannot be received.*

"3rd. If deemed a suitable case, a ticket of admission for one month, containing directions which must be strictly attended to, will be given, on receipt of a letter, as above, properly filled up."

THE CLERICAL FUND.

The office of this Society, established mainly with the view of assisting clergymen, has been removed from Trafalgar-square to 345, Strand. The second annual report states that applications from clergymen in temporary sickness or distress continue to be more numerous and urgent than ever.

Although the Society was originally founded to aid the clergy in making assurances, by purchasing deferred annuities, it was found advisable, after a few months' experience, to add an Auxiliary Branch to help clergymen in pecuniary distress.

The Society has been enabled, during the past two years, to assist more than fifty clergymen with donations of money and clothing, and the letters addressed to the committee clearly testify to the value of this branch of the work that they are engaged in.

It should be borne in mind, that, while the metropolitan and diocesan charities administer their funds only half-yearly, the committee of the Clerical Fund and Poor Clergy Relief Society are enabled to give monthly, and, if necessary, even more frequent relief to deserving cases of clerical destitution.

It is the peculiar feature of the Society to relieve at once the poor clergy and their families, who may, from accidental circumstances, be in actual want of food and raiment.

It is calculated that there are not less than 400 clergymen of the Church in England alone who are in the direst need and most miserable poverty. For this large body the committee once again confidently appeal to their richer brethren, and the laity, to care for those who so sedulously minister to them in spiritual things, and they feel that when their report is read of "cases of distress," they will not appeal in vain.

It is from these "cases," as well as from the printed "letters of thanks," that the real poverty of ministers in the Church may be seen; and none who read them can rise from their perusal, without a feeling of shame, that the shepherds of the flock are thus allowed to live in want of the necessaries of life, while they are leading the sheep to the green pastures of heavenly comfort.

It is clearly the duty of the Churchmen of this country to aid their clerical brethren with their worldly goods. It is all they can give for the means of grace which they enjoy, and surely they will not refrain when thus appealed to.

DOMESTIC SERVANTS.

"Servants have ruled over us, there is none that doth deliver us out of their hand."—Lam. v. 8.

There will be, as we believe, a public meeting in Willis's Rooms early in this month, to take into consideration what steps can be adopted for the better regulation of the mutual duties of employers and servants. The following observations are extracted from a paper prepared by a lady who has given the matter considerable attention, and which we understand will be read at the meeting. It will be previously forwarded to all those who are expected to take part in the proceedings. No one who has a household can doubt the importance of the subject, even if the Recorder of Hull had not so forcibly drawn attention to it in his late charge.

It may be presumed that no one in these days can doubt or deny the reality and extent of those evils by which *Domestic Service* is encumbered and surrounded. "It is," (to use the words of an able writer on the subject*) "a matter which occupies in some measure, and in some shape or other, the daily thoughts of a large proportion of the community; but it is seriously considered and dwelt on by very few. . . . . The *subjectiveness* in this case is overlaid by the *objectiveness;* in other words, whilst we are continually thinking about our domestic servants, the subject of domestic service but rarely enters into our thoughts."

The English are a peculiar people in such matters; their inertness is a characteristic, they grumble but suffer on, "content with admitting that things might be better, but lending no aid to make them so. Either from want of imagination, or want of knowledge, or want of sense, the greater number of persons in modern society do not think on these matters in a *practical* way; they have little faith in the possibility of improvement, still less disposition to take part in an effort to realize it."

Any one who undertakes to handle this *servant-question*, must necessarily feel conscious of some embarrassment in dealing with it, and this for many reasons. Though eminently a *public* question, it is decidedly *unpopular*, at least if we may judge by the way in which it has been received hitherto.† And, again, it is an inquiry that embraces so many subjects and considerations, that in thus submitting it to public scrutiny and to the arbitrament of public opinion, the writer may well feel at a loss upon which point to fix the chief attention in order to make the matter interesting and acceptable. The general and very vulgar outcry against *servants* is much to be condemned; it is as unfeeling as it is unwise: for it places a class of people (whom we are bound to protect) at the spear's point of persecution, instead of drawing them towards us with the cords of affectionate good-will. On the other hand we would deprecate as much that ill-feeling on the part of servants which induces them to slander their employers in the most unwarrantable manner. Such unjust and ill-considered conduct strengthens mistrust and antagonism between those classes which it is so desirable should be brought into closer union with each other, upon the most amicable and confiding grounds. We must no longer hear of the "greatest plagues of life," "necessary nuisances," "natural enemies,"

* An article in the *North British Review.*

† The correspondence in the *Morning Post* in the Autumn of 1856 is here referred to. The majority of the published letters evinced such strong feeling and party prejudice that the flame of contention and mistrust appeared fanned and augmented thereby.

Digitized by Google

How far such institutions can be maintained in their efficiency, if attached to the existing workhouses, is a very questionable point. Would it not be better to establish them in the localities where they are required, and then let a suitable allowance be made for each child from the parish to which she belongs. It is always advisable that schools of this character should not contain too many inmates; for, to lose your individual influence over the girls by the numbers you receive, is for them to lose, in a great measure, the benefit which it is your object to confer upon them.

I would commend this subject to the serious attention of your readers, and, above all, to the blessing of Him "without whom nothing is strong, and nothing is holy."

I remain, sir,
Your obedient servant,
ONE WHO SEEKS TO PREVENT CRIME.

Any particulars respecting the Kensington Industrial School may be learnt on application to the secretaries, Girls' Industrial School, 2, Bullingham Place, Kensington.

To the Editor of the Philanthropist.

LETTER FROM A CONVERTED INFIDEL AND REFORMED DRUNKARD.

Rogers' Temperance Hotel, Bristol, June 28, 1859.

MR. EDITOR,—In the Bristol *Temperance Herald* for July, a copy of which I have seen in the excellent hotel here, there is an extract from the *Philanthrophist* which illustrates the excellent influence of the pledge of Total Abstinence in saving the poor despised prisoners, whose souls not many care for in this cold and selfish world. I sympathise with the prisoners, for I was a prisoner to Satan for years before I was led to seek salvation, by confessing my sins to God, and asking Him for the sake of JESUS CHRIST to have mercy on me. See St. John iii.; Isaiah i. and lv.; St. Matthew xi. 28; St. John vi. 37; Revelation xxii. 17. The slavery in which I was to Satan led me to love bad company, bad books, and strong drinks and tobacco, and to all these I was a dupe and a slave, and a willing slave, before my conversion. I became so fond of intoxicating liquor at last, after I had spent several fortunes in sin and vice and gracelessness, that for weeks and months at a time I used to continue drinking and loafing about from grog-shop to grog-shop in my native land (Canada West) and at six several times the policemen found me lying dead drunk in the streets, and I was sent to jail to get sober! It was in this way, sir, that I became acquainted with the miseries of the poor prisoners, whom all men despise except the *Christian*, who recognizes in them, degraded though they be by sin and vice and crime, brothers and sisters for whom CHRIST died!

I wish to say to all poor slaves of the bottle, whether in prison or in the public-house, where I learned the way to the prison, *that the pledge and prayer to God in the name of Jesus Christ for grace to keep it has saved me,* and I have been a free and happy man for more than three years, and by the aid of God's grace I am determined to do all I can to bring others to the SAVIOUR who has delivered me. I I have been preaching CHRIST, as a Temperance lecturer, for three years, and during this time have delivered 700 lectures in the British provinces. I came here last month, and, if it is the will of God, I will tell the people of England the dark story of my degradation by vice and sin, and the the bright one of my deliverance by the grace spoken of in St. Paul's Epistle to the Ephesians, i. and ii. I hope, sir, this letter may be blessed to some poor prisoner: I love and pity all such, and beseech them to come to JESUS, and He will deliver them, and give them the COMFORTER He has given me, since I gave up Tom Paine, champagne, and tobacco, and intoxicating poisons in general. See St. John, xiv. and xv., for the COMFORTER I now enjoy and rejoice in with joy unspeakable, and at times full of glory.

I ask the prayers of God's people for
Yours truly in CHRIST,
JAMES A. DAVIDSON.

To the Editor of the Philanthropist.

44, *Chancery Lane, W.C.,*
7th July, 1859.

Sir,—In my letter to you which appears in the July number of the *Philanthropist*, there are several misprints, some of which are of a serious character.

In the tables of the consumption of spirits and malt the decimal dots are omitted, and consequently, as the fractions are carried out to three places of decimals, the quantities are multiplied a thousand-fold.

In another place I am made to say that the agricultural labourers "cannot spend "any sum in drink which, though not "large absolutely, it may be an important "fraction of their income;" what I wrote was, "cannot spend any sum which is "large absolutely, though it may be an "important fraction of their income."

There are some other misprints of minor importance.

I remain, Sir,
Your obedient Servant,
ALFRED HILL.

MR. HOPLEY ON THE WRONGS OF NEEDLEWOMEN.

THE following extracts are taken from "Minutes of Evidence" given before a Select Committee of the House of Lords in June, 1855. The Committee was appointed to consider the expediency of passing a Bill, brought forward by the Earl of Shaftesbury, for the Protection of Needlewomen—one of the most numerous, and, so far as "whole armies" of them are concerned, one of the most crushed and poverty-stricken of our over-toiling classes; but at the same time numbering among them (which makes the tyranny of oppressors cut more keenly) thousands who have once seen better days—daughters of clergymen's widows, of the widows of the officers in the army or navy, victims of dishonest bankers, orphans. "Many of these have been trained gently and tenderly in delicate and happy homes; and, possessing all the virtues and tenderness that belong to the female sex, are rendered by those very characteristics more obedient and more unmurmuring." It was chiefly to a large division of needlewomen, which includes vast numbers so situated, that the enquiries of the Committee had reference.

The dreadful treatment of these poor creatures, as shown in the evidence of 1842, we have already noted. To what extent had matters improved up to 1855?

Mrs. Elizabeth Bartrup, examined:—

Earl of Shaftesbury: What were the hours you were working?—From eight in the morning till two or three in the following morning; sometimes till five or six.

[As a customary thing eighteen or nineteen hours, sometimes twenty-one and twenty-two hours, out of the twenty-four.]

That was about seven years ago?—Yes.

[In this establishment there were nine young people; the effect upon their health was "generally bad;"—"I have seen them faint, sometimes two or three a day."]

Lord Privy Seal: Do you know anything of the condition of the establishment in which you were seven years ago, since you left it?—I believe it is carried on upon the same principles.

Working the same hours?—Yes; in fact *they are worse now*, as I hear from young ladies living now in it.

Do you say that from information which you derived from persons now working there?—Yes; at the present time.

Do the young persons pay any premium upon coming in?—£40, £50, and sometimes £60.

Lord Wynford: Of course they cannot leave without forfeiting the premium?—No.

Lord Elgin: Is there any clause in the indentures of the apprentices to protect them against overwork?—Not any.

Lord Privy Seal: In the cases in which they pay such a large premium, is there not always a written indenture?—not always.

Then those persons are entirely at the mercy of their employers?—Entirely.

Lord President: It is your opinion, from what you know, that the system is worse than it previously was?—I do not think there is any change in it; I think that *if anything it is worse.*—Minutes of Evidence, pp. 37-39; Nos. 374, 375, 380, 386, 387, 388, 392, 393, 399, 402, 403.

Miss Julia Rigge, examined:—

Earl of Shaftesbury: How long is it since you quitted the establishment in which you last worked?—Two months.

Lord Elgin: Do you know what was the number of hours that the young people in the house worked?—It was unlimited; sometimes they used to work till three, sometimes till four in the morning.

From eight in the morning till three or four the next morning?—Yes.

Lord Privy Seal: Was that common?—In the season.

Often in the season?—Yes, very frequently.

Earl of Shaftesbury: What was the time allowed for meals?—We *never used to be above ten minutes or a quarter of an hour;* there was no time specified. Ibid, pp. 45, 46; Nos. 501, 508, 509, 510, 511, 521.

Miss Sarah Coulston, examiued:—

[This witness had worked in two establishments with Mrs. Elizabeth Bartrup,

Digitized by Google

and of course could attest the same facts regarding those establishments as were attested by Mrs. Bartrup.]

Earl of Shaftesbury: With respect to the establishment in which you worked *without* Mrs. Bartrup, what was the number of hours you were employed?—I was worked there from six in the morning till twelve at night.

Lord Elgin: Habitually?—Yes; all through the season.

For how many months was the season?—I was only there four months myself; I would not remain any longer.

During the whole of that time you worked from six in the morning till twelve at night?—Yes, sometimes later; but *those hours were the shortest that I ever worked.*

Lord Privy Seal: What was the average age of the young persons that worked there?—From 14 to 27.

Were there many as young as 14?—There were two about 14 and 15.

Were they worked the same hours as their elder companions?—Yes.

[For a period extending over *more than four whole months* the "*shortest* hours" that these young girls were "ever worked," were "from six in the morning till twelve at night;" their meals were snatched in the most unwholesome haste; and at each cessation from toil they retired, for the little while which was left before the commencement of the next day's task, to close and excessively overcrowded bedrooms! Well may the Queen's Physician declare, "a mode of life more completely calculated to destroy human health *could scarcely be contrived.*"]

Earl of Shaftesbury: Did you observe the effects of this work upon their health and strength?—Yes, upon every one of them; I have seen them sit and faint, and left to come to as they liked, or as they could, and no notice taken of them.

Earl of Malmesbury: What time did they give you for your meals in that establishment?—*Sometimes ten minutes.* We used to breakfast at seven, and we dined about two; we had nothing between those hours.

You had only ten minutes for dinner?—There was no stated time; but that was about the average time that we were allowed.

Lord Bruce: When you worked those very long hours, did you get any rest the day following?—No; even if we did not go to bed till five o'clock, we got up at the same hour.

Lord Privy Seal: From what you know of the present condition of the trade, would you say that the majority of the establishments are adopting the long-hour system?—I think they are.

You think that it is as bad now as it ever has been?—I think it is.

Lord President: Have you ever observed any cruelty exercised towards these young persons beyond keeping them at work so many hours?—Yes, I witnessed one very cruel action; Miss Newton* wished that I would complain of it at the time, but I did not. One of the young ladies was very ill indeed, and yet she was obliged to work at the business until after twelve at night; and when the doctor was sent for to her, he said she ought to have been in bed weeks ago, and that she had been in a very bad state of health; she had sat and cried over her work every day a long time before the doctor was sent for; she died a week after she had advice; she was *worked till the very last minute she could sit up.*

Lord Privy Seal: But they did not work her after the doctor had pronounced her unfit to work?—No, she was obliged to go to bed; *and she never got up again.*—Ibid, pp. 41-43; Nos. 440-448, and Nos. 457, 458, 483, 484, 488, 490, 491.

A word or two of comment. *What is all this for?* this toil—toil—toil? this cruel fainting? this bringing on of almost "every disease to which females can be subject?" this work—work—work, even unto death? For *what* is all this misery among all these thousands?

If it were a tremendous effort on the part of a nation in order that human life might be saved eventually, or the human race be the more ennobled,—if it were to raise, at the shortest possible notice, a mighty range of hospitals, or receiving-houses, suddenly rendered necessary in order to save whole districts from people-devouring plagues,—if it were to raise whole towns of "model-dwellings for the poor," so that we might snatch, without an hour's unnecessary delay, our millions from typhus, cholera, and all the host of diseases of which they are now compelled to die,—if it were that famishing millions might be fed,—that shivering millions might be warmed,—if it were to help brave nations struggling for liberty,—if it were to enfranchise slaves at the earliest possible period from the iron hands of their oppressors,—or if it were to root out ignorance and heathenism,—to raise up thousands of schools and Christian temples—schools where education should progress indeed, temples where God should be worshipped indeed,—and if the feeling of horror that hundreds of thousands of human beings throughout our country are sunk in such brutal ignorance as to know not the name of their Maker save to curse by it—if the feelings of horror at this gigantic national sin was so intense that people could not rest night nor day till the black iniquity was in a fair way of removal,—If *such* were the causes of all this toil and misery, then, though with hearts brimming with commiseration for these workers, we yet could say "Go on, go on in your Christian duties; blessed are ye martyrs; though ye die, yet shall ye live; great will be your reward in heaven." But *no.* It is (oh, mockery!) for CRINOLINE! for the formation of flounces! the modelling of corsets! the trimming of silly bonnets? These girls are killed—oh, receive it not as irony, but as writ in bitter sorrow—are killed that others may wear foolish head-gear, exhibit foolish waists, be satirized in ball-rooms, laughed at in the streets, ridiculed in public prints, chatted to and perhaps admired by the weak and narrow-witted, and looked upon with mournful pity by all the really worthy and intellectual men and women of the community. Mothers of England, Instructresses of England,—how have you been neglecting your duties that matters should have come to this? Has women, then, *no* mission here? Has education no holier office than to train what should be, whether in mind or outward beauty, the fairest and most lovely things of God's whole earth, to be—such things as these? It greatly depends on *you* ye Mothers, and *you* ye Mistresses of Schools, how long a period may elapse before the female portion of our wealthier population shall experience more true pleasure in doing good than in worshipping the world; and shall feel incapable of reaping any enjoyment from ball or rout or revel, so long as they know that the trumpery which they wear upon such occasions is paid for by the crooked spines, blotted vision, swooning frames, and early deaths, of those whom Christ has instructed us to call our sisters.

Such evidence as we have quoted having been heard, it was not considered a matter for legislation: there were "difficulties in the way." We consequently find Lord Shaftesbury, in July, 1856 (at a meeting convened with the object of exciting public attention to the subject), declaring—

"The state of things this year has become *so much worse*, partly in consequence of there being a far greater demand for the work of these young people, but also because an attempt at legislative restriction having failed, many of those employers, thinking that they should henceforth enjoy a complete impunity, have given the reins to their oppression; and these wretched girls are more than ever the victims of their covetousness and tyranny."

"We have carefully considered," said Mr. Grainger on the same occasion, "all that was due to the heads of establishments, and hoped they would find a remedy. But all these efforts failing, in 1855 an attempt was made to get an Act of Parliament in order to rectify what by private exertions had not been accomplished. That measure failed, and, in consequence, the system this year is as bad as ever."

At this meeting Lord Shaftesbury mentioned "a witness who had worked without going to bed from four o'clock on Thursday till half-past ten on Sunday;" and Mr. Lilwall, the Honorary Secretary of the Early Closing Associaton, knew that "within the last week or two, young persons were kept at work during the whole of three successive nights," of course including the intermediate days.

At another "Great Meeting," held at Exeter Hall in February, 1857, the system was shewn to be still "*as bad as ever.*"—*Hopley's letter to the Men and Women of the United Kingdom.*

MR. HOPLEY ON THE PRESENT CONDITION OF THE LABOUR QUESTION.

The statistics so largely quoted in the "Wrongs" mentioned above, (1842-3), have reference mainly, the reader will remember, "To the Employments of Children and Young Persons in the Trades and Manufactures *in which numbers of them work together*, not being included under the Terms of the Factories Act." Concerning those operatives (dwellers in towns) who do *not*, as a general rule, work together, there was almost a total dearth of statistics until the *Morning Chronicle* took up the question of "Labour and the Poor." The writer of the present letter, having carefully studied the series of articles on that subject, in connexion with such offi-

Digitized by Google

cial reports and other documents as he has been able to meet with bearing on the matter, and aided in his inquiries by not a little personal acquaintance with the condition of various portions of the industrial population, and having striven (under God's aid) to prosecute the investigation with no party leaning towards the poor or towards the rich, towards the employed or towards the employer, but only with an anxious desire to arrive at such serviceable truth as may benefit the country at large and the cause of Christian philanthropy in particular—ventures his conclusions as follows :—

Contemplating that important portion of the nation, the operative classes, as arranged in two grand divisions, the one consisting of such as work together (as in large manufacturing establishments, bleaching and dyeing works, employer's workshops, &c.), the other consisting of such as do *not*, as a general rule, work together; of the former division he would say—

"That in the condition of some workers in trades and manufactures—principally if not universally, in trades and manufactures where palpably it would not be to the interest of employers to maintain the long-hour system, a decided, and, in some instances, a considerable improvement has taken place during the last ten or fifteen years.*

"That in the condition of a vast number of others (including all those suffering classes concerning whom statistics are given in the text above) little or no improvement (save in a few exceptional cases where employers have shown a feeling interest in their employed) has been effected,—either as regards protection from poisonous or otherwise deleterious agents, the ventilation and cleanliness of working-places, the hours of toil, or (with some inconsiderable exceptions) the rate of wages.

"That the present condition of another vast number of these workers (counting among them tens of thousands of women and young children) has, during the last few years (in spite of occasional reactions in favour of shorter hours), been gradually growing worse and worse; their crushed and oppressed state, their cruel sufferings for no fault but poverty, the almost incredible duration of their hours of continuous toil, especially under pressure of large and sudden orders for any particular kind of manufactured article, being at present, in thousands of instances, so terrible as to be perhaps without parallel in the annals of the world;—certainly without parallel in the annals of any country which has pronounced its people free."

Of those operatives (the second grand division) who do not, as a general rule, work together, it may be sufficient to say—

"That among them are an incalculable number (artisans, toymakers, working-tailors, shoebinders, slipper-makers, and makers of almost every article of apparel—mainly dwelling in London and other large towns, and including in their numbers tens of thousands of females) whose wages (partly from the middle-man and middle-woman system, which has greatly increased of late, partly from what is called in the trade the 'sweating system,' but more especially from the intense competition among capitalists, which causes them to offer articles for sale at the lowest possible prices) have, for several years past, had a tendency to grow less, and less—until matters have arrived at such a pitch that in many thousands of instances, let the operatives toil as they may—and they *do* toil, many of them, nights and days in succession—it is absolutely *impossible* for them to scrape together the necessaries of life by lawful, moral means. The condition of this vast class of operatives—containing, as it does, whole armies of women, young girls, and children—may be sufficiently described by saying that, viewed with reference to oppression, suffering, and over-toil, it is almost as bad as—in a moral point of view far worse than—that which is stated above to be 'perhaps without a parallel.'"

Matters cannot thus continue. What portion of these wrongs is to be righted by legislative interference, what by the energetic striving of associated philanthropy, and what by striving of a more private character, is not to be argued here; but demands, and should receive, the deepest consideration of the greatest minds of the nation.—*Hopley's Letter to the Men and Women of the United Kingdom.*

* It is, perhaps, unnecessary to state that these remarks refer to the workers in trades and manufactures wherein duration of labour is not restricted by legislative enactment. It is pretty generally known that wherever the legislature has helped any portion of the operative classes against injustice (as in the case of the cotton-factories, print-works, &c.), there has been, from that time forward, a gradual improvement in the health and intelligence of the aided parties, leading to a greater degree of contentment, and to a better feeling on their parts towards their employers; while the employers themselves have never suffered materially, if at all, and in many instances have been greatly benefited, by such legislative interference.

WRETCHED RESULTS OF PRACTICAL JOKING IN THE ARMY.—Lieutenants Geo. W. Wiglesworth and William M. Clarke, of the 76th Regiment of Foot, stationed at the Curragh, were, some weeks since, observed about dusk in the evening to enter the hut of Ensign Augustus West of the same corps. Shortly afterwards Mr. West complained to a party of his brother officers that a gross outrage had just been committed upon him. During his temporary absence, he said, his hut had been entered, and a favourite dog, which he was trying to cure of distemper, had been hanged with his sash, and, as if to add to the indignity, his tooth-brushes had been left sticking in the animal's mouth. The dog was quite dead, but still warm. The deed was denounced by his companions in decided terms, and an immediate resolution was adopted to put the aggressors—who were at once suspected—into regimental coventry. The case, however, came to the ears of the superior officers of the regiment. Lieutenants Wiglesworth and Clarke were then placed under arrest and brought to a court-martial. Excitement consequent upon free living was pleaded, but the decision of the court was prompt and decided; it recommended the accused to be cashiered, and His Royal Highness the Commander-in-Chief confirmed the finding.

INKS FOR EXPORT, &c.

G. BELL and CO. beg to call the attention of Buyers to their superior PRINTING INKS and WRITING FLUIDS—Blue and Red, for use with Metallic Pens—Copying, Blue-Black, Violet-Green, Black Bordering, Ruling and Japan Ticket Inks of first-rate quality. All large purchasers treated on liberal terms. Lists sent free by G. BELL and Co., Wellington Street, St. Luke's, E.C.

A Good FAMILY MEDICINE CHEST, with a prudent use, has saved many a life; and yet we think the idea might be improved upon, and reduced to a more simple form. Take some good Compound, such as COCKLE'S ANTIBILIOUS PILLS, and we find that the desired end may be obtained without scales and weights, or little mysterious compartments and enchanted bottles with crystal stoppers. Others might be used, but Cockle's Pills, as tested by many thousands of persons, and found to answer their purpose so well, may be set down as the best.—*Observer.*

FOR LADIES.

NICOLL'S PATENT HIGHLAND CLOAK is a combination of utility, elegance and comfort. No lady having seen or used such in travelling, for morning wear or for covering full dress, would willingly be without one. It somewhat resembles the old Spanish Roquelaire, and has an elastic Capucine Hood. It is not cumbersome or heavy, and measures from twelve to sixteen yards round the outer edge, falling in graceful folds from the shoulders; but by a mechanical contrivance (such being a part of the patent) the wearer can instantly form semi-sleeves, and thus leave the arms at liberty; at the same time the Cloak can be made as quickly to resume its original shape. The materials chiefly used are the soft neutral-coloured Showerproof Woollen Cloths manufactured by this firm. The price will be Two Guineas and a Half for each Cloak; but with the Mécanique and a lined Hood a few shillings more are charged. This department is attended to by Cutters, who prepare Mantles of all kinds, with Velvet, Fur, or Cloth Jackets, either for in or out-door use. These at all times—like this Firm's Riding Habit—are in good taste and fit well. Female attendants may also be seen for Pantalons de Dames à Cheval, partially composed of Chamois. As no measure is required, the Patent Highland Cloak can be sent at once to any part of the Country, and is thus well adapted for a gift.

H. J. and D. NICOLL, Warwick House, 142 and 144, REGENT STREET, London.

NICOLL'S NEW REGISTERED PALETOT has all those advantages which secured such general popularity to Messrs. Nicoll's original Paletot; that is to say, it avoids giving to the wearer an *outre* appearance, so that professional men, and all others, can use it during morning and afternoon, in or out of doors. Secondly, there is an absence of unnecessary seams, well known to secure a more graceful outline, as well as to effect a great saving in wear; the latter advantage is considerably enhanced by the application of a peculiar and neatly-stitched binding, the mode of effecting which is patented. Great exertions are being made to supply Messrs. Nicoll's agents throughout the country and the colonies with an assortment of this new garment simultaneously with the display in London, but it is necessary to inform the public that all Messrs. Nicoll's manufactures may be distinguished by a trade mark, consisting of a silk label attached to each specimen; to copy this is fraud, and may be thus detected: if the garment is dark-coloured, the label has a black ground, with the firm's name and address woven by the Jacquard loom in gold coloured silk; if the garment is light-coloured, the label has a pale drab ground, and red silk letters. Each Paletot is marked in plain figures, at a fixed moderate price, and is of the best materials. In London, the NEW REGISTERED PALETOT can alone be had of H. J. & D. NICOLL, 114, 116, 118, 120, REGENT STREET, and 22, CORNHILL.

A NEW DEPARTMENT FOR YOUTH, &c.

H. J. and D. NICOLL recommend for an outside Coat the Havelock; and for ordinary use the Cape Suit, such being well adapted for Young Gentlemen, as exhibiting considerable economy, with general excellence. Gentlemen at Eton, Harrow, Winchester, the Military and Naval Schools, waited on by appointment. A great variety of materials adapted for the Kilted or Highland Costume, as worn by the Royal Princes, may be seen at

WARWICK HOUSE, 142, and 144, REGENT STREET.

THE ADVERTIZER will be materially benefited if some kind person will lend him the sum of about £30. Very satisfactory reasons can be given why the Loan is required. The Advertizer does not offer any personal security, but he offers the security of many years' unexceptionable character, and can also give good references, which he hopes will be a sufficient guarantee that the money will be repaid, to which will be added good interest. A Policy for £100 on the Advertizer's life will be deposited with the lender. The money is required for not more than two years, and will be returned by instalments.

Address "Clerk," News Rooms, 66, Cheapside, E.C.

WHAT WILL THIS COST TO PRINT? is a thought often occurring to literary minds, public characters, and persons of benevolent intentions. An immediate answer to the inquiry may be obtained, on application to RICHARD BARRETT, 13, MARK LANE, LONDON. R. B. is enabled to execute every description of PRINTING on very advantageous terms, his office being furnished with a large and choice assortment of TYPES, STEAM PRINTING MACHINES, HYDRAULIC and other PRESSES, and every modern improvement in the Printing Art. A SPECIMEN BOOK OF TYPES, and information for authors, sent on application, by RICHARD BARRETT, 13, MARK LANE, LONDON.

Printed for the Proprietors, by RICHARD BARRETT, 13, Mark Lane, London; and sold by W. TWEEDIE, 337 Strand.

LADIES' NATIONAL ASSOCIATION FOR THE DIFFUSION OF SANITARY KNOWLEDGE.

It is not merely in observance of our promise, but with real pleasure, that we now place before our readers a sketch of the first meeting of this association. The Report may, of course, be procured by every one who takes interest in such an important subject. We shall therefore merely say that it gives evidence of the steady progress of the Society both in public favour and in usefulness. The Committee have issued 32,500 copies of their useful tracts, to which we have before drawn attention, as adapted specially to the requirements of mothers.

Believing that a great part of the weakness and disease which the Association aims to prevent, is caused by improperly-made clothing, the Committee have recently prepared several improved patterns. These have been carefully contrived with special reference to health and comfort, and made in thin paper, so that they can be cheaply sent as models to any part of the country. A complete set of patterns for every part of the dress of women and children, with an explanatory illustrated tract, is now being prepared.

The Committee are anxious to establish training institutions for nurses. They consider this is one of the most important parts of the Association's proposed work, and they are ready to proceed in it as soon as sufficient money is subscribed for the purpose.

They propose also the delivery of popular sanitary lectures, and the formation of lending libraries of proper sanitary books.

The funds have hitherto been inadequate to the efficient prosecution of even any one of the Association's plans. Up to the 31st of June, 1859, the receipts were 240*l.* 5*s.* 5¾*d.*, and the expenditure 218*l.* 16*s.* 4½*d.*, leaving a balance of 21*l.* 9*s.* 1¼*d.* in hand.

The Committee are neither surprised nor discouraged at the smallness of the sum hitherto subscribed, for until very lately the Association has had no London office, and has, therefore, not been able to adopt the means requisite to its efficient operation. But now, as an office has been obtained in 14a, Princes Street, Cavendish Square, they have good reason to hope confidently for an amount of support adequate to the efficient prosecution of all their plans. They feel that their work is of God, and, in humble and grateful reliance on His aid, they cheerfully pledge themselves to increased exertions, and earnestly invite the co-operation of all who would carry out His purposes.

The meeting was presided over by the Right Hon. the Earl of Shaftesbury, who, in his opening remarks, said that, long as had been his experience, and many as had been the societies with which it had been his pleasure to be connected, he knew of no one the institution of which had given him more pleasure or filled him with more hope than this small society. "I am convinced," said he, "that its principles, the objects it has in view, and the agency it has selected, will not fail, under God's blessing, to produce very decided and very important results. That part of sanitary reform which this society has undertaken is peculiarly woman's work. No man could undertake it with a reasonable hope of anything like success. It is extremely well for Boards of Health and for learned and scientific men to set forth great sanitary principles, to enforce them by powerful arguments, and illustrate them by a great array of facts. All these things are very necessary to prepare the way, to enlighten men's minds as to the dangers which exist, and to provide a safeguard. But for the purpose of fully carrying into effect all these principles, which are of little or no value unless they be applied to every home, and to every individual in the home, we require something more minute; we require workers who are more qualified to deal with detail, and more conversant with the peculiar wants and necessities of the particular class in which the evil principally prevails. Those workers must, I maintain, be women; they, and they only, can work efficiently in the direction I have indicated. Why, if any one doubted this, I would just call his attention to the character and titles of the tracts which have been published by the ladies connected with this association:—*How to Manage a Baby, &c.*—and I would ask where is the man who would dream of writing such tracts, and where is the man who would be capable of doing it? Tracts of that kind can be well written only by women. A very admirable list of this association's tracts has just been read by Mr. Cowper, and, in the list of those in course of preparation, I see others which I consider are of very great importance, especially two:—*How to Keep Children Healthy*, and *The Evils of Tight Lacing*. It is not for me to deal with these evils; but I am convinced that they are very serious, and I am very glad that the ladies connected with this association intend to direct attention to them. Depend upon it that a vast number of the victims of tight lacing have to suffer they know not why, and fall into an early grave for want of a little instruction. Now, consider the way in which this association is to be conducted, and the visitation among the poor which its members will carry on. No man can visit in the way a woman can. These ladies will visit from house to house, there kindly conversing, as woman with woman, with the poor mother, they will enter into the most minute details relating to her health and to that of her children, and to domestic matters, and will have an eye to cleanliness in the different parts of the house. Now it is very strange but very true that men in general are not good judges of cleanliness. They go into a room, look round, and say, 'The room appears tolerably clean,' or 'The house appears tolerably clean;' but send a woman and she will say very differently. The first thing she does she turns the furniture upside down, she pulls up the carpet and turns up the rug, she goes into every closet and every nook and corner, and causes at first what appears to be a good deal of confusion, and then she pronounces the place to be in a filthy state, not fit for the reception of human beings. Women alone understand the minute details of domestic economy, and upon attention to these minute details depend the health and safety of the population. There are also many points of advice which men, going into the cottages of the poor, could not undertake to give, and it would not be proper that they should. But a woman can very safely and properly undertake all this, and do it most efficiently. These are very small things apparently; but small things make up the sum of life. From the neglect of apparently trifling things come the most serious diseases. I am certain that if these ladies can prevent the little domestic violations of health's laws, they will also prevent many of the epidemics, fevers, deformities, and other causes of suffering, both physical and mental, that are found operating to so alarming an extent among the children of the poor. There are two hospitals to which my attention has been a good deal directed of late, and I hope that some of you have seen them; if not, I would advise every lady here to lose no time in visiting them. There is one in the city, called 'The Orthopædic Hospital,' and another in Oxford Street, called 'The Royal Orthopædic Hospital.' These hospitals are established for the purpose of remedying all the deformities that afflict children and adults, and really the cures that have been effected seem to be something approaching to the miraculous. You may go there and see children so deformed that their bodies represent every letter in the alphabet, and the greater part of these children are, through God's providence, turned out in a short time as straight as an arrow. These hospitals are remedying mischief which you, through the agency of this Association, may altogether prevent. We cannot assert that there would be no orthopædic cases if the sanitary arrangements you propose were fully carried out; but I venture to state, and no medical man can gainsay it, that a vast proportion of these deformities of various kinds, which arise from real neglect, from the state of the parents before the children's birth, or from the foul air which they breathe as soon as they are born,—these and other frightful disorders, which are not only a cause of present suffering, but which present so dismal a future to the miserable children who are the subjects of them, would be

Digitized by Google

prevented. I repeat that these things, I am quite certain, may be obviated to a very great extent by a good system of sanitary regulation, and by teaching the people in what way they can best regulate their homes and preserve their health and that of their children. The utter ignorance of the most simple laws of health which prevails among the poor, is really a most curious thing. How few there are who seem to know that pure air is necessary to health! Thousands are from their very earliest years subject to the most baneful influences through foul air; they feel unwell, but it never occurs to them that air has anything to do with their complaint. And think of the unwholesome stuff they allow their children to eat, and the manner in which they bring them up. We go into many of the districts in London and elsewhere, where the children are left at home under the care of some nurse, who has perhaps four, or five, or six, or seven entrusted to her, while the mothers go out to labour; and we know all the various drugs that are administered to these children:—'Godfrey's Cordial,' 'Black Drops,' 'Quietus,' 'Comfort,' and things of that sort; and we know that many give even laudanum to the children. I have seen myself a piece of flannel soaked in laudanum stuffed into a child's mouth, and the child has been left to suck it during some twelve or fourteen hours, until the mother's return from the labour in which she has been engaged. Now, I really believe if these mothers were told that they were laying in their children the foundation of the most fearful disorders, their maternal feelings would be excited, and they would pay attention to the advice given to them. By way of showing that the adoption of even the simplest sanitary measures produces the most beneficial results, I will mention what occurred under my own observations. Not many years ago a dispensary was established in two adjacent parishes—Saint George's and Saint James'—and in connexion with it a small fund for sanitary purposes was raised. This did not exceed a few pounds, and it was exclusively expended in whitewashing a large number of houses and in making openings for the purpose of ventilation. The result was, that in that small district, in the course of one year, the number of applicants for medical aid at the dispensary was eight hundred less than in former years; and the medical man told me that he ascribed this remarkable diminution to nothing more than the small outlay upon whitewashing and the openings which had been made for ventilation in some of the dwellings. Now, if eight hundred cases less were presented at the dispensary, think how great an effect must have been produced upon the population at large! We know that at least one hundred thousand preventible deaths occur every year in this country, and that a large proportion [nearly one-third] of the children who are born, die under five years of age. Now, the number of deaths is a fearful thing in itself, but it does not give us an adequate idea of our low physical condition, for I think you must estimate that for every death that occurs from these preventible causes, there are four cases of permanent ill health and continuous sickness; and, therefore, the population is in this way being very seriously injured. By allowing this state of things to continue, you not only increase the rates and taxes of the country, but by your own neglect—by leaving the working people to fester in those abominable alleys, and by withholding from them that sanitary knowledge which they cannot acquire themselves, but which it is in your power to impart—you are really bringing the population to such a state that hundreds of thousands of them are deprived in early life of the means of doing a full day's work, and obtaining their livelihood by honest labour. I believe that if the general health of the people were improved no one result would be more striking than the diminution of the poor-rates and of the demands upon private charity. I know that there are some very important parts of sanitary reform which this association cannot prosecute, and which can be effected only by the intervention of the law—by general and compulsory drainage, by the necessary widening of streets, by taking care that there shall be a free circulation of air in every part—by insisting that no houses shall be constructed except of a certain form, or at any rate upon certain principles, so that those who inhabit them shall at least have the means of decency, comfort, and health if they desire it—and by the institution of public parks and playgrounds, and everything that can give the means of recreation and exercise to the juvenile and adult population of this vast country. I know very well that the operations of this association cannot do all this; but still I am sure that they will have the effect of considerably improving the state of those to whom they are directed. Oberve how much depends upon women in his association. It is women acting upon women; and it is only in this way that many of the most important parts of sanitary reform can be effected. Recollect that women necessarily have for six or seven years of a child's life absolute and uncontrolled influence over it; and if you could but impress upon the minds and hearts of mothers, the duty they owe to God and to man with respect to these children—to God as they are immortal beings, and to man as they are the future citizens, and perhaps the future governors, of the country in which they live—I am sure you would go a very great way indeed towards improving the condition of thousands and millions of your race. And you can do this in a variety of ways; there are ten thousand little means of doing it. You have all heard of that little institution—we may perhaps hardly term it an institution — that we call 'mothers' meetings.' I do not know anything so productive of good among all the efforts that are made in London or elsewhere as these meetings. Now, how easy it would be on these occasions to impart to the poor mothers that sanitary knowledge which would be so invaluable to them.* Depend upon it, they will be very glad to learn; I know they will. I think it would be a very good thing if we could prevail on the mistresses in our ragged and other schools to come and attend your lectures, that they might become qualified to give the children simple lessons on the laws of health. The children would acquire such knowledge very readily, and would be most anxious to act upon it, and to instruct their parents in the way in which the house may be kept in order, and the way in which their own health may be best preserved. I hope you will do something in a matter to which my attention has been very much directed. It is a very simple thing, but one which is in the long run very important, and that is that the benches upon which the children in church and school have to sit for so many hours should not be made without a support for the back, as they now generally are.* It is astonishing to see the number of distorted and ill-shaped children whose deformity has arisen from this cause. I might go on thus a long while; but I think enough has been said to show that this is an association very peculiar in its agency, and very peculiarly adapted to the time in which we live. I think it is most necessary that ladies should now come forward and take their part in this great movement, especially as I think we can prove to them that it can be efficiently carried on by none but themselves; and I am sure their labours will be attended by the most beneficial results. I hope very great attention will be paid to that most admirable tract upon *The Evils of Perambulators*, which has been lately published by this Association; for although I am not going to protest against these vehicles as occasional means of conveyance from one place to another, I do protest against them as prisons and as cages. It is quite distressing to see children, who ought to be rolling on the grass, or running and jumping about all day long, imprisoned thus, looking like rabbits in a hutch, or wretched sparrows in a cage, while the servants who are intrusted with them are either working, reading, gossiping, or flirting. I hope serious attention will be directed to this subject, which is one of very much consequence to the welfare of children, and which is connected with those interests which we are now endeavouring to promote. I wish now to say, in conclusion, that I think it is a matter of great importance that social and sanitary improvement should go hand in hand with the advancement of Christianity. I think that if you go into the houses of poor persons and there offer a Bible, it is of great and lasting value that at the same time you should instruct them in those habits that will conduce to their decency, to their comfort, and to their civilization; and show them that all the good things which you teach them are part and parcel of that blessed book which you put into their hands for their guidance in time and eternity. I know of nothing that produces a greater effect upon the mass of the working population than to be shown that religion conduces to present as well as

* See page 9 of *Woman's Work in Sanitary Reform*, a tract published by the Ladies' National Association for the Diffusion of Sanitary Knowledge.

eternal well-being. How often it is from pure ignorance that you hear many of them saying, 'What is the use of talking to me about these things?' or, 'Why do you talk to me about religion, or about the Book? don't you see the state in which we are? don't you see the wants that surround me? Look at my children, see how naked and dirty they are!' and words of that kind. It is a great thing to show them that the principles of that Book have actuated you to come and help them on a way leading not only to eternal, but also to temporal welfare; and if you do this they will receive you, depend upon it, with deference and affection. The manner in which women can impart such instruction, and give advice, and sit down and enter into all the little domestic wants and grievances of a family, the manner in which they can hear complaints, in which they can fondle the children, and through the children reach to the hearts of the parents, is entirely different and far better than men can do. I am sure that the operations of the Association will be very beneficial both to the ladies who teach and to the poor women who are taught. On the one side you will have influence and kindly authority; on the other, deference and attention, and there you will realise the words of Burke in a Christian and most elevated sense, you will there see 'power made gentle, and obedience made beautiful. I have now to call on the Rev. Charles Kingsley to move the first resolution."

The Rev. Charles Kingsley.—"I have been called upon to move the first resolution:—

"'That the report just read be received, adopted, and printed for general circulation.'

"Really, after the admirable speech and *resumé* of the whole intent of this meeting that you have just heard from the chairman, there seems at first sight very little to be said. But let me say one thing to the ladies who are interested in this matter. Have they really seriously considered what they are about to do in carrying out their own plans? Are they aware that if their Society really succeeds they will produce a very serious, some would think a very dangerous, change in the state of this nation? Are they aware that they would probably save the lives of some thirty or forty per cent. of the children who are born in England, and that therefore they would cause the subjects of Queen Victoria to increase at a very far more rapid rate than they do now? And are they aware that some very wise men inform us that England is already over-peopled, and that it is an exceedingly puzzling question where we should then be able to find work or food for our masses, they increase so rapidly already, in spite of the thirty or forty per cent. kind Nature carries off yearly before they are five years old? Have they considered what they are to do with all those children whom they are going to save alive? That has to be thought of; and if they really do believe, with political economists now, that over-population is a possibility to a country which has the greatest colonial empire that the world has ever seen, then I think they had better stop in their course and let the children die, as they have been dying. But if, on the other hand, it seems to them, as I confess it does to me, that the most precious thing in the world is a human being: that the lowest, and poorest, and most degraded of human beings is better than the world, better than all the dumb animals in the world: that there is an infinite, priceless capability in that creature, degraded as it may be—a capability of virtue, and of social and industrial use, which, if it is taken in time, may be developed up to a pitch, of which at first sight the child gives no hint whatsoever: if they believe again, that of all races upon earth now, probably the English race is the finest of them all, and that it gives not the slightest sign whatever of exhaustion, that it seems to be on the whole a young race, and to have very great capabilities in it which have not yet been developed, and above all, the most marvellous capability of adapting itself to every sort of climate, and every form of life that any nation, except the old Roman, ever had in the world: if they consider with me, that it is worth the while of politicical economists and social philosophers to look at the map, and see that about four-fifths of the globe cannot be said as yet to be in anywise inhabited or cultivated, or in the state in which men could make it by any common supply of population and industry and human intellect:—then, perhaps, they may think with me that it is a duty, one of the noblest of duties, to help the increase of the English race as much as possible, and to see that every child that is born into this great nation of England be developed to the highest pitch to which we can develop him in physical strength and in beauty, as well as in intellect and in virtue. And then, in that light, it does seem to me, that this association—small now, but I do hope some day to become great, and to become the mother association of many and valuable children—is one of the noblest, most right-minded, straightforward, and practical conceptions that I have come across for some years. We all know the difficulties of sanitary legislation. One looks at them at times almost with despair. I have my own reasons, with which I will not trouble this meeting, for looking on them with more despair than ever; not on account of the Government of the time, or any possible Government that could come to England, but on account of the peculiar class of persons in whom the ownership of the small houses has become more and more vested, and who are becoming more and more, I had almost said, the arbiters of the popular opinion, and of every election of Parliament. However, that is no business of mine here, that must be settled somewhere else; and a fearfully long time, it seems to me, before it is settled. But, in the meantime, what legislation cannot do, I believe private help, and, above all, woman's help, can do even better. It can do this; it can not only improve the condition of the working man; I am not speaking of working men just at this time, I am speaking of the middle classes, of the man who owns the house in which the working man lives. I am speaking, too, of the wealthy tradesman. I am speaking, it is a sad thing to have to say, of our own class as well as of others. Sanitary Reform, as it is called, or, in plain English, the art of health, is so very recent a discovery, as all true physical science is, that we ourselves and our own class know very little about it, and practise it very ill. And this Society, I do hope, will bear in mind that it is not simply to affect the working man, not only to go into the foul alley; but it is to go to the door of the farmer, to the door of the shopkeeper, ay, to the door of ladies and gentlemen of the same rank as ourselves. Women can do in that work what men cannot do. Private correspondence, private conversation, private example, may do what no legislation can do. I am struck more and more with the amount of disease and death I see around me in all classes, which no sanitary legislation whatsoever could touch, unless you had a complete house-to-house visitation of a Government officer, with powers to enter every house, to drain and ventilate it, and not only that, but to regulate the clothes and the diet of every inhabitant, and that among all ranks. I can conceive of nothing short of that, which would be absurd and impossible and would morally be most harmful, that would stop the present amount of disease and death which I see around me, without some such private exertion on the part of women, of mothers, as I do hope will spring from this Institution more and more. I see this,—that three persons out of four are utterly unaware of the general causes of their own ill health, and of the ill health of their children. They talk of their 'afflictions,' and their 'misfortunes;' and, if they be pious people, they talk of 'the will of God,' and of 'the visitation of God.' I do not like to trench upon those matters, but when I read in my Book and in your Book that "it is not the will of our Father in Heaven that one of these little ones should perish,' it has come to my mind sometimes with very great strength that that may have a physical application as well as a spiritual one, and that the Father in Heaven who does not wish the child's soul to die, may possibly have created that child's body for the purpose of its not dying except in a good old age. And not only in the lower class, but in the middle class, when one sees an unhealthy family, in three cases out of four, if one takes time, trouble, and care enough, one can, with the help of the doctor who has been attending them, run the evil home to a very differeent cause than the will of God; and that is, to a stupid neglect, a stupid ignorance, and, what is just as bad, a stupid indulgence. Now, I do believe that if those tracts which you are publishing, and which I have read, and of which I cannot speak too highly, are spread over the length and breadth of the land, and if women, clergymen's wives, the wives of manufacturers and of great employers, district visitors and school mistresses, have these books put into their hands, and are persuaded to spread them, and to enforce them, by their own example and by their own counsel in the course of a few years, this system being thoroughly carried out, you would see a sensible and large increase in the rate of population. When you have saved

Digitized by Google

your children alive, then you must settle what to do with them. But a living dog is better than a dead lion; I would rather have the living child, and let it take its chance, than let it return to God—wasted. Oh! it is a distressing thing to see children die: God gives the most beautiful and precious thing that earth can have, and we just take it and cast it away; we cast our pearls upon the dunghill and leave them. A dying child is to me one of the most dreadful sights in the world. A dying man, a man dying on the field of battle, that is a small sight; he has taken his chance, he is doing his duty; he has had his excitement, he has had his glory, if that will be any consolation to him; if he is a wise man, he has the feeling that he is doing his duty by his country, or by his king, or by his queen. I am not horrified or shocked at the sight of the man who dies in the field of battle: let him die so. It does not horrify or shock me to see a man dying in a good old age, even though it be painful at the last, as it is. But it does shock me, it does make me feel that the world is indeed out of joint, to see a child die. I believe it to be a priceless boon to the child to have lived for a week, or a day; but oh, what has God given to this thankless earth, and what has the earth thrown away, in nine cases out of ten, from its own neglect and carelessness! What that boy might have been, what he might have done as an Englishman, if he could have lived and grown up healthy and strong! And I entreat you to bear this in mind, that it is not as if our lower classes or our middle classes were not worth saving; bear in mind, that the physical beauty, and strength, and intellectual power of the middle classes,—the shopkeeping class, the farming class, and down to the working class lower and lower still,—whenever you give them a fair chance, whenever you give them fair food and air, and physical education of any kind, prove them to be the finest race in Europe. Not merely the aristocracy, splendid race as they are, but down and down and down to the lowest labouring man, to the navigator;—why there is not such a body of men in Europe as our navigators, and no body of men, perhaps, have had a worse chance of growing to be what they are; and yet see what they have done. See the magnificent men they become in spite of all that is against them, all that is drawing them back, all that is tending to give them rickets and consumption, and all the miserable diseases which children contract; see what men they are, and then conceive what they might be. It has been said, again and again, that there are no more beautiful races of women in Europe than the wives and daughters of our London shopkeepers; and yet there are few races of people who lead a life more in opposition to all rules of hygiene. But, in spite of all that, so wonderful is the vitality of the English race, they are what they are; and therefore we have the finest material to work upon that people ever had. And, therefore, again, we have the less excuse if we do allow English people to grow up puny, stunted, and diseased. Let me refer again to that word that I used: death—the amount of death. I really believe there are hundreds of good and kind people who would take up the subject with their whole heart and soul if they were aware of the magnitude of the evil. Lord Shaftesbury told you just now that there were one hundred thousand preventible deaths in England every year. So it is. We talk of the loss of human life in war. We are the fools of smoke and noise; because there are cannon balls, and gunpowder, and redcoats, and because it costs a great deal of money, and makes a great deal of noise in the papers, we think, what so terrible as war! I will tell you what is ten times, and ten thousand times, more terrible than war, and that is—outraged nature. War, we are discovering now, is the clumsiest and most expensive of all games; we are finding that if you wish to commit an act of cruelty or folly, the most expensive act that you can commit is to contrive to shoot your fellowmen in war. So it seems; but Nature, insidious, inexpensive, silent, sends no roar of cannon, no glitter of arms to do her work; she gives no warning note of preparation; she has no protocol, nor any diplomatic advances, whereby she warns her enemy that war is coming. Silently, I say, and insidiously she goes; she does not even go forth, she does not step out of her path, but quietly, by the very same laws by which she makes alive, she kills and kills and kills. By the very same laws by which every blade of grass grows, and every insect springs to life in the sunbeam, she kills and kills and kills, and is never tired of killing till she has taught man the terrible lesson he is so slow to learn,—that Nature is only conquered by obeying her. And bear in mind one thing more. Man has his courtesies of war, and his chivalries of war: he does not strike the unarmed man; he spares the woman and the child. But Nature is fierce when she is offended, and as she is bounteous and kind when she is obeyed. She spares neither woman nor child. She has no pity: for some awful, but most good reason, she is not allowed to have any pity. Silently she strikes the sleeping child, with as little remorse as she would strike the strong man, with the spade or the pickaxe in his hand. Ah! would to God that some man had the pictorial eloquence to put before the mothers of England the mass of preventible suffering, the mass of preventible agony of mind and body, which exists in England year after year! And would that some man had the melo-dramatic eloquence to make them understand that it is in their power, in the power of the mothers and wives of the higher class, I will not say to stop it all,—God only knows that,—but to stop, as I believe, three-fourths of it. It is in the power, I believe, of any woman in this room to save three or four lives, human lives, during the next six months. It is in your power ladies, and it is *so* easy. You might save several lives apiece, if you chose, without, I believe, interfering with your daily business, or with your daily pleasure, or, if you choose, with your daily frivolities, in any way whatsoever. Let me ask, then, those who are here, and who have not yet laid these things to heart, will you let this meeting to-day be a mere passing matter of two or three hours' interest, that you shall go away and forget for the next book or the next amusement? Or will you be in earnest? Will you learn—I say it openly—from the noble chairman, how easy it is to be in earnest in life; how every one of you, amid all the artificial complications of English society in the nineteenth century, can find a work to do, and a noble work to do, and a chivalrous work to do,—just as chivalrous as if you lived in any old fairy land, such as Spenser talked of in his *Faerie Queene;* how you can be as chivalrous now, and as true a knight-errant, or lady-errant, in the present century, as if you had lived far away in the dark ages of violence and rapine? Will you, I ask, learn this? Will you learn to be in earnest, and to use the position, and the station, and the talent that God has given you, to save alive those who should live? And will you remember that it is not the will of your Father that is in Heaven that one little one that plays in the kennel outside should perish, either in body or in soul?

The meeting was also addressed by R. Monckton Milnes, Esq., M.P.; the Rev. J. Rowsell, incumbent of St. Peter's, Stepney; F. O. Ward, Esq.; Dr. Southwood Smith; and Dr. Edwin Lankester.

Correspondence.

To the Editor of the Philanthropist.

Sir,—Allow me, through your columns, to call the attention of my brother managers of Reformatories to a point which I think is becoming one of much importance to us all.

Statistics show a great decrease in the number of juvenile offences, and though unfortunately by a mistake, which will shortly be explained, the diminution proves to be far less than was stated—(the number for 1858 being 10,329, instead of 7,622, making a decrease on the total of 1856 of 25 per cent., instead of 45). Yet, when we consider that this decrease of 25 per cent. is principally of the oldest and worst of the offenders, it rises greatly in importance.

But the fact is shown not only by statistics, but is felt in our Reformatories, many of which, as those of Herts, Glamorgan, and Monmouth, are very far below their number, while others have increased their buildings, but do not find a proportionate increase of applications.

Most counties which have no Reformatories of their own have gone on the only just and fair principle, of taking a certain amount from their own rates to pay a small weekly sum to the Reformatory of any other county that will receive their boys. This was only strictly fair. If the people of county A have voluntarily subscribed to establish a Reformatory, and have diminished their own crime, and have room to assist county B, they will probably be glad to do so; but, certainly, they cannot be expected to do so at their own expense. county B, therefore, raises money from its own rates, and pays, or ought to pay, *much more* to county A than the difference between the 7s. a-week allowed by Govern-

Digitized by Google

ment and the actual total cost of the boy in the school.

This has worked admirably hitherto. The counties which have received *foreigners* into their Reformatories have had less to pay for the maintenance of those establishments; and the counties which have paid, have been rid of their young criminals at one-quarter of the sum it would have cost them to establish a Reformatory for themselves. But most of the counties have now so reduced their numbers of cases, that a dearth of *paying* boys is beginning to be felt. I have even *heard* that in West Yorkshire, where they paid most liberally, they find so small a supply of youthful offenders, and so great a demand for them in other Reformatories, that they propose, instead of paying for them, to put them up to auction.

But there is one county which stands on different grounds from others in this point of paying. Middlesex, by an act of its own, put itself on a different system from all the rest of England. Which system will turn out eventually to be the best, remains to be seen. Hitherto London has done *nothing* for itself in the technically Reformatory line. It has many Refuges, and some Reformatories, supported by voluntary subscriptions and Treasury payments; but the public funds of Middlesex have till very lately done *nothing*, even in the way of paying for the admission of their boys into other Reformatories.

Of late, however, this is changed. The Middlesex Reformatory at Feltham is open, and, two months ago, I saw thirty-eight boys within its walls, and the number is probably increased by now. These boys are not supported like ours, by a payment from the Consolidated Fund, but are maintained *wholly by the rates of their own county*. Thus the people of Middlesex pay in their general taxes their portion of the cost of our Reformatories, and we pay nothing towards theirs.

But there is another peculiarity in their Act. It prohibits their receiving any boys above fourteen years of age. I believe it is the opinion of nearly all who have had any practical experience in this work, that the real instructors and tempters to crime among boys are usually those between fourteen and sixteen; so that the merely taking from the streets those below fourteen will for some time but little diminish the evil. But now that many of us have room in our county Reformatories—and now that Middlesex is paying both the whole of its own cost and part of ours—I would ask my brother managers to consider whether we may not fill up our vacancies by receiving some London boys, only stipulating that they shall be *fit cases*. The fit cases for us to receive I should define to be—First, above fourteen years old (as all under may be sent to Feltham): and, secondly, that they should be the *oftenest convicted*. I hope to be able to ascertain, ere long, what number of fifth, seventh, or tenth convictions occur in the year, and only to offer to receive those classes whom we can fully deal with; for instance, if there should be in an average year sixteen boys (above fourteen years old) ten times convicted, sixty boys seven times, and 200 five times, and if the Home in the East, which I trust will confine its admissions to boys above fourteen, can receive twenty boys per annum, and Brook-green say twenty more; if Herts, Monmouth, Cheshire, and Gloucestershire could take about five each, we should be able to convince the young London thieves that *every boy* on a seventh conviction was cleared off; and this would frighten those six times convicted so far that we should soon be able to receive the fifth, fourth, and third convictions. There is a fear with some that London boys may be more difficult to deal with—nay, some excellent theorists (who have never tried it) still assure us that it is dangerous to receive any boys above fourteen. But, as I said, I address myself to my brother managers, who have had real experience in the work, and who know that London boys dispersed through country schools are, after the first month, nearly as easy to manage as country boys; while as to the difficulty of dealing with boys above fourteen, I can but say that those who cannot face the difficulty, are not, as yet, fit for the work.

Our country Reformatories are at present, it is true, sadly apt to be filled with little trifling cases of small boys, committed by kind-hearted magistrates, nominally for cutting some twigs of a laurel, or for swearing at a donkey (two absolute well-vouched-for *facts*), but really in the hope of giving a comfortable home to a poor boy for five years, at no expense to the parish, though at the cost of £100 to the State. But these cases are happily growing more rare, and I trust that ere long we shall be able to offer to receive not twenty, but 200 London boys above fourteen, and of the oftenest convicted class, and this will make a rapid reduction in the crime.

By the way, I have lately been told that the authorities of Birmingham, having taken the matter of *payment* into consideration, have determined to pay nothing! I can hardly think this, as in their own Reformatory, at Saltby, they receive Staffordshire boys, *on payment*, and therefore they cannot expect other Reformatories to receive any more Birmingham boys without it, as the plea I have made for Middlesex can in no degree apply to Birmingham. In 1856 and 1857, forty-four boys were received gratuitously into Reformatories; but if they still refuse to grant any pay, when an Act of Parliament has enabled them to do it, I fear there will not be many found to respond to the cry of "Please give a trifle to poor Birmingham."

I remain, Sir, your obedient servant,

T. B. Ll. Baker.

Hardwicke Court, August 20th, 1859.

To the Editor of the Philanthropist.

Sir,—I have received the following letter from Mr. Redgrave, the head of the Statistical Department of the Home Office, on the subject of the number of commitments of juveniles under sixteen for the year 1858, given in page 12 of my last Report on Reformatory Schools.

"*Home Office, August 15th*, 1859.

"My dear Sir,—I am very sorry to say that I find the total numbers which I gave you in the progress of my work (*the compilation of the Judicial Statistics for the year* 1858,) as 7622 are erroneous—that on the revision of the returns I discovered an important omission had been made, and that the numbers should be as stated in the Judicial Statistics, 10,329. I can hardly tell you how vexed I am by this mistake, which I must take entirely upon myself—for having given you the totals from the tables in progress before I had had time to verify them—a work of some labour.

"Yours faithfully,

"Samuel Redgrave."

"Rev. Sydney Turner."

The correction of this total for 1858 makes the numbers for the three years 1856-8, given at page 12 of the Report, stand as follows:—

	1856.	1857.	1858.
Under 12—			
Boys	1,674	1,622	1,352
Girls	816	255	201
Between 12 and 16—			
Boys	10,134	9,200	7,485
Girls	1,857	1,424	1,291
Total	13,981	12,501	10,329

The decrease in juvenile commitments for the year 1858 was therefore 17·4 per cent. on 1857, and 26·2 per cent. on 1856. This reduction may appear at first sight less satisfactory than that which resulted from the totals formerly given, and which amounted apparently to 40 per cent. on 1857, and 45 per cent. on 1858. It is in reality more so. A decrease of 40 per cent. in one year was scarcely explicable, and seemed so unlikely, that I did not venture to dilate on it, or argue from it. It was the more difficult to understand because the commitments in the districts where reformatories had been established, and which Mr. Redgrave furnished me with at the same time, and which I gave on pages 14 and 15 of the Report, shewed a considerably less rate of diminution, averaging only from 20 to 28 per cent. The result now established of a general reduction of about 18 per cent. on the whole of England and Wales, and a reduction in the counties in which reformatory agency has been brought to bear, averaging 22 per cent. is natural and intelligible in itself, and gives surer and more lasting ground for expecting a steadily increasing reduction for the present and succeeding years, especially as it follows on a decrease of 5 per cent. already established for 1857, as compared with 1856, and as it is accompanied by a corresponding reduction of 24 per cent. on the numbers *committed to reformatories* during the year.

I shall hope to circulate in a few days a short appendix to my Report, giving the corrected total and entering more fully into the details of the juvenile commitments in the different localities, as the publication of the "Judicial Statistics" will now allow of. In the meantime I shall be much obliged by your insertion of this letter in your columns.

I remain, Sir,

Your very faithful servant,

Sydney Turner.

Notices to Correspondents.

Our correspondents are requested to observe that we cannot be answerable for the insertion of any articles received after the 22nd of the month, or Advertisements after the 27th, though we shall always endeavour to meet their wishes.

The Advertisements in "*The Philanthropist*" will henceforth be confined to Charitable Institutions, and such as bear immediately on the social improvement of the community. Existing contracts will, of course, be concluded.

The Editor requests that any circumstances connected with Charitable Institutions, which it may be thought advisable to bring before the public, may be communicated to him at 337, Strand, on or before the 18th of each month.

N.B.—As "The Philanthropist" will be published in future by Mr. Tweedie, 337, Strand, the Editor requests that all communications may be forwarded to him there, where they will receive immediate attention.

Notice.—All sums due to "The Philanthropist" for Advertisements, and for Subscriptions from this date, to be paid to W. Tweedie, 337, Strand. No other person is authorized to give Receipts.
Jan. 1st, 1859.

Notice.—Subscribers of £1 1s. and upwards to the Reformatory and Refuge Union, 118, Pall Mall, will be supplied on application with the "Philanthropist," a Monthly Journal of Social Economy.

*** *Attention is called to the following scale of charges for Advertisements :—*

The Philanthropist,
AND
SOCIAL SCIENCE GAZETTE,
August 1, 1859.

NATIONAL ASSOCIATION FOR THE PROMOTION OF SOCIAL SCIENCE.

THE third annual meeting of this increasingly important Association, will be held at Bradford, in the West Riding of Yorkshire, in October, on Monday the 10th and the five following days. Our readers will hardly need to be informed that the Association was established to aid the development of Social Science, and to guide the public mind to the best practical means of promoting the Amendment of the law, the advancement of education, the prevention and repression of crime, the reformation of criminals, the adoption of sanitary regulations, and the diffusion of sound principles on all questions of Social Economy. The Association aims to bring together the various Societies and individuals who are engaged or interested in furthering these objects; and, without trenching upon independent exertions, seeks to elicit by discussion the real elements of truth, to clear up doubts, to harmonise discordant opinions, and to afford a common ground for the interchange of trustworthy information on the great social problems of the day.

Lord Brougham, at the earnest request of the council, has consented to accept the office of permanent president of the council; and in that capacity his lordship will deliver an address at the Bradford meeting, reviewing the progress of the Association, and the leading questions of social interest that have arisen during the past year. An annual president for the year has been selected in the person of the Earl of Shaftesbury, whose long and various experience in social questions, acquired during a lifetime of zealous effort for the physical and moral improvement of our population, will be productive of signal benefit to the Association, and to the objects which it seeks to pursue.

The following are the regulations of the Association, to which we gladly append the appointments for the various departments, and the various classes into which the papers are to be divided, by which it will be seen that the field of enquiry will embrace almost every conceivable topic which can affect the well-being of society, or in which anyone can take interest :—

REGULATIONS CONCERNING PAPERS.—All communications concerning papers, or other business of the meeting, must be addressed to the general office, 3, Waterloo Place, Pall Mall, London, S.W.

Every paper must be sent to the general secretary, on or before the 20th of September next. On the first page of every paper must be written the subject, the name of the author, and his address.

The Council reserve the right of rejecting any paper which they consider inappropriate.

No paper must occupy in reading more than twenty minutes.

No paper already published can be read.

No paper, when read, can be published by the author (unless by permission of the Council) previous to the publication of the transactions of the Association for 1859.

The Council may print any paper, either in whole, or in part, or may exclude it from the transactions, as they see fit.

REGULATIONS CONCERNING MEMBERS AND ASSOCIATES.—Any person becomes a member of the Association by subscribing one guinea annually, or ten guineas as a life payment. Every member is entitled (without further payment) to attend all the meetings of the Association, and to receive a copy of its transactions.

Any person becomes an Associate for a year by a payment of ten shillings. Every Associate is entitled to attend all the meetings.

Any public body, such as a chamber of commerce, a mechanics' institute, a working men's college, &c., becomes a corporate member by paying an annual subscription of one guinea. Every corporate member receives (without further payment) a copy of the transactions, and may nominate two representatives to attend the meetings of the Association.

General Office.—3, Waterloo Place, Pall Mall, London, S.W.

Local Office and Reception Room.—St. George's Hall, Bradford.

FIRST DEPARTMENT.—JURISPRUDENCE AND AMENDMENT OF THE LAW.—President: Vice-Chancellor Sir W. PAGE WOOD. Vice-Presidents: H. W. RIPLEY, Esq., President of the Bradford Chamber of Commerce; ROBERT COLLIER, Esq., Q.C., M.P. Secretaries: J. NAPIER HIGGINS, Esq.; A. RYLAND, Esq. Local Secretary: JOHN DARLINGTON, Esq.

In this department is discussed the science of Civil Jurisprudence; its bearing on the social condition of the people; the advantages derivable from a wide diffusion of its principles; the practical defects in our laws; the evils arising from such defects; and the fitting remedies.

Papers may be classed under the following heads :—

I. The principles of Jurisprudence and Legislation. Province of legislation—Adaptation of law to social changes, &c.

II. The method of legislation. The preparation and passing of bills—Minister of justice—Judicial and legislative Statistics, &c.

III. Administration of Justice. Superior and Local Courts—Procedure and evidence—Professional regulations, &c.

IV. Laws relating to property. Mercantile law—Real property law, &c.

V. Laws relating to persons.

SECOND DEPARTMENT.—EDUCATION. President: the Right Hon. C. B. ADDERLEY, M.P. Vice-Presidents: Rev. J. BURNET, LL.D., Vicar of Bradford; EDWIN CHADWICK, Esq., C.B.; W. E. FORSTER, Esq.; Secretaries: Rev. G. D. BOYLE; Rev. NASH STEPHENSON. Local Secretaries: Rev. H. J. BURFIELD, M.A.; Rev. H. B. CREAK, M.A.

This department deals with the various questions relating to Education, both industrial and intellectual, whether of the upper, middle, or lower classes of society.

Papers may be classed under the following heads :—

I. The objects of education.

II. The means and methods of educa-

Digitized by Google

tion. University education — Grammar and foundation schools—Competitions for the civil service—Middle class examinations—Privy Council system—Voluntary system — The principle of supporting schools by local rates—Factory schools—Union schools — Ragged and feeding schools—Agricultural and industrial training as an element in school instruction—Schools of art—Mechanics' institutions, &c.

[It is proposed, in accordance with a Resolution passed by this department at Liverpool in October last, to make method in teaching a subject of special treatment.]

III. The effects of education.

Better training of all classes for their mutual duties — Increased efficiency of public services, professions, &c.—Increased productive powers—Saving in criminal expenditure, poor rates, &c.

Third Department.—Punishment and Reformation.—President: R. Monckton Milnes, Esq., M.P. Vice-Presidents: E. B. W. Balme, Esq.; Rev. Sydney Turner. Secretary: Martin Ware, Jun., Esq. Local Secretaries: Rev. J. R. Campbell, M.A.; M. W. Thompson, Esq., M.A.

In this department are discussed the various question relating to the prevention and repression of crime; the reformation of the criminal; the best mode of secondary punishment; prison discipline; the management of reformatory schools and institutions, &c.

Papers may be classed under the following heads:—

I. Incentives to and Prevention of Crime. Receivers of Stolen Goods—Marine Store Dealers—Beer Houses, and Disorderly Houses.

II. Criminal Law and Procedure.

III. Treatment of Adult Offenders. The Convict System—The Prison System—Remunerative Work in Prisons—Public Supervision of Discharged Prisoners—Prisoners' Aid Society—Adult Reformatories.

IV. Treatment of Young Offenders. Reformatory Schools—Ship Reformatories Reformatory for Incorrigibles—Certified Industrial Schools—Methods of enforcing payment from Parents—Mixing of Criminal and Destitute cases in Refuges—Teaching of Trades in Reformatories and Refuges—Disposal of Boys and Girls on leaving Reformatories.

Fourth Department.—Public Health.—President: The Right Hon. W. Cowper, M.P. Vice-Presidents: H. W. Wickham, Esq., M.P.; J. Simon, Esq., F.R.S.; T. Southwood Smith, M.D. Secretaries: W. Farr, M.D., F.R.S.; Philip H. Holland, Esq. Local Secretaries: Dr. Macturk; H. F. Lockwood, Esq.

This department considers the various questions relating to the public health: it will collect statistical evidence of the relative healthiness of different localities, of different industrial occupations, and generally of the influence of external circumstances in the production of health or disease: it will discuss improvements in house construction, (more especially as to the dwellings of the labouring classes) in drainage, warming, ventilation; public baths and wash-houses; adulteration of food and its effects; the functions of government in relation to public health, the legislative and administrative machinery expedient for its preservation; sanitary police, quarantine, &c.; poverty in relation to disease, and the effect of unhealthiness on the prosperity of places and nations.

Papers may be classed under the following heads:—

I. The Condition of the Public Health. The subjects, chiefly statistical, referred to this head, will comprise everything that relates to the past or present state of the public health. Papers descriptive of the general state of health of particular districts, or of the same districts at different periods, or under different circumstances, and of persons engaged in the several industrial occupations, as well as of the special diseases to which particular localities, and modes of life or of occupation, are most liable, will be classed under this division.

II. The Causes which modify the Public Health. To this head will be referred papers that treat of the causes which, whether favourably or injuriously, affect the public health, and the mode in which these causes act. This division will thus include the consideration of the production of disease by external causes to which persons, either individually or collectively, are liable to be exposed; such as climate, soil, locality, habitation, diet, occupation, station, or habit.

III. The Improvement of the Public Health. Communications that suggest plans for the amendment of the public health, whether these have reference to legislative enactments, and the machinery requisite for the administration of sanitary law; to the removal of causes of disease by engineering or other mechanical appliances; or to the prevention of disease by hygienic precautions, will be classed under this head.

IV. Social and Economical Aspects of Public Health. This division will include inquiry into the effect of diminished death-rates upon the Population — the effect of Sanitary Improvement on the National Wealth, the Diminution of Pauperism, and the general Moral and Physical Elevation of the Community.

Fifth Department.—Social Economy.—President: Sir James Kay Shuttleworth, Bart. Vice-Presidents: E. Akroyd, Esq.; Titus Salt, Esq., M.P. Secretary: Professor John Wilson. Local Secretaries: Rev. J. P. Chown; George Wood, Esq., M.A.

In this department are considered the various questions relating to Social Economics; the conditions of industrial success, whether of nations or individuals; the relation between employers and employed; strikes and combinations; legislative interference with the hours and wages of labour; legislative regulation of professions, trades, and employment generally, and of price and means of supply; emigration, its effect, and true conditions; industrial employment of women; industrial and economical instruction of the labouring classes; public amusements; social economics in relation to education; exercise of public and private charity; relief of the poor.

Papers may be classed under the following heads:—

I. Conditions of industrial success. Accumulation and employment of capital—Freedom of trade—Apprenticeship System—Trades' unions—The effects of science and machinery on industrial success—The factory system, &c.

II. Condition of the working classes. Habitation—Domestic Economy—Provident habits—Recreation, &c.

III. Charity and relief. The effects of charitable endowments—Workhouse Relief and Management, &c.

It is considered desirable that one or two papers in this department should be devoted to the more abstract questions of economic science; to generalizations of ascertained facts, and enunciation of the laws to be deduced from them.

[The following special question has been proposed for the consideration of this department at the Bradford meeting:—How far, and in what way, can the National census of 1861 be made available for procuring information on the moral, material, and social condition of the country?]

The Committee, Public Health Department, in the Social Science Association, have issued the following judicious hints, by way of suggesting, as subjects particularly requiring additional proof and illustration, the connexion of Sanitary Science with Religious and Moral Culture, with Patriotism, and with Industrial Economy.

It is almost self-evident that whatever renders the population more healthy, by increasing their domestic comfort and bodily purity, must improve also their domestic morality and moral purity: and must also remove formidable impediments to moral and religious culture. It is important that these effects should be illustrated by examples, with which Clergymen, Town Missionaries, Medical Officers, and others, who have had opportunities for observation, are familiar; either of the good effects of this nature which have followed successful sanitary improvements, or of the evil effects, where such improvements are neglected, though most urgently required.

It is of special interest to the Politician to consider the diminution by unnecessary disease of the numbers, strength, and working ability of our countrymen, upon whose industry we depend in peace, and on whose valour in war; and by whose loss or deterioration we must be impoverished, and may be endangered. Also, the political danger of a large class living in a state of habitual discomfort and barbarism—prone to folly, crime, and social disorder. Good government may be endangered, if, by numerous premature deaths, the number of the experienced and prudent is diminished, and the proportion of the young, and the inexperienced and reckless, increased.

The Political Economist will have to inquire the effect of diminished death-rate upon the population. Does it cause, simply, increased numbers, with diminished comfort, or does it increase both numbers and

Digitized by Google

means of subsistence, or must it be accompanied by emigration or over-population?

Does the cost of sanitary improvement equal the saving it produces? Is it wasteful or profitable? Does it impoverish or enrich the community? By what class is the cost chiefly borne? and what class will be chiefly benefited? Is the value of property depreciated or enhanced? Is pauperism increased or diminished? Is it true that the increased rent necessary to pay sanitary improvements causes as much misery as the improvements themselves relieve?

Increase in the size and number of towns necessarily diminishes the natural facilities and inducements which the inhabitants of the country enjoy for outdoor occupations and amusements, producing both increase in diseases, arising from deficiency of bodily exercise and fresh air, and excess of mental and nervous excitement; and also moral and social evils, from want of healthful, cheap, and harmless recreation. How can this effect of the growth of towns be best counteracted?

The growth of towns diminishes to continually increasing numbers, constant and easy access to those natural objects of interest and beauty by which all would be gratified and improved, and these increasing numbers are compelled to pass most of their lives amidst dull, gloomy, and monotonous streets, to the injury of both mind and body. Attention should be directed to the need for gratifying and cultivating the sense for beauty, by artistic architecture, and by obtaining public gardens and walks in and near towns. One great impediment to rendering towns agreeable places of residence, is the prevalence of smoke, and in many towns, of dust, which compels the inhabitants to keep their windows closed. Smoke disfigures buildings and destroys plants. This evil is susceptible of very great abatement, as has been proved in London, Liverpool, and elsewhere.

An important subject of inquiry, especially in a manufacturing district, is the direct and indirect influence of particular employments, on the health of workers and their families. If health suffer, what part of that effect is due to the employment itself? what to other circumstances? such as the sanitary conditions of the homes and of the district. If the occupation be itself injurious, is it from its nature, or its duration, or from the condition of the places of work? Are women much employed, and are many of them mothers of young children? Does the health of the children suffer from neglect of nursing or otherwise? If the families of any particular trade appear unhealthy, to inquire if all are nearly equally so, and whether more so than others inhabiting the same streets, and in similar *domestic* circumstances: and also whether those of the families who are, or are not, old enough to work, suffer most sickness. What evidence is there of deterioration of the young from the ill-health of the parents?

What is the connexion between density of population and a high death rate? How much is the supposed effect really attributable to other causes which may be removed or greatly diminished?

EMPLOYMENT FOR WOMEN.

WHATEVER may be the exertions made by benevolent persons to ameliorate the general condition of society, no decided improvement can take place so long as women, the future mothers of our workmen in peace and defenders in war, are left to battle, unaided, against the present difficulties which surround them, and in too many cases driven to degradation or reared in neglect and poverty for want of employment adapted to their necessities. It is not to be denied that much of what is called "the Social Evil" arises from this very inability to procure proper means of living; the proper spheres for women's work, in many cases, are occupied by young men; and this in many cases will, we fear, continue to be the case; because it is well known that ladies will attend by preference, and without apparently a feeling of shame, where they are served with silks, satins, and other less mentionable things, in linendrapers' shops, by young men. Let it be admitted that the work is too laborious for the delicate fingers and slender forms of females; and that the latter must, therefore, yield these places; then, we say, it is at least justice that in those lighter places which require not so much strength as tact and skill, women should, if possible, have the preference; such as ticket-taking at stations, book-keeping, letter-writing, printing, composing, &c., &c. We were delighted to find that the first meeting of the London District Telegraph Company, which took place on the 23rd of August, Mr. R. Taylor, who occupied the chair on the occasion, called attention to the fact, the pleasing fact, that the work of the company was carried out by females, and that the announcement was received with well-merited cheers. He stated that:—

"The Directors had received applications for those situations from a number of well-educated and apparently well-to-do young ladies. He was pained and astonished at seeing such a class of persons amongst the applicants to learn the business of manipulators of telegrams. He deeply regretted to find that persons of such capacity and respectability of appearance were asking for such situations as they could offer them. They positively began at nothing, and when pupils could manipulate five words in a minute they got 5s. a-week. After making further progress they got 8s. a-week, and ultimately they got 10s. a-week when they could take charge of an instrument. They had engaged fifty-five young females, of whom forty-five were under instruction—that being the largest number that the instruments in their possession, at the present time, enabled them to instruct. They were under the instruction and supervision of an experienced matron, with submatrons under her, and the rules laid down by other telegraph companies were adopted by them, namely, that any male clerk or officer who held communication with them would be instantly dismissed."

This is a picture which would give unmixed pleasure, were it not for the reflection of the very sad condition to which those must be reduced who could contentedly enter upon such poorly paid situations as are here described. Similar was our gratification at receiving a circular put forth by the Hospital for Sick Children, in Great Ormond-street, containing regulations for "pupil nurses," to the following effect:—

1st. All candidates for admission as pupil nurses must be between the ages of seventeen and thirty-five years; in good bodily health; and able to read and write.

2nd. No person can be admitted as a pupil nurse without a certificate from the clergyman of the parish in which she resides, or a recommendation from a subscriber to the hospital.

3rd. The pupil nurses will be lodged and boarded in the hospital on payment of a weekly sum of six shillings.

4th. They shall discharge in the wards and nursery—under the superintendence of the nurses, matron, and medical officers—all the duties of a nurse, including the preparation of food for the sick.

5th. The period of training shall not be less than two months. No fee will be required.

6th. They shall be under the same authority, and subjected to the same regulations, as the other nurses; and those who conduct themselves satisfactorily, and prove themselves competent to discharge the duties of a children's nurse in sickness, will receive a certificate, signed by the chairman of the committee, the medical officers, and the matron.

To this fresh calling or avocation young women would do well to turn their attention. There is a great dearth of efficient nurses for children, and if the attendants of these little fragile and helpless beings were better trained to tend them in health, the sick wards of hospitals, &c., would not be so full as they are at the present time.

It is because we so think, that we hail with very great satisfaction the formation of a society expressly for "promoting the employment of women." Nothing can be more gratifying than its object, and we feel satisfied that it will commend itself to the public sympathy and support. The committee have put forth a statement of the views and plans of the society, from which we gladly make the following extracts:—

"It appears from the Census, that there are two millions of unmarried women in England, who work for subsistence. It is of no use to tell these persons that domestic life is the best position for them, and that a woman never appears to such advantage as in her husband's home, for they have no

Digitized by Google

husbands belonging to them, and though any individual of the number may marry, yet the proportion of two million of single women must remain for ever, gradually increasing with the numbers of the population. These must be their own bread winners, and earn money in some way or other, unless they are contented to take up their abode, for life, in the union workhouse.

The three great professions open to receive them—Teaching, *Domestic Service*,* and Needlework, are over-crowded to such a degree as to render competition excessive, and to beat down wages to a point at which it is difficult to live, so that we hear of maids of all-work earning from three to six pounds a year, (a sum barely sufficient to furnish them with the scantiest raiment, and which makes any attempt at laying by money, against old age, or a time of sickness, utterly impossible ;) or, more cruel still, till we read of women toiling for sixteen hours a day, at their needles, and earning fourpence ! One who is an excellent judge, says 'the payment for the labour of females in this country is so small, as to demand for obtaining an honest living a greater power of endurance and self-control than can reasonably be expected.†

As is natural under these circumstances, the workhouses are full of able-bodied women ; the parish-officers, urged on by the over-taxed rate-payers, treat them with rigour, affecting to believe that their idleness is voluntary, and so drive them forth into the world, to live as best they may. And all this misery is inflicted on them for no fault, but that of having come into a world where there is no employment for them.

"But can this state of things be natural ? Could Providence have created several thousand superfluous women, for the purpose of rendering them useless burdens on society, as inmates of our prisons, workhouses, and charitable institutions ? Or is it that there is something wrong in our social arrangements, whereby they are unfairly deprived of occupations that were intended for their peculiar benefit ?

"If this want of employment extended to the men, it would be a sign that the country was in a state of decadency, but happily this is not the case, for everywhere we hear how high their wages are.

"Government is obliged to raise the bounties for soldiers and sailors, or they could procure none, and even then finds it difficult to obtain enough, occupations for men being so plentiful and so well remunerated. From the Colonies, letters declare they are at a stand-still for want of workmen. "We want nothing," says a newspaper from Cape Town, "but more men, more carpenters, more blacksmiths, more bricklayers. If we had twice as many as at present, they would all find full employment." Is it not somewhat strange, that while men's labour is in such demand, women should experience a difficulty, (often amounting to an impossibility) in earning a living by honest industry ?—That while in some departments of labour, men will only work three days a week, because in that time they can earn enough to provide food for their families, and the means of drunkenness for themselves, *women should be glad to work sixteen hours a day for fourpence !*

Surely there must be something wrong in this disproportion, something unnatural, and that was never intended. Let us then look round, and see whether men are never to be found occupying easy, remunerative places, that could be as well or better filled by women ; places that originally belonged to them, and that they would have remained in possession of to this day, had not artificial means been used to displace them. We refer to those departments in the great shops, which are devoted to the sale of light articles of female attire. Why should bearded men be employed to sell ribbon, lace, gloves, neck-handkerchiefs, and the dozen other trifles, to be found in a silk-mercer's or haberdasher's shop ?

The *Edinburgh Review*, in its April number, gives us the reasons. One is, that women are too ill-instructed in arithmetic for the purpose ; the other is, that ladies prefer the services of men. The first reason, however, is sufficient, and fully explains the second. Ladies would rather be waited on by a man who understands his business, than by a woman who keeps them waiting for ten minutes, while she is trying to make out their bill. The cause of this great ignorance among women, is told us by the Rev. J. P. Norris, the Government School Inspector, in his Report to the Committee of Council of Education :—

"But I much fear the chief reason that more is not done in this direction, is the very general apathy that prevails in the matter of girls' education. Why is it that, where you find three or four good boys' schools, you will find barely one efficient girls' school ? Why is it that in pamphlets, and speeches, and schemes of so-called national education, they are almost uniformly ignored ? The reasons are twofold ; a very large number of the people who are interested in the progress of education think of it only in connexion with our national wealth ; they mean, by education, the extension of skill and knowledge as essential elements of productiveness, and, therefore, with them, girls' schooling is a matter of little or no moment. Another still larger class of persons, who, from native illiberality of mind are opposed to all education, though ashamed to confess this generally, do not blush to own it with respect to girls. So that on either hand the girls' school is neglected. And what is the result ? For want of good schools for girls, three out of four of the girls in my district are sent to miserable private schools, where they have no religious instruction, no discipline, no industrial training. . . . . My belief is, that England will never secure the higher benefits expected to result from national education until more attention is paid to girls' schools. . . . . We must multiply over the face of the country girls' schools of a sensible and practical sort. The more enlightened women of England must come forward and take the matter into their own hands, and do for our girls what Mrs. Fry did for our prisons, what Miss Carpenter has done for our reformatories, what Miss Nightingale and Miss Stanley are doing for our hospitals."

"Mrs. Jameson, too, in her *Communion of Labour*, page 127, states that out of every eighty women who are married, 68 are unable to sign their names in the register ; of the 12 who can write, some are probably not acquainted with accounts, and as a certain small proportion necessarily consists of persons in a high station of life, the tradesman cannot have a large choice among those left, and the same amount of ignorance must of course exist among single women. Thus if he would, he could not find a sufficient number of educated females to wait in his shop, and we see here the true reason why women have been excluded from their proper station behind the counter. Pains have been taken to fit boys for the place, but none have been bestowed on the girls, who, taught only to read and sew, have sunk down into miserable, starving sempstresses. The master of an old-established lace shop, in Oxford Street (who employs several women to wait), told the writer that he experienced no little difficulty in finding persons well qualified for the position. He added, 'You may be sure tradesmen employ as many women as they can, for their wages are half those of men.'

"We are told, however, that there are other objections to their employment, besides the want of education. 'Women,' it is said, 'could not possibly lift the weights, for in those places where tapes are sold, bales of sheeting require to be moved, and where gloves are found, there is also a demand for heavy pieces of velvet.' Now there is an error here, as everybody who frequents shops will be aware, after a moment's reflection. Different articles are sold in the different departments ; if you ask for velvet at the glove department, you will be referred to another counter, where you will be attended to by another young man ; and if you then ask for muslin, you will be sent on to a third. Two or three men might therefore be kept in every shop, to do the heavy work, while the great bulk of the business, which is light, could be transacted by women. There can be little doubt of their being able to stand the number of hours, for thousands of women in England now work, standing in manufactories for ten hours a-day, and if medical men are asked, we believe their opinions will be generally found to be, that the active life of a shop-girl is less injurious to health than the sedentary one of a sempstress.

The objection, that ladies prefer the services of men, we regard as frivolous. If the ladies themselves are inquired of, it will be found that by far the greatest number are entirely indifferent by whom they are served, provided they are well attended to ; they regard the shop attendant as a machine, and do not care, and scarcely know, whether it is habited in a coat or a gown ; others decidedly prefer the services of persons of their own sex. Yet a few old-fashioned people doubtless exist, who object to all change on principle, and these will certainly oppose any reform, in any respect. A few selfish ones too, may perhaps be found, who will say, 'Why should we change ? we are well served by the men now ; we are quite contented, and as to what becomes of the girls who can get no employment, what is that to us ? It's no affair of ours.' Ladies, you mistake ; it *is* your affair ; wealth and influence are talents

* The dregs are left, a fresh supply of *good* servants is much needed.

† *Crime, its Amount, Causes and Remedies*, by F. Hill, Prison Inspector.

Digitized by Google

bestowed on you, for which you will one day find yourselves answerable, and you need not think to escape responsibility, by saying, 'Am I my sister's keeper?' Much is in your power. If you will give your money to educate girls better, and your influence to convince your tradesmen that you would rather be waited on by women, they will gradually employ them more and more: they will not suddenly dismiss their male assistants, and take women in their stead, nor is it desirable that they should do so; but as each young man retires from service, he will be succeeded by a woman. Let the remark of the Prison Inspector not be forgotten—'Much I believe would be done towards securing the virtue of the female sex, if the practical injustice were put an end to, by which women are excluded from many kinds of employment for which they are naturally qualified.'

"But perhaps it may be said, that as the shopmen must maintain their wives, just as many women are in fact supported by the shops as though they waited in them themselves. To this we reply, simply, that the shopmen are very rarely, if ever, married; indeed, we have been told that they are frequently required to enter into an engagement to remain single as long as they stay in service.

"We will answer no more objections, though we do not imagine we have replied to half those that may be brought against the proposed change. It is always easy to point out difficulties in the path of improvement. For instance, in France, where it is the custom to employ men as housemaids, we are gravely assured, that women are morally and physically unsuited to the office, and incapable of the work. So hard is it to overcome a long-established prejudice. We will now proceed to the details of our plan.

"It is the intention of the Society to establish a large school for girls and young women, where they may be specially trained to wait in shops, by being thoroughly well instructed in accounts, book-keeping, &c.; be taught to fold and tie up parcels, and perform many other little acts, which a retired shopwoman could teach them. The necessity of politeness towards customers, and a constant self-command, will also be duly impressed upon them. Girls educated in this school would be capable of becoming clerks, cashiers, and ticket-sellers at railway stations.

"It is also contemplated to establish workshops in connexion with the school, where the girls might be taught other trades—trades well suited to women, but now almost exclusively in the hands of men, such as printing, hair-dressing, &c., for instance, and possibly, even watch-making. As the means of the Society increased, so would the number of workshops, and the variety of trades taught.

"No girl would be admitted to either school or workshop, who did not bring with her a certificate of good character from the clergyman of her parish, or from two respectable householders; she must also bring a certificate of health from a medical man, as it would be a waste of time and money to instruct feeble or sickly girls in trades that require a considerable degree of strength for their exercise.

"Nevertheless, the weakly would benefit by the plan, by being relieved from the competition of their stronger sisters in needlework, teaching, and whatever other resources for the feeble there may exist.

"We are aware that instruction cannot be given to all who require it; twenty schools would not suffice for that; but when it is proved that women are capable of these employments, a demand for them will spring up, which will compel a change in our present one-sided system of education. Our workshops, too, will lead to considerable benefits, and will greatly increase the number of occupations open to women. Thus, if we send out a dozen young women as accomplished ladies' hairdressers other girls will speedily be apprenticed to them; and in a few years the dozen will have become hundreds.

"A list of tradesmen, recommended by the society, will, in the ensuing year, be kept at the office. It should be observed, that a certain amount of trouble and temporary inconvenience will be experienced by those tradesmen whose humanity shall induce them to adopt our views, for it will be necessary for them to see that their female attendants are provided with respectable lodgings, and also because, in some cases, the height of the shelves in the shops will require alteration. On this account, it is expected that many tradesmen will be found adverse to the proposed change; those, therefore, with whom good feeling or the wish to please their customers shall prevail, and induce them to overcome these obstacles, deserve to meet with the special patronage and support of the ladies belonging to this Society, which we hope they will not fail to afford.

It is also the intention of the Society to render their office a depôt for information of every kind relating to the employment of women. Curious and interesting facts will be collected. Extracts from newspapers, pamphlets, and speeches on the subject will be gathered together, and kept for the inspection of members of the Society.

"We are happy to state that the objects of the Society have met with the approbation of the Bishop of London, and the support of a large number of ladies.

"We have only now to add that the Society is in want of funds. It is but in its infancy, and requires support of every kind, —the substantial help of money and the active assistance of energetic minds of both sexes.

"Subscriptions can be received at Messrs. Coutts and Co's., Strand; Messrs. Hoare and Co's., 37, Fleet Street; and at the Office, 26, Castle Street, Regent Street, addressed to Sarah Lewin, *Secretary*."

INDUSTRIAL EMPLOYMENT.

It would be well if more places took a lesson from Manchester, in the foundation and support of an Industrial Institute, specially intended to provide employment for the outcasts of society. We stop not here to enter upon the question of how far this ought to be the function of parish authorities, because that question is surrounded by many almost insuperable difficulties. We have ever held that a man's labour is worth something, and that those who have to support that man have a right to look to his labour first as their remuneration, before they come upon the public at large to pay for his support. It is poor economy to try to save £20 or £30 in procuring for a man or woman such labour as is best adapted to their capabilities, by driving them to crime as an alternative, at an ultimate cost of at least £100 to the community, and of ruin and degradation to the applicant. We hope the fallacious plea of interfering with other labour is becoming exploded. If a man or woman be able, through practice or the innate skill which has been given them, to earn a sufficiency for their support and advancement, no right-minded person would hesitate to admit that they should be enabled to do so, whether the means be supplied as a gift or a loan. Their labour and skill is gain to the community, and it is a suicidal error to condemn them to useless or unremunerating labour, lest they should interfere with the trade of others. An institution similar to that at Manchester has, it appears, been conducted with very evident success at Wakefield, some statistics from which will be found in Mr. Adshead's speech at the meeting of the Manchester Industrial Institute. We could wish there were many such in the neighbourhood of the Metropolis. Certain we are that a large portion of the expensive criminals which we have to support would be diminished. It appears that such institutions would mainly affect the discharged prisoners, though many others would avail themselves of its aid. Everyone knows how hard, if not impossible, it is to procure employment for one who wears the prison brand. Our reformatory institutions step in as a help in time of need, and with these such industrial institutes would not interfere. Our readers will better understand the advantage of such an establishment, on perusing the account of the Manchester meeting, to which we gladly draw attention.

HOME IN THE EAST.

The report for the year ending March 31st, 1859, shows that this institution is doing its work well and thoroughly, and while making extracts from it, we draw attention particularly to that part in which reference is made to the report of 1854, which will be found to be interesting.

During the year ending 31st March, 1859, twenty-six boys have been received into the Institution, viz.:—

25 committed by magistrates for terms varying from two to five years.
1 on payment by friends.

Digitized by Google

Of these youths it will not be necessary to add more than that they all belong to the juvenile criminal population.

27 boys have left.

—

7 to Canada, at the expense of the Home.
14 to situations.
2 returned to parents.
2 removed to other reformatories.
1 discharged by warrant of Secretary of State.
1 dismissed.

The average of inmates during the year has been fifty.

"With reference to the boys sent to Canada, time has only served to deepen the conviction in the minds of your Committee, that they acted wisely in adopting this as a yearly plan; all the boys yet arrived are known to be doing well, and the letters received give evidence that they are not unmindful of those who have helped them. Seven have left since the date to which this report refers, making a total of twenty-two in three years.

The Committee desire to tender their best thanks to those friends in Canada who have given very valuable assistance in receiving the boys on their arrival, and in providing situations for them; the success of the whole scheme is chiefly due to these services, which have been rendered so cheerfully and efficiently.

"The system of training adopted remains the same as mentioned in previous reports:—market-gardening—tailoring—bag-making—shoe-making, with a large proportion of time devoted to education, form the principal employments of the boys, and the Committee would desire to bear their testimony to the efficient aid they receive from the assistants in these several departments.

"Not, however, to be able to notice an advance in the training department, would be a symptom which your Committee would regard very unfavourably. To stand still is virtually to recede, and it is with much pleasure that the friends of the Institution are this day welcomed in a new room, which, by their liberality, the Committee have been enabled to erect.

"New workshops, new palings, and a paved yard, have been long desired, in connexion with the operations of the Home. During the past year, the necessary funds have been obtained, and it is felt that an amount of comfort has been secured, which only those who make this work their daily occupation can adequately value.

"Your Committee have, for some years past, adopted a plan of keeping an oversight over those who have been placed in situations either on shore or at sea; and in the return made by the visitor in 1858, it appears, that of 147 cases,

102 are reported doing well.
26 doubtful.
19 relapsed.

When this statement is carefully considered, it will be found to present an amount of encouragement which calls loudly for continued and increased effort.

"It will not escape notice, that the Treasurer's account contains a considerable sum received from Government for maintenance of boys committed under the 17 & 18 Vict. cap. 86. Your Committee reported, at the last annual meeting, that the Home had been certified by the Government Inspector as fit for the reception of juvenile criminals, and magistrates have now the power to commit boys to this Institution, for terms varying from two to five years, having first secured the consent of the Committee to receive them. A reference to the first report of the Home, presented 1st June, 1854, will, perhaps, aid in placing this matter in a proper light. It was then remarked as follows:—

"'Your Committee cannot help remarking on the extreme desirableness of such a change in our criminal law as will enable magistrates to send very young criminals, not to prisons, but to reformatory schools, with power to enforce their residence for a considerable period; such schools to be remunerated at the public cost for the support of children thus placed under their care. The short imprisonments to which juvenile offenders are at present sentenced, and in reference to which the magistrate or judge has no discretionary power, are universally acknowledged to be often the means of hardening wicked boys in their evil courses, and training them for further crime; and the labours of reformatory institutions can have but very partial and limited influence in the way of diminishing crime, till the criminal jurisprudence of the country undergoes a great change. Your Committee would not propose that Government schools should be instituted to supersede the efforts of private and spontaneous benevolence. But they think, that, to a certain extent, Government stands to the neglected and criminal children who frequent our streets, *in loco parentis*, and should pay for their support and training in approved schools; that to such schools juvenile offenders should be sent by the magistrates; at the very least, that magistrates should have a discretionary power to send them; and that, without any undue interference with the liberty of the subject, steps may be taken to gather off the streets and send to school, at the public expense, the crowds of idle boys who are known to gain their livelihood by dishonest means. Till such improvements are made in the criminal law, your Committee must be content with a measure of success, far below what in other circumstances they might confidently anticipate. The greatest drawback they have to contend with, in relation to those who are actually brought under their care, arises from the fact, that they have no power to enforce continuance at the Home at a period when boys have not been long enough within its walls to appreciate its benefits.'

"Time has shown the soundness of this view, and the wish then expressed has been secured to the full extent. If it is thought that with such aid private benevolence is not needed, the Committee would only refer to the account of expenses for the present year. Notwithstanding the new source of income named, the receipts and expenses only just balance each other, for the amount in hand is the result of a grant which ceased to be available on the 31st March last; and your Committee have good reason to know, that the average expenses of each lad are very moderate as compared with other institutions. The true basis on which the reformatory movement must be conducted, appears now to be established; prison discipline is admitted to be a failure, so far as prevention and reformation are practically concerned.* The Government, therefore, instead of persevering in a plan both costly and inoperative, is willing to avail itself of voluntary service; and the following statistics for the whole of England clearly demonstrate that up to the present time the step has been a right one.

"The commitments of youths under sixteen, for

The year ending—

30th September, 1856, were 13,981
30th September, 1857, „ 12,501
30th September, 1858, „ 7,622

Showing, in two years, a decrease in commitments of nearly fifty per cent.—a result, it is believed, which the most sanguine friends of the reformatory movement never even ventured to anticipate.

SOCIETY AT MANCHESTER FOR PREVENTING THE USE OF CLIMBING BOYS.

On Wednesday, Aug. 11th, by the kind permission of the Mayor of Manchester, a meeting of the members of the Society for the Prevention of Chimney Sweeping by the use of Climbing Boys was held in his worship's parlour at the Town Hall. In the absence of the mayor (Ivie Mackie, Esq.), who was prevented by other duties from being present at the opening of the proceedings, the chair was occupied by Mr. Joseph Adshead, who, in introducing the object of the meeting, said it had been convened for the purpose of bringing under public notice the silent, unostentatious, effectual operations of a society which had been formed for the protection of climbing boys, of which Mr. Wood, the honorary secretary, had been the embodiment, indeed the society itself, for a number of years. In endeavouring to carry out the Act of Parliament passed for the protection of climbing boys, Mr. Wood had visited 35 towns in which 120 prosecutions had taken place, of which 61 were dismissed, 41 had paid the fines, nine of the convicted persons had been sent to prison, and nine had absconded. He (the chairman) could not omit that opportunity to pass without bearing his testimony to the devoted labours of Mr. Wood, who had entered upon these philanthropic labours after he had passed threescore years and ten, who was now verging upon fourscore years. He had not only discharged the duties which he had taken upon himself without fee or reward, but he had advanced £70 or £80 of which he was at that moment out of pocket, after paying all the expenses of the Society and labouring for a period of six or seven years.

* This we are far from admitting. Many hundreds issue from prison wiser and better; but popular prejudice habitually distrusts them, and it is rarely that lads can find any opening to obtain employment here, or to get abroad to seek it, unless they enter the reformatory. Many are in all respects as trustworthy, and as willing to work honestly, on leaving a well-regulated prison, as after their additional detention in the reformatory.—Eds. *Philanthropist.*

An interesting report of the operations of the Society, which had been prepared by the veteran philanthropist (Mr. Wood), was read by the Rev. Mr. Robjohn. Having referred to the popular error that the Act of Parliament had done away with the practice of employing climbing boys, whereas it still existed to a lamentable extent, the report stated that the employment of children as sweeps prevented them from learning useful trades in after-life; was the means of adding largely to the number of the dangerous classes, who lived as beasts of prey upon other portions of society, the criminal population deriving some of its most formidable elements from this source; that female children, even, were immolated on the altar of covetousness, and sacrificed to this cruel trade; that four girls were employed as chimney sweeps in Manchester, and two at Prescot, while there were others so employed at Birmingham, Windsor, and other towns. The report having referred to the amount of fines which the Act empowered to be levied, in cases where children were employed in sweeping chimneys, stated that in carrying out the Act the Society had been instrumental in rescuing 200 children from this British slavery, and that Mr. Wood, in accomplishing these results, had travelled 10,000 miles. The report also asserted the fact that chimneys could be better swept by the machine, when properly used, than by the boys; and it concluded by calling upon the public not to engage master sweeps who employed boys, and also to aid the society by their sympathy and by donations.

The Rev. Mr. Robjohn, in moving the adoption of the report, referred to the persecution which Mr. Wood had suffered at the hands even of magistrates, before whom he had carried cases, and who had treated him as a common informer, pursuing the work for the sake of half the penalties, whereas all sums so obtained, with the exception of a portion which had gone into the general account for travelling expenses, had been given by Mr. Wood to charitable institutions, as receipts in his possession fully proved. (Cheers.)

Mr. Gelart seconded the motion, which was carried *nem. dis.*

Mr. William Wood moved: "That the practice of employing climbing boys for the sweeping of chimneys is inimical to the common feelings of humanity, and is a disgrace to this enlightened age, experience having proved that when the machine is properly applied the chimneys are more effectually cleansed by such means." He said his sympathies had been strongly moved in aid of the objects of the society by having seen two children burnt to death; and that, before a select committee of the House of Lords, he had heard details which would excite his audience painfully were he to repeat them. Having described the various efforts made during the past century to alleviate the sufferings of chimney sweeps, Mr. Wood said that, in carrying out the objects of the society, he had received much abuse by persons on the magistrates' bench, who had called him a common informer, and who had so excited the people in the court against him that he had been followed into the street, hooted, stoned, and threatened with death; and on one occasion, to save his life, he had to seek the protection of the police, while he got to the railway station as quickly as he could. Mr. Wood then adduced several facts which had come under his own observation, illustrative of the hardships and enormities arising from the practice of employing children to sweep chimneys. One of these was the case of a child who was stolen from his parents at Keighley, when he was only six years old, was taken into a town in Cambridgeshire, where he was subjected to the greatest cruelties for ten years, when he escaped and found his way back to his native place to find that his mother had died of a broken heart soon after he was stolen, and that his father speedily followed her to the grave.

The resolution was seconded by Dr. Brown, and carried unanimously.

Ralph Chapman, master sweep, of Salford, then gave a sketch of his life, showing the hardships he had undergone. He said, My father was a chimney sweep years before I was born. It is known that boys have been sold frequently and taken from their native place to a strange part of the country. My father was one of those. He was taken out of Salford with my grandfather who was a master bricklayer. He laid the foundation of St. Peter's Church. He was, however, fond of drink and became a beggar. My father was sold for £10 to a chimney sweep in Rotherham. When I was five years old I was taken and put up chimneys. I remember this was before the Town Hall was built. I was a climbing boy then. I am a master sweep now living in Salford. Thanks be to God I am living, although all the punishment I have gone through is unknown. I have still marks on my body caused by climbing chimneys, which I shall never get rid of to my dying day. I was once in a chimney, not 500 yards from here, two hours and forty-five minutes. That was in James's Square, and I recollect I was then five or six years of age. The chimney was that narrow that a boy could hardly get up; but my father thought that if any boy could sweep it I could, and he made me go up. For three months after that I was not able to sweep another chimney. I have been carried in the soot-bag on my father's back eight miles to sweep chimneys at two or three o'clock in the morning. With running about in frost and snow my feet became so hard that I cried when I first had to wear clogs; the frost had no effect upon my feet, but the clogs pinched them. That was in my younger days. In manhood I have followed the same occupation. I have a little boy thirteen years of age. Some years ago I attended a meeting for the prevention of climbing boys, and so much was brought forward then that I said with a clenched fist, "This boy shall never go up a chimney again as long as I live!" (Cheers.) And he hasn't been. That boy now works for the Mayor of Salford (Mr. Harvey), instead of running alongside of me, which he formerly did. I have had the sweep's cancer; and I was so bad with it a few years ago that I went to the Oldfield Lane doctor, who performed an operation and gave me certain directions for a week. I walked to him on the third day, and he said as I came into the surgery, "Here is a dead man walking!" He told me when I went out of his surgery, after the operation, he did not expect to see me alive again. That cancer was growing for nearly twenty-five years, and it kept growing larger and larger until I became alarmed. I have known boys to be sold to chimney sweeps for 5*l.*, 10*l.*, and 12*l.*, and the sweep who had bought them paying for them by instalments as they sold their soot. After some further statements, Chapman said, in answer to a question, that he had entirely given up employing climbing boys, and now used nothing but the machine.

John Booth, another master sweep, also gave his experiences, which were not of so varied and interesting a character as those of Chapman, although they bore out his statements as to the severity and hardships of a climbing boy's life.

The Rev. Mr. Stokes moved: "That public opinion ought to be brought to bear upon the subject of the great evil of employing climbing children; and that in small towns and villages where there is not a strict surveillance exercised their employment prevails; and this meeting desires to urge the great importance of the amendment of the same to meet the necessity of the case." Mr. Stokes was convinced that the object of the society was highly philanthropic, and deserving of a large amount of public support. He was equally convinced of the pure, disinterested principles under which Mr. Wood acts, in conducting all the operations of the society, and that his name would go down to posterity amongst the benefactors of mankind. (Hear, hear.)

Mr. Alley seconded the resolution which was carried *nem. dis.*

The Mayor, in proposing a vote of thanks to Mr. Adshead for his conduct in the chair, took occasion to express his high sense of the services of Mr. Wood, to whom they were much indebted for the zeal he had displayed in his labour of love.

The resolution was carried unanimously, and Mr. Adshead having responded, a vote of thanks was accorded to the patrons of the society—the Mayor of Manchester, the Mayor of Salford, Mr. Bazley, M.P., Dr. Brown, Dr. Burton, &c., and the proceedings terminated.

THE LIVERPOOL GRAND JURY AND THE BEERSHOP EVIL.

At the Liverpool Assizes a few days ago the following presentment was made by the grand jury:—

"In the charge with which your Lordship opened this assize you directed attention to those acts of violence which occupy a prominent place in the calendar. You informed them that it contained 'thirty-five cases of cutting, stabbing, and wounding, by which eight persons had come to their deaths.' Your lordship concluded your charge by directing attention to those means of prevention which might be wisely adopted to check the growth of crime. The grand jury have carefully borne in mind both parts of your lordship's charge.

Digitized by Google

They find that the acts of violence to which your lordship directed their attention have been of an aggravated description. A large proportion resulted from quarrels commencing within the walls of licensed public-houses, after drinking prolonged for hours, and, indeed, until it had produced a brutal frenzy. The grand jury desire emphatically to express their opinion that, apart from the moral mischief which the excessive use of intoxicating drinks occasions in families and in society, all the poisons sold to malefactors, or wantonly or carelessly used, cause far fewer deaths than the unregulated sale of beer and spirits. The chaplains of our gaols have for many years called the attention of the magistrates of this county to drunkenness as the chief source of crime. But the magistrates have only a very limited power over beerhouses, inasmuch as they cannot limit the number of licences; and their discretion as to the suspension or removal of the licence of public-houses is subject to embarrassing restrictions. It is especially to be regretted that the law does not enable the magistrates to secure the personal residence of the licensed victualler in his public-house. The grand jury, nevertheless, suggest that in all cases of intoxication causing any breach of the peace the police should be directed to ascertain and report to the justices in petty sessions what were the houses in which the several parties had been permitted to obtain drink in excess. They would urge that the justices should pursue these inquiries, so as to impress on all who are entrusted with the sale of intoxicating liquors that they become parties to disorder—to much moral mischief—to breaches of the peace and acts of brutal violence ending in homicide—by permitting drink to be taken in excess. They, therefore, frustrate the intention of the Legislature that the licence should be held on condition of co-operation with the justices of the peace to prevent the abuse of intoxicating drinks, and should be withdrawn if this condition were not fulfilled. The grand jury conceive, that the justices not attending may be strengthened in the discharge of such duties, if from this assize their attention be called to all those cases of violence caused by intoxication, and commencing in public-houses, which have been sent for trial by your lordship, and that they be requested to consider whether they should take such measures with respect to the licences of such publicans as may issue in their suspension or removal. Some such immediate exercise of the authority of the justices, followed by a vigorous and persevering administration of the law, has become indispensable. The grand jury, however, feel that if these efforts were successful, they would leave untouched the mischievous influences of beerhouses kept by a ruder class of persons than the licensed victuallers. Either on the one hand the sale of beer and spirituous liquors may be safely made an open trade, both without reference to the character of the dealers, or to any guarantee for their good conduct; or, if such a trade cannot be suffered without control, then the security which the Legislature has required from the licensed victuallers should be rendered thoroughly effectual, and extended to beerhouses. The present law neither effectually promotes wholesome restraint nor is it consistent with an unfettered trade. It is administered by two classes of functionaries, on two conflicting and ill-defined principles, so as to cause a confusion most injurious to the well-being of those who are supported by manual labour, and to become a fruitful source of crime. The grand jury are of opinion that the laws as to the sale of intoxicating drinks in beerhouses and public-houses should be assimilated, and that the authority administering the law should be made uniform, and should be such as to secure a prompt, pure, and faithful enforcement of the intention of the Legislature. The grand jury cannot conclude this presentment without expressing their earnest concurrence with your Lordship as to the supreme importance which you attached to all the moral means for the prevention of crime afforded by the religious bringing up of our youth, by private example, and in efficient schools."

ENTERTAINMENT TO AGED GOVERNESSES.

On Monday, 25th July, Mrs. Tait most kindly invited the aged ladies of the Governesses' Asylum, at Kentish-town to spend the day at Fulham; and accordingly they drove down the avenue about three o'clock in several carriages. Besides the resident members of the Bishop's family, there were present, also, Mr. Spooner, the clergyman whose ministry the ladies attend; Mr. and Mrs. Laing, the honorary secretary to the Society for Governesses, and his active wife; and Mr. Baker, the venerable vicar of Fulham. The visitors were received on the lawn by their kind hosts, and were soon scattered under the splendid old trees of that fine old episcopal residence. After an early dinner, the lawn again received the company, and the little children of the family playing freely with their new friends—new in time, however old in years—gave a character of *Home*, which was truly delightful. After tea followed evening prayers in the chapel; and then the guests drove home, fatigued, perhaps, as to the bodies, which they have worn from sixty to eighty years; but greatly refreshed in spirit by the great kindness and courtesy of the invitation, and by the manner in the kindness and the courtesy were maintained in the most minute details of the entire day.

Domestic Service.—In accordance with the recommendation of most who are interested in this subject, the intended meeting has been postponed until a later period in the year, when many now absent will be returning to town.

Preliminary steps have been taken to establish a free library in Birmingham. A meeting has been held on the subject, Sir John Ratcliff in the chair, and there is every prospect of good success.

AN URGENT APPEAL is made to the Benevolent on behalf of SIX MOTHERLESS CHILDREN requiring Care and Instruction. Every particular given by addressing "Hope," 9, Old Compton Street, Soho.

TO SCHOOL COMMITTEES and others.—An urgent Appeal is made on behalf of SIX MOTHERLESS CHILDREN, to provide one or more with a Home and Instruction. Every information given by addressing Mrs. Gammoge, 20, Blomfield Street North, Dalston.

SALE OF WORK BY LADIES OF LIMITED MEANS.—The public are respectfully informed that, in consequence of larger premises being required, the Association have removed the Sale of their work from counters 266, 267, 268, Soho Bazaar, to 16, Berners Street, Oxford Street. Orders for all kinds of plain and fancy work will be thankfully received by the Secretary, at the Office, 16, Berners Street, between the hours of 11 and 3 o'Clock.

CIVIL SERVICE, Merchants, Civil Engineers, and Surveyors' OFFICES.—Foster's Initiatory Counting-house, 161a, Strand, next door to King's College Gate.—This Institution is intended as an intermediate between school and business, where gentlemen are thoroughly prepared to perform the duties in the above.

SAVINGS' BANK DEPARTMENT.

SOUTHWARK, METROPOLITAN, and PROVINCIAL FREEHOLD LAND and HOUSE SOCIETY.

Trustees.

Thomas Pillow, Esq., James Pollock, Esq., and W. H. German, Esq.

FIVE PER CENT. ON DEPOSITS.—Dividends payable on and after the 1st of January and the 1st of July.

Offices: 4, Wellington Chambers, London Bridge, Southwark.

RICHARD BRETT, *Secretary.*

Prospectuses forwarded on application.

BANK OF DEPOSIT.

ESTABLISHED A.D. 1844.

3, PALL MALL EAST, LONDON.

Parties desirous of Investing Money are requested to examine the plan of The Bank of Deposit, by which a high rate of interest may be obtained with ample security. *Deposits made by special agreement may be withdrawn without notice.* The interest is payable in January and July,

PETER MORRISON, Managing Director

Forms for opening Accounts sent free on application.

PHRENOLOGY APPLIED TO CHILDREN may lead to the avoidance of many of the errors so frequently committed in their education and subsequent destination. During Mr. DONOVAN'S long and extensive practice as a consulting phrenologist, his attention has been particularly directed to this most important branch of cerebral science. Consultations from 9 to 6 daily. Free Lectures on Monday evenings, as usual. 1, Adelaide Street, Trafalgar Square, W.C.

HEALTH AND ECONOMY.

AGAVA, the best substitute for Horse-hair. This is a new and Patented article for Stuffing, and now very extensively used in preference to Horse-hair, being free from the great objection to the latter, that of breeding and harbouring vermin. It possesses every advantage necessary in a material for stuffing Mattresses, Furniture, &c.—elasticity, durability, and non-susceptibility to damp; and for invalids or hospital purposes is invaluable, as it is perfectly clean and cool, and will not convey infection. In addition it is lighter than horse-hair, and half the price.

Can be had of all respectable upholsterers in the United Kingdom.

For price, and other information, apply to D. Walters & Sons, 14, Wilson Street Finsbury, E.C. Sole Agents to the Agava Patent Hair Company.

ALLEN'S PATENT PORTMANTEAUS AND TRAVELLING BAGS, WITH SQUARE OPENING; Ladies' Dress Trunks, Dressing Bags, with Silver Fittings; Despatch Boxes, Writing and Dressing Cases, and 500 other articles for Home or Continental travelling, Illustrated in their new Catalogue for 1859. By post for two stamps.

J. W. & T. Allen, Manufacturers of Officers' Barrack Furniture, and Military Outfitters (see separate catalogue, 18 and 22, Strand.)

PAISLEY, DUBLIN,

77A, Market Street, Manchester, and 23, Ironmonger Lane, London.

A Good FAMILY MEDICINE CHEST, with a prudent use, has saved many a life; and yet we think the idea might be improved upon, and reduced to a more simple form. Take some good Compound, such as COCKLE'S ANTIBILIOUS PILLS, and we find that the desired end may be obtained without scales and weights, or little mysterious compartments and enchanted bottles with crystal stoppers. Others might be used, but Cockle's Pills, as tested by many thousands of persons, and found to answer their purpose so well, may be set down as the best.—*Observer*

TO RELIGIOUS AND PHILANTHROPIC SOCIETIES.

JOHN READ, Bill-Poster to the National Temperance League, and various other Institutions, 19, YORK STREET, BLACKFRIARS ROAD. Men and Boards supplied. Orders by Post promptly attended to.

PERSONS about to Decorate should inspect SILAS TUCKER'S splendid assortment of PAPER HANGINGS, at his Warehouse, 234, HIGH HOLBORN, ten doors East of Little Queen Street, London. Estimates given for every kind of Decoration; also for General Repairs in Town and Country.

FOR LADIES.

NICOLL'S PATENT HIGHLAND CLOAK is a combination of utility, elegance and comfort. No lady having seen or used such in travelling, for morning wear or for covering full dress, would willingly be without one. It somewhat resembles the old Spanish Roquelaire, and has an elastic Capucine Hood. It is not cumbersome or heavy, and measures from twelve to sixteen yards round the outer edge, falling in graceful folds from the shoulders; but by a mechanical contrivance (such being a part of the patent) the wearer can instantly form semi-sleeves, and thus leave the arms at liberty; at the same time the Cloak can be made as quickly to resume its original shape. The materials chiefly used are the soft neutral-coloured Showerproof Woollen Cloths manufactured by this firm. The price will be Two Guineas and a Half for each Cloak; but with the Mécanique and a lined Hood a few shillings more are charged. This department is attended to by Cutters, who prepare Mantles of all kinds, with Velvet, Fur, or Cloth Jackets, either for in or out-door use. These at all times—like this Firm's Riding Habit—are in good taste and fit well. Female attendants may also be seen for Pantalons de Dames à Cheval, partially composed of Chamois. As no measure is required, the Patent Highland Cloak can be sent at once to any part of the Country, and is thus well adapted for a gift.

H. J. and D. NICOLL, Warwick House, 142 and 144, REGENT STREET, London.

NICOLL'S NEW REGISTERED PALETOT has all those advantages which secured such general popularity to Messrs. Nicoll's original Paletot; that is to say, it avoids giving to the wearer an *outre* appearance, so that professional men, and all others, can use it during morning and afternoon, in or out of doors. Secondly, there is an absence of unnecessary seams, well known to secure a more graceful outline, as well as to effect a great saving in wear; the latter advantage is considerably enhanced by the application of a peculiar and neatly-stitched binding, the mode of effecting which is patented. Great exertions are being made to supply Messrs. Nicoll's agents throughout the country and the colonies with an assortment of this new garment simultaneously with the display in London, but it is necessary to inform the public that all Messrs. Nicoll's manufactures may be distinguished by a trade mark, consisting of a silk label attached to each specimen; to copy this is fraud, and may be thus detected: if the garment is dark-coloured, the label has a black ground, with the firm's name and address woven by the Jacquard loom in gold coloured silk; if the garment is light-coloured, the label has a pale drab ground, and red silk letters. Each Paletot is marked in plain figures, at a fixed moderate price, and is of the best materials. In London, the NEW REGISTERED PALETOT can alone be had of H. J. & D. NICOLL, 114, 116, 118, 120, REGENT STREET, and 22, CORNHILL.

A NEW DEPARTMENT FOR YOUTH, &c.

H. J. and D. NICOLL recommend for an outside Coat the Havelock; and for ordinary use the Cape Suit, such being well adapted for Young Gentlemen, as exhibiting considerable economy, with general excellence. Gentlemen at Eton, Harrow, Winchester, the Military and Naval Schools, waited on by appointment. A great variety of materials adapted for the Kilted or Highland Costume, as worn by the Royal Princes, may be seen at

WARWICK HOUSE, 142, and 144, REGENT STREET.

WHAT WILL THIS COST TO PRINT? is a thought often occurring to literary minds, public characters, and persons of benevolent intentions. An immediate answer to the inquiry may be obtained, on application to RICHARD BARRETT, 13, MARK LANE, LONDON. R. B. is enabled to execute every description of PRINTING on very advantageous terms, his office being furnished with a large and choice assortment of TYPES, STEAM PRINTING MACHINES, HYDRAULIC and other PRESSES, and every modern improvement in the Printing Art. A SPECIMEN BOOK OF TYPES, and information for authors, sent on application, by RICHARD BARRETT, 13, MARK LANE, LONDON.

Printed for the Proprietors, by RICHARD BARRETT, 13, Mark Lane, London; and sold by W. TWEEDIE, 337 Strand.

MANCHESTER INDUSTRIAL INSTITUTE FOR DISCHARGED PRISONERS.

A MEETING of the friends of this institution, for the employment of discharged criminals, was held in the Mayor's Parlour, Town Hall, on Tuesday the 2nd of August, to take steps to ensure its more extended and efficient working. His worship the Mayor of Manchester, Ivie Mackie, Esq., presided, and amongst those present were the Lord Bishop of Manchester, Mr. Robert Gladstone, Mr. Robert Barnes, Mr. C. Worsley, Mr. Thomas Wright, Mr. Edward Ovens, Mr. J. M'Clure, Mr. H. Phillips, Mr. Robert Gardner, Mr. Joseph Adshead, Mr. S. Fletcher, Mr. Joseph Heron, town-clerk, and others.

The MAYOR said they had met to have a conference respecting the interests of this institution, rather than to propose any definite course. It was a very important institution, and one that was very much needed in Manchester. No one could doubt this who had visited the institution, and knew its objects. He had been there on two or three occasions, and had been exceedingly pleased with the decorum and decency with which the men conducted themselves. He understood that they were really industrious, and had given great satisfaction to Mr. Walker, the originator and manager of the institution. There had been about seventy men in the place since it was opened, and only two had been discharged for misconduct. Judging from their appearance, nothing out of the common way would be discovered in these men, whose conduct was very praiseworthy. Next in importance to the prevention of crime was the reformation of the criminal, and therefore an institution of this kind, with the avowed object of providing employment for the outcasts of society, had a first claim upon the inhabitants of Manchester. (Hear, hear). The men were found in steady employment so long as they conducted themselves well, and on leaving they received a certificate of good character. It must not be expected that this institution could give employment to a tenth part of the discharged criminals from Manchester prisons, but the object was good, and it was desired now to put the institution on a proper footing before the public, and relieve Mr. Walker of his anxiety. He (the Mayor) hoped, from the presence of so many influential gentlemen that the desired object would be accomplished.

The TOWN CLERK read a statement respecting this useful institution, the entire credit of the formation of which belonged to Mr. Walker. Seventy discharged prisoners had enjoyed the benefits of the institution. Four had by their conduct fully justified the successful exertions made to obtain them employment; and to many others assistance had been given in self-maintenance which there was no doubt would result in permanent good. Thirty, of whom six are females, still remain connected with the institute, and their steady application to work, and cheerful observance of the rules, give the best hopes of their reformation. It was felt that it was now decidedly time for the institute to pass under the control of a committee representing the public; and although some preliminary expenses would be involved, it was confidently anticipated that they would not have to be repeated.

Mr. ROBERT GLADSTONE moved a resolution to the effect that it was desirable to transfer the management of the present Industrial Institute from the hands of Mr. Walker to a committee, representing the public, in order to secure its permanent and increased success. He thought that many gentlemen were unaware of the existence of this institution, because it had been working its way so quietly and been in existence but a short time. He had paid several visits to the institution, and could corroborate what the Mayor and Mr. Heron had said as to the efficient manner in which it was conducted by Mr. Walker, who was the right man in the right place. The position of the institution was as follows: Mr. Walker had paid away £542, and had received £409, leaving a balance due to him of £133. This was a satisfactory result of the experiment, for many of the hands were inexperienced, and could not earn enough to maintain themselves. The estimate made was that a thousand pounds would be needed to pay their debts and lay in a stock of materials; also that there should be subscribed annually about £400 to pay the salaries of a superintendent, foreman teacher, schoolmaster and bookkeeper, and assistant, rent, taxes, &c. He did not suppose there would be any difficulty in raising these amounts in Manchester, to give the thing a fair trial. He should be happy to give £50 and subscribe five guineas annually. (Hear, hear.) Mr. Robert Gardner, Mr. H. Philips, and Mr. Robert Barnes had also promised £50 each. Our ragged schools and juvenile reformatories were doing a great work, and, to complete it, this effort was necessary to provide honest employment for discharged criminals. The recorder, Mr. Armstrong, had sent a donation of £5, and expressed his willingness to become a patron of the institution, the object of which he considered most excellent. A kindred society had been established in London with unequivocal success. (Applause.)

Mr. ROBERT GARDNER seconded the motion, and said he thought that Mr. Walker had peculiar qualifications for the management of such an institution. With such a scarcity of labourers surely this industrial institution deserved to be supported.

Mr. OVENS (Chairman of the Salford Hundred Sessions) mentioned the case of a discharged convict who had returned to criminal ways from the difficulty of obtaining work. Such cases showed the necessity of something being done to provide work for this class. He feared there might be danger from collecting too large a number of criminals together, and having so expensive an establishment.

Mr. GLADSTONE said the London institution relied upon the report of the chaplain, who was very likely to be imposed upon; but in the Manchester institution a certificate of character depended upon good conduct during the period of probation, which Mr. Walker thought should be twelve months.

The TOWN CLERK remarked that the ultimate object of both the London and Manchester institutions was the same; but here employment was found directly, and in London indirectly. The salary of the London secretary was £500; if, therefore, a staff cost only £400, they would be working economically.

The LORD BISHOP thought both plans commendable, but it would be best to leave details to a Committee. (Hear.) No one could doubt the benevolence of the scheme and its importance, but it was necessary to go to work in a business-like way. They must consider how they could prevent undue competition with regular tradesmen, and other matters, for it was a large question. He had watched the institution from its commencement, and visited it once, and all he had seen was in its favour. The privacy and retirement of the institution was one of the most necessary elements to ensure success. (Hear, hear.) If they were to parade these persons as objects of sympathy, and draw public attention, the very worst effect would be produced. (Hear.) He quite agreed with Mr. Gladstone, from personal experience—for his first sermon was in a gaol—that they ought invariably to distrust the report of the chaplain. (Hear, hear, and laughter). He had known many excellent chaplains, and he was more than usually intimate with the late Mr. Clay, of whom it was impossible to speak too highly; at the same time, he had known instances of such continued and confirmed simulation carried on, not for days or weeks, but months and even years, when everything was thoroughly rotten, that he believed the best man was capable of being deceived. (Hear, hear.) He cordially concurred in the scheme, and should be most glad to give it any measure of support in his power; but he urged strongly that something more definite was necessary to secure the public confidence, without which an institution of this kind could not flourish. (Applause.) The resolution was adopted unanimously.

Mr. J. MORLEY moved a second resolution, which was seconded by Mr. JOSEPH ADSHEAD, nominating a committee to carry out the foregoing resolution. Mr. Adshead said there could be but one opinion as to the importance of such an institution. Those who had mingled with prisoners found that their great complaint was their inability to obtain employment

Digitized by Google

on dismissal from gaol, therefore employment was the main agent in reformation. He ventured to hope that Manchester would not be slow in setting a good example in this matter. He quoted from the statements made by Mr. Monckton Milnes, M.P., at the Liverpool Social Science Meeting, the experience of the Wakefield Industrial Home, under the able management of Captain Shepherd, which had been in operation three or four years. Up to July 1858, 350 destitute persons, chiefly discharged prisoners, had been admitted into the establishment, the disposition of whom is thus classified :—

1. Left without assigning reason ...	95 or	27·00
2. Discharged for Misconduct	73 „	20·75
3. Left from Objecting to Regulations	36 „	10·50
4. Committed to Prison	45 „	13·25
5. Left to seek Employment	34 „	9·50
6. Obtained Employment.....	67 „	19·00
Average number in the Institution	30	
Average Earnings per week	9s. 3d.	
Average Time in the Institution ...	58 days	

The inmates are chiefly employed in making cocoa-nut fibre mats, carpentering, tailoring, shoe-making, &c. Mr. Adshead considered that considerable caution would be required to carry on such an institution satisfactorily. In Sweden the State undertook the office of the Discharged Prisoners' Aid Society. Feeling that some intermediate provision was absolutely necessary, the Swedish law consigns the prisoner on his discharge to the authorities through whom he was committed, who keep him under surveillance and assist him in obtaining employment; during this interval he is supported by the money he receives on his discharge and which is not, as has been stated, a premium to felony, but a reward of industry, and is considered of such importance in Sweden that a prisoner is not discharged, even though his sentence be terminated, before he has earned a certain sum, which is about £5 for men and £3 for women. Great difficulty is sometimes experienced in securing them employment; so much so that, at times, a list of their names is read from the pulpits, and the congregations are exhorted to afford the applicants a chance of reformation. This enactment passed the full Diet, through the influence of King Oscars* who was early impressed with the necessity of aiming at the reformation of criminals. The great difficulty experienced in this and other countries was the feeling which society entertained against the employment of persons without characters. In many workshops, the honest artizans objected strongly to work with those who had been convicted of crime.

Mr. Robert Barnes said he was one of those who had from the first taken an interest in this movement, but he had been impressed with the feeling that it required very great caution, and one that must have mature consideration. Great praise was due to Mr. Walker for his benevolent and Christian feelings towards this unfortunate class of society. (Hear.) Mr. Barnes counselled further consideration by the committee before making the institution public.

Mr. Philips reminded Mr. Barnes that something must be done immediately to place the institution on a safe financial footing.

Mr. Barnes quite concurred, and expressed his willingness to give according to his position and the wants of the institution—(hear)—and he had no doubt that other gentlemen would do the same.

Mr. Ovens: How many persons are there at this place?

Mr. Gladstone: Seventeen at present.

The Town Clerk gave Mr. Barnes credit for being one of the best friends of the institution. (Hear, hear.)

The original resolution was modified so as to leave the matter entirely with the committee.

Nine gentlemen put down their names for donations of £50 each, and an annual subscription of five guineas.

* As a further proof of the sympathy felt by the late king of Sweden upon such subjects, his Majesty sent an autograph letter to Mr. Joseph Adshead of Manchester, accompanied with the *Memoriæ Pignus* gold medal, as an expression of appreciation of his works upon penal treatment, &c.

PROSTITUTION.

Our cotemporaries in the Southern Hemisphere have entered heartily on the subject of the Social Evil. We find the following in the Melbourne *Age*, May 7, 1859 :—

"'Feeling that it is a false and mischievous delicacy, and a culpable moral cowardice, which shrinks from the consideration of the great social vice of prostitution, because the subject is a loathsome one;—feeling also, that no good can be hoped unless we are at liberty to treat the subject, and all its collaterals, with perfect freedom, both of thought and speech; convinced that the evil must be probed with a courageous and unshrinking hand before a cure can be suggested, or palliatives can safely be applied;—we have deliberately resolved to call public attention to it, though we do so with pain, reluctance, and diffidence."—*Westminster Review*, July, 1850.

"'I propose to inquire whether, in the interest of society and civilisation, on what are commonly called sanitary and social grounds, some compromise which I should term Recognition, may not be effected between sanction and pretended ignorance of vice, and whether some useful means may not exist between unbridled license and despotism, which, for want of a better name, might be called Regulation. I intend to advance that a large class of our women should not be ignored or excommunicated, and to show why they should be as worthy of improvement, regulation, and even special legislation, as murderers, thieves, gamblers, and other male members of the dangerous classes. Their amalgamation with the population seems, notwithstanding contrary impressions, to be so regular, so extensive, and to all appearance so much upon the increase, not owing to the spread of vicious desires alone, but also to the sanction of society itself, that, it seems to me, we must no longer hold them outlaws during their passage through their furnace of purification. Granted their admission within the pale of the law their better regulation and the amelioration of their state will, I think, follow as a matter of course.'—*William Acton, M.R.C.S.*

"The recent perusal of Mr. William Acton's valuable monograph, entitled 'Prostitution, considered in its Moral, Social, and Sanitary Aspects, in London and other large Cities,' and the favourable disposition now evinced here for dealing with the subject in a rational, humane, and Christian spirit, have induced me to collect some facts as a basis for action on a "social problem, which, of all philosophy has to deal with, is the darkest, the knottiest, and the saddest." In a subsequent communication I may feel myself justified in giving my own views on police supervision, sanitary regulation, prevention, and so forth, for what they are worth; always permitting myself to make free use, with due acknowledgment, of Mr. Acton's invaluable pages. At present it shall be my business to deal with the extent, causes, and the results of prostitution; and for this purpose present a series of statistics and observations which though not actually official may safely be relied on.

"The number of prostitutes living in Melbourne and its suburbs whose names and residences are known to the police, is computed at about five hundred. Of these, two hundred reside in the block of houses enclosed within Spring, Russell, Latrobe, and Bourke streets. In this quarter also should be included seventy or eighty women who have been ejected from their houses, and whose new residences have not yet been noted; as also several who are in gaol under the operation of the Vagrant Act. The next block, extending westward to Elizabeth street and including a further section of Little Bourke street, numbers sixty women. Those residing between Bourke street and Flinders street might be computed at about forty. Collingwood and Richmond are adopted by the less obtrusive of the class, as places of residence. Here they number about fifty. At St. Kilda eleven or twelve may be found in the summer season, for in winter time they return to town. Prahan registers seven, and Emerald Hill as many. About the same number of women of the most abandoned character reside at Sandridge. This computation, it must be understood, is irrespective of vast numbers of *clandestinaires*, who, under various disguises, swell the ranks of abandoned women.

"Referring to Melbourne proper, it will be seen that the north-eastern quarter of the city is the chosen haunt of this unfortunate section of our population; and that in Little Bourke, Stephen, Latrobe, and Little Lonsdale streets, they are the most thickly congregated. I will also have to show that, with few exceptions, they are the most abandoned of their order. In the former of these narrow streets, and in its numerous still narrower lanes, running right and left into Bourke and Lonsdale streets, as far down as Russell street, are no less than one hundred and six houses occupied as brothels, besides single apartments tenanted by women who choose to live apart from the rest. Of these one hundred and six, I find that about thirty-five are frequented by low thieves; nine by professional burglars; six by sharpers; nine by fighting and fancy men; two by American coloured men; five by Jew dealers and petty tradesmen; two by foreigners; six by cabmen exclusively; and twenty-two by bushmen, diggers, employées in business premises, and "flash"

Digitized by Google

men generally. Of twenty houses in Little Lonsdale street, nine are frequented by thieves, burglars, and 'old hands;' six by sharpers; three by cabmen; and there are two dwellings in which prostitutes 'huddle.'

"It remains for me to particularise the locality of Stephen street, Punch's lane, the mass of houses towards Russell street (exclusive of Little Lonsdale street), and the whole of Latrobe street east. In this district there are fifty-nine houses, of which seven are usually frequented by unmistakeable thieves; twelve by the lowest class of diggers, and coach-drivers; eight by those who, in the language of the police are known as 'swells;' and the residue by persons of the better class, including idle men about town. These latter thirty-two houses are occupied by a superior grade of women, who have received a fair education, and who usually exhibit a greater amount of decorum than the rest. Speaking generally as to numbers, the English and Irish preponderate, while the Scotch form a decided minority. The lowest class is all but uniformly Irish. About ten houses are almost exclusively supported by the various ranks of the Chinese, viz:—merchants, store-keepers, gamblers, and lucky diggers. The women are all Irish, and by no means the least personable of their class. Direct importations from the London streets number about eighty.

"From all that I can make out the proportion of abandoned women in Melbourne and its suburbs correspond pretty closely with that of older cities in England and on the continent of Europe. In 1857 there were in London 8600 notorious women (exclusive of *clandestinaires*) to a population of 2,500,000; and in Hamburg in 1846 there were 500 registered women to a population within the walls of 120,000—this latter an almost exact parallel to Melbourne.

"The houses which these women occupy vary according to the class, from the most wretched hovels to well-built and furnished two-storey dwellings. They are very frequently owned by 'old hands' and other persons of that class, who made money on the first flush of the diggings, and are those who come forward as 'householders' to give bail for persons as disreputable as themselves when such fall into the clutches of the police. Other of the better class of dwellings are rented of their owners by certain pawnbrokers, who furnish them with flashy articles and then let them to these unfortunate creatures at usurious rates. The police have not hitherto had adequate support from the bench in suppressing brothels superintended by vagabonds of the male sex. I know one where daily may be seen an old wretch sitting at one end of the table, and his wife at the other, serving out dinner to rows of wretched women ranged on either side—women from whom this scandalous pair wring their miserable earnings.

"After careful inquiry, I find that a very large proportion of the prostitutes now in Melbourne were free emigrants, and persons of loose character when they were selected by the Government agents at home. Others, previously virtuous, have been seduced on board of vessels; while a third class have been contaminated by their companions on the voyage. Government ships are now, however, under much stricter regulations than formerly; the matrons appointed are responsible for the conduct of females under their charge, and the consequence is that cases of seduction are comparatively rare. The discredit mostly lies with private ships, over whose passengers there is exercised little or no salutary control. On board some of these vessels after nightfall, scenes may be witnessed well calculated to deter fathers, brothers, and lovers, from venturing the honour of any they hold dear, in such keeping. Indeed one of the most fertile sources of prostitution is to be found in the contaminating influences to which unprotected young women are subjected on the voyage hither; for, even should they manage to leave the vessel's side unscathed in honour, the indolence and enervation contracted during three months of unwonted ease and abandonment of all self-reliance often meets with so sudden a shock on facing the stern realities of their new position as to compel them, sooner or later, to seek a livelihood by means unfortunately far too facile. Deprived of the advantages of a home, and the counsel and wholesome restraint of parents or guardians; charmed with her newly-acquired freedom, and possibly indulging in the expectation of matching herself with some rich colonist (as the immigrant has been led to believe by English writers on Australia will be her most probable lot), she refuses to go into servitude, or, if she does, is speedily disgusted with it, and either indulges her vanity by accepting a situation of an equivocal character, or passes at once into the gaudy flaunting ranks of open prostitution. To say the truth, there are many employers who make the lot of their servants as little palatable as can be imagined, and who often, by their harsh and ungenerous treatment, break down the last barriers of virtue which remain in the heart of the poor creature who has to apply to them for the means of an honest subsistence. The chief blame, however, in this colony, must be attached to servants themselves.

"Young women of all classes of society and degrees of education and refinement come out hither, or are dispatched by their *friends* in Britain just to get them out of the way. Others find their way to Australia to fulfil long-standing contracts of marriage, but owing to the instability of colonial employment, and other mutations of fortune and residence peculiar to the place, too often find their intended husbands unable to support them when they arrive, if they do not learn to their great dismay that their recreant lovers have gone to the diggings, or are already married. There are large numbers of married women now in Melbourne and its suburbs who, in consequence of their husbands having betaken themselves to the diggings and giving no note of their whereabouts, are compelled to resort to prostitution as a mode of obtaining a subsistence. An instance of a somewhat similar character recently came under my notice, and I am afraid it is but the type of a class. A gentleman, who, on the faith of his holding a Government appointment, had married a respectable lady, suddenly found himself deprived of the means of subsistence, not by any misconduct of his, but by a necessary reduction in the staff of his department. For months did he make the most strenuous efforts to obtain the only class of employment for which his education and habits fitted him. The diggings were the last resource, and his successes there were so indifferent as not to enable him to remit to his wife more than a tithe of her requirements. Unable to remove her to the gold-field on which he was engaged or to support or lodge her if there, he was compelled to abandon her to such means of subsistence as her forlorn condition suggested.

The mass of Melbourne prostitution, however, is not, as in London and other ancient and crowded cities, attributable to ill-paid labour, but to a variety of circumstances which render marriage, if not undesirable, at least impracticable. The enormous rental of houses, the expenses of furnishing, the high rates still attaching to most articles of consumption, the inordinate recompense demanded by servants—all these, in the face of great mercantile depression and reduced salaries, tend to deter otherwise well-intentioned men from contracting marriage, and this naturally leads to a disreputable mode of life. A taste for domestic habits and for the enjoyment of a home have yet to be formed in Victoria."

SALTLEY REFORMATORY, BIRMINGHAM.

The Staffordshire magistrates have agreed to add a new wing to this Reformatory, for the reception of the juvenile criminals of their county; and the first stone was laid by the Hon. Mrs. Adderley, on Monday, September 5.

The present building is adapted for the reception of fifty boys, and the addition will accommodate fifty more. The ground-floor will be chiefly occupied by shoemaking and tailoring rooms, and the upper storey by two large dormitories, the minor apartments being devoted to the masters and to lavatory, bath, and infirmary purposes. Alterations in the existing building will also be made, so as to adapt it to the prospective requirements of the establishment as a whole; but everything will be done in the plainest and least expensive way. The architect is Mr. Martin, and the builders Messrs. Webb and Son, Great King-street, Birmingham.

A goodly number of ladies and gentlemen assembled on the occasion, to witness the ceremony, including the Right Hon. Mr. and Mrs. Adderley, the Countess of Aylesford, Lord Lyttelton, Lord and Lady Naas, the Hon. Miss Leigh, the Hon. and Rev. G. M. Yorke, A. McGeachy, Esq., Mr. Charles Ratcliffe, Mr. Charles Couchman, Dr. Birt Davies, Thomas Bagnall, Esq., J. N. Bagnall, Esq., Thomas Jesson, Esq., the Rev. W. Gover, Mr. Tarleton (the indefatigable surgeon to the institution), the Rev. F. Williams, Mr. Thompson, Mr. Bruce, Mr. Postgate, Mr. Boyce, &c.

Digitized by Google

By way of introducing the ceremony, Mr. CHARLES RATCLIFFE said he had been asked to say a few words respecting the arrangements and origin of the institution. He was sure there were some present who could remember, that in 1851, when the Conference was held in Birmingham, many noblemen and gentlemen attended it for the purpose of investigating the causes of juvenile crime, and the best means of checking it. Soon after that time Mr. Adderley most generously assisted in establishing a small school in the Ryland-road. The funds required for that institution were not great, but the operations they were the means of carrying on were sufficient to show the great advantage which would result from their being carried out on a more extensive scale. Mr. Adderley was convinced of this, and, without saying much to the Committee, he set apart the five acres of land on which they were then met, and built a house, with school-rooms, &c., sufficient for the accommodation of twenty-five boys. It was not long before larger buildings were found necessary. In four years from the commencement of the experiment, accommodation for fifty was secured. For the last eighteen months the Staffordshire magistrates had taken an interest in the school, and the requirements of that county being greater than was at first anticipated, the Earl of Lichfield, Chairman of Quarter Sessions, had undertaken to raise the whole money required for the wing of which the corner-stone was about to be laid. During the six years the school had been in operation there had been 158 boys in the institution. Of that number nineteen had been transferred to other schools, twenty-seven had been discharged or returned to their friends, and were doing well, twenty-eight had been apprenticed or placed in situations, twenty-six had emigrated, one had died, ten had absconded and not returned, and a few had been imprisoned—making a total of 112 who had passed through the school and been accounted for, and leaving forty-four now in the school. Six months ago the Rev. Sydney Turner, Government Inspector of Reformatories, visited the school, and reported that he was much pleased with what he had seen, and that a great improvement was manifest. Since then the boys had been well-conducted in every sense. Contracts had been entered into with the Birmingham Corporation for clothing, and large orders for clothing and boots had just been completed. As for the land which the boys cultivated, that spoke for itself. The crops this year had been very plentiful, and two or three times each week Mr. Humphreys and his assistants had gone to market with large loads of vegetables, the money received for which formed a good item in the income of the institution. He (Mr. Ratcliff) felt persuaded that the statistics of the school, both as regards its expenses and the advantage to the boys, as well as the general arrangements, would meet with the approbation of all who inspected it. (Hear.) In conclusion, he had much pleasure, on behalf of the Committee, in asking Mrs. Adderley to lay the first stone of the Staffordshire wing.

This she forthwith proceeded to do in a graceful manner, trowel and mallet being duly used. Inscriptions on the stone recorded the fact of its having been laid by Mrs. Adderley, and of the funds for the erection of the wing having been contributed by the magistrates and other inhabitants of the county of Stafford, through the exertions of the Earl of Lichfield. The trowel, a very handsome one, in silver, bore the following inscription:—"Presented to the Hon. Mrs. Adderley by the Committee of the Saltley Reformatory School, on the occasion of her laying the foundation-stone of the Staffordshire wing of that building on the 5th of September, 1859. Wm. Morgan, Chas. Ratcliff, Hon. Secretaries."

After a few words from Mrs. ADDERLEY, the company present adjourned to one of the large rooms of the institution, where, by the kindness of Mr. Ratcliff and Mr. Thomas Bagnall, a *recherché* luncheon had been provided by Lisseter and Miller, of Bennett's-hill. As a matter of course, the two hosts presided, Mr. Ratcliff occupying the chair and Mr. Bagnall the vice-chair.

After some remarks from Lord LYTTELTON and others, in acknowledgment of various toasts, the CHAIRMAN in proposing "Prosperity and success to Reformatories," gave a number of interesting statistics on the subject. He stated that, while in 1856 the number of juveniles sentenced to imprisonment was 13981, and in 1857, 12,501; in 1858 the number had sunk to 7,622; and that while in 1857 the number sentenced to detention was 1,119, in 1858 it was only 849. The amount contributed by the Treasury was in 1858 £43,846, and by the Council of Education £8,557 (since withdrawn); but the amount contributed by private sources in that year was £13,102, while the total private bounty to certified reformatories could not have been less than £150,000.

Sir John Ratcliff, the mayor, was unable to be present, being at the sea-side for the benefit of his health.

THE GIRLS' LAUNDRY AND TRAINING INSTITUTION FOR SERVANTS.

ON the occasion of the annual meeting of this valuable institution in the grounds of the establishment, West-end House, West-end-lane, Hampstead, the house was thrown open to the inspection of visitors, and specimens of the laundry-work were also shown, forming a striking practical argument in favour of the institution. The Earl of Shaftesbury (president) paid a lengthened visit in the course of the day, but owing to Parliamentary duties was unable to remain for the meeting. The result of his investigation was expressed in brief but emphatic terms:—"He had never seen anything to equal it." Shortly after four o'clock the company assembled under a tent, and prayer having been offered, the report was read by Mr. Robert Hanbury, M.P. It appeared that West-end House, which is commodious and admirably situated—combining country air and scenery with proximity to town—is capable of accommodating between forty and fifty girls. Thirty-four are now inmates. The institution was not so much a refuge for those who had lost character as a home for girls of good character but in adverse circumstances. The girls were retained for two years, during which time they were effectively trained in laundry work, and in the various duties of domestic service. The receipts up to the present time had exceeded £1,600, and the expenditure, including liabilities, had been over £1,500. Deducting the probable amount of earnings for laundry work (from £8 to £10 per week), and other sources of income, it was estimated that about £300 a-year would be required from subscriptions and donations. Mr. Hanbury explained that, from the nature and benevolent objects of the institution, it could not be expected to be entirely self-supporting. He passed a warm eulogy on the services of the ladies of the Managing Committee and others who had rendered aid. Short addresses were also delivered by Mr. W. J. Maxwell, Mr. C. Moody, M.P.; the Rev. J. Bolton, of Kilburn; and Mr. A. D. Chapman. Mr. Bolton referred with much praise to the character of the religious instruction given to the girls. Their knowledge of Scripture was, he said, quite remarkable. They attended his chapel (St. Paul's, Kilburn), and he might say that he felt amply repaid for the space they occupied, by the sweetness of their singing. Evidence of this was given by hymns sung by the girls at the commencement and close of the meeting. Among the company present on this interesting occasion, we observed (besides those already mentioned), Mrs. Tait (the lady of the Bishop of London), Lady Gainsborough, the Hon. Mrs. B. Noel, Lady S. Whitbread, Lady Susan Smith, Lady Townshend, Mrs. R. Hanbury, Mrs. Thomas Hankey, Madame de Bunsen, Mrs. A. D. Chapman, Mrs. J. Meadows White, Hon. Miss Waldegrave; Mr. R. Hanbury, sen; Mr. G. H. H. Oliphant, Mr. Meadows White, Mr. Fordham, &c., &c. A liberal collection was made at the close of the day's proceedings.

Review.

The Characteristics of Juvenile Delinquency especially in reference to Monmouthshire: being the substance of an Address delivered in the Town Hall, Newport, before the Mayor and Borough Magistrates, on the occasion of the opening of the Reformatory School for the County. By the Rev. STEPHEN CATTLEY BAKER, B.A., Incumbent of Monkswood and Chaplain to the County House of Correction at Usk. Monmouth: Printed by Thomas Farror, Beacon Office, Agincourt square.

IF Mr. S. C. Baker is original in many of his views and remarks, he is at any rate sound and correct; and it would be impossible to peruse this little work of his and not feel that he is forcible in his remarks. In it he deals with crime as

Digitized by Google

a disease, and adds a few words on its remedy. Next he shows that we may fairly assume, that the annual plunder by the mass of criminals is not less than three millions and a half; he shows how a tax of 7s. 1d. a head for each of us and our families is abstracted from the resources of commerce by the vices and crimes of the profligate, the ignorant, and the idle. He naturally speaks well of all attempts to *reform the boy* before he grows to maturity in crime. Then he enters into some exceedingly interesting statistics, tending to show of what materials our juvenile delinquents, more especially in the county of Monmouth, are composed; what they do, whence they come, and whom they belong to. All these are treated in the way which few can better do than Mr. Baker. We venture to quote the following from his concluding remarks:—

"Crime is so deeply-seated an evil, and the work of counteracting it so great, that I am sure every effort in such a work will come to nothing if it refuses to seek the guidance of God, to rely on his strength and blessing, and to ascribe to Him the glory of success. If crime is a social malady, three great prescriptions exist for its cure. They are—PUNISHMENT, REFORMATION, and PREVENTION. The last is the best; but I must dismiss that one altogether, for we are now supposing our patient to be suffering from the malady, and are taking up the subject from a point when it is too late to speak of prevention. Punishment is the first and indispensable thing to be prescribed as a remedy. Nothing should be suggested to supersede it. Justice exacts it, and public security demands it. Whatever else be proposed, I trust punishment may never be ignored, for without it we shall want that 'Righteousness which exalteth a nation,' and every proposed remedy will only be 'pampering crime.' But, for age after age, punishment, in its worst forms, was the only antidote for the crime that was known or thought of. Till very recently it held, even in our own humane land, an undisputed sway. The rod alone was used or asked for. 'Death, which pays all debts,' was the chief form in which it was administered.

"Thank God this Draconic system has passed away, and death is now retained, and very properly, only as the just penalty for murder. For many years, however, after this demand for blood had ceased, *punishment* was the only known corrector of crime. John Howard did not depose it from its undisputed position; he mitigated its severity, and showed that it was not inseparable from cruelty; he allied mercy with justice in a close (and, I trust, indissoluble) embrace. He went down into the damp and filthy cell; he purified it, dried it, and aired it; he supplied food and clothing to its inmates, and brought to light abuses which he began to rectify, and which, though he died seventy years ago, his successors have gone on rectifying to this present day.

"But Howard's peculiar mission was to *ameliorate the condition* of prisoners. It was left for those who followed to attempt, the *reformation of their characters.*

"The mission of the philanthropists of the present age has been directed towards the *mind* and the *heart* of the man who is punished, to seek through these avenues to improve and reclaim him, and to restore him to society a different being. In the state in which prisoners once were, to attempt a reformative system would have been a mockery. The prison itself had first to be reformed, nor till that was done was the way opened systematically to reform the *prisoner.* The first and great reformation, however, has been, I conceive, most effectually accomplished: there are about 160 prisons in England and Wales (exclusive of Government ones): of these, twenty are strictly separate of the rest, 120 combine separation and association; and very few, indeed, of the old disorganized character remains. Now every appliance is brought to bear that can aid in the reformation of the prisoner, and favour his escape, not from prison, but 'from darkness to light, from the power of Satan unto God.'

"Much success of a marked and definite character in reformative efforts is known and undeniable; much more, I am confident, is secret and undiscerned. 'It is as if a man should cast seed in the ground which should spring and grow up he knoweth not how.' But the very perfection of the arrangements *now adopted* has made it evident that one thing has been wanting, and that is, *a means of punishing, and a place for reforming, boys and girls.*

"Prisons under the very best arrangements (much more under the old and worst) have proved themselves totally unfit for *juvenile offenders.* When all, old and young, were huddled pellmell together in one undistinguishable mass, the incongruity of treating little children as grown-up men and women was not, in the multitude of abominations, perceived; but now, when such admirable order prevails, and such a flood of heaven's light is poured in upon the lonely captive's cell—now that each inmate of a prison is made a separate study, and moral treatment, if not material, is provided to suit his peculiar case, it is seen most plainly, that arrangements accommodated to the stature of a man are wholly disproportioned to the miniature model of a child. What would you think, to see a little lad of ten years old enlisted in one of her Majesty's regiments of the line, and standing in the ranks with the rest of the men—(every child is called "a man" in prison)—clothed in the full-sized uniform regulation shako, and shouldering a musket twice as long as himself? Not less incongruous is it to see the boy of ten years old clothed in the prison dress, undergoing all the prison discipline, the sole tenant of his cell, and the sole object of the stated visits of governor, chaplain, magistrate, surgeon, and officer. All who understand the subject, from the judge, who gives his dictum from the bench, down to the chaplain, who tells his experience in an annual report, agree in the opinion, that the only effect of such treatment (when continued or repeated) is to harden the boy in crime, to puff him up with pride, and to hasten him on by a forcing process to a criminal maturity. A week or two, even in solitude, could do no bad boy any harm; but when he commits offences for which a week or two is not sufficient punishment, then a great mental and moral injury is inflicted upon him if he be shut up for a longer period, or receive no correction but that of a short imprisonment. It is the discovery and admission of this fact (this great though simple fact) which has proved the origin of REFORMATORY SCHOOLS.

"They differ from prisons chiefly in this respect: that, in prisons, punishment is the chief thing, reformation the second thing; but in Reformatories the order is reversed,—for, in them, reformation is the chief thing sought, punishment is a thing lost sight of, unless bad conduct or a new offence should call it forth.

"When a lad of fifteen or under breaks the law and is convicted, he will first be sent to prison as his punishment (and, if the magistrate pleases, there be whipped), he will stop there at least fourteen days, and when his imprisonment is ended, his period of punishment will be considered as *complete;* he will leave the prison gates with his crime expiated—its penalty paid—and satisfied justice will, contentedly, bow him out of the place. But just where punishment ends, there reformation begins. The law from that point gently retains him, but it is in the silken bonds of love, and, handing him over to mercy and religion, leaves them to carry on and complete the process of reformative training, the law, meanwhile, merely circling him round at a distance to prevent his escaping from his kind and new benefactors. In the Reformatory the boy will be treated as a boy at school; he will be fed, clothed, taught, and employed, as a boy of the working class; he will receive all these benefits with some additional circumstances of hardship and restraint, which will make his position no enviable one to a free and honest boy, though at the same time the very hardships and restraints will be of a character that will tell beneficially on his future course, and be to him blessings in disguise.

"The law of kindness is, and ever must be, the law of the House; but not that kindness which pets and spoils, but that which protects and controls. It is the prudent parents' place which the managers of the Reformatory wish to occupy, and it is parental treatment that the boy will receive at their hands. 'Reformatories,' says Mr. M'Callum, 'should be places where early rising, unremitting industry, plain fare, and a common education, prevail. The attraction of the Reformatory to boys should consist, not in sloth or indolence, but in the conviction that they are there learning by manly toil and self-denial honestly 'to earn their bread with the sweat of their brow;' to uproot those pernicious principles by which they forfeited their place in society, and to acquire those habits of industry which will again restore them as useful and upright members of the community. The motto should be legibly read in all their arrangements—'*No idleness permitted here.*'"

Notices to Correspondents.

Our correspondents are requested to observe that we cannot be answerable for the insertion of any articles received after the 22nd of the month, or Advertisements after the 27th, though we shall always endeavour to meet their wishes.

The Advertisements in "*The Philanthropist*" will henceforth be confined to Charitable Institutions, and such as bear immediately on the social improvement of the community. Existing contracts will, of course, be concluded.

The Editor requests that any circumstances connected with Charitable Institutions, which it may be thought advisable to bring before the public, may be communicated to him at 337, Strand, on or before the 18th of each month.

N.B.—As "The Philanthropist" will be published in future by Mr. Tweedie, 337, Strand, the Editor requests that all communications may be forwarded to him there, where they will receive immediate attention.

Notice.—All sums due to "The Philanthropist" for Advertisements, and for Subscriptions from this date, to be paid to W. Tweedie, 337, Strand. No other person is authorized to give Receipts.

Jan. 1st, 1859.

Notice.—Subscribers of £1 1s. and upwards to the Reformatory and Refuge Union, 118, Pall Mall, will be supplied on application with the "Philanthropist," a Monthly Journal of Social Economy.

**** *Attention is called to the following scale of charges for Advertisements :—*

SOCIAL SCIENCE GAZETTE,

October 1, 1859.

THE RESCUE SOCIETY AND THE SOCIAL EVIL.

England is essentially a Christian country; and in no one thing is this more clearly shown, than in the vast extent of its charities, both public and private. There is scarcely any phase which misfortune or distress can assume, which is not met, on one side or the other, by a disposition, as far as means will allow, to mitigate its severity. A stranger totally unacquainted with our habits and customs, suddenly placed in the midst of us, might indeed call us a "nation of shopkeepers," might be struck with the indomitable zeal and energy with which the English people embrace the opportunity of earning money; but he would, at the same time, acknowledge that the English money, when earned, is distributed with princely liberality in an endeavour to meet and alleviate distress in all its forms, and in all places, not only in our own country, but also in other and even stranger lands. Probably that which would cause the greatest amount of wonder in the mind of our visitor, would be, that, concurrently with the millions which are spent, both publicly and privately, in charitable attempts to relieve distress, there should yet be so much misery and distress unrelieved. The real solution of this is, that while, as a body, the English are bold and daring in speculation and foresight in earning money,—in their charitable works there is a total absence of the same qualities. Our benevolence is not sufficiently *preventive*. A few pounds would cleanse and repair a filthy alley fraught with malaria, fever, cholera, &c.—the few pounds cannot be got. The fever and cholera rage—hospitals are put into requisition, and thousands are forthcoming, without a murmur, to meet an evil which might have been prevented at a tenth of the cost of its cure. But it is rarely until an evil has grown to such a magnitude as to threaten the vitality of society, that any attempt is made to cope with it with anything like vigour. This has been signally the case with what has been justly termed *par excellence*, "*the* social evil." It was peculiar in its kind, and while, on the one hand, delicacy held back from commenting on it; on the other, it was an evil which so pandered to the vicious tastes of the careless and indifferent, that it grew daily more and more malignant, and well nigh baffled any attempt to meet it. Attempts *were* made, however; and though, at first, slightly spoken of—nay, even ridiculed—they were persevered in; and, as the Great Ruler of the Universe saw fit to give great encouragement, and to vouchsafe many signal proofs of success, the public cannot be sufficiently grateful for the attempt, and the perseverance under such very great difficulties as clearly encompassed it. Among all the attempts to cope with this gigantic evil, not one merits public approbation to so great an extent as the Rescue Society, in 11, Poultry. Other attempts have been made to form institutions and refuges, which have done a very large amount of good; but the great secret of the success of the Rescue Society lies in what may be termed its *home* system—the subdivision of its numbers into small manageable orders. The condition, character, age, and disposition of the unfortunates, who apply for relief must, of necessity, be so varied that concentration into one, or even two, different refuges would fail to meet the requirements of most cases. The Rescue Society has judiciously endeavoured to collect into some twelve or more "Homes" those who appeared to be more nearly assimilated to each other in ideas and habits; while many, unfitted for association, are dealt with by placing them under the care of well-known and tried friends, who thus endeavour to do their little towards the great work of reformation of their fallen fellow-creatures. The Homes of the Rescue Society are arranged in small families, and conducted as privately as can possibly be, without ostentation or indiscriminate display; yet where these poor girls, who are too often regarded as the waifs of society, may, when desirous to give up their sinful and corrupting trade, literally find a home. In many cases they have never known what it means; in far more they are completely ignorant of the softening influences of a well-conducted family. Hence the wonderful success which has attended its system, which, besides the good effect it has upon these forlorn ones, has this great advantage, that it is capable of perpetual extension when and wherever circumstances may seem most to require it. The operations of the Rescue Society have now become large, and exercise a most important influence on the social system; nor can we believe them to be unknown to most of our readers. It would be, on the one hand, impossible to insert in this place any such fair extracts from the last Report as would convey an adequate idea of its interest: it would be, on the other, unjust to the Society to omit due mention of it. It embraces a year, ending March 31, 1859, and there is not one page of it which will not amply repay perusal to such as feel any interest at all in the great work which the Rescue Society has taken in hand. That we are not alone in our appreciation of its labours is sufficiently evidenced by the fact, that the public have contributed

Digitized by Google

to the support of the Society at a continually increasing rate; the increase of its funds having been as follows:—

	£	s.	d.
In 1853	250	5	1
1854	1547	11	6
1855	2120	16	10
1856	2867	13	4
1857	4341	5	6
1858	5246	9	10

Making a total of 16,374*l.* 2*s.* 1*d.* in six years, during which period 1640 inmates have been received, and, with very few exceptions, subsequently provided for.

Mr. E. Carlton Tufnell, Her Majesty's Inspector of Schools, makes the following observations on the Society's family system, of which he gives his unqualified approbation, in his second report of it:—

"In my last year's Report I mentioned in terms of praise the establishments founded by the Society for the Rescue of Young Women and Children, and I continue to think them worthy of commendation. In the Camden Town Family Home, which belongs to this Society, of the twenty inmates whom I found in it last year, twelve had obtained respectable situations, and were doing well. The expense of maintaining it had been 15*l.* 15*s.* per head, which includes rent of the house and every other expenditure. In the Wandsworth Family Home, which contains only sixteen girls, twelve have got out to service since last year; and the cost of the establishment has been only 16*l.* per head. In the Hampstead Family Home, though they never had more than twenty-six in the house, twenty have been satisfactorily disposed of since last year; and not any failure in character in those who have been sent out has been discovered. The cost has been 17*l.* 18*s.* each inmate, but this includes the outfit of the twenty girls sent to places. One proof of the real success in reformation that has been worked in these homes is, that there is a demand for servants from them much greater that what can be supplied; a proof which, I am sorry to say, cannot always be alleged of workhouse schools."

Those who feel friendly disposed towards their less fortunate fellow-creatures, and desirous of knowing how they may help them, should by all means read carefully the Report to which we are now alluding, which can be had by application to the Secretary, at 11, Poultry. It would be unjust to dismiss this subject without observing, that though a liberal public is beginning substantially to appreciate the effects of the Rescue Society, still as it becomes more widely known among the rich and benevolent, so does it also among the wretched objects of its bounty and care; and as applications continue to multiply, a continued exercise of increasing love and charity is required on the part of the more wealthy public. Appended to the Report is a long list of—we may call it an appalling one—applicants rejected for want of funds and room. The books are admirably kept, and any single one of the cases, whether accepted and dealt with or rejected, can be at once pointed out, and all information given. This alone should give, as it does, satisfaction and confidence to the public. We recommend the Society strongly and confidently; let it be well supported, and the public will find, that while doing a truly Samaritan work of kindness to those who have literally fallen among thieves, they will themselves reap the benefit, by a serious diminution in the great evil, which is so destructive to our social peace and well-being.

COURT OF CRIMINAL APPEAL.

It may be within the recollection of some of our readers, that when discussing the case of Mr. Barber some time since, we concluded our observations by strongly advocating the institution of a Court of Criminal Appeal. The circumstances which have followed the recent trial of Dr. Smethurst have again brought this subject before the country, and aroused a very strong feeling in favour of a change in our existing system. If no other good results from that trial, it seems probable that it will, at all events, have the effect bringing this important question to a decisive issue. Most of our contemporaries have written more or less warmly on the subject. The language of one of them is so precisely in accordance with our own view, that we gladly avail ourselves of it. *The Press* argues, that in Smethurst's case "the law does not allow the prisoner fair play. Even those convinced, like ourselves, of the prisoner's guilt, must concede that the opposite view may at least be maintained very plausibly; and it is clear that a little matter—a slight hesitation on the part of an important witness, a little extra scrupulosity in two or three jurymen, an abler defence, a more favourable summing-up—might have freed Smethurst from punishment, if not from suspicion. Now, it is undeniable, that any one cast in a merely civil suit would at least have had the opportunity of demanding a new trial, and, were his case but as strong as Smethurst's, would probably have obtained it. Why, then, cut off the possibility of remedying injustice in the only instance where justice is irreparable?" Our contemporary ends by maintaining that the "movement for a Court of Criminal Appeal ultimately resolves itself into the more urgent demand for the creation of a Ministry of Justice—a measure to be desired, both as a judicious reform in itself, and as the probable source of many others." It is scarcely within our province to touch upon this larger question, nor is it for us to define the safeguards and limitations by which the institution of a right of appeal should be accompanied. All we are concerned in asserting at present is, that our law on this point is now in a most unsatisfactory state, and demands an immediate change.

While on this subject, we may remark our very decided objection to the manner in which, in cases of suspected poisoning, the analysis has been hitherto consigned to one man. The life of an individual should at no time be placed within the power of one man, however upright, honest, and conscientious; and, in any case where human life and justice are likely to hang upon the issue, we are strongly of opinion that all examination for the discovery of poison, if not made in the actual presence of a coroner's jury, should at least be publicly made before proper authorities, who could testify to the identity, so far as may be, of the portions to be examined, and the complete cleanliness and freedom from poison of all and every article employed in applying the test. Dr. Smethurst's case may have apparently ceased to create the interest of the public, as an individual case, and may die out of recollection, as a nine days' wonder; but as an example of a very decided deficiency in the administration of our criminal law, it will take its place beside the memorable case of Mr. Barber, and afford ample grounds whereon some of our high and influential legal authorities in either House may argue for a court of appeal in criminal cases.

In passing, we may observe that the compensation granted to Mr. Barber appears to us by no means adequate to his deserts. We still hope to hear, that, looked upon as an innocent man, he may receive from the hands of Government some appointment in addition to the money compensation, which may be agreeable to him, and open the way for him in some degree to recover in his declining years what his unjust sentence of punishment deprived him of the power of earning in the prime and vigour of his manhood.

We shall conclude our remarks by entering a strong protest against what appears to us to be a very decided infringement upon the rights of open trial by jury. A paragraph has been the round of the papers, stating that the Secretary of State has not yet decided as to any alteration of the sentence of Dr. Smethurst; and the reason given is,—not that any

Digitized by Google

delay is caused in weighing the additional evidence which has been urged in reference to the recent trial—but that "the police are investigating other serious charges against Dr. Smethurst." We protest against such a proceeding; we have no opinion as to Dr. Smethurst, but any commutation of his late sentence should be made to depend solely upon facts connected with the trial he has undergone: if there be no reasonable doubt that Miss Isabella Banks died of poison administered by him, let him suffer as he justly deserves; if on the other hand there be reason to suppose that that lady *may have died* of natural causes, then let him be forgiven; but let not other malpractices brought against him in his absence, and for which he has, as yet, *had no trial*, no opportunity of refuting, be permitted to weigh in the settlement of this particular issue. It is in the highest degree unreasonable. Had application been made to the Secretary of State to commute the sentence, on the ground of the previous good character of the prisoner, the case might be different, and he would be bound to investigate that character. But this is not so; the protest has sprung from the idea that the trial was not complete, that Dr. Smethurst is an innocent man—and it is upon that, and that alone, that the decision of the Secretary of State should be grounded.

MANNING THE NAVY.

We beg to draw attention to some letters on this subject, which we have extracted from *The Times*. There can be no doubt that much of the difficulty with which dealing with reformed criminals is encircled, springs not so much from want of genuine reformation on their parts as from incredulity in its reality on the part of the public. Many leave both our prisons and our reformatories who are as fully open to trust as the best of the unconvicted, the undiscovered, or even the honest free. They have tasted miserably the bitters of their dishonest practices; they have gone through a wholesome period of discipline; and are, in all points, fully fitted to take service in any capacity, if only they could find themselves trusted. It is very rarely that what is termed a reformed criminal, once raised to a feeling of self-respect by being fairly trusted, has been found to abuse the trust; generally, they have been found to more than answer the expectations formed of them. We are extremely glad to find that the subject of manning the navy, in connexion with the well-drilled of our reformatory lads, has elicited such notice. Let the public once recollect that, when a criminal has performed his allotted punishment, he has vindicated the broken law, and given all the satisfaction required at his hands; and though it may subject him to more careful watchfulness, yet he should not be denied a re-entry into the paths in which he may manifest the sincerity of his sorrow, and do his utmost to make up to his country for the injury he has done to her. There will be found as good and true men in our reformatories and refuges as ever entered into Her Majesty's service, and it is cruel and unjust to deprive them of the opportunity—unless, indeed, there were such a superfluity of applications for the naval or military service that unblemished reputation might safely be demanded. We sincerely thank Mr. Cave and others who have taken this matter up so vigorously.

THE INSPECTOR OF REFORMATORIES' REPORT.

As a matter of considerable importance, we deem it right to give insertion to an amended statement of the Returns of Juvenile Commitments, which has followed Mr. Turner's Report. The mis-statement originated in some clerical errors in Mr. Redgrave's "Judicial Statistics," with which he furnished Mr. Turner, who of course grounded his remarks upon them; but he has now published the following memorandum, in the form of a letter to Sir G. C. Lewis:—

To the Right Hon. Sir G. C. Lewis, Bart., M.P., Principal Secretary of State for the Home Department.

Sir,—I have the honour to state that Mr. Redgrave has informed me, that, on revising the Returns of Commitments of Juveniles under 16 years of age for final publication in the "Judicial Statistics," he found that the numbers with which he had furnished me, and which are printed in page 12 of my last Report on Reformatory Schools, were incorrect.

The numbers furnished to me were—

Under 12 years of age...Boys 1,018...Girls 144
Between 12 and 16.....Boys 5,551...Girls 909
Total.....7,622.

They should have been—

Under 12 years of age...Boys 1,352...Girls 201
Between 12 and 16.....Boys 7,485...Girls 1,291
Total.....10,329.

This correction reduces the decrease in the number of commitments of juveniles under 16 for the year ending September 30, 1858, as compared with the year ending September 30, 1857, from 40 per cent. to 17·4 per cent., and as compared with the year ending September 30, 1856, from 45 per cent. to 26 per cent.

I enclose a copy of Mr. Redgrave's letter, and would remark, that the corrected totals are more favourable to the agency of reformatory schools than those previously given. A reduction of 40 per cent. on the number of commitments in one year was so great as to be almost unaccountable, especially as the decrease in the commitments in the counties where reformatory schools had been established ranged generally from 16 to 30 per cent. only, and averaged but 20 per cent., showing, as it seemed, that juvenile crime had fallen off more largely in districts where no reformatories had existed than in those where they had been in operation.

The corrected numbers show a decrease at once intelligible, and fairly attributable to the action of the reformatory system. In those localities where the system has been steadily carried out, the parents made to pay, and the schools well managed, the reduction reaches 30 per cent. upon the previous year; in others, where the schools have been inadequate or imperfectly supported, or the inmates received from distant districts, or the responsibilities of the parents evaded, it sinks to 10 per cent. The average on the whole of England and Wales being as above, nearly 18 per cent. This is the more satisfactory, as following a previous reduction of 5 per cent. effected in 1857, and as accompanied by a corresponding decrease in the number committed to reformatory schools of 24 per cent. This last circumstance showing that the amount of the diminution is due to a real decrease in crime, and not to a mere transfer of the criminal from *prison to school*.

I append a Table, showing in greater detail the results arrived at in the counties in which reformatory agency has been resorted to, as given in pp. 14, 15 of the Report.

I have the honour to be, &c.,
Sydney Turner.

15, Parliament Street,
August 26, 1859.

To the Rev. Sydney Turner.

My dear Sir,—I am very sorry to say, that I can only explain the discrepancy you point out in the number of juvenile offenders convicted in 1858, by telling you that I find the total numbers, which I gave you in the progress of my work as 7,622, are erroneous; that, in the revision of the returns, I discovered an important omission had been made; and that the numbers should be, as stated in the "Judicial Statistics," 10,329.

I had subsequently sent you the details of these commitments, which were correct, and I did not advert to the use which you might make of the totals first sent, or become in any way aware of the error into which I had led you, until I read the copy of your printed report, which you were so good as to send me a few days since.

I can hardly tell you how vexed I am by this mistake, which I must take entirely upon myself, for having given you the totals from the Tables in progress

Digitized by Google

before I had had time to verify them, which is a work of some labour.

Yours faithfully,

(Signed) SAML. REDGRAVE.

Whitehall, August 15, 1859.

Comparative Table of Commitments of Juveniles under 16 for 1856-58.

BOYS.

County.	Commitments.		
	1856.	1857.	1858.
Bedford	46	42	25
Berks	68	62	62

" " 1856 ..... 26·5

GIRLS.

County.	Commitments.		
	1856.	1857.	1858.
Gloucester	61	48	25
Lancaster	430	286	202
Middlesex	507	398	368
Surrey	161	144	117
Warwick	63	45	28
York	111	94	129
	1,333	1,015	869

Average decrease on 1857 ..... 19·7
" " 1856 ..... 39·5

It will be seen that the above Table exhibits in almost all cases a steady decrease in the numbers committed to prison; the reduction varying for 1858, as compared with 1857, from the maximum of 40·5 per cent. in Bedford, to 10·2 per cent. in Yorkshire; and averaging for boys 19·0 per cent., and for girls 19·7 per cent. Comparing 1858 with 1856, the reduction is still greater, the maximum in Bedford being 45·7 per cent., the minimum in Worcestershire 6·3 per cent.; the average for boys 26·5, and for girls 39·5 per cent.

The results in the large centres of population and crime—Lancashire, Middlesex, Surrey, Warwickshire, and Yorkshire—are of the most importance. The reduction here is—

		For 1858 as compared with	
		1857.	1856.
Lancashire,	Boys	20·4	29·4
"	Girls	29·4	53·0
Middlesex,	Boys	15·7	26·7
"	Girls	17·6	27·5
Surrey,	Boys	32·7	26·5
"	Girls	28·8	27 4
Warwickshire,	Boys	28·5	39·6
"	Girls	37·6	55·6
Yorkshire,	Boys	10·2	36·0
"	Girls	(—16·0)	37·2

In Cumberland and in Worcestershire the commitments, after decreasing in 1857, increased to near the same amount as for 1856 in 1858. The only reformatories, Carlisle and Woodberry Hill, being full, and the larger part of their inmates being taken from other districts.

In Durham, the alternations have been very remarkable, and point to causes distinct from reformatory agency. No reformatory has existed for the county, the only institution of the kind being the Sunderland Ragged Schools, whose operations are almost wholly confined to the borough.

In Leicestershire, as stated in my Report, the commitments have increased each year, —a circumstance which seems to call for the special attention of the magistrates.

In Northumberland the operations of the North-Eastern Reformatory were interrupted in 1857 by its removal from Newcastle to Netherton. The slight increase for 1858 may be explained by this circumstance.

The only girls' reformatory in Yorkshire is the small school (or Refuge) at Wakefield, accommodating 20 inmates, and circumstances rendered this very inefficient in the years 1857-8.

The reformatories now opened for girls in Devon and Suffolk were not established till 1858. I have not, therefore, inserted the commitments of girls for these counties.

Kent and Sussex subscribe to the Red Hill Reformatory.

THE WRECK REGISTER AND CHART FOR 1858.

(*From the Journal of the National Life-Boat Institution.*)

IN accordance with our custom for some years past, we present some facts connected with the Wreck Register and Chart, prepared annually by the Board of Trade for presentation to Parliament.

It is, as usual, a carefully-arranged document, prepared from official and reliable authorities.

At the outset it is satisfactory to find, that 1,555 lives were rescued in 1858 by life-boats, other boats, and ships, and by the rocket and mortar apparatus, and that out of 1,895 lives in actual peril from shipwreck, 340 only were lost. This number is still too large; and it must not be forgotten, that the average number of lives lost during the past seven years, including the number in 1858, is 745. We believe we are correct in stating, that even now, before the winter has commenced, the loss of life from shipwrecks on the coasts and in the seas of the United Kingdom this year (1859) has already reached the average number. It is, therefore, quite evident, that the strenuous efforts which are now being made by the National Life-Boat Institution in this good work must not be allowed, on any consideration, to relax, for the stormy elements and the carelessness of man can only be counteracted by the best preparations and calculations.

The following statement shows clearly the number and character of the shipwrecks that have occurred in the seas and on the coasts of the British Isles during the past seven years:—

Wrecks and Casualties in	Wrecks.	Collis.	Total Wrecks.	Total Lives Lost.
1852	958	57	1,015	920
" 1853	759	73	832	689
" 1854	893	94	987	1,549
" 1855	894	247	1,141	469
" 1856	837	816	1,153	521
" 1857	866	277	1,143	532
" 1858	869	301	1,170	340
Total	6,076	1,365	7,441	5,020

What a frightful catalogue does this aggregate loss of life and of ships present! How such calamities have been tolerated for so many years in a civilized country without any serious attempt at a systematic remedy, it is not easy to comprehend. With regard to the means of saving life from wreck, it is consolatory to learn that human skill and ingenuity bid fair, if properly supported, to very greatly reduce the number of lives lost from these catastrophes. The Register tells us that there are now 149 life-boats on the coast, 82 of which are under the management of the National Life-Boat Institution, and 67 belong to local authorities. Each boat of that Institution has a paid cockswain and a volunteer crew attached to her, who are promptly paid after they have been afloat in the boats. We fear that few of the life-boats of local authorities are equally well attended to.

We also observe that there are 216 mortar and rocket stations on the coast. These are chiefly under the control of the Board of Trade, and worked by the Coast-guard. We find that the result of these combined and active exertions during the past year in saving life is thus succinctly given:—

	Persons.
By life-boats	206
By luggers, coast-guard boats, small craft, and ships' own boats	719
By ships and steam-vessels	394
From shore by ropes, rockets, mortar apparatus, &c.	210
Individual exertion of a meritorious character	26
Total	1,555

With reference to these results, it should be observed that the services of a life-boat are seldom or never called into requisition except on very boisterous weather, when ordinary boats could not safely be made use of. Hence it is that so large a number of lives are rescued by shore-boats and other craft, mostly in moderate weather, which are always then found in large numbers on the water. We feel per-

Digitized by Google

suaded that in future years the services of life-boats will prove still more conspicuously effective.

It may be hoped that the proposed new harbours of refuge will do much to lessen the number of these disasters; but such extensive works must necessarily be far apart, while a life-boat establishment can be formed almost on any part of the coast, and is sure to find the support of active and intrepid seamen. The only real impediment to the multiplication of these works of mercy is *money*, and without that the National Life-boat Institution cannot possibly carry out extensively its truly benevolent work. There seems indeed hardly any limit to the reduction which may be accomplished in these annual disasters by the exercise of vigilance beforehand on the part of those most deeply interested, and the provision of ready succour at all times.

An analysis of the tonnage of the wrecks on our shores during the past year is thus given:—

	Vessels.
Vessels under 50 Tons ...	199
51 and under 100 ,, ...	352
101 ,, 300 ,, ...	467
301 ,, 600 ,, ...	96
601 ,, 900 ,, ...	28
901 ,, 1,200 ,, ...	23
1,200 and upwards	5
Total...	1,170

The exact site of each disaster is given in the Register; and to prevent the possibility of error on this point, the Wreck Chart which accompanies it, clearly and distinctly points out the locality of the wreck. What a vale of woe and misery does this grim chart bring to light! Who can think of it without feeling a desire, by every means in his power, to lessen the causes of those black dots on it? The following is the summary:—

	Vessels.
East Coast—Dungeness to Pentland Frith	514
West Coast—Land's End to Greenock ...	304
South Coast—Land's End to Dungeness...	89
Irish Coast.....	168
Scilly Islands.....	14
Lundy Island.....	15
Isle of Man	6
Northern Isles, Orkney, &c., &c.....	60
Total	1,170

On the coast of Scotland there is a sad want of life-boats. It is along this coast a large portion of our trade with the Baltic, Greenland, Archangel, Davis' Strait, and much of that of the Canadian and United States trade, is carried on. In addition to this traffic the Scotch coast is remarkable for its great herring-fishery. Peterhead has its 250 fishing-boats; Fraserburgh and Buckie more than 400 sail; while further north, off the coast of Caithness, more than 1,200 fishing-boats, manned by 6,000 persons, nightly pursue their calling during the season, exposed to the proverbial suddenness of a north-east gale. About two years ago, during a fearful gale of wind of a fleet of such boats five were lost, from which 42 men were drowned, leaving 27 widows and 79 orphans unprovided for. Since then calamities to Scotch fishermen nearly equal in magnitude have occurred. Within the last two or three months the National Life-boat Institution has made an urgent appeal to the Scotch people generally for assistance to station additional life-boats on their coast; but we lament to say that appeal has met with little response from them.

The number of casualties in each month of 1858 is thus given in the Register for that year:—

	Vessels.
January	124
February.....	116
March	148
April	115
May	48
June	30
July	61
August	88
September	91
October	148
November	120
December	136
Total.....	1,170

Representing 205,243 tons, and employing 8,979 hands, of whom 340 perished.

The cargoes of these wrecks are thus defined:—

	Vessels.
In Ballast, not Colliers.....	151
Coal laden	377
Colliers in Ballast	41
Cotton	7
Fishing Smacks	12
Fish or Oil.....	18

It is supposed that this aggregate loss of ships and cargoes represents at least £1,500,000. Unquestionably the first step towards effectually checking this truly distressing waste of life and property is to institute immediate inquiry as to the cause of loss in every case of shipwreck. We are glad to find that this step is, in numerous instances, now prosecuted with much advantage by the Board of Trade, and we augur still very beneficial results to arise therefrom.

We further find, that 172 vessels were lost from stress of weather; fifty-eight from defects in ships or equipments, including charts and compasses; and sixty-nine from various other causes, more or less avoidable. We thus see, that 127 vessels were absolutely lost in one year from causes which were clearly controllable by man, and which were, we fear, the product, in some instances, of his wilful negligence. It is not long ago that the master of a ship was tried and convicted in the Old Bailey for scuttling his vessel off the Downs. Who can tell how many more vessels have been thus wilfully destroyed, in addition to those which have been lost through gross and culpable neglect? For it must be remembered, that, in consequence of the almost universal custom of insurance, the shipowner has often no pecuniary interest in the safety of his vessel, and may even be benefited by her loss. It cannot be wondered at, therefore, if here and there an unprincipled man should lend himself to the commission of a fraud for his own advantage. Every English vessel should be thoroughly examined before she leaves port, in order that it might be satisfactorily shown that she was seaworthy and well manned, and that means, both simple and efficacious, were on board for the rescue of the crew in the event of an accident.

On this latter point, it is much to be lamented that the law of the land does not afford that protection to its merchant-seamen which they surely have a rightful claim to, by requiring all owners of vessels to provide the cheap and simple appliance of a life-belt for the use of each seaman in his employ, as by such provision alone undoubtedly many lives would be annually saved from our merchant-craft. We will illustrate this assertion by a case in point:—

A few months ago, the life-boat of the National Life-boat Institution, stationed at Walmer, proceeded off, early in the morning, to the rescue of a sloop's crew on the Goodwin Sands. The crew, three in number, were seen in the rigging; but it was found impossible, from the violence of the sea and the rolling of the vessel, to approach her. As soon as the tide turned, causing the sea somewhat to subside, the life-boat was taken alongside; but at the moment of her being so, the vessel's mast went by the board, falling across the bow of the life-boat. One of the three men in the vessel's rigging had before this been washed off and perished: of the two who remained, one was taken into the boat as the mast fell; the other, the master of the vessel, was thrown into the water. One of the life-boat's crew, John Chadwick, immediately jumped overboard, swam to him, and succeeded in bringing him alongside the life-boat; but on the crew grasping him, his clothes unfortunately tore away, and a sea dashing the boat away from him, he unhappily perished.

In the report of this case received by the Institution, it is remarked, that had the unfortunate master been provided with one of the cork life-belts, such as were worn by the life-boat's crew, his life would probably not have been sacrificed. Indeed, the two other men, previously washed from the rigging and drowned, might possibly have been saved, had they been provided with belts, as they might have been picked up by the life-boat, or by a Deal lugger which was near at the time.

The life-boats of the National Life-boat Institution were manned last year by about 3,000 persons on occasions of service and exercise. They were often afloat during the heaviest gales and in the darkest nights; and it is satisfactory to be able to report, that not a single life was lost from them on these occasions. This happy circumstance is principally, no doubt, attributable to the safety of the boats themselves; but this immunity from fatal results was also owing in some instances to the excellent cork life-belts, one of which each man forming the boat's crew is required, by the rules of the

Digitized by Google

Society, to put on before he is allowed to step into her.

Let the reader bear in mind, that the average loss of life from wrecks on our coasts during the past seven years is 745. It is not presumptuous to say, that a very considerable proportion of this large number of our fellow-creatures have been sacrificed through the cupidity and carelessness of their employers. How many of these victims might this day, with God's blessing, be still the solace and support of their families, as well as useful and active members of a busy commercial community like ours, if all had been done for them which justice and humanity dictated! If the shipowner had discharged his duty, by ascertaining the soundness and tightness of his vessel, the fitness of her rigging, sails, anchoring gear, &c., before committing her to the dangers of the sea, how much misery would often have been prevented! Where in the hour of need and distress has been the sufficient number of the ship's life-boats—the means of safely lowering them—the life-buoys and the life-belts? None are at hand; and if found, they are too frequently found to be worse than useless, from want of repair and preparation. We confess that we envy not the feelings of the man who has realized immense wealth, but who has not in his day faithfully discharged the important duties of an employer of labour, and who, by his remissness, probably unconsciously to himself, has consigned many a woman to be a widow and her children to be orphans. The best interests of our country, and the cause of humanity, constrain us to speak thus openly and unreservedly on this important subject. Great difficulty is at present experienced in manning with able seamen Her Majesty's ships. Now, in seven years 5,220 valuable lives, or nearly 800 annually, mostly seamen, have perished from shipwrecks on our coast; and that very large number would, unquestionably, have been nearly doubled, had not strenuous and brave exertions been made to rescue shipwrecked persons. Whosoever, therefore, contributes, either by his individual services or in any other way, to this philanthropic work, is not only the friend of the cause of suffering humanity, but he also renders important services to his country.

"The preservation of human life," it has been well observed by a contemporary, "has in all ages been considered as an act deserving of the most enthusiastic meed of gratitude. If he who makes an ear of corn to grow where it never grew before, merits public applause, how much more deserving of praise is he who rescues a fellow-creature from a violent and an unprepared death! The highest and humblest are made widows and orphans by ruthless shipwreck. To-day it is the great admiral, in his proud war-ship, who goes down 'with twice five hundred men' into the ocean's bosom. To-morrow it is the poor woman, with her children round her, who, on the desolated beach, mourns for the embrowned face, the tarry hand, the manly heart that will return no more; for the night has been stormy, the smack was capsized, the fishermen are 'drowned.'"

Ten thousand nine hundred and two persons have been saved from shipwreck by life-boats and other means since the establishment of the National Life-Boat Institution: 28,061*l.* have been expended by it on life-boat establishments, and 11,651*l.*, besides gold and silver medals, for saving life have been voted. The Committee of the Institution make, therefore, a confident appeal to the generosity of the public, on whose support the continued efficiency and extension of the Society depend. Many new life-boats are yet needed on the coasts. The cost of several recently placed, as well as of the carriages and boat-houses required for them, has in some cases been defrayed in full by charitable persons, admirers of the Institution, or anxious to afford substantial testimony of their personal gratitude for rescue from shipwreck by means of life-boats. Only the other day Lord Bury and his fellow-passengers, returning in the *Asia* from the United States, presented 21*l.*, the profits of an amateur magazine they had started to relieve the tedium of the voyage, to the National Life-Boat Institution. A prettier or more graceful thanks-offering for a "good deliverance" from ocean's perils could not well be conceived. Only recently the journeymen sawyers and boat-builders in the employ of Messrs. Forrest, of Limehouse, subscribed 30*l.* for the same purpose. Equally as touching and appreciated was the gift to the Society of 1*s.* 6*d.* in stamps from a sailor's orphan. It only remains for us to appeal to the public at large for their continuous pecuniary support to an Institution at once noble, patriotic, and merciful in its design, and which is so constantly affording practical illustration of its useful character and successful working.

CORK INDUSTRIAL RAGGED SCHOOL.

Owing to the withdrawal of the support and provision, both for instruction and maintenance, hitherto received from the Irish Church Mission, but which that Society, in its necessary retrenchments, finds itself reluctantly compelled to withdraw, this valuable and well-conducted school is now thrown upon its own resources.

It will be remembered, that, though the dormitories are open to all creeds of destitution, Protestants are well and carefully attended to. The institution is struggling on in the midst of a thickly populated city, where much ignorance, vice, and spiritual poverty abound. Let some help be sent over to the Hon. Secretary, Miss Whately, 16, Waterloo-place, Cork. There are in the Institution at present twenty-five children wholly provided for by the Committee, and a small sum has been set apart as the commencement of a fund for apprenticing the boys as they become suited to it. The Committee would gladly extend their numbers to fifty, for whom they have ample accommodation. The average attendance at the day-school for the past year has been forty-one, and at the Sunday-school there have been over seventy, kindly and sedulously watched over by W. Hall, Esq., and where the truths of the Gospel have been carefully and patiently inculcated.

Surely Christians will uphold an institution thus calculated to meet the wants of those who are emphatically "the dangerous classes," and to rescue from idleness, crime, or degraded superstition, the children of all professing creeds of their poorer brethren.

It must be borne in mind, that the Committee of this School have no Government aid to look to; they are, therefore, compelled to appeal to the public, and we gladly do what lies in our power to succour them by thus drawing attention to the School, and we shall close our remarks by adding the appeal which the Committee have issued:—

"The Committee earnestly desire to call the kind attention of their friends and the public to the increased responsibility and additional obligations of their present position, alluded to in the close of the report. The Irish Church Missions, who had hitherto relieved them of the care of the children's education, and had lent other kindly aid, are now obliged to withdraw that support; and the whole provision, both for their instruction and maintenance, will for the future devolve upon this Committee.

"Convinced that the work is of God, they desire to uphold the institution in all its efficiency, as well as to increase its usefulness. The dormitories are open to all creeds of the destitute and the perishing, Protestant children being eligible only on the recommendation of the parochial minister.

"An evening school will be held for the instruction of out-door children, to whom supper will be given, and the Sunday school will be carried on at the usual hour on the Sunday afternoon.

"The Committee hope to apprentice the boys as they grow up, and have commenced a special fund for the purpose. Some of the boys are already employed in situations of trust in this city. The Committee appeal with earnestness, but with confidence, to their friends for increased support in this time of difficulty.

"The clergy they would ask to open their pulpits, and from all they would solicit annual subscriptions; and thus they trust this valuable and interesting institution will, through God's blessing, be established upon a basis firmer and more permanent than ever.

"'Go quickly out into the streets and lanes of the city, and bring in hither the poor, and the maimed, and the halt, and the blind.'—Luke xiv. 21.

"Contributions will be gratefullly received by the Treasurer, Mrs. Sarsfield, Doughcloyne; the Secretary, Miss Whately, Waterloo-place; or they may be left at the Tract Shop.

"Donations of clothes, meat, vegetables, &c., will be thankfully received at the institution, George's Quay."

Correspondence.

To the Editor of the Philanthropist.

SIR,—No observant person who has walked through those quarters of our large towns which are chiefly inhabited by the working classes, can fail to be impressed with the truth of Lord Shaftesbury's speech at the meeting of the "Ladies Association for the Diffusion of Sanitary Knowledge;" of which I have just read the report in your September number. Last evening I had occasion to visit a family living in a district of this city, where some of the largest mills are situated, and the population of which is therefore almost entirely composed of mill hands. As usual, I was struck by the sickly appearance of the people, whom I met in large numbers returning from their work. An erect well-made figure, and clear healthy complexion, were notable exceptions to the general rule of stunted growth and pallor. It was, moreover, observable, that the younger men and women were, on the whole, less healthy-looking than the middle, aged, or elderly, *i.e.*, than their parents, and it was natural to conclude, that the rising generation are deteriorating in physical vigour. On entering the house which I sought, I found the mother of the family tending a child which had, she told me, been left by a neighbour in her charge for a few hours. In size it was about up to the mark of a moderate-sized baby of ten months, but the expression of the face made me suspect that it was older. On enquiry, I learnt that its age was about three years. My informant added, "I think it has been a good deal *thrown about*. It has been put out to nurse, and they've been giving it too much of that sleeping mixture, I suspect." Here, then, doubtless, was the cause of much of the degeneracy so apparent in the younger members of the surrounding population. The married females employed in mills have had to pay persons to take charge of their babies for them. From bad nursing many die, and most of those who survive carry about them the evil effects of early neglect, and become puny, sickly men and women. It is a comfort to find that this great evil has at last attracted the attention of influential and benevolent persons, and that something is doing to remedy it. One plan which occurs to me I will take this opportunity of suggesting.

If I understand rightly the functions of the association, it will endeavour to stir up the ladies of large towns, such as this, to form local societies for the encouragement of the objects which it has in view. Now, would it not be possible for these associated bodies to promote the establishment of nurseries, under the direction of competent nurses of respectable character, where the babies of working women might be properly cared for, and so protected from the ill-usage to which they are liable, when placed, as at present, under the care of ignorant and careless persons. These nurseries might be supported out of the payments made by those whose children were received there, and the principal trouble which they would involve would be that of periodical visitation and the appointment of experienced and conscientious persons to manage them. I have seen the plan which I suggest, in operation, on a small scale, in a village where many of the women are employed at a neighbouring factory, and I do not see why it should not be conducted on a larger scale in our great manufacturing towns.

I enclose a post-office order for £1 1s., an annual subscription to this Association, for the Diffusion of Sanitary Knowledge, from which I expect great things. May I ask you to pay it to the Treasurer for me?

I am, sir,
Your obedient servant,
H. P.

I enclose my card.
Manchester, Sept. 6, 1859.

MANNING THE NAVY.

The following letters have already appeared in *The Times*:—

TO THE EDITOR OF "THE TIMES."

Sir,—Several boys have gone into the army and navy from the North-West London Reformatory, the majority of whom have turned out well.

My object, however, in addressing you is, to direct attention to the recent establishment of a Reformatory School Ship in the Thames, on the plan of the *Akbar* at Liverpool, for the purpose of training for the sea boys answering the description given in your article to-day.

An old frigate, the *Cornwall*, and considerable assistance, were given by the late Board of Admiralty, and the vessel lies off Purfleet, with about a dozen boys on board, and room for 200 more.

They ought, at present, to be all convicted boys, because the Treasury allowance will go towards our heavy expenses; but, when our numbers are larger, we hope to have a free list also.

There is considerable prejudice, both in the navy and merchant service, against boys of this class; but a naval captain, who took, *sub rosa*, several from the *Akbar*, said that they were the best boys in his ship, and that, after all, they were in many instances of the same class as, and and no worse than, the other boys, with this difference—that, having been found out, they had had two years' good training.

A merchant captain wrote to me, that his boys were not worth their salt the first voyage, and ran away at the end of it; "but your boys," he said, "will be valuable to me from the first."

I cannot trespass on your space further than to say, that all particulars may be obtained by addressing a letter to Captain Burton, R.N., School Ship *Cornwall*, Purfleet,

I am, Sir, your obedient servant,
STEPHEN CAVE, Hon. Sec.

Wilton-place, Sept. 16.

TO THE EDITOR OF "THE TIMES."

Sir,—In consequence of your second leading article of *The Times* of to-day, I am directed by the managers of this Industrial School to state, that from this institution, during the past year, one boy has enlisted into the Royal Artillery, two boys into the 84th Regiment, two boys into the 85th Regiment, two boys into the 6th Regiment, and three boys into the Royal Navy. All these, who once were destitute, vagrant, and starving, are now strong, healthy, and steady lads, able to mend and wash their own clothes and to cook their meals, with a fair rudimentary education, and some little knowledge of carpentry tools or of shoemaking. The whole of them have joined the above services at their own special desire.

I have the honour to be, Sir,
Your obedient servant,
GEORGE BELL, Secretary.

The Boys' Home for the Training and Maintenance, by their own Labour, of Destitute Boys not convicted of Crime, 14, Euston-road, St. Pancras, Sept. 16.

TO THE EDITOR OF "THE TIMES."

Sir,—With reference to Mr. Cave's letter on your second leading article of the 16th instant, I beg to bear testimony to its truth, and solicit your insertion of the following:—

During the past year fourteen lads from this ship have joined the army, and six have entered the navy. All are doing well.

There are at present on board many fine "strapping" boys of sixteen and upwards, some of whom have been at sea. Many have been convicted of only trivial offences, such as desertion from ships, vagrancy, sleeping in outhouses, &c., but all have undergone a careful course of moral training and discipline for an average of two years, by which their antecedents, however bad, are thoroughly eradicated.

They have also been instructed in the various duties of a sailor, and are considered by most of the shipowners of this port to be worth the wages of an ordinary seaman. (Two have to-day joined the ship *Alexander* as ordinary seamen.)

But, alas! in addition to their other faults, they have broken the eleventh commandment, and, unlike their more fortunate, though not more honest, brethren, have been contaminated by the Reformatory, and are considered unfit to be openly received into her Majesty's naval service.

I am, Sir, your obedient servant,
WILLIAM H. FENWICK,
Commander, R.N., and Captain of the *Akbar*.

School Frigate *Akbar*, Birkenhead, September 21.

TO THE EDITOR OF "THE TIMES."

SIR,—All wise men must admit that when you are in real difficulty there is nothing so fatal to success as attempting to "shirk" it. We are now face to face with a riddle which we as a nation must either solve or die. The question of manning the navy is well understood by every thoughtful person in the country to be that on which our political existence depends, and it is the duty of everyone to do what he can to prevent the public from

Digitized by Google

being led off on a false scent. As I cannot but think that Colonel Simmons has, with the best intentions, done something of this kind in your columns, may I be allowed a few words of criticism?

How are we to find the means of meeting on the sea a nation which has its whole maritime population under an efficient system of conscription? This is the question, or rather only one part of it, for it may be our fate to have more than one such nation on our hands. We have had quite lessons enough to show us that this can be no longer left to chance, and your columns, sir, have contained many excellent suggestions on the subject. Those which are at all likely to be useful may be resolved into two. We must either subject our seafaring classes to a system of registry and ballot, applying the same principle to the whole non-seafaring population for the supply of local militia, or we must induce by very high pay a large number of men to enter the ranks of a permanent reserve force. I should myself prefer the former, and believe it to be quite feasible. No one has much hope from the plan which the authorities are about to adopt at present, and which is neither one nor the other. But Colonel Simmons proposes that we should cease to trouble our heads about seamen at all, and supply their places to a great extent by marines. This would be, indeed, an easy solution of the problem, if it were a solution; for marines are the cheaper commodity and more easily obtained.

But has Colonel Simmons really considered what the effects of such a wholesale change would be? Take his own case of 700 marines out of a crew of 1,000 in a line-of-battle ship. He must be well aware that we dare not reduce our masts and sails on board ship, in spite of the introduction of steam, because in war time coal must be reserved for action, and the cruising must be under sail. When he has taken the officers, the engineers, the ship's boys, and the so-called "idlers" out of the 300 who are not marines, how many will he have to go aloft? He would, I suspect, be very sorry to be in such a ship on a lee shore. Merchant ships afford no parallel. They have not to brave the risks of cruising men-of-war; their safety does not depend on celerity of movements; as it is, many of them are lost for want of a proper number of hands. Or, take the manning of the ship's boats into consideration. Who is to perform this duty? There will be but a small number of the 300 available, and it cannot be expected of the marines. If, indeed, it is meant that the marines are to do the duty of sailors, then we shall have to call them by their right names. They must have the same pay, and will belong to the same class of men. Their distinctive character as sea-soldiers, in which they perform so admirable a part, would then disappear, and the service would sustain a very grievous loss.

But, it may be said, that Colonel Simmons has overstated his case, and that instead of a proportion of about one-fourth marines in a ship's company, as at present, we might safely increase it to one-third, or even one-half. Mr. Lindsay differed from the rest of his brother Commissioners on this point, and proposed something of the sort. Now, I believe that a change, even to this extent, would be most dangerous. We shall be called upon to match ourselves against a fleet manned for the most part by seamen. It will be a fatal error if we attempt to oppose them at sea with soldiers. A marine may be excellent at gun drill under ordinary circumstances, and as a small-arm man; he will be also—at least those who have been embarked—proof against sea sickness; but in the emergencies of a general action, and especially in bad weather, it cannot rationally be expected that he should have the qualities of one to whom the sea is his natural element. The thousand critical contingencies which may occur under such circumstances demand the activity and the resources of a man trained to depend on himself in a life-long contest with the winds and waves. The very qualities of the marine which make him so valuable an auxiliary on board ship and so useful when landed—his training to act as part of a machine and his excellent discipline—interfere with the power he is required to exert as an individual. Let any one, for instance, study our naval actions in the great war, and ask himself whether soldiers could have performed the feats of our seamen in boarding the enemy. Steam can make no essential difference in this respect, nor the long-range guns. As in the late Italian battles, there will be all the more vigorous endeavours to get to close quarters.

I cannot either subscribe to Colonel Simmons' assertion, that even in time of peace "the best gunners on board ships of war at the present day belong to the marines." I have shown, I think, no disposition to under-rate the real value of that body, but I cannot in the course of a pretty long experience recall the name of any ship I served in where such was the case. There is no one like a trained seaman for naval gunnery, though a trained marine among a number of untrained seamen will be, of course, their superior until they are brought up to his mark.

No, sir, with all our shortcomings, we have been, I am convinced, on the right tack in adding as many of the soldier's accomplishments as possible to those of the sailor. It was that which gave us our superiority in the great war. May the day be far distant when we shall attempt to reverse the process. There is no necessity, either, for such a downward step. There are plenty of the old stock to be got, if we only set about it in the right way. But we want a reform within the service as well as measures to connect it with the mercantile marine. We want the abolition of corporal punishment, except under sentence of court-martial; we want a total reform of the Board of Admiralty, and its freedom from all connexion with political parties; we want the re-adjustment of our half-pay lists; we want a better system of education for our officers, and the total abolition of promotion by interest. These are the "points of our charter." We all have our nostrums; these are mine. I should state them with more diffidence if I were singular in my opinion.

I am, Sir, your obedient servant,

A Naval Officer.

AN URGENT APPEAL is made to the Benevolent on behalf of SIX MOTHERLESS CHILDREN requiring Care and Instruction. Every particular given by addressing "Hope," 9, Old Compton Street, Soho.

TO SCHOOL COMMITTEES and others.—An urgent Appeal is made on behalf of SIX MOTHERLESS CHILDREN, to provide one or more with a Home and Instruction. Every information given by addressing Mrs. Gammoge, 20, Blomfield Street North, Dalston.

SALE OF WORK BY LADIES OF LIMITED MEANS.—The public are respectfully informed that, in consequence of larger premises being required, the Association have removed the Sale of their work from counters 266, 267, 268, Soho Bazaar, to 16, Berners Street, Oxford Street. Orders for all kinds of plain and fancy work will be thankfully received by the Secretary, at the Office, 16, Berners Street, between the hours of 11 and 3 o'Clock.

CIVIL SERVICE, Merchants, Civil Engineers, and Surveyors' OFFICES.—Foster's Initiatory Counting-house, 161a, Strand, next door to King's College Gate.—This Institution is intended as an intermediate between school and business, where gentlemen are thoroughly prepared to perform the duties in the above.

SAVINGS' BANK DEPARTMENT.

SOUTHWARK, METROPOLITAN, and PROVINCIAL FREEHOLD LAND and HOUSE SOCIETY.

Trustees.

Thomas Pillow, Esq., James Pollock, Esq., and W. H. German, Esq.

FIVE PER CENT. ON DEPOSITS.—Dividends payable on and after the 1st of January and the 1st of July.

Offices: 4, Wellington Chambers, London Bridge, Southwark.

RICHARD BRETT, *Secretary.*

Prospectuses forwarded on application.

BANK OF DEPOSIT.

ESTABLISHED A.D. 1844.

3, PALL MALL EAST, LONDON.

Parties desirous of Investing Money are requested to examine the plan of The Bank of Deposit, by which a high rate of interest may be obtained with ample security. *Deposits made by special agreement may be withdrawn without notice.* The interest is payable in January and July,

PETER MORRISON, Managing Director

Forms for opening Accounts sent free on application.

PHRENOLOGY APPLIED TO CHILDREN may lead to the avoidance of many of the errors so frequently committed in their education and subsequent destination. During Mr. DONOVAN'S long and extensive practice as a consulting phrenologist, his attention has been particularly directed to this most important branch of cerebral science. Consultations from 9 to 6 daily. Free Lectures on Monday evenings, as usual. 1, Adelaide Street, Trafalgar Square, W.C.

HEALTH AND ECONOMY.

AGAVA, the best substitute for Horse-hair. This is a new and Patented article for Stuffing, and now very extensively used in preference to Horse-hair, being free from the great objection to the latter, that of breeding and harbouring vermin. It possesses every advantage necessary in a material for stuffing Mattresses, Furniture, &c.—elasticity, durability, and non-susceptibility to damp; and for invalids or hospital purposes is invaluable, as it is perfectly clean and cool, and will not convey infection. In addition it is lighter than horse-hair, and half the price.

Can be had of all respectable upholsterers in the United Kingdom.

For price, and other information, apply to D. Walters & Sons, 14, Wilson Street Finsbury, E.C. Sole Agents to the Agava Patent Hair Company.

ALLEN'S PATENT PORTMANTEAUS AND TRAVELLING BAGS, WITH SQUARE OPENING; Ladies' Dress Trunks, Dressing Bags, with Silver Fittings; Despatch Boxes, Writing and Dressing Cases, and 500 other articles for Home or Continental travelling, Illustrated in their new Catalogue for 1859. By post for two stamps.

J. W. & T. Allen, Manufacturers of Officers' Barrack Furniture, and Military Outfitters (see separate catalogue, 18 and 22, Strand.)

4, 8 and 16 ozs.

Obtain it where inferior articles are not substituted, from family Grocers, Chemists, Confectioners & Corn Dealers.

PAISLEY, DUBLIN,

77A, Market Street, Manchester, and 23, Ironmonger Lane, London.

A Good FAMILY MEDICINE CHEST, with a prudent use, has saved many a life; and yet we think the idea might be improved upon, and reduced to a more simple form. Take some good Compound, such as COCKLE'S ANTIBILIOUS PILLS, and we find that the desired end may be obtained without scales and weights, or little mysterious compartments and enchanted bottles with crystal stoppers. Others might be used, but Cockle's Pills, as tested by many thousands of persons, and found to answer their purpose so well, may be set down as the best.—*Observer*

A NEVER-FAILING RECEIPT FOR 30 STAMPS TO MAKE THE HAIR GROW AND CURL.

A VERY VALUABLE RECEIPT for 30 Stamps, to make a FIRST-CLASS HAIR-DYE.

LADIES! If you wish your Skin to be CLEAR, FAIR and BLOOMING, send me 30 Stamps, and I will forward you the receipt. Its effect is surprising. It removes Tan Freckles, Pimples, and other unsightly marks. It is perfectly harmless, and may be prepared by any lady at a trifling cost. These Receipts are superior to anything of the kind hitherto discovered.

IMPORTANT to every Man who keeps a Horse, Cow, Sheep, or Pig. The receipt to make the celebrated HORSE and CATTLE FOOD, for 13s. per cwt. The Selling price being 42s. and 50s. per cwt.

N.B.—Two receipts sent for 44 Stamps; three for 60 Stamps; or the four for 78 Stamps.

Address, Mr. J. TAIT, Chemist, Newcastle-on-Tyne.

TO RELIGIOUS AND PHILANTHROPIC SOCIETIES.

JOHN READ, Bill-Poster to the National Temperance League, and various other Institutions, 19, YORK STREET, BLACKFRIARS ROAD. Men and Boards supplied. Orders by Post promptly attended to.

PERSONS about to Decorate should inspect SILAS TUCKER'S splendid assortment of PAPER HANGINGS, at his Warehouse, 234, HIGH HOLBORN, ten doors East of Little Queen Street, London. Estimates given for every kind of Decoration; also for General Repairs in Town and Country.

FOR LADIES.

NICOLL'S PATENT HIGHLAND CLOAK is a combination of utility, elegance and comfort. No lady having seen or used such in travelling, for morning wear or for covering full dress, would willingly be without one. It somewhat resembles the old Spanish Roquelaire, and has an elastic Capucine Hood. It is not cumbersome or heavy, and measures from twelve to sixteen yards round the outer edge, falling in graceful folds from the shoulders; but by a mechanical contrivance (such being a part of the patent) the wearer can instantly form semi-sleeves, and thus leave the arms at liberty; at the same time the Cloak can be made as quickly to resume its original shape. The materials chiefly used are the soft neutral-coloured Showerproof Woollen Cloths manufactured by this firm. The price will be Two Guineas and a Half for each Cloak; but with the Mécanique and a lined Hood a few shillings more are charged. This department is attended to by Cutters, who prepare Mantles of all kinds, with Velvet, Fur, or Cloth Jackets, either for in or out-door use. These at all times—like this Firm's Riding Habit—are in good taste and fit well. Female attendants may also be seen for Pantalons de Dames à Cheval, partially composed of Chamois. As no measure is required, the Patent Highland Cloak can be sent at once to any part of the Country, and is thus well adapted for a gift.

H. J. and D. NICOLL, Warwick House, 142 and 144, REGENT STREET, London.

NICOLL'S NEW REGISTERED PALETOT has all those advantages which secured such general popularity to Messrs. Nicoll's original Paletot; that is to say, it avoids giving to the wearer an outré appearance, so that professional men, and all others, can use it during morning and afternoon, in or out of doors. Secondly, there is an absence of unnecessary seams, well known to secure a more graceful outline, as well as to effect a great saving in wear; the latter advantage is considerably enhanced by the application of a peculiar and neatly-stitched binding, the mode of effecting which is patented. Great exertions are being made to supply Messrs. Nicoll's agents throughout the country and the colonies with an assortment of this new garment simultaneously with the display in London, but it is necessary to inform the public that all Messrs. Nicoll's manufactures may be distinguished by a trade mark, consisting of a silk label attached to each specimen; to copy this is fraud, and may be thus detected: if the garment is dark-coloured, the label has a black ground, with the firm's name and address woven by the Jacquard loom in gold coloured silk; if the garment is light-coloured, the label has a pale drab ground, and red silk letters. Each Paletot is marked in plain figures, at a fixed moderate price, and is of the best materials. In London, the NEW REGISTERED PALETOT can alone be had of H. J. & D. NICOLL, 114, 116, 118, 120, REGENT STREET, and 22, CORNHILL.

A NEW DEPARTMENT FOR YOUTH, &c.

H. J. and D. NICOLL recommend for an outside Coat the Havelock; and for ordinary use the Cape Suit, such being well adapted for Young Gentlemen, as exhibiting considerable economy, with general excellence. Gentlemen at Eton, Harrow, Winchester, the Military and Naval Schools, waited on by appointment. A great variety of materials adapted for the Kilted or Highland Costume, as worn by the Royal Princes, may be seen at

WARWICK HOUSE, 142, and 144, REGENT STREET.

WHAT WILL THIS COST TO PRINT? is a thought often occurring to literary minds, public characters, and persons of benevolent intentions. An immediate answer to the inquiry may be obtained, on application to RICHARD BARRETT, 13, MARK LANE, LONDON. R. B. is enabled to execute every description of PRINTING on very advantageous terms, his office being furnished with a large and choice assortment of TYPES, STEAM PRINTING MACHINES, HYDRAULIC and other PRESSES, and every modern improvement in the Printing Art. A SPECIMEN BOOK OF TYPES, and information for authors, sent on application, by RICHARD BARRETT, 13, MARK LANE, LONDON.

Printed for the Proprietors, by RICHARD BARRETT, 13, Mark Lane, London; and sold by W. TWEEDIE, 337, Strand.

October 1, 1859.

SOCIAL SCIENCE GAZETTE.

VOL. V.—No. 54.] LONDON, NOVEMBER 1, 1859. [Annual Subscription, 6s. PAYABLE IN ADVANCE.

REFORMATORY FOR JUVENILE MALE CRIMINALS under 16 years of age.—The HOME in the East, Old Ford, Bow, near London.

PRESIDENT,
THE EARL OF SHAFTESBURY.
TREASURER.
JOSEPH CRANE, ESQ.
BANKERS.
MESSRS. HANKEY & Co.
HONORARY SECRETARIES.
A. J. SCRUTTON, Esq., 81, Old Broad Street; THOMAS SCRUTTON, Jun., Esq., 3, Corbet Court, Gracechurch Street.
GOVERNOR.
Mr. J. W. GORDELIER, at the Institution.

Fifty youths are maintained at an annual average cost of about £1,000.

In addition to the ordinary operations of the Institution, the following efforts call for special funds:—

New workshops, with appropriate fittings, newly erected at a cost of £300.

Emigration of seven youths to Canada in April next, £85.

Contributions in aid of either of the above objects are earnestly solicited, and will be gratefully acknowledged.

THE GIRLS' REFUGE.—The KING EDWARD RAGGED & INDUSTRIAL SCHOOLS and EASTERN REFUGE, Albert Street, Buxton Street, Brick Lane, Spitalfields.—The objects of this Institution are to educate and train in habits of industry that class of children who, for want of clothing, or the means of paying for instruction, are unable to attend other schools, and to gather in the vicious and depraved who swarm in our streets, and endeavour to civilize and instruct them, and, as far as the funds permit, to provide food, clothing, and shelter for the most destitute.

In the erection of this Institution, provision has been made for about seventy inmates, while accommodation exists for the daily instruction of more than 400 poor children. The number of Refuges which have of late years been opened for the reception of houseless and destitute boys induced the Committee to depart from their original intention, and make this a Refuge for girls. In addition to the large number of children under daily instruction, thirty-five destitute girls are now enjoying the benefits of the Refuge, and the Committee are desirous of extending the sphere of their usefulness, and to afford food, shelter and clothing to at least thirty-five more.

The varied operations of such an Institution necessarily involve a large annual expenditure, to meet which, and to carry out to the full extent the objects contemplated in its erection, subscriptions and donations are earnestly solicited, and will be thankfully received by Samuel Gurney, Esq., M.P., Treasurer, Lombard Street; Messrs. Smith, Payne, and Smiths, Bankers, 1, Lombard Street; and by the Hon. Sec., 2, Penbury Grove, Hackney. H. R. WILLIAMS, *Hon. Sec.*

TO MANAGERS OF REFORMATORY AND INDUSTRIAL SCHOOLS.

WANTED, by a Young Man, who has had above three years' experience in the Reformatory movement, a SITUATION as CARPENTER or GENERAL ASSISTANT in one of the above-named Schools. Address C. W., 5, Princes-street, Fitzroy-square.

TO THE BENEVOLENT.

AN URGENT APPEAL is made on behalf of six motherless children for aid to place one or more in some public school. Their ages are:—Girls, 11, 9, and 7; Boys, 12, 5, and 3.

Reference to EDMUND BOFF, Esq., 1, Sutherland-square West, Walworth, who will be happy to be referred to, as he knows the family well.

GOVERNESSES' BENEVOLENT INSTITUTION. Incorporated by Royal Charter. WITH POWER TO HOLD LAND BY GIFT, PURCHASE, OR BEQUEST.

UNDER THE PATRONAGE OF
HER MOST GRACIOUS MAJESTY.

The Rev. Ed. Spooner, M.A.
W. Jesse Street, Esq.
The Earl of Shrewsbury and Talbot.
Edward Thornton, Esq.
T. Parry Woodcock, Esq.

The objects of the Society are:—

TEMPORARY ASSISTANCE to Governesses in distress, afforded privately and delicately through the Ladies' Committee.

ANNUITY FUND.—Elective Annuities to aged Governesses, secured on invested capital, and thus independent of the prosperity of the Institution.

*** The Hon. Mr. Ashley having most kindly opened a Fund to raise all the Society's Annuities to £25, any Donations which may be kindly given may be addressed "The Hon. Mrs. Ashley, to the care of the Secretary."

PROVIDENT FUND.—Provident Annuities purchased by Ladies in any way connected with education, upon Government Security, agreeably to the Act of Parliament. This Branch includes a Savings' Bank.

A HOME for Governesses during the intervals between their engagements.

A SYSTEM OF REGISTRATION, entirely free of expense.

AN ASYLUM for the aged.

CHARLES WILLIAM KLUGH, *Secretary.*
32, Sackville-street, London.

ROYAL NORTHERN SEA-BATHING INFIRMARY: established in 1811.—A new infirmary, long very much needed, is now in course of erection. £2,000 is required to complete it. This charity is intended to provide a home for patients from all parts of the kingdom requiring sea air. It is supported entirely by voluntary contributions, and these are earnestly solicited.

SECRETARY.

Edward West, Esq., 97, Newgate Street, London.

THE streets of London, and of other large towns throughout the Kingdom, are said to furnish victims for every variety of temptation; and daily experience will evidence how great are the *bodily* evils which arise to the children of our poor, from the necessity which exists for their playing in crowded thoroughfares, and play they *must—somewhere*.

The Committee feel assured, that for the sake of Society at large, as well as for that of the thousands of children whose interests, both bodily and spiritual, are concerned, the Public will come forward to aid them liberally in their effort to achieve a great public good. Even in the most dense neighbourhoods it is possible to make arrangements for the present, with the hope that changes of site and transfers of property may afford better opportunities in the future.

Contributions for local objects will be gladly accepted, under *strict limitations* to the neighbourhood in their expenditure; and promises of support from the Nobility and Gentry with reference to the cities and towns contiguous to their estates will be gratefully acknowledged by the Committee, who will be prepared to assist and guide local efforts, *and who earnestly invite grants of land*, which can be legally conveyed for the purpose.

The Society consists of Subscribing and Honorary Members, who are entitled to vote upon all questions at the Annual General Meetings; the former are qualified by an annual subscription of One Guinea, or a life donation of Ten Guineas; the latter comprise Donors of Sites, or any parties who have gratuitously assisted to convey sites. The subscriptions become due on the 1st of January in each year.

Donations and Annual Subscriptions of any amount will be thankfully received by the Bankers, Messrs. Williams, Deacon & Co., Birchin Lane, Cornhill: and by Edward West, Esq., Secretary, 97, Newgate Street, London; who will, with pleasure, send for any contribution, upon receiving a notification to that effect.

AID is asked for many poor CLERGYMEN in DISTRESS, wanting food and raiment. Donations of money and clothing will be thankfully received by Rev. W. G. Jervis, Secretary to the Poor Clergy Relief Society, 345, Strand, W.C.

METROPOLITAN ASSOCIATION for IMPROVING the DWELLINGS of the INDUSTRIOUS CLASSES; incorporated by Royal Charter, dated October 16th, 1845, with perpetual succession.

DIRECTORS.

Chairman.—Sir RALPH HOWARD, Bart.
Deputy-Chairman.—JOHN WILLIAM TOTTIE, Esq.

George William Alexander, Esq.
Major-Gen. Edward Pery Buckley, M.P.
The Right Hon. the Earl of Carlisle, K.G.
Stephen Charles Denison, Esq.
Edward Enfield, Esq.
Sir William Fraser, Bart., M.P.
Hon. D. Francis Fortescue, M.P.
Thomas Field Gibson, Esq.
Frederick David Goldsmid, Esq.
The Right Hon. Lord Claud Hamilton, M.P.
William Egerton Hubbard, Esq.
Edwin Hill, Esq.
Sir Samuel Morton Peto, Bart.
T. Southwood Smith, Esq., M.D.
Russell Scott, Esq.
William Arthur Wilkinson, Esq.
Horace Wilkinson, Esq.

The necessity for the prosecution of the objects of this Association is continually brought before the public by the press and in the reports of the officers of various sanitary boards, the only result of which has hitherto been the formation of various societies in addition to this Association, of smaller scope, though having the same objects in view.

The experience of 13 years has convinced the Directors that the only mode in which the existing evils resulting from the improper housing of large masses of the people in densely populated districts can be effectually and permanently alleviated, is by the exercise of such powers as they possess, and that the desire to do this must at the present time be exerted by one extended and powerful combination, instead of a variety of disjointed attempts, each necessarily burdened with expenses of its own, pressing upon the body of proprietors with a weight proportioned to the contraction of the area of its operations.

The Charter confers power to raise £100,000 capital, in shares of £25 each, to be expended in England and Wales, and to increase such capital to any extent from time to time, with the sanction of the Board of Trade and the Shareholders.

To enter into contracts under the common seal of the Association.

To declare dividends not exceeding £5 per cent.; surplus to be applied in further promoting the objects of the Association, with the approval of the Board of Trade.

Constitution—Shareholders incorporated, and liabilities of each limited to the amount of his investment.

Directors elected by the Shareholders, two retiring every year, but capable of re-election.

Supervision by the Government, through the medium of the Board of Trade, for the purpose of securing the permanence of the original intent.

It is gratifying to know that, wherever the operations of this Association have been felt, the result has been the improvement of the accommodation afforded in the neighbouring dwellings; but greatly increased efforts are requisite, both to meet the extent of the existing evil, and to perfect the remunerative character of the undertaking.

The Directors, therefore, invite the co-operation of the capitalist, and, to this end, his inspection of their buildings undermentioned.

The tenant class are earnestly requested, for the sake of their comfort, their health, and the economy of their dwellings, to make themselves acquainted with the accommodation hereby provided.

Every information may be obtained on application to the Secretary, Mr. CHARLES GATLIFF, 19, Coleman Street, London, E.C.

The existing property of the Association is as follows:—

Pancras Square, Old Pancras Road....	110	families.
Ingestre Buildings, New Street, Golden Square	60	do.
Nelson Square, Snow's Fields, Bermondsey	108	do.

NATIONAL ASSOCIATION FOR THE PROMOTION OF SOCIAL SCIENCE.

The third annual meeting of the Social Science Association commenced on Monday, October 10th, at Bradford. The first public meeting of the Association took place in St. George's-hall. The lower part of the hall was not quite full, but the two galleries were well occupied, and among the audience were a large number of ladies. It must be borne in mind, that all the places were paid for. The chair was taken by the Earl of Shaftesbury, the President of the Association, and the platform was filled by a large body of the leading members of the Association, including Lord Brougham, the Bishop of Ripon, Sir J. Ramsden, M.P., the Mayor of Bradford, &c. The proceedings commenced with the Earl of Shaftesbury delivering the opening address, from which, as it has not only been printed but commented upon in most of the papers, we can make a few extracts only :—

TEMPTATIONS ON LEAVING SCHOOL.

But then comes the time when the poorest sort go out into service, and mingle with the world. Then begins the principal danger. Utterly inexperienced, fresh in appetite and passion, with all the wildness of youthful liberty, they are surrounded by every form of allurement. Depend upon it—surely I may speak without fear of contradiction—that temptation to vice and licentiousness, in its manifold and various phases, makes tenfold, aye, fifty-fold more delinquents than all the poverty and ignorance put together (hear, hear). It would be endless to enumerate the sources of temptation: I name but a few,—money left carelessly about; goods recklessly exposed in shop windows; low theatres; fairs; low company; dancing taverns; gin palaces with measures for the least and the youngest; dealers in marine stores, which is the euphonious term for receivers of stolen goods, with the certainty of prompt payment for the thing stolen; and for a class somewhat higher, casinos, betting-clubs, low races, and the like. Now none but those who have seen them, heard them, and, as it were, felt them, can estimate the fatal power they exercise over all, and especially the young. . . . . Let us endeavour to meet one influence by another — establish counteracting attractions. They may be comparatively feeble, but you will save some. There are lectures, "grave, gay, lively, and severe;" unions for mutual improvement; here many of the members may commence, or recommence, the study of the first elements, may fasten on the subject they like best, and pursue it with all the zeal and delight that belong to a natural, and not a forced, undertaking, proving, in the issue, that the education which a man gives to himself is ever the most lasting and most effective. There are reading-rooms, coffee-clubs, Young Men's Christian Associations, lending libraries, and penny banks.

HOW TO DEAL WITH THE STREET ARABS.

I still persist in the opinion that I ventured, some years ago, to embody in a bill, in which power was given to the police to take any vagrant or begging child before a magistrate, who, according to the evidence, might send the child to the workhouse, or any place open to receive it; make the parents responsible for the charge; and imprison them in case of refusal or non-payment. The bill passed the House of Lords, and was rejected by the Commons; but I had the testimony of most of the London magistrates, the police, and many others of great experience, that such a system would, in little more than twelve months, have dried up one great source of juvenile delinquency; for in this, as in other cases, poverty is not the cause; many of the parents, or guardians, if they may be so called, live in clover on the earnings of those wretched striplings, and have, as I have learned on investigation, resources of their own to the extent sometimes of 30s. a week!

PRACTICAL EFFECTS OF SANITARY REFORM.

Let me now earnestly recommend to your attention the report for 1858 of the Macclesfield Local Board of Health. Here you will see at once what a zealous and enlightened body of men can do. They tell you that their system has been in operation for five years. The results, therefore, are beyond question. The rate of mortality in the borough was, before they began, 33 in 1,000; for the last five years it has been 26 in 1,000; so that 1,015 lives have been saved. In funeral expenses alone, calculated from the returns of 232 burial clubs, £8,729 have been saved. But there have been 23,420 less cases of sickness; and the cost of these cases being estimated, according to the data of the benefit societies, at 1s. a-day for 20 days, there has been a further reduction of expense of £28,420. Again, observe the increased average duration of human life. The average age of all who died in the first period was 24 years; while in the surrounding agricultural district it was 34 years. In the last five years it has been 27 years. Each year gains an accession, the last year's average being 28½ years. Thus it proceeds; length of days by three years have been added to each inhabitant. "A few years ago," says the reporter, "statements such as these were received with little favour; indeed, many people affected to ridicule them. Now, however, such vital statistics have assumed an authority which prevents even the most ignorant from questioning their real value." One more fact. "The deaths of children under one year of age have decreased 16 per cent.; and those under five years 4 per cent." This is a sample of what had been already achieved in many parts, and of what might be achieved in every part of the United Kingdom; and well have we a right to say to everyone—"Go thou and do likewise." But the benefits of improvements of dwellings, streets, courts, alleys, of drainage, ventilation, supply of good water, removal of nuisances, piggeries, hay stalls, bone-boiling, poisonous manufactures, with the whole array of noxious agencies, are now almost universally admitted. Yet many pause at the preliminary expense. It will, therefore, be a part of our inquiries to examine the pecuniary bearings of the whole subject, and show, as we most undoubtedly can show, that a financial outlay on works such as these will be amply compensated by a financial return in "good measure, pressed down, and running over."

NECESSITY OF RECREATION.

We must improve and direct the taste of the people, and check, in some measure, the reviving appetite for the detestable amusements of the bull-bait and the prize-ring. Harvest-homes, excursions, and things of that sort are admirable, if duly managed; and I would call attention to the "Olympian Games" at Wenlock, in Shropshire (tested by the experience of ten years), for encouragement of athletic exercises. Sure I am that this manifestation of interest begets a sympathy between all classes. A man will oftentimes be more gratified by your attention to his amusement than by your regard for his necessities. And (if the instance of the Ragged-school may be quoted) we may assert that the prospect of a summer treat on the river, or in the fields, is far more effective for discipline during the whole preceding year than would be twenty times the duration in length of punishment.

LORD BROUGHAM'S ADDRESS.

On Tuesday the great attraction was the delivery of Lord Brougham's annual address, as President of the Council. The body of the hall was, on this occasion, about two-thirds full, and the stalls were entirely occupied. The noble lord commenced by alluding to several topics which had been discussed at the meeting of last year:—

ADULTERATION OF FOOD.

At that meeting it appointed a committee to consider the important subject of the means of preventing adulteration of food; and the council made an elaborate report, referring Mr. Scholefield's Bill to the committee, which approved the bill, suggesting some material amendments. It was, however, unfortunately dropped in the Commons; but the Committee's report will be of great service to Mr. Scholefield in preparing the measure for introduction.

THE PUBLIC HEALTH ACT, 1857.

The same department took into its consideration the unsatisfactory footing upon which the responsibility of Government, as well as that of the local authorities, for the sanitary state of the country, had been left by the Public Health Act of the session 1857, and especially by the want of system which inevitably resulted from the Act being only temporary. The council entirely agreed in this view, and presented an elaborate petition to both Houses, through Lord Shaftesbury and Lord John Russell, setting forth in detail the evils complained of, and strongly urging the making of the Act permanent, with some few alterations. This application to Parliament was attended with success, and the Act of 1857 is now perpetual.

OUR HOSPITALS—MISS NIGHTINGALE.

But the most remarkable papers then read in this department were unquestionably those of Miss Nightingale in which she communicated in a most striking manner the results of her experience upon the construction and economy of hospitals. The council, deeply impressed with the importance of these papers, had them printed in a separate form, and sent copies to all the hospitals in the United Kingdom, and to many medical officers. There is every reason to believe that the best effects have followed from this proceeding; and that this great benefactor to her suffering fellow-creatures will not much longer have to lament, with a feeling of shame, our free country being left behind those under despotic Governments in so material a branch of sanitary policy. Let us pause for a moment to declare, that the choicest notes warbled by the "solemn bird" of night never sounded more sweet to vulgar ears than now sounds to the philanthropist the name consecrated to undying fame by the wise beneficence and generous self-sacrifice of her who bears it [here the noble lord was visibly affected]—a fame far less precious in her estimation than the delightful reflection on pain assuaged and sorrow averted.

OUR WORKHOUSES—MISS TWINING.

When we consider how many thousands of the poor are unfortunately inhabitants of the workhouse, we at once perceive the importance of its better regulation, both as regards its economy, its arrangements, and the labour of its inmates. But the tendency of the governors to exclude the public, and to prevent a full examination of what goes on within the walls, has been found to prevent the improvements which humane and well-informed persons have repeatedly urged. Two most valuable papers from Miss L. Twining were read at our meetings in Birmingham and in Liverpool; and at the former an important discussion led to the appointment of a sub-committee on the proposition suggested by her experience and full knowledge of the whole subject—namely, the formation of workhouse visiting committees. This received the entire approval of the Poor Law Board. The consequence has been the institution of a system of regular visiting of workhouses, especially of their schools and sick wards.

SUCCESS OF THE MAINE LIQUOR LAW.

That no legislative interference can be contemplated until the public mind is prepared, we must admit; such was the course in America, and our palliative measures tend to afford the required preparation. The evil of drunkenness had reached such a height, that in the State of Maine, 25 years ago, associations to promote temperance were formed; they spread through the country; they influenced by degrees the whole community; they induced the magistrates to refuse licenses; and, finally, they obtained a law of rigorous prohibition. Six other States, having a population of 4,500,000, followed the example of Maine. Other States, or districts, with a population of 7,500,000, having made considerable progress towards the same end, more or less rigorously discouraging the sale of intoxicating liquors, and the greatest benefits have resulted to these portions of the Union. But the most important fact is the attempt to repeal the law in Maine, and its signal failure. Like all subjects in a country which, from the nature of the Government and the changes in the holders of all offices, is under the influence of perpetual canvass, this of temperance became a party question, and governors were chosen and removed upon it. Four years ago its supporters were defeated, and a stringent licensing system was substituted in its place. For two years and upwards this plan was tried, with every disposition of the authorities to favour its success. Pauperism and crime, which under the prohibitory law had been reduced to an incredible small amount, soon renewed their devastations; the public voice was raised loudly and with rare concert against the licence plan; a resolution was passed at the State Convention, that the Liquor Law should no more be treated as a party question, and the repealing act was, without opposition, itself repealed. Another effort was made to restore the repeal, but the resolution of the State Convention was referred to, which stood unrescinded, and all attempts to get rid of the Liquor Law were abandoned thenceforth as hopeless. The happy result has been a continuance of the same diminution of pauperism and of crime which had followed upon the original enactment of the law. Upon this very remarkable passage in the history of social science, it may be observed, that at least it affords proof of the experiment having been made, and successfully made, of dealing vigorously with the evil; and if the same preparation of the public mind which led to that experiment being tried, and secured its success, takes place in other countries, the great example may there be followed safely and successfully.

THE STRIKE.

That which regulates all prices, whether of commodities or labour, is the higgling of the market; and there is a kind of individual instinct by which dealers in labour, as well as dealers in other things, adjust their demands. A combined action of 100 or 1,000 substitutes for this individual instinct a fixed rule, conceived without the least regard to the rate of supply and demand, to the circumstances of the party offering and the party accepting or refusing, and enforces that rule in an arbitrary manner, and by no natural appliances.

GREAT EVIL OF FACTORY LABOUR.

The effects of promiscuous association without due superintendence are, most unhappy upon the young of both sexes, but more especially upon females. The constant wages, too, tempt married women to eke out their income by this kind of work, and leave their children unattended to; these children at a very early age are themselves drawn into the same employ. The good feeling and good sense of master manufacturers can alone interpose to rescue the numerous and important class, especially the female hands, from the contamination to which they are exposed, and which is spreading the worst kind of dissoluteness over the working classes. Nor will all the care of the masters suffice, unless they are assisted by the generous and rational co-operation of women in the middle and upper classes of society, moved by pious zeal and acting upon a well-considered plan, for the good of their fellow-creatures in by far the most important of human concerns. . . . . A worse disease than ever filled the wards of hospitals, a moral plague, desolates the haunts of our most gainful industry. Let the spectacle or report of it call into existence a sisterhood that may meet the enormous evil, to prevent which is far better and far easier than to cure.

"INNOCENT" CANDIDATES AT ELECTIONS.

It is said that they only give the money to be expended in a lawful manner; that they have confidence in their agents, and that they even direct them on no account to practice corruption. But the existence of the practice in question is notorious, and they can have no reason to doubt the zeal and the activity, and the unscrupulous nature of those they employ—the jobbing attorney is as well known for an electioneering agent as others of his craft are known for money-lending agents; the publican who bargains that his house shall be used—whose accounts, the bill of the one and the score of the other, are paid without any scrutiny. These things cloak from the candidate's eyes the particular course pursued in spending his money; but that the corrupt deeds have been done he must be taken to know as well as he knows how much they have cost him, and the state of the poll, which is the result. Let him not doubt, then, his own criminality, or flatter himself that he has not spread corruption among his fellow-creatures, sapped their morals, produced fraud and falsehood, ay, even perjury, merely because he has wilfully shut his eyes to the acts of those by whom he has done the deed.

HOW WE DEAL WITH "INNOCENT" M.P.'S.

The loss of the seat is all the penalty that we denounce to deter the great malefactors. I speak here from some experience of the inefficacy of such penalties. While the African slave-trade was only punished by the forfeiture of the ship, it mocked the law, because the profits of a successful voyage covered the loss of many failures. The wrong-doer was content to

Digitized by Google

run the risk in the eager quest of great gain. So the candidate and his agents in their eager desire of a seat will run the risk of defeat, and encounter any cost of money. But when I made slave-trading felony, the pirate who had cheerfully run all pecuniary hazards would not expose himself to be transported as a felon, and the execrable traffic ceased. So it is clear that candidates and their agents, whom no dread of defeat or expense can restrain, will shrink from the hazard of an infamous punishment, when they see the treadwheel as well as the House of Commons at the end of the path which leads from the hustings. It may be objected, that the severity of the infliction would prevent the execution of the law; and, no doubt, as long as the enforcement of it is left to a tribunal like the election committee, this result is to be apprehended. But how much longer are we to continue the only nation which leaves the execution of its penal laws to private individuals, inflicting upon the party injured by an offence the additional injury of prosecuting the offender?

THE LUDICROUS SIDE OF BRIBERY.

For, unhappily, the offence of bribery is treated too lightly, both by parties and by the public. It seems to be taken for granted, that all men would bribe if they could; the only shame is being found out, and that sits very lightly. In a late newspaper discussion on the subject, the comparison between drunkenness and bribery in this respect was very ingeniously and very soundly instituted. There is something ludicrous in both; as the crowds flock to see an actor play the drunken man, so do they flock to an election committee to hear of a kitten sold for £50, and a £20 bank-note found in the teapot of a voter's wife. But serious—truly serious—nay tragical, are the consequences of the one fault and of the other. They who laugh at the mimic exposure of intemperance would be shocked to witness the real midnight orgies of the gin-palace, and would perhaps shed tears over the wretched home, forlorn wives, and starving children of its frequenters; and they who have made themselves merry at the committee with the gibes of counsel or the tales of witnesses, may shudder to reflect on the consequences of electoral corruption, itself a great offence, and leading to dishonest courses that end in still greater delinquency.

The proceedings of the Conference terminated on Saturday evening. The Council and friends of the Association have reason to be gratified at the success of the Bradford Congress. There is, however, something to be regretted, which is, that owing to the large number of papers sent in, and the limited time allowed to the Conference to get through the business, many contributions remain unread.

SIR J. K. SHUTTLEWORTH'S ADDRESS.

Sir J. K. SHUTTLEWORTH, president of the Social Economy Department, delivered a lengthened address at eleven o'clock on Saturday. We have only space for the concluding remarks. The first effect of a rise of wages (said Sir James) among a rude people has commonly been the increase of the coarser forms of sensual enjoyment. Thus, Mr. Porter some years ago estimated the amount of beer, spirits, and tobacco consumed by working men in the United Kingdom at £53,411,615, the spirits amounting to £20,810,208, the beer and porter to £25,383,165, and the tobacco and snuff to £7,218,242. "Now," says Mr. C. Morrison, "without going the same length as those who would proscribe stimulants altogether, it may be assumed, without much contradiction, that nine-tenths of the spirits stated in this estimate, one half the beer and porter, and half the tobacco and snuff, were either actually pernicious in the use, or at least 'superfluous' (p. 43). The evidence of the amount of crime and pauperism fluctuate so much with the state of the law and its administration, that probably no standard of the moral and intellectual condition of our population is so sure as this inordinate and unnecessary use of intoxicating drinks and tobacco. This is fatal proof that though the pauper, bound by the law of settlement, is our last actual slave, some of the worst consequences of serfdom remain. The workman is free to emigrate from the moorland cottage, or the hut in the fens, or the mud hovel in a stagnating agricultural district, or from an Irish bog. He may settle in the midst of the vigorous life of the English coal fields; he may be trained gradually with better food, lodging, and clothing, by the discipline of toil, till he has a muscular energetic frame for out-door work, or has gained a wiry, highly nervous organisation for the skilled manipulations of the factory; he may submit his will to the regulated system of the division of labour, and to the influence of opinion on society. He may combine with perfect respect to the law to adjust the relations of labour and capital. But though in all this there is gain, the animal nature of the ancient serf reappears. Ages ago his progenitor was a beast of burden—sold as a chattel of his owner, when life was subject even to his caprice. He has not risen to real freedom until he has acquired self-control. Emancipated from the 'mund' of his lord, he has become his own master without the power to control his own appetites. In his new life, the mind of the workman is mainly developed by his industrial and social training. The workshops and the press have done more for him than any other agency, and next to these the Sunday school. But it is to be confessed that that portion of the workmen who spend their evenings in sensual excesses have not yet become freemen. The tendencies to democratic change are obvious, and are so strongly indicated by the origin, history, and theory of our constitution, that they are in some form ultimately irresistible. We have, therefore, to determine for ourselves whether we value the personal liberty of action which we enjoy under the mixed political power of this country, and whether we cannot preserve it, while we proceed to fulfil the apparent destiny of our race, by completing the freedom of the mass of our countrymen, by raising them to the dignity of freemen in the power of self-control, and to the intelligent exercise of the rights of freemen by the recognition of their claim as a class to a more direct influence in our representative system. Something has been done towards this result. The cities, towns, and villages of our coal fields, into which in the last century the population has emigrated, were irregularly constructed, unpaved, unsewered; the houses often rude and unhealthy. There was bad scavenging, little lighting, no sufficient water supply. Though we had suffered from the warnings of typhus and of an excessive infantile mortality, we needed to be aroused by the visitation of cholera to the condition of our towns. That disease shocks by the appalling mystery which shrouds its advance, and the rapidity of its action; and by the suddenness with which it ravages the population, the singular manner with which it marks by its path where the foulest squalor, the thickest miasma from filth, attacks the frame wasted with want, and the deepest moral degradation, combined with the lowest condition, herd together, attracted public attention to the sanitary regulation of our towns. Great advance has been made during the last twenty years in these forms of improvement, both in town and country. The physical condition of the people has also been greatly ameliorated by the cheapening of food and clothing, and all the other necessaries of life, while their habitations and wages have improved. The protection of women and children under thirteen from excessive hours of labour, the prohibition of the employment of women in mines, have had a practical effect beyond the mere letter of the law. Excessive hours of work for men are discountenanced by public opinion; factories and mines are subject to regulations for the protection of life and health; and what the law does not require, an intelligent sense of Christian duty often effects. The new hamlets, villages, and towns, have in the last half century, and especially in the last 25 years, been organised as centres of Christian influence, by the building of churches, and chapels, and schools. We have spent many millions on these buildings. We probably now expend £2,000,000 annually on the education of the people. In the last quarter of a century, literature has been cheapened for the use of the masses by such societies as that for diffusing useful knowledge, over which Lord Brougham has presided since its origin. The press has become the great instructor of the people in all social and political topics. An earnest practical effort has been, within the same period, made to foster in the working population, habits of prudence, by savings banks, in which £30,000,000 are accumulated; by building and benefit societies, in which large funds are accumulated; by the possession of cottages and small freeholds; by temperance leagues; by societies of mutual improvement and mechanics' institutions; by advice, remonstrance, and example. The chief object of this brief review of the social history of the most numerous class of our fellow-countrymen will have been attained, if it tend to inspire a lively faith in their destiny: if it teach us to recognise in our history how all the elements of our social state react on each other; how each advance in order, in peace, in social policy, in civil and religious freedom, in the powers of mind over matter, and especially

Digitized by Google

in the divine influence of charity,—has slowly but surely emancipated our humblest classes from serfdom, from villanage, from pauperism, and now tends to lift them up to the enjoyment of all the privileges of intelligent freemen. Nor have I been without hope, that while such a review may thus strengthen in the beneficent tendency of all providential laws, we may, in contemplating their operation, learn to restrain a short-sighted impatience. Fifteen hundred years have elapsed in our history, and yet the theory of our Saxon constitution is only partially realized. The schools of Edward V. and Elizabeth only partially educate our middle class. Some generations must pass before home education in the cottage will generally worthily co-operate with the elementary school. How long a time will be required ere the vast annual waste on intemperance is converted either into a means of rational enjoyment, domestic comfort, or into capital, for the elevation of those who work with their heads! Whatever be the time required, we have to maintain our faith in the beneficent tendency of all great providential laws, whether in the great eras of material forces and animal life, or in the epochs of social change. All history teaches us the earth was in the vast ages of development slowly prepared by one great design for the habitation of man. So in the history of our race, whatever have been the catastrophes which have overwhelmed empires—the internal ferments which have appeared for a time to cause a social chaos, slowly, but surely, in the eye of Him with whom a thousand years are but as one day, man has been making a conquest of nations—asserting and exercising the dominion of mind over matter—emancipating himself from debasing animal instincts—raising class after class from serfdom, ignorance and brutishness—and prefacing for that reign of Christ in the hearts and institutions of mankind, when every man shall sit under his own vine and his own fig-tree, none daring to make him afraid.

CLOSING GENERAL MEETING.

The closing general meeting of the Conference was held, Oct. 15, at twelve o'clock to-day, the Earl of Shaftesbury presiding.

Lord Brougham announced that at a meeting of financial reformers held in the course of the week—one of the largest meetings of the Conference at which he had been present—the important subject of direct and indirect taxation was very carefully considered. The indirect taxation of the Country fell with the most pressure on the great body of the people. The bulk of it was paid by the working classes on five articles—tea, sugar, malt, spirits, and tobacco—and the produce to the revenue was £50,000,000 annually. The question was how to raise that money, if the indirect taxation on those articles was given up. If he said to his right hon. friend Mr. Gladstone, "You ought to give up the duty on those articles," that right hon. gentlemen would say, "I am quite with you on that point, but what are we to do for the money? Now, the meeting to which he was referring had come to the conclusion, that, "as far as possible," indirect taxation should be replaced by direct—meaning by "as far as was possible," as far as was consistent with justice to all classes of the community, to all sorts of properties—as far as was consistent with the exigencies of the public service—of our army and navy, and of our civil Government, and also as far as possible consistently with keeping good faith with the public creditor. The words, "as far as possible," covered all those matters. The general feeling of the meeting was, too, that the best sort of direct tax was what they called a wealth tax—a tax on all sorts of capital, whether in land, in money, in goods, in furniture—on, in fact, every species of feasible tangible property. That certainly was the opinion of the great bulk of the meeting. Whether it was his or not, he would not say. He thought that the general opinion of the meeting was also decidedly in favour of a tax on wealth rather than on income, for various reasons, and, amongst others, on account of the inquisitorial character of the latter impost. It might be asked, "What would you do with the man of £5,000 or £10,000 a-year, and who has no capital whatever?" Well, if such a person saved his income, or a portion of it, his savings would become wealth, and would therefore be taxable; but if he spends it, and that indirect taxation were abolished, he would escape taxation altogether with his £5,000 or £10,000 a-year. It had, however, been suggested, that in such cases the man himself should be assessed. That was, that his income might be estimated at an annuity, and that annuity taken as equivalent to a certain capital, and the wealth tax applied to the recipient. That seemed to be the general feeling of the meeting. Besides the five articles which he had mentioned as producing so large an amount of indirect taxation, there were 485 articles which paid duty, and which only produced £700,000 a-year to the Country. Surely the duty on those articles ought to be done away with. He wished to mention that he had received from his reverend friend the Rev. Vernon Harcourt a copy of a resolution passed at Aberdeen during the meeting of the British Association, declaring that the present mode of taking scientific evidence in courts of law was most defective. He (Lord Brougham) fully concurred in that statement, not only as regarded medical, but any kind of scientific evidence. He wished to mention that he had received from his right rev. friend the Bishop of Oxford a letter, in which that right rev. prelate expressed his regret at not being able, owing to a pressure of episcopal duties, to accept the invitation of the association, and be present at the Bradford Conference. The noble lord concluded by proposing a vote of thanks to Mr. Hastings, the general secretary of the association.

Mr. A. Kinnaird, M.P., seconded the motion, which was adopted.

Mr. Hastings returned thanks, and announced that the number of members had been 3,978, and of associates 645, besides which 324 transferable tickets had been issued, making a total of 1,366. The number of papers read was 175—namely, in the jurisprudence section 22, in education 38, punishment and reformation 30, public health 30, social economy 50, and at special meetings 8. The council had accepted the invitation received from Glasgow to hold the next conference there.

Votes of thanks were then passed to the mayor and magistrates of Bradford, and other local authorities who had assisted in forwarding the views of the association; a vote of thanks was also passed to the Press, Lord Shaftesbury taking occasion to pay the London and provincial journals a high compliment.

A vote of thanks, passed by acclamation, to the noble president concluded the proceedings of the Conference.

MEETING OF THE WORKING CLASSES.

A meeting of the working classes of Bradford was held Oct. 14, in St. George's Hall. The Earl of Shaftesbury, Lord Brougham, Lord Radstock, the Right Hon. W. Cowper, M.P., the Right Hon. B. Adderley, M.P., Mr. Monckton Milnes, M.P., and other leading members of the Social Science Conference, attended. The great hall was densely crowded on the occasion; and, amongst the audience, was a large number of females.

The chair was taken by the Mayor of Bradford, who, having said a few words, introduced Mr. Adderley to the meeting.

Mr. Adderley, who was very warmly received, then addressed the assembly. He said that all classes at that meeting had a mutual interest in the proceedings and objects of the Social Science Conference. They were all working men, whether they laboured with the head or with the hands, and their interests were the same. All classes in society were necessary to each other. The screw and the nut did not fit because they were like each other, but because they were not like. He hoped they were not all screws. Two screws, if brought together, would be of no use; but if the screw and the nut were used together they served an excellent purpose. They had all different duties to discharge, but they ought to endeavour to serve each other.

Lord Radstock observed that the members of the Social Science Conference were working for those who composed the bulk of that meeting, as well as for themselves. On examining the subjects discussed in the various sections, it appeared manifest that the working classes had great duties to perform in respect to those subjects. He had ascertained that there are in this kingdom from 600,000 to 700,000 factory workers, whose wages amounted in the aggregate to £20,000,000 annually. Here was enormous amount of money which the employed in factories had under their control. The great cause of misery and destitution was improvidence; but if every one of the factory people would only lay by 4*d.* a-week, a fund of £500,000 would be provided, and this would be amply sufficient to maintain all in distress. The United States had been described as the paradise of the working man. There was no doubt that wages were high and provisions cheap in that country; but pecuniary prosperity did not of itself give happiness; and certainly there was not more happiness in the United States than

Digitized by Google

in Old England. In some parts of the United States the taxes were such as people here would be very unwilling to pay. He had been in America, and some time ago a friend of his in New York told him that the taxes he paid there amounted to 13*s.* 4*d.* per cent. on his assessed capital, which was equal to 25 per cent. on his income. A man with £100 a-year paid £25 to have the streets swept, yet he (Lord Radstock) had seen streets in New York where the mud reached to his knees, and in Broadway he had seen a hole large enough to take in the whole of the platform. It had been found, on inquiry, that £700,000 of the money raised by the city of New York was unaudited and unaccounted for. That led to further inquiry, when it was found that the contractors for sweeping the streets had been paid two or three times over for work which had never been done. There were many things which he admired in the States; but the most intelligent men there considered that all their wealth and prosperity did not give them more true liberty and happiness than we had in this country. There was a right kind of liberty and a wrong. They had plenty of the latter in the United States. A little man, opposed to slavery, was walking down one of the streets in a town in a slave State, when a tall, strong man attacked and knocked him down. On the reason of such an assault being asked, the answer was, that America was a free country, and a man could do as he liked. The fact was, wealth had deprived the people of America of the power of self-control. The working men of England should look to these things, and learn that the greatest gift to have was the power of self-control, that enabled a man to grapple with difficulties.

The Right Hon. J. Napier said he had been a working man all his life, and had never complained of his lot. He frankly confessed that he had been accustomed to regard the manufacturing population with apprehension, as persons who were ready, when an opportunity occurred, to turn everything upside down; but he was bound to say that he had never seen a better foundation for society than since he came to Bradford. The chief, if not in reality the only, source of a country's happiness was an industrious and moral population. He was himself the victim to a kind of strike; for he had been turned out of employment against his will. It was just as that event occurred Mr. Cassell sent him a number of essays, written by working men, to read, having made him one of the judges for awarding the prizes which he had offered. He must say that the ability with which some of those productions were written astonished him. When in Parliament he had always given his vote for the working man; but there was one vote of his in which he specially rejoiced. It was a vote to preserve one day in seven as a day of rest.

Mr. Cowper, in some brief observations, referred to the advantages which accrued to the working man from the promotion of social science.

The Earl of Shaftesbury, who was greeted with loud cheering, said he and his friends on the platform now occupied a very different position in respect of the working men to that which they had done some years ago. Then they had to ask the working man, "What can we do for you?" Their question now was, "What can you do for yourselves?" On themselves depended their present and their future welfare. He delighted in meetings of this kind, when men of all degrees and ranks in England met together. He liked also to see men from foreign countries come and hear with their own ears, and see with their own eyes, that England was not a country in which the rich man trembled and the poor man frowned. He advised the working classes to make good use of the boon they enjoyed in the shortened hours of labour. He trusted that their leisure time would not be given to drunkenness, but applied in social improvement. Nothing so much impressed him with a sense of true dignity, or gave him higher hopes for the future, than to go into the house of a working man and see happiness and piety prevailing there, and the parents devoting themselves to bringing up their children in the love and fear of Almighty God. This was what showed the true strength of a nation. This was what Burke would have called "the cheap defence of nations." He earnestly recommended the working men to elevate their own intellects by reading works calculated to improve the mind, and to carefully educate their children. He would also call on them to be attentive to their wives. There were in society depraved and abandoned women who would lead their husbands astray; but, as a rule, women were able to advise their husbands. The wife had often more discernment, more quickness, more feeling than the husband, and the latter would do well to take her advice in all matters, and to follow it too. He thought the working men might have little social science conferences of their own: and amongst other questions they might discuss this: Whether it was not desirable to keep married women at home instead of letting them go to work in the factory? He would ask whether the working man does not lose more by the absence of his wife from domestic duties than he gains by her earnings in the factory? Then, he would say, avoid strikes. He did not deny their right to combine and strike; but the exercise of a right was often anything but advisable. If they had a grievance, let them go boldly and state it, and if justice were on their side, he believed they would be listened to. He had never known a strike answer; but he had known a great many to bring irretrievable ruin on those engaged in them.

After some observations from Mr. W. Chambers of Edinburgh, and Mr. Monckton Milnes, M.P.,

Lord Brougham, who had just returned from Sheffield, whither he had gone to attend a meeting, next presented himself, and was received with very warm demonstrations of applause. He said that he could not address a meeting of the men of Bradford without expressing his admiration at the good conduct they had exhibited. It was always more useful to point out defects than to indulge in panegyrics, and he would take the liberty of alluding to one defect which the working men of Bradford, in common with all operatives, were chargeable with. It was that they did not sufficiently estimate the absolute necessity of provident and prudent conduct. The particular kind of improvidence which he was going to specify might be called comparatively trifling, and was easily remedied. It was that they did not sufficiently reflect that they were not entitled to any relaxation or amusement whatever till after their day's work was done; that they were not entitled to even the relaxation of reading or instructing themselves till after they had finished their day's work. Their highest interest and duty was to follow their regular callings, and so secure their independence. Now he was speaking as a working man himself, and that was the rule he had always followed. He never considered even one hour or minute his own, or considered himself entitled to relaxation even in the way of instruction—out of the line of the profession he followed—till his day's work was honestly and entirely done. He had been a working man all his life, and what was more, he had all his life lived upon wages. Yes, it so happened that he had never spent one halfpenny of any little property he enjoyed, or of any sum that might have come to him; he had always lived by the sweat of his brow. Another subject to which he would refer was the kind of relaxation in which the working classes should indulge. He entirely agreed with what had been said by other gentlemen since the commencement of the conference, on the subject of reading. It was a great misfortune that at one time they had so large an issue of inferior works of fancy and imagination. He did not at all object to works of fancy. The proverb was that "all work and no play makes Jack a dull boy:" so, if reading was all dry, hard reading, unrelieved by anything that was light and fanciful, the mental stomach would not digest well. Therefore, he did not object to works of fiction, but to those that were not of the purest kind—to novels of a light kind, full of extravagant descriptions, of impossible scenes and sickly sentiment, and all kinds of things that never could have occurred among men and women in this world, he had a decided dislike. There had, however, of late years been a great improvement. Few of these trashy works were now circulating, while there were in circulation many excellent works of fancy, the perusal of which might be productive of much good. Now, seeing that he had been a working man all his life, and was so at present, it might be said that he should at his time of life—and he was a good deal over thirty years of age—take a little rest, and that he had earned a title to a little repose. But the great Christian poet Cowper had said with truth—

"A man unoccupied is not at rest,
A mind quite vacant is a mind distressed."

And he had resolved, that so long as Providence allowed him to retain his faculties, he would not fall under the description of "a man unoccupied," or a "mind quite vacant." He would continue, as far as he was able, to live a life of labour, to which he had been so long accustomed. He had heard of anticipated political changes;

Digitized by Google

but on that point he would not enter further than to say, that such changes might possibly be improvements, but that they ought to be adopted only after much forethought and circumspection, and they ought to be moderate in their character. And this he would emphatically say, that it was the duty of every class, and of none more than of the working class, to be content in the meantime with things as they were, and not to lift up hand or finger to alter the law by force.

A vote of thanks to Lord Brougham and other distinguished persons present on the platform was carried with acclamation, and the meeting separated.

The above addresses were listened to by at least 3,500 persons.

THE condition of many parts of London and the suburbs remains very bad; overcrowding increases, and there is the greatest difficulty in obtaining healthful lodgings at a reasonable rate. One poor man writes to us—"What is the cause of the exorbitant price we all of us have to pay for our homes? I, with my family, live in a room barely four yards long by three yards wide, for which we pay 3s. a week unfurnished; and notwithstanding much floor-scrubbing, bedstead-cleaning, and clothes-washing, we are devoured with bed vermin, through the necessity of keeping a fire close to the beds all day for cooking purposes. The dwellings of the poor are horrible dens of disease and discomfort. The cursed single-room system produces fever and consumption among children, and drives parents to the public-house and to sin." In the pleasant suburb of Brompton, with its wide roads, admirable museum, good schools, front gardens, squares, crescents, and trees, there are rows of houses just behind all the gay, airy surface, which are absolute hot-beds of disease. Each room is occupied by a family, at a high rent, and the doctor is a constant visitor. In the heart of London abominations maintain their places for generations, and improvements are effected with the greatest difficulty. On a recent hot Sunday we passed down Drury-lane. There was no air stirring, the footways were full of women and children sitting and standing about the various courts behind; there was nothing bright but the gin-shops, which were ablaze with gas, and were driving a roaring trade. The condition of the atmosphere was disagreeable everywhere; but on passing the end of a narrow turning on the west side of the way, at the north end, called Ashlin's-place, the effluvium was sickening; and, when led by the nose we passed down it, this became worse and worse. It was too dark to discover much of its condition, so we returned soon after, in the morning, when the sketch of a block of building in it was made; a building which was doubtless erected before the date of the great plague of 1665. It is asserted, with reference to that terrible pestilence, that the first case occurred in Drury-lane, opposite to the coal-yard. Now this house, which is situated in Drury-lane exactly opposite to the coal-yard, is perhaps the very house in which the plague first showed itself.—*The Builder.*

Notices to Correspondents.

Our correspondents are requested to observe that we cannot be answerable for the insertion of any articles received after the 22nd of the month, or Advertisements after the 27th, though we shall always endeavour to meet their wishes.

The Advertisements in "*The Philanthropist*" will henceforth be confined to Charitable Institutions, and such as bear immediately on the social improvement of the community. Existing contracts will, of course, be concluded.

The Editor requests that any circumstances connected with Charitable Institutions, which it may be thought advisable to bring before the public, may be communicated to him at 337, Strand, on or before the 18th of each month.

N.B.—As "The Philanthropist" will be published in future by Mr. Tweedie, 337, Strand, the Editor requests that all communications may be forwarded to him there, where they will receive immediate attention.

Notice.—All sums due to "The Philanthropist" for Advertisements, and for Subscriptions from this date, to be paid to W. Tweedie, 337, Strand. No other person is authorized to give Receipts.

Jan. 1st, 1859.

Notice.—Subscribers of £1 1s. and upwards to the Reformatory and Refuge Union, 118, Pall Mall, will be supplied on application with the "Philanthropist," a Monthly Journal of Social Economy.

**** Attention is called to the following scale of charges for Advertisements:—*

SOCIAL SCIENCE GAZETTE,

November 1, 1859.

THE SOCIAL SCIENCE CONFERENCE AT BRADFORD.

WHATEVER may have been the interval which in former times separated the upper from the lower classes of Society, it cannot be denied that it has gradually been bridged over of late years, by mutual good-fellowship and understanding. In the present state of feeling it ceases to be a novelty to find a noble Earl shaking hands with a shoe-black, acknowledging, both by word and act, that true nobility consists not so much in rank and position as in the honest and conscientious performance of those duties which belong to a man's station, be it what it may. This is a wholesome state of things, the consummation of which may be, in a great measure, attributed to the truly noble conduct of the Earl of Shaftesbury. But the persevering endeavours of the noble Earl, from his earliest years, have had important accessories; prominent amongst which will stand the spread of cheap literature, combined with increased amount of education. In early ages the lower classes, with few exceptions, appear to have submitted the right of thought to their superiors in station. Now all classes combine to prove that "man is a thinking animal." There is clearly a vast amount of elevation in the tone of the humbler classes. Mechanics' Institutes, with cheap newspapers, and instructive periodicals, have called forth in many of the humbler classes very considerable latent powers, and these have received their encouragement by the kindness and rightmindedness of those well-educated noblemen and gentlemen who have not scrupled to attend these institutes and give lectures on popular and instructive subjects. The result has been that the powers of thought in the lower and middle classes have been called into action. It may be true that, in too many cases, a wrong and even evil bias has been given to many minds by pernicious publications, or ultra democratic periodicals; but, on the whole, there is to be found in all classes of British subjects sufficient good sense on which we may rely that an increased extension of sound practical information, on all subjects affecting the welfare of the general body of society, and tending to bring about a better understanding of their mutual responsibilities and dependence one on the other, will go far to counteract the pernicious influences to which we have alluded. In proof of this we may without hesitation adduce the interest taken by the lower or working classes in the Association which lately held its Conference at Bradford; their evident appreciation of the honest endeavours of such men as Lord Brougham, Lord Shaftesbury, and others, to better their condition; the attention they invariably paid to the remarks addressed especially to them at the meetings of the Association, at Birmingham,

Digitized by Google

at Liverpool, and at Bradford, and their hearty acknowledgement of the justice of those remarks even when their errors were pointed out. It is this conduct which proves that the combined sources of instruction now before the public of all classes are not misplaced, and that the people are in a ripe condition to receive information on any one of the various departments into which the Social Science Association has rightly divided its operations. Lord Shaftesbury's opening address, of which we give elsewhere large portions, will be read by all with satisfaction. Without at all disowning the difficulties which beset the growth and progress of such an association, he gives, in a clear and graphic style, his own remarks on each separate branch of its labours—remarks on which it would be almost presumptuous in us to enlarge. Let them be read, and the reader cannot fail to be instructed and improved. It is no small testimony of the public appreciation of the probable value and usefulness of such an association that, in spite of the depreciatory tone in which the leading journal of the day spoke of the Association, it yet attracted together a large number of persons, whose standing, worth, influence, and knowledge, form a sufficient guarantee to the general public that the Association is no mere clap-trap, but one formed and adapted to supply a real want; that it may be safely relied upon for practical information on such points as affect the general welfare of the public. But not merely does it attract the high and noble. At Birmingham, at Liverpool, and at Bradford, successively, large and crowded meetings of the working classes were held, patiently, nay, thankfully, listening to the pointing-out of their faults, and their remedies, by those whom for years they as a body have looked upon as indifferent to their troubles, but now begin clearly to recognize as their friends and well-wishers. What glorious opportunities such meetings hold forth for the promulgation of hints, which may sink into the minds of the more thoughtful among the working men, and produce fruits of inestimable value to their future welfare. Such a hint we take to be the noble Earl of Shaftesbury's remarks to the working classes in St. George's Hall, on the 14th October, when he told them "he thought the working classes might have Social Science Conferences of their own; and, amongst other questions, they might discuss this—Whether it was not desirable to keep married women at home, instead of letting them go to work in the factory? He asked, did not the working man lose more by the absence of his wife from domestic duties than he gained by her earnings in the factory?" There are many thoughtful practical men among the working classes able to prove an affirmative to his lordship's questions, from whom the truth would be more palatable than from any others. The Social Science Conference, on the whole, was a very decided success, and a clear proof of a very extended interest in social matters, and that there are few subjects connected with social amelioration which have not been separately pondered upon by various intelligent persons, whose thoughts required but circulation. The Social Science Association will elicit *thoughts*, and, by the free publication of them, excite thought in others, and thus truth will make its way and be established. It gave us much satisfaction to find that the subject of intemperance received so much more attention than it had done at the two former meetings. Very little real improvement can take place in the condition of the poorer classes until vigorous measures shall have been taken to deal with intoxication. It stands foremost by a great deal amongst the causes of crime, of disease, of poverty, of degradation, and of death. It is the origin of by far the greatest part of the public expenses in dealing with these evils. Christianity, economy, and public welfare alike demand that this subject should not be let alone, and we have great hopes that when such a body as the Members of the Social Science Association shall have well weighed the subject in all its bearings, the causes which produce it, and the best method of checking it, their powerful influence will have the success which has been denied to the painstaking individuals who have so nobly battled against this great and fearful evil; backed, indeed, by thousands of the poor and middle classes, but almost unsupported by those whose duty it should be to help them.

Lord Brougham's remarks are, as might be expected, full of his practical knowledge, and will add, if it be possible, to the estimation he has earned on all hands by his wonderful mind. Many are the deeds for which a grateful public will ever reverence his name. The years will come when the most glorious monument raised to his honour, firmly grounded upon the thanks and the gratitude of every class of society, will be that which he was the main instrument of calling into existence—The National Association for the Promotion of Social Science.

OUR HOUSELESS POOR.

With all the benevolence of the English people, with all the practical information ever and anon brought before Parliament, with all the powers vested in the Poor Law Board, it seems marvellous that some better means cannot be adopted to relieve the temporary necessities of our houseless poor. What occurred at Greenwich on the 11th of October, is but one instance of what appears to be a general system, and is a disgrace to the country. On that day it appears that eleven miserably attired emaciated objects were brought before Mr. Combe by a police-sergeant, charged, not with crime, but with that which, in this Christian country, appears to be looked upon as a crime, poverty. Forsooth it was found that, having no home, no food, and but little clothing, and having applied for admission to that place which had been provided by law to shelter them, they had been told the house was full, and instead of keeping awake all night, or wandering from one post to another, had actually *dared* to attempt to sleep on the public footway in front of the Greenwich Union House, which ought to have sheltered them. What mattered it that tottering old age was there, even seventy years? what mattered it that tender childhood was there, even barely of eight summers? They have no right to be weary, no right to attempt to sleep, unless they had proper homes to go to! Fortunately humanity is to be found in police constables; and what assistance the law bid them look for at the *poor-house*, but which they looked for in vain, was to be found in the police station. Mr. Combe took, so far as his jurisdiction was concerned, a right view of the matter, and discharged the accused; but it is sad to feel that they took their departure from the court with no other prospect than that of having to apply at some other union houses at night for the relief they so greatly needed, and perhaps receiving a similar answer to that they had received on the previous night. Is this a state of things to be allowed to continue? As winter closes upon us, thousands more will be reduced to a similar state of destitution; and what are they to do? Many are too wise to submit to the cold streets as their resting-place, and they will not hesitate, by breaking windows or other acts, to secure what they require in the way of food, raiment, and shelter, in the prison; and this in England! the land of freedom, the land of wealth, the land of learning, the land of Christianity! Oh, that some master mind among our senators would

Digitized by Google

take up this subject with vigour and perseverance! It may be that many are but little deserving of sympathy; but even these, when reduced to such a state as that in which these poor creatures were found, should be dealt with as human beings; and, assuredly, the aged, cripple, and the tender child, should be able in emergency to find some better sleeping apartment than the pavement in the street. Let our Legislators look to it; let the Poor Law Board look to it. Many valuable suggestions have, from time to time, appeared in the papers. Let those who have given the subject their continued thought be requested to lay their thoughts before some body competent to deal with the subject; or, it may be, better than all, let some benevolent person, who has the means, offer a handsome prize for two or three essays on the subject, showing not merely theories, but a practical method of dealing with the difficulties with which the subject is unquestionably surrounded. There are thousands of minds, unknown it may be, who see with regret the present state of things, capable of suggesting the remedy, if properly called out. Let the one who shall prove able to solve the difficulties meet with some such reward as met Mr. Rowland Hill's valuable suggestion of the penny post. Let him be appointed to some post where he may have opportunity of carrying into effect his own ideas. The prospect of such a reward will elicit, we firmly believe, valuable information; and sure we are, that to one who shall successfully put a stop to the present disgraceful state of things, the whole public will so feel their debt of gratitude, as to rejoice in his elevation to a high post of honour and emolument.

REFORMATORIES, REFUGES, AND INDUSTRIAL SCHOOLS.

The Reformatory and Refuge Union has just prepared a complete classified list of all the reformatories, refuges, industrial schools, prisoners' aid societies, and penitentiaries in Great Britain and Ireland, giving at one glance the post address of each, with the date when it was founded, the amount of accommodation it offers, the ages preferred, the class received, as well as the terms of admission. It is impossible to speak too highly of this little book, not merely as a proof of the earnest desire of the Union to assist all those who may be at a loss as to the best method of assisting objects of compassion, and as an example of the trouble the committee are willing to undergo to effect their objects, but as a hand-book adapted for all benevolent persons; giving them at once information as to what is being done to counteract the evil influence of crime, to stop its sources, and to provide for the reformation of its victims; and a means of at once ascertaining where and upon what considerations, any one who may have fallen into crime, or may be likely to fall into it, may be placed so as to be under the influence of better habits, and religious and industrial teaching. There is not a parish which has not some such case, and many are suffered to go on and grow in crime, simply because those who pity them, and would save them, know not how to set about such an object. Even the minister himself is at a loss, and many are the letters we have received from clergymen and others, detailing cases in their districts, with which they know not how to deal, of boys or girls who appear likely to be lost and ruined, unless some means can be found of separating them from their evil association; not, perhaps, actually as yet grossly criminal, but showing every disposition to fall into crime; not brooking control by their parents, or, it may be, neglected by them; wilful and disobedient, and yet sufficiently young to encourage a hope that a change to a reformatory or refuge, where they may be placed under kind but firm discipline, may, under God's blessing, save them as brands from the burning. In such cases, this little book would prove invaluable. It should be in the hands of every clergyman, of all churchwardens and guardians, and such benevolent persons as feel for, and desire to aid, such cases as those to which we have alluded. The price is but sixpence.

Lest we should mislead any of our readers, we may add that it will not be published till the 1st of January next; as, although already full of information, there are yet many institutions of which particulars have not been received; and it is hoped that before the end of the year not only will these have been furnished, but such errors as may have crept into the proof may be corrected. There will then be an amount of information in about 24 pages, which, in our opinion, can scarcely be equalled. The thanks of the public are due to the committee, for the great trouble they *must* have taken in the compilation of this little book; and we hope, both as an encouragement to the committee to persevere in such labours, and for their own sakes, a large number of benevolent persons will forward their orders to the secretary, at 118, Pall-mall, for this excellent hand-book.

THE SOCIAL EVIL.

Those who have read the works of Dr. Sanger, of New York, and Mr. Acton, of London, on this highly important subject, may acknowledge considerable research, and yet may perhaps not be aware that both apparently take in a wrong figure at the commencement of their calculations, and hence, naturally, in their summing up, go far astray. Both start with the assumption that "prostitution is inevitable in the very nature of things." It is not a subject into which it would become us to enter deeply in these pages; but it is a part of our duty, where we conceive that a clever production is likely to mislead, to recommend to our readers any work which, in our opinion, sets the matter in a right light, confutes the errors which may be promulgated, and brings to bear upon the subject, not only practical research, but a Christian feeling. Such a work is Mr. Miller's work on this subject, which we are glad to find has gone through seven editions. The circulation of such a book amongst those who think at all on "The Social Evil," as it is termed, cannot fail to do good. Let such apply to Sutherland and Knox, of Edinburgh, or Simpkin, Marshall, and Co., London, and they will be repaid. It is absolutely necessary in these times, that the subject, unsavoury as it is, should be practically dealt with, and as yet no one that we know of, has handled it in a better or more vigorous and Christian spirit than Mr. Miller, who is a Professor of Surgery in the University of Edinburgh, and evidently a right-minded man.

Correspondence.

"NOT AT HOME."—FASHIONABLE ETHICS REPROVED.

The following is extracted from a sensible letter which appeared in the *Brighton Gazette*:—

"*To the Editor of the Brighton Gazette.*

"Sir,—The Brighton season having just now commenced, a favourable opportunity offers for presenting a few hints on some of the absurd customs which are too prevalent in 'high life.'

"'Not at home.' How few of those who use this phrase would have the moral courage to acknowledge to others, or even the mental candour to admit to themselves, its true meaning, as signified by them! It is needful, therefore, that some bold exponent of truth should speak out on this matter.

"You know, gentle lady, when you give that order to your servant, that you are virtually pronouncing—what he understands it to be—*a lie*. You know that

Digitized by Google

when your friends call they are perfectly aware that, on many occasions, you are *at home* in one sense, but 'not at home' in another. That little piece of acting which is frequently performed, by the servant of the house asking 'What name?' and then going 'to see if his lady is at home,' means precisely this, that some visitors are to be admitted, others refused; and whenever a servant *goes to ask*, we may be quite sure that he knows his mistress is at home all the time, but is not certain whether the call is a welcome one.

"An anecdote in point may here be related. A simple-minded servant girl, probably just arrived from some unsophisticated neighbourhood, went to reside with a family in a fashionable locality, and on one occasion she was deputed to open the door to visitors in the absence of the footman; the latter hastily gave the orders he had received, to the effect that 'mistress was only *at home* to Miss G——.' A visitor shortly afterwards drove up to the door, and the truthful servant girl, unused to fashionable figures of speech, answered enquiries thus:—'If it's Miss G—— my missus will see her; but she can't see no one else.' It was *not* Miss G——; but the visitor, in turning away from the door, set herself to moralizing on the state of 'society' thus presented, and thought the truth, such as it was, more acceptable in the genuine words of the simple-minded servant, than the same thing could possibly be, tricked over with the transparent tinsel of fashionable falsehood.

"'Not at home,' in ninety-nine cases out of a hundred, means, 'I am engaged, or indisposed, or unwilling, for some reason or other, to be interrupted by visitors.'

"Then why not say so? Surely every one has a right to the seclusion, the quiet, which their own house, or any apartment in it, may afford. Can any one presume to quarrel with their friends or their neighbours because they may not always be well enough, or idle enough, to be able or willing to sacrifice some valuable time to a fruitless, aimless hour's gossip?

"These are questions which the thoughtless and the frivolous should ask themselves; they involve matters which the martyrs to fashion should take seriously to heart.

"The effect of this false state of things may be very prejudicial to the principles, not only of servants, but of the children, in families where such customs prevail.

"Another little anecdote may be introduced here with good effect.

"A mother was seated in her study one day, in the company of her children, when the man servant (who had only entered the family the day before) appeared, saying, 'A carriage is at the door, ma'am, are you at home?' His mistress immediately answered, 'Show my friends to the drawing-room.'

"The children all looked amazed at the question, and inquired, 'What did Brown mean, mamma? He asked if you were at home, *and you are at home*.'

"The mother, after the visitors had departed, took an opportunity of explaining the practice in fashionable life which had given rise to the servant's conduct, and she also profited by the occasion thus afforded, to draw a moral from the incident.

"How can masters and mistresses complain, with any reason, of a want of truthfulness and all manner of deception in the members of their households, whilst such an example is daily before them?

"An attempt is made to excuse these practices; it is contended that '*Not at home*' *is an understood thing—that it is the custom,—therefore, as everybody acts a part, nobody has any need to feel themselves wronged.*

"No upright, well-principled mind could, after a little reflection, feel satisfied with such an explanation. Moreover, setting aside the graver considerations, and regarding the habit merely as a matter of convenience, the fact being admitted, that the falsehood is understood, removes all necessity for the use of such an expedient, and the utter folly of it appears.

"Not wishing to trespass too unreasonably on your space now, I will, if you will allow me, continue my remarks on a future occasion, and will then point out a plan which may help those who are willing to act like responsible, reasonable, independent beings, to escape this fashionable thraldom—for of all species of bondage, that which renders otherwise rational people willing or unwilling slaves to the tyrant FASHION, is the most pitiable.

"I am, Sir,
"Yours, &c.,
"VERITAS.

"London, Sept. 8."

DAY NURSERIES FOR POOR CHILDREN.

To the Editor of the Philanthropist.

SIR,—I wish to say a few words with reference to the suggestion of "H. P." in your October number, respecting the establishment of nurseries for the infants of poor women who go out to work.

The idea is a very humane one, and it is carried out in numerous localities, with great apparent success; for the children are certainly better "cared for" and "done by" than they would be at home. But the plan at best can only be considered as offering a palliative,—it could never eradicate the evils which it grapples with. Indeed these nurseries indirectly help to extend the mischief, by holding out additional inducements to the mothers to leave their homes and their children for the sake of some daily occupation abroad.

What these poor little ones really want is *maternal care;* but that, in the present state of things, is a term of very doubtful significance; at least it is a matter of questionable advantage. We must first endeavour to reform the mothers, and the *homes* will then soon be what they ought to be.

THE LADIES' SANITARY ASSOCIATION seeks to furnish information on those matters upon which so much ignorance now prevails, and which ignorance is the cause of so many physical and moral evils. By means of the simply-written tracts already published, every mother may know what her domestic duties are, and how to perform them.

I would just say, that a nursery such as your correspondent "H. P." proposes, would be admirable for *motherless* children; but no substitute can be—or, oughtto be—equal to the mother's care for the child. Let us not, then, by an over-zealous and misdirected benevolence, deprive the infant, even temporarily, of its proper protector. We may lighten the duties of the poor mother in many ways, by sympathy, counsel, and aid of various descriptions: let us do all this; but at the same time we may teach her, that the best way to support her maternal responsibilities is by fulfilling them.

I am, sir, yours, &c.
M. A. B.

October 12th.

"A PLEA FOR THE NEEDLEWOMEN.

"TO THE EDITOR.

"SIR,—I fear the only remedy for 'stitch, stich,' is 'agitate, agitate.' I am glad, therefore, to see the letter of 'Preciosa' in your paper of to-day, describing her own experience as one of the sisterhood, and lamenting that ladies do not directly employ sempstresses without the intervention of shopkeepers. This suggestion appears to me to point to the only practical solution of the difficulty. But it is beset by another difficulty—viz., how are ladies in large populations to find out sempstresses of approved character? With a view to this, I suggest that in every large parish a committee of clergy and ladies be formed, to whom all sempstresses desiring employment may address testimonials of competency and moral character. When these are verified, let such sempstresses be placed on the roll for the inspection of all ladies desiring work done, whether at their own homes or those of the needlewomen; the list of names and addresses to be constantly open for inspection of employers, along with another list of employers' wants for the inspection of workers, in some room as conveniently central as may be. I have myself known ladies anxious to employ accredited needlewomen without the intervention of shopkeepers, but in large populations they have been unable to find them. I venture to think the simple expedient I have proposed would bring them together with advantage to both.

"Faithfully yours,
"AN ESSEX RECTOR."

MANNING THE NAVY.

TO THE EDITOR OF "THE TIMES."

SIR,—The proposal of Colonel Simmonds, in *The Times* of this day, to man our ships chiefly with marines would, I fear, end in a short time in a deficiency of marines as well as sailors. It must be remembered that the corps of Royal Marines is no modern experiment; it has nobly stood the test of all trials for 150 years, and in the words of a recent report to Parliament, it is "an efficient body of men, second to none in the service of the State; they are

Digitized by Google

excellent troops both as artillery and infantry.

A marine, to be efficient, should have his service equally divided between land and sea; for if too long on shore, he loses his "sea legs," and, on the other hand, if he is too much afloat he loses his "land legs," and is no longer the same useful man he now is "*per mare, per terram.*" It is this change that makes the Royal Marine corps a popular service. It is at all times readily recruited, and no men have a finer *esprit de corps.* It is wise to 'let well alone." At this time there are 12,000 marines embarked, and if the present fleet is to be our ordinary establishment, it is evident there should be the same number of marines in reserve on shore ready for reliefs, or for embarkation on an emergency. The reserve is under 5,000, including the Artillery.

With 40,000 continuous service seamen, training-ships for boys at all the ports, 24,000 marines, and the introduction of a law for ship's courts-martial, there would be no difficulty in manning the navy.

I am, &c.,
A Colonel, Royal Marines.

Sept. 16.

TO THE EDITOR OF "THE TIMES."

Sir,—In the admirable suggestive article on the above subject, in your impression of Friday last, you have struck upon a vein which, if properly worked, will prove a prolific source of advantage to the army as well as navy.

The workhouses in London and throughout the country would most gladly avail themselves of, and prepare the youths thrown upon their succour for one of these services, if Government issued instructions "that all qualified lads at a fixed age, on making application, should be received into one of these services." But without some such distinct understanding, attention will still be given to prepare these "foster children of the country" for occupations tending most quickly to relieve ratepayers of their burden. The same remark applies to many orphan and charitable institutions.

Lads generally have an almost instinctive love for the navy, which, by a little judicious training, might be developed, and preparation made for immediate usefulness when they enter upon active service.

The prejudice which at one time locked the door against the class which is taken up by refuges and reformatories, as shown by letters published in *The Times* of today, to be fast passing away, and the training, through which such youths must pass, cannot fail to make them capital sailors.

The prospect of good food and plenty of it, an adventurous occupation, and certain reward for well-discharged duty, has introduced an extraordinary desire on the part of many youths of the poorest class, who have been in the habit of attending the Field-lane Ragged Schools and Refuges, to engage in the naval service, and although, through the application of Mr. Fraser (the schoolmaster), in the course of nine weeks, forty-one lads have been received into the Royal Navy—lads whose wits have been sharpened by the keen edge of want, and whose quickness and good conduct have already secured the commendation of their officers —yet this accepted number is but a moiety of those who are anxious to be engaged, and who, in a few years, could not fail to become the best of seamen.

Trusting the attention of the authorities may be drawn to this fact, and further facilities opened to the class,

I have the honour to be, Sir,
Your very obedient servant,
Samuel Tawell,
Hon. Sec. to Field-lane Ragged and Refuges for the Homeless.

20, Aldermanbury, Sept. 17.

TO THE EDITOR OF "THE TIMES."

Sir,—I see in your yesterday's paper several letters on your excellent leader of the 16th on the subject of manning the navy.

With regard to the reformatories, I hope you will allow me to add my testimony to that of your other correspondents, that there is scarely any point we should be more anxious to gain than the permission to enlist our boys in the navy. We would by no means ask that boys who have behaved ill should have the preference over the honest in such an honourable and excellent service; but I would ask for them that, when a supply of those boys who had lived *sans reproche* cannot be had, permission should be given for the most eligible of those who have done wrong, and now appear anxious to retrieve their characters, to supply the deficiency.

Much is written and said upon the nature of the criminal class by gentlemen of lively imaginations; but I have rarely been able to guess from what quarter they have derived any foundation for their opinions.

I hardly like to assume superior knowledge on any point to the rest of the world, but I would ask how many classes of people are there who really have opportunities of knowing much about criminals? The governors and officers of gaols see a great deal of them, but these see them only under circumstances of restraint, when they would naturally conceal as much of their nature as possible, and the officials seldom if ever have an opportunity of watching the habits of the discharged prisoner so closely as to trace what effect the treatment has really upon him. A prison chaplain has a somewhat better opportunity, by frequently gaining the confidence of the prisoner, and occasionally by being in correspondence with him after his discharge.

A police officer learns as much about a criminal as one antagonist can learn about another—that is, as little as the other can help his learning. But a governor or manager of a reformatory is not only treated as a friend by the greater part of the boys under his care, but one of his most important, though not legally specified, duties is to keep up a communication with and watch upon the boy for years after he leaves the school. Of 147 boys who have left my reformatory from 1852 to the present time, I think there would hardly be twenty on whom I could not now lay my hands.

This emboldens me to speak as to the real nature and habits of this particular class, and to press strongly the fact that a large portion of them would be peculiarly fitted for the navy. It is represented by some fluent writers that the class of criminal boys (as if they were all alike) are the wretched offspring of the poorest and vilest of parents, nursed in ignorance, steeped in iniquity, &c. Sir, I can only say it is not so. I have had boys, not only from my own county, but from London, Liverpool, Bristol, Birmingham, and many counties in England. The very ignorant children of very poor and bad parents are decidedly rare among them. The well-instructed children of the higher class of labourers are much more common. The number of those who, "living by stealing, stole to live," are very rare. I think out of 193 boys there have not been ten who anything like supported themselves by dishonesty. They have almost invariably lived either on their own or on their parents' honest labour, and have stolen to procure what to them were luxuries.

I should, therefore, divide them into five classes: — 1. The clever premeditating master-thief. These are not numerous, though most dangerous to society, from corrupting and instructing others; yet they are most difficult to deal with when first we get hold of them; but, somehow, even these generally turn out well after a time. 2. The bold bad boy, who happens to have taken to thieving, and goes on in it sturdily and obstinately, without much talent, but with a great deal of pluck. This class is often very troublesome to us, and frequently they have not sufficient intellect for us to feel at all sure of their future good conduct, when turned absolutely loose to shift for themselves; but where we can get some little watch kept upon them, they (with few exceptions) become useful and hardworking. 3. The mischievous larking boy, who steals rather from the love of excitement than care for the things stolen. 4. The accidental thief, who never intended to steal, but, while going to his daily work or play, sees some trifle lying in his way, and, almost thoughtless, picks it up and appropriates it. 5. Those who steal (alas! a numerous class) from sheer weakness of mind, approaching sometimes to imbecility. These are in some cases restored simply by good regular diet and work, and some go on admirably. One who, in very weak health long ago, was, apparently, one of the most disheartening cases I ever encountered, is now as fine, intelligent, happy a young sailor as most in Her Majesty's navy.

Many of these, if we can get them into any regular work, where they are under some authority, make—first, obedient, and, after a time, active and energetic fellows.

Do not suppose, sir, because I thus describe them, that I seek to excuse them or to lessen their punishment. Crime ought to be, and must be, punished; but the punishment ought to aim as much as possible at the diminution of the general crime. Had you an overwhelming amount of applications from hitherto honest boys, all anxious to enter the navy,

Digitized by Google

I would by no means press the elistment from reformatories; but if there is a deficiency, then there is no fear of its being considered a premium on crime.

The present fear of enlisting boys from reformatories is much on a par with that of sailors, who, on short allowance of bad water, let it stay till night, in order that they may not see what they drink. Many boys have enlisted in Her Majesty's navy after leaving my reformatory, and these are doing well. Very many constanly enlist as a last resource to escape prison, and only come to the training-ships unknown, and without any care having been bestowed on them, instead of being well known and carefully selected after twelve months or so of trial. Not that it very much matters, for I believe there are few of our reformatories so good or efficient as one of Her Majesty's training-ships. I have had opportunities, though very rare, of sending a few boys to them. The boys sent were not selected by me, and some of them I hardly should have selected as thoroughly trustworthy, yet I can now point with some pride to every one of them, as boys not only of dash, energy, and pluck, but as boys of steady habits and good conduct.

Last December there were 2,302 boys under sentence of detention in reformatories. There are now probably many more. Of this number I should think that one quarter would be fit and willing to enlist in this year. Each of these boys is now costing the country nearly, if not quite, 20*l.* per annum, so that the measure would be a direct saving to the country of 10,000*l.* per annum, and what would be of far greater importance would be the conversion of that which has hitherto been one of the greatest evils, losses, and misfortunes to the country into its most valuable defence.

I am, Sir, your obedient servant,
T. B. L. C. Baker.

Hardwicke Court, Gloucester,
Sept. 22.

THE LADIES' SANITARY ASSOCIATION.

Having inserted, in our last number, an article taken from the *Daily Telegraph* in reference to this Association, we give, in justice, extracts from a letter which subsequently appeared in that paper, explanatory of some errors respecting the operations of the society. The matters alluded to may appear trifling in themselves, but, as the writer observes, "everything is of importance to a new society, especially when, as in the present case, it is making its first prominent appearance before the public. Everything should be clearly and accurately stated, in order that nothing may be left unsaid in its favour; and, certainly, there should be no misconception as to the amount or nature of the work it is doing, or intends to do.

"First, with regard to the number of tracts issued, more than 30,000 have been already published and circulated, instead of only 20,000; this is an error in figures which some of your contemporaries have also fallen into. How the mistake could have originated I am at a loss to know.

"Then you say, 'One or two opportunities for sanitary reform have been unaccountably overlooked in the ladies' programme—let them teach the poor to cook.' In reply to this suggestion, I beg to say that the association has not been unmindful of so important a sanitary matter as that of cookery I refer you to the list of tracts in the prospectus, in which will be seen announced, with others which are shortly to be published, one entitled 'How to Cook.'

"With respect to your remarks on domestic servants, you have spoken I think somewhat unadvisedly, in recommending "higher wages;" the sums given to servants as wages are generally very liberal; there may be exceptional cases, but wages in these days are decidedly good. The real want in this matter is to have that class taught, the female portion of them more particularly, how to spend their earnings wisely and well. A judicious outlay would enable them to save a portion of their money, and they would be benefited in more ways than one. An indulgence in the love of dress is ruinous both to their pecuniary prospects and their morals; the highest wages are thus swallowed up, and they seek more and more, for such tastes and demands are insatiable. I believe the remedy for this and other evils which form the theme of complaint with employers, lies in the hands of employers themselves. The mistress of the family may do much in this direction by example, by teaching, and so forth.

"We must work downwards in these matters, not upwards. Ladies must reform themselves before they have any right to expect their servants to be wiser and better than they are at present. Let them set about the duty—for duty it is—of acquiring such knowledge and such habits as are needful for the more intelligent and judicious management of their household. They must not be satisfied with a mere theoretical knowledge in their own case, but let them take an active superintendence over every matter which concerns the physical and moral well-being of their inmates. This would be a great step towards both sanitary and social reform.

"A few words only remain to be said with reference to 'sempstresses, milliners, workgirls,' &c. You suggest that the association should turn its attention to the evils which are included in late hours, ill-ventilated rooms, and so on. The general diffusion of sanitary science, and the application of its laws to every condition and circumstance of life, will in time correct most of the abuses resulting from an ignorance and neglect of them; the results of which ignorance and neglect are so lamentably apparent in the present day; but allow me to say that it scarcely comes within the province or range of the association's labours to make those matters you have named the objects of its special care.

"There are kindred societies, such as the Association for the Promotion of the Employment of Women, and others, directing their attention to class evils. The Ladies' Sanitary Association announces, in its prospectus, that co-operation is desired. Thus, by a union of the various societies having similar views and objects, a larger field of labour may be occupied, and more abundant and beneficial results anticipated.

"I am, sir, yours, &c.,
"A Member of the Ladies' Sanitary Association."

ROYAL ASYLUM OF ST. ANN'S SOCIETY.

On Thursday, Sept. 22nd, an extraordinary general meeting of the subscribers to this society was held at the London Tavern, for the purpose of sanctioning a departure from one of their rules, in order to meet a case of unparalleled benevolence to the institution, and to make a suitable acknowledgment of it.

Mr. Dickinson having been called to the chair,

Mr. E. F. Leeks, the secretary, read the advertisement convening the meeting.

Mr. John A. Barnard said the meeting would be aware that at the last special court he gave notice of the motion he intended then to propose. He would not detain them at any length by detailed statements; but he would venture to point out to those present that the society stood alone for the objects for which it was instituted. They had various institutions for orphans, such as the London Orphan Asylum, the Infant Orphan Asylum, the Working Orphan Asylum, the British Orphan Asylum, the Female Orphan Asylum, the Institution for Fatherless Children, and many more; they had also institutions for the aged, including the National Benevolent Institution, the General Pension Society, the General Annuity Society, the General Beneficent Society, the Governesses' and the various professional and trade societies; and for those who were sufferers from all the ills that flesh was heir to, they had all the hospitals and dispensaries; but for the children, whether orphans or not, that had been in affluence and reduced to indigence, with the exception of Christ's Hospital, it was the only one that opened its doors to them. It did open its doors as wide as it could; but the committee had this sad reflection, that at every election there were above 100 children who were obliged to be rejected in consequence of the limited funds in the hands of the Committee, and he was convinced that if the public only knew how beneficial the institution was, they would not leave them in that position, but would enable them to extend their benefits. The late George Holgate Foster, Esq., was a gentleman whose benevolence was well known in his life; but his sympathies did not go in favour of institutions established for the training and education of youth. He subscribed liberally to hospitals and such like charities, and at his death he left the munificent sum of £25,000 to various institutions of that character, but nothing to those which devoted themselves to the education of youth. However, before his death, his wife stepped in, and induced him to add £1,000 to his bequests, and to leave it to the Royal Asylum of the St. Ann's Society. That lady had always taken a deep interest in their association, and it was the only one of the kind men-

Digitized by Google

tioned in his will. It was, therefore, their duty, as well as their gratification, to make an acknowledgment of the services they had received at her hands. Mrs. Foster might have allowed the money to be left to her, and then given it herself to the institution; but she had done them the good without taking the pleasure, the gratification, or the glory of it to herself; and he thought they ought, by some complimentary act, to show that they appreciated her benevolent conduct. He should, therefore, move,—"That, in consideration of the munificent bequest of the late George Holgate Foster, Esq., of £1,000, free of duty, to the Royal Asylum of the St. Ann's Society Schools, a presentation to the asylum be placed at the disposal of his widow, Mrs. Maria Isabella Foster." In moving that resolution he knew he was travelling a little out of the record, and going beyond the rules of the society; but he did so only because the power of meeting this case as it should be met, was not vested in the hands of the committee.

Mr. Mayor seconded the motion, and it was carried unanimously.

THE BOYS' REFUGE, COMMERCIAL STREET, WHITECHAPEL, LONDON.

It is now five years since the "Boys' Refuge" was opened, and during that period 358 boys have been received within its walls; of whom 97 are still in the Institution, 110 have been provided with situations, 63 restored to their relatives or friends, 39 left irregularly, 3 sent to other institutions, 8 expelled, and 3 have died.

Of the 119 provided with situations, as far as the managers have been able to learn, 102 are going on well.

The entire cost of carrying on the Boys' Refuge last year was 1340*l.* 12*s.*, or 14*l.* for each inmate.

It is with feelings of gratitude to God that the committee of the Refuge place before its friends and supporters these encouraging results, and they earnestly trust that a favourable response will be given to this appeal for further assistance in carrying out the following object, the completion of which is of the *greatest importance* to the welfare of the Institution:—

New House and Enlargement of Playground.—The committee are now able to announce the completion of the new *house* and the enlargement of the playground, and they request their friends to visit the Institution, and to see the great improvements that have taken place during the year in the additional accommodation that has been provided.

A roof has been erected over a portion of the playground.

It is earnestly hoped that during the year funds may be provided which will authorize the committee to complete the purchase of the site. The current expenditure of the Institution has hitherto been assisted by a liberal grant from the Privy Council; but the committee regret very much to state that they have received an intimation that further aid from that source (except in a very limited degree) is no longer to be expected. Under these circumstances the committee issue their appeal with the full confidence that it will be responded to by all those who take an interest in the progress of the "Boys' Refuge," and the effort it has made to help the friendless, and to stem the tide of crime amongst the neglected classes.

The total cost of building the new house and walls, paving yards, erecting iron roof over playground, including purchase of land, will amount to £2240.

Contributions already promised.

SOUTH LONDON OPHTHALMIC HOSPITAL.

Since the report of the Committee of the 12th of last January, 446 new patients have been relieved, bringing the total number of cases treated at the hospital from its opening in October, 1857, up to June 24th, 1859, to the large number of 1,246. Amongst these numerous patients many have been rescued from imminent blindness; some restored from blindness even to perfect sight.

On the 18th of last May, a dinner was held at the Albion Hotel, on behalf of the hospital, under the presidency of William Roupell, Esq., M.P., on which occasion a sum of no less than £430 was added to the funds of the institution, including twenty-five additional governors and life governors.

But the benefits of the institution are so daily increasing in appreciation by the poor, that the Committee feel convinced that it will, in the same ratio, require the assistance of the charitable public for the more effectual fulfilment of its mission. This latter remark more especially applies to the reception of in-patients. Up to the present time the Committee have felt it prudent to limit the number of beds to two, but trust that the funds of the hospital may, at no distant period, permit them to add to this number, and so enlarge the efficiency of the institution. The Committee direct the attention of the governors of the hospital to a bye-law with reference to the in-patient department, which they believe will be attended with several desirable results, viz.:—that those patients, who can really afford it, now pay for their board whilst in the hospital. By this the funds of the hospital are economised, while a spirit of honourable independence is encouraged in the recipients of its bounty; bearing in mind always that no cases of real destitution will ever find the doors of the hospital shut to them, should the nature of their case demand their admission within its walls. It may now be confidently asserted that the hospital has taken a firm root as one of the most useful charities in the South of London, and in every sense confirmed the sanguine anticipations of its success.

The hospital is situated at No. 6, St. George's Circus, S., opposite the Blind School, and is open for the reception of patients every day at two o'clock.

We find that the number of patients who have attended at this hospital from the date of its opening on the 12th of October, 1857, to the 31st of December, 1858, was 780; from that period to the 30th of June of the present year there have been 503 new cases, being 1,283 since the foundation of the charity. The monthly average of new cases for the first fourteen months was 54; the monthly average for the last six months has been 84, showing an increase of thirty patients a month since our last report: this is satisfactory evidence of the continued and increasing popularity and usefulness of the institution among those for whose benefit it was established.

PLAYGROUNDS FOR THE POOR.

Play seems everywhere one of the necessities of social life, but never more so than in spots where wearing toil and hard competition are struggling to crush out life's energies, and to reduce the complex and wonderfully made frame of man to a passive machine. In the busy and ceaseless whirl of metropolitan life there is a need, if anywhere, of rest, that the flagging powers may regain their elasticity, and of recreation, that the damped spirits may for a little while forget their cares. Now, if one class of the community needs this recreation more than another, it is the poorer class; and if one section of that class realizes the want most thoroughly of all, it is surely that of childhood and of youth, from the activity and ardour of which they are so naturally the subjects.

If we ask ourselves, however, how this need is met,—how provision is made that hours of leisure may be spent in healthful

Digitized by Google

exercise or innocent joy, in some cases it is very difficult to find an answer. There are parishes in the metropolis and elsewhere, consisting of twenty or thirty thousand inhabitants, in which every square foot of ground seems appropriated, and in which no sweep of greensward meets the eye, on which youth may sport or age repose. A space of unoccupied ground, with its accumulations of oyster-shells, old rags, and broken crockery, similar to that called "The Ruins," near Clerkenwell, or the vacant tract in front of Spitalfields Church, sometimes presents its blotched surface to the eye; but here, not unfrequently, a caution-board from a jealous landlord arrests the step, and informs a band of juvenile on-lookers that the strong arm of the law will avenge every infraction of that exclusive ownership. The street, and the street alone, remains in which our poorer juvenile population may exercise their limbs and indulge their predilection for merriment. And of all places the street is the most corrupting in its associations, the most fatal in its results. Bad words are learned in their sound and in their meaning, and bad and blackguard ways are an almost certain concomitant of bad words. The eye gets accustomed to sights from which it ought to turn, and the heart soon becomes a hotbed of impure, or fraudulent, or rebellious thoughts and passions. It is in the street that our young delinquents first learn to steal, to gamble, and to fight. It is familiarity with street associations and practices which is the most effectual training for the gin-palace, the low casino, and the penny theatre. It is upon the street that low characters of every grade of vice thrive. It is the street from which every righteous parent most desires to shield his flock.

Now, among the many excellent schemes which have been carried out or projected for improving the condition of the poor of our large towns, there is one to which we beg to call especial attention. It is not a plan for providing them baths or model-lodgings, washhouses, or school-rooms, but one which is established, as its title imports, for the purpose of securing in populous districts *well-regulated playgrounds for poor children.* It proposes not only to provide a place for, but the *means* of, healthy pastime; not only to secure an unoccupied plot of ground, but to erect upon that plot such adjuncts to play as that the children of the poor may realize something of the pleasure that legitimately belongs to their young life, and even their fathers and elder brothers be induced to try their strength in athletic exercises and their skill in innocent diversions. For those who reside near them, the Parks are an incalculable blessing to the poor. But, admitting that they meet the need in question where they exist—which they do not, however, for *parks are not playgrounds*—we need only turn our eye to a map of the metropolis to see how *entirely unavailable are these* to tens of thousands of our swarming population. The thing needed in the crowded localities to which we refer is about an acre of ground, fenced securely in, furnished with swings, gymnastic poles, and other articles of play, under the superintendence of a good-tempered keeper, and under the control of a few wise and simple rules as to admission and exclusion. Such a spot in our city districts would be invaluable for health, safety, morals and intelligence. We have said the young must play. It is their very element—their life. Let us direct, where we may not subdue the propensity. Let us bring them from what is hurtful by providing for them what is innocent. If a weeping willow stand by the side of a pool of water, it will bend its branches in the direction of that pool; but if another pool of larger capacities be dug and filled on the other side it will at once turn its boughs where the water is more abundant. It is worth an experiment to attempt some counter-influence to the attractions of the street. We shall be much surprised if it be not a successful experiment, if "the young branches" do not incline to the pure and pleasant waters of the playground, in preference to the turbid and noxious puddles of the street. We trust the public will very generously respond to the appeals which the *Playground and General Recreation Society* makes to them. Its office is at No. 97, Newgate-street, where its secretary will receive contributions to its funds, and supply information as to its work. Its appeal is to those who can betake themselves, when they will, to Primrose-hill or Hampstead-heath, to Margate, or to Scarborough, or who own a snug and well-stocked enclosure of their own, on behalf of those from whom, and from whose children, the means of cheerful exercise and recreation are cut off, and whose sole domain consists, it may be, of one close room.

The time will perhaps come, when, attached to these playgrounds, there may be rooms in which the adult population may hear useful lectures, read useful literature, and procure at a small charge light refreshments. Let us first, however, have our playgrounds, in which our children may play at games which their families may witness, or even share, and which will invigorate the bodily health and cheer the spirits, without injuring the mind or corrupting the heart.—*Record.*

THE character of the man, whether rich or poor, is, to a great extent, formed by the habits an associations of his childhood and youth, and it is, consequently, a matter of great importance that the children of the poor, who have not those resources at command which would enable them to choose their localities and companions, should have the means provided for them of passing their "play-time" (the most important period of their childhood, next to "school-time,") in a healthy and moral atmosphere. When facilities are not available for rational and healthful exercise, both mental and physical, the natural activity of the child will lead it into the concoction of measures, and adoption of resources, calculated to injure, or perhaps destroy, the effect of the moral lessons taught it at school or otherwise, and to following the bad examples set by the untaught and the vicious. The facilities afforded for the healthy recreation of children are not so limited in Brighton as in most large towns; still something might be done for their benefit even here; but the greatest want of this convenience is felt in London and large manufacturing towns, where the only resource of the children of the poor, whom it would be positive murder to keep pent up in the close and narrow dwellings in which they are at present necessarily densely packed, is the street. The lanes and alleys leading from the streets are consequently the spots chosen by them for their amusements, and these are just the localities where they are most exposed to the influence of bad language, evil example, and all the ill influences of association with the vicious and abandoned, both adult and juvenile, of certain classes of society. Public playgrounds have been suggested as an eligible means of in some measure, counteracting the present unsatisfactory state of things; and an association, called the Playground and General Recreation Society, has been formed in London, whose object it is to provide public grounds for the purpose of recreation and health, which, if established, and placed under proper supervision, would doubtless, in a large measure, effect the intended good. The society is, we perceive, under the patronage and direction of a great number of the nobility, gentry, and eminent philanthropists of the day, and we trust their efforts will do much towards forwarding the great and useful objects of the association. Their offices in London, are at 97, Newgate-street.—*Brighton Examiner.*

Review.

Man his own Benefactor. Published by ED. WILKINS, 8, Bath Terrace, Camberwell New Road, London, S. Price 1*d.*

WE are not agriculturists, but many of our readers are, and most of those for whose benefit and improvement we have undertaken all our labours, have a direct and personal interest in the cultivation of the land. It would be presumption in us to enter upon arguments with, or comments on, this little *brochure;* but we do feel that in recommending its perusal to labourers, gardeners, and others, having, or interested in, land, we may be doing a considerable amount of good. Mr. Wilkins proceeds upon the principle, which seems quite consonant with nature, that the *root* of the plant is the mouth or proper place at which to feed or supply it with nutriment: and this little pamphlet is intended to show *how* this may be done; and he shows, not only on his own authority, but that of competent witnesses, even of Mr. Mechi, that plants and crops of all descriptions may be more than doubled in their produce by the application of his system. Those who desire to see, in preference to hearing, can call in at the Arch next to the Fishmonger's shop, going up to the Waterloo Station, where they will be allowed to judge for themselves, and where a few minutes spent will be by no means wasted.

CHARITABLE BEQUESTS OF THE BARONESS DE STERNBERG.—The will of Baroness de Sternberg, late of Belsfield, Windermere, Westmorland, has been proved by the executors, T. Tilson, Esq., of Brixton-hill, T. Johnstone, Esq., solicitor, Raymond's-buildings, and Mrs. Armistead. The personalty was sworn under £100,000. The will bears date the 4th of June, 1859, and the Baroness died on the 21st of that month. The charitable bequests are numerous, and of large amount, exceeding £25,000. Her ladyship had bequeathed to the London Hospital, the Samaritan Society connected therewith, and to the Marine Society, £3,000 to each. To the Whitehaven Infirmary, £1,000, towards forming a fever ward; £300 towards repairing a wing thereto, which was built at her expense; £1,000 for a Samaritan Society to the same, and £1,000 towards the support of a chaplain to that infirmary; and has bequeathed to the Whitehaven Infirmary the portrait of the late Joseph Steele her friend and benefactor, with a request that it may be placed in the board-room of that institution. To the Tower Ward School, in the city of London, £2,000; the interest to be applied yearly in apprenticing the most deserving boys in that school, who are to be called "Joseph Steele's Apprentices." To the Royal Medical Benevolent Fund, £1,000, and a legacy of £500 to each of the following institutions:—The National Society for Promoting the Education of the Poor in the principles of the Established Church throughout England and Wales; Society for Promoting Christian Knowledge; Society for the Propagation of the Gospel in Foreign Parts; Society for the Employment of Additional Curates in Populous Places; Society for the Enlargement, Building, and Repairing of Churches and Chapels; Corporation of the Sons of the Clergy; London Orphan Asylum, Clapton; Infant Orphan Asylum, Wanstead; Adult Orphan Asylum, Regent's Park; British Orphan Asylum, Clapham; Blind School, St. George's Fields; Deaf and Dumb Asylum, Old Kent Road; Governesses' Benevolent Institution, Harley Street; City of London Lying-in Hospital, City Road; Middlesex Hospital (the Cancer Ward): Brompton Consumption Hospital; St. Luke's Hospital; Asylum for Idiots, Red Hill; Refuge for the Destitute, Hoxton; Eastern Dispensary, Great Alie Street; the Westmorland Society, for the Maintenance and Education of Children of Westmorland Parents, or of a Westmorland Parent, born in or near London. The whole of the bequests, whether charitable or otherwise, are to be paid in full, without deducting the legacy duty. The Baroness has bequeathed to her nephews and nieces legacies amounting to about £50,000; leaving also among them the residue. She has directed £100 to be given to the poor of the parish in which she was buried. £500 to the churchwardens and minister of Allhallows; the interest to be applied in keeping in repair the vault of the late Joseph Steele, and the surplus given to the poor; £300 to keep in repair the altar-grave of her mother; and £500 to the Church of St. James, Dover. She leaves to her pensioners liberal legacies, as well as to all her servants.

A GOOD FAMILY MEDICINE CHEST, with a prudent use, has saved many a life; and yet we think the idea might be improved upon, and reduced to a more simple form. Take some good compound, such as COCKLE'S ANTIBILIOUS PILLS, and we find that the desired end may be obtained without scales and weights, or little mysterious compartments and enchanted bottles with crystal stoppers. Others might be used, but Cockle's Pills, as tested by many thousands of persons, and found to answer their purpose so well, may be set down as the best.—*Observer.*

A NEVER-FAILING RECEIPT FOR 30 STAMPS TO MAKE THE HAIR GROW AND CURL.

A VERY VALUABLE RECEIPT for 30 Stamps, to make a FIRST-CLASS HAIR-DYE.

LADIES! If you wish your Skin to be CLEAR, FAIR and BLOOMING, send me 30 Stamps, and I will forward you the receipt. Its effect is surprising. It removes Tan Freckles, Pimples, and other unsightly marks. It is perfectly harmless, and may be prepared by any lady at a trifling cost. These Receipts are superior to anything of the kind hitherto discovered.

IMPORTANT to every Man who keeps a Horse, Cow, Sheep, or Pig. The receipt to make the celebrated HORSE and CATTLE FOOD, for 13s. per cwt. The Selling price being 42s. and 50s. per cwt.

N.B.—Two receipts sent for 44 Stamps; three for 60 Stamps; or the four for 78 Stamps.

Address, Mr. J. TAIT, Chemist, Newcastle-on-Tyne.

THE HAIR.

THE BEST MEANS to ADORN it is to use CHURCHER'S TOILET CREAM, which imparts fragrance, softness, and beauty to it, and is admitted to be the most economical article for the purpose extant. Price 1s., 1s. 6d., and 6s.

Decidedly the best Hair Dye is BATCHELOR'S INSTANTANEOUS COLUMBION, in the New York Original Packets. Price 4s. 6d., 7s., and 14s.

Sold by Hairdressers, and by R. HOVENDEN, Wholesale Perfumer, &c., No. 5, Great Marlborough Street, (Three Doors East of the Pantheon), W., and 57 and 5, Crown Street, Finsbury Square, London, E.C.

BROWN & POLSON'S

PATENT CORN FLOUR,

Preferred to the best Arrowroot.

DELICIOUS IN PUDDINGS, CUSTARDS, BLANCMANGE, CAKE, &c.,

and especially suited to the delicacy of

CHILDREN and INVALIDS.

The Lancet states,

"THIS IS SUPERIOR TO ANYTHING of the KIND KNOWN."

Trade Mark and Recipes on each Packet, 4, and 16 ozs.

Obtain it where inferior articles are not substituted, from family Grocers, Chemists, Confectioners & Corn Dealers.

PAISLEY, DUBLIN,

77A, Market Street, Manchester, and 23, Ironmonger Lane, London.

WHY GIVE MORE?—Excellent TEAS, Black, Green, and Mixed, are now on sale, for Family Use, at 2s. 8d. per pound, at NEWSOM and Co.'s original TEA WAREHOUSE, 50, BOROUGH, near London Bridge Terminus. Established A.D. 1745.

ALARM GUN.—Captain NORTON'S ALARM GUN, without vent or touch-hole, fired at the muzzle by friction, for protection against burglars, poachers, &c., is to be had of the London Gunmakers: Field, Blisset, and Beckwith, Holborn; Reiley, New Oxford Street; Lang, Cockspur Street; Daw, Old Broad Street; and Wilkinson, Pall Mall.

F. FUSEDALE, FASHIONABLE TAILOR, 4a, King Street, Holborn, London. W.C., begs to call the attention of the public to his superior Stock of Spring and Summer Goods, also to his unequalled 16s. Trowsers, which he is enabled to supply owing to the very extensive demand for them. A perfect fit guaranteed.

FOR LADIES.

NICOLL'S PATENT HIGHLAND CLOAK is a combination of utility, elegance and comfort. No lady having seen or used such in travelling, for morning wear or for covering full dress, would willingly be without one. It somewhat resembles the old Spanish Roquelaire, and has an elastic Capucine Hood. It is not cumbersome or heavy, and measures from twelve to sixteen yards round the outer edge, falling in graceful folds from the shoulders; but by a mechanical contrivance (such being a part of the patent) the wearer can instantly form semi-sleeves, and thus leave the arms at liberty; at the same time the Cloak can be made as quickly to resume its original shape. The materials chiefly used are the soft neutral-coloured Showerproof Woollen Cloths manufactured by this firm. The price will be Two Guineas and a Half for each Cloak; but with the Mécanique and a lined Hood a few shillings more are charged. This department is attended to by Cutters, who prepare Mantles of all kinds, with Velvet, Fur, or Cloth Jackets, either for in or out-door use. These at all times—like this Firm's Riding Habit—are in good taste and fit well. Female attendants may also be seen for Pantalons de Dames à Cheval, partially composed of Chamois. As no measure is required, the Patent Highland Cloak can be sent at once to any part of the Country, and is thus well adapted for a gift.

H. J. and D. NICOLL, Warwick House, 142 and 144, REGENT STREET, London.

NICOLL'S NEW REGISTERED PALETOT has all those advantages which secures such general popularity to Messrs. Nicoll's original Paletot; that is to say, it avoids giving to the wearer an *outre* appearance, so that professional men, and all others, can use it during morning and afternoon, in or out of doors. Secondly, there is an absence of unnecessary seams, well known to secure a more graceful outline, as well as to affect a great saving in wear; the latter advantage is considerably enhanced by the application of a peculiar and neatly-stitched binding, the mode of affecting which is patented. Great exertions are being made to supply Messrs. Nicoll's agents throughout the country and the colonies with an assortment of this new garment simultaneously with the display in London, but it is necessary to inform the public that all Messrs. Nicoll's manufactures may be distinguished by a trade mark, consisting of a silk label attached to each specimen; to copy this is fraud, and may thus be detected: if the garment is dark-coloured, the label has a black ground, with the firm's name and address woven by the Jacquard loom in gold coloured silk; if the garment is light-coloured, the label has a pale drab ground, and red silk letters. Each Paletot is marked in plain figures, at a fixed moderate price, and is of the best materials. In London, the NEW REGISTERED PALETOT can alone be had of H. J. & D. NICOLL, 114, 116, 118, 120, REGENT STREET, and 22, CORNHILL.

A NEW DEPARTMENT FOR YOUTH, &c.

H. J. and D. NICOLL recommend for an outside Coat the Havelock; and for ordinary use the Cape Suit, such being well adapted for Young Gentlemen, as exhibiting considerable economy, with general excellence. Gentlemen at Eton, Harrow, Winchester, the Military and Naval Schools, waited on by appointment. A great variety of materials adapted for the Kilted or Highland Costume, as worn by the Royal Princes, may be seen at

WARWICK HOUSE, 142, and 144, REGENT STREET.

GARDEN WATERING ENGINES, SYRINGES, &c.

Upon the most approved principle, manufactured by the Patentee, RICHARD READ, 35, Regent Circus, Piccadilly, London. Descriptions sent post free.

PERSONS about to Decorate should inspect SILAS TUCKER'S splendid assortment of PAPER HANGINGS, at his Warehouse, 234, HIGH HOLBORN, ten doors East of Little Queen Street, London. Estimates given for every kind of Decoration; also for General Repairs in Town and Country.

WHAT WILL THIS COST TO PRINT? is a thought often occurring to literary minds, public characters, and persons of benevolent intentions. An immediate answer to the inquiry may be obtained, on application to RICHARD BARRETT, 13, MARK LANE, LONDON. R. B. is enabled to execute every description of PRINTING on very advantageous terms, his office being furnished with a large and choice assortment of TYPES, STEAM PRINTING MACHINES, HYDRAULIC and other PRESSES, and every modern improvement in the Printing Art. A SPECIMEN BOOK of TYPES, and information for authors, sent on application, by

RICHARD BARRETT, 13, MARK LANE, LONDON.

Printed for the Proprietors, by RICHARD BARRETT, 13, Mark Lane, London; and sold by W. TWEEDIE, 337, Strand.

November 1, 1859.

REFORMATORY FOR JUVENILE MALE CRIMINALS under 16 years of age.—The HOME in the EAST, Old Ford, Bow, near London.

PRESIDENT,
THE EARL OF SHAFTESBURY.

TREASURER,
JOSEPH CRANE, ESQ.

BANKERS,
MESSRS. HANKEY & Co.

HONORARY SECRETARIES,
A. J. SCRUTTON, Esq., 81, Old Broad Street;
THOMAS SCRUTTON, Jun., Esq., 3, Corbet Court, Gracechurch Street.

GOVERNOR,
Mr. J. W. GORDELIER, at the Institution.

Fifty youths are maintained at an annual average cost of about £1000.

In addition to the ordinary operations of the Institution, the following efforts call for special funds:—

New workshops, with appropriate fittings, newly erected at a cost of £300.

Emigration of seven youths to Canada in April next, £85.

Contributions in aid of either of the above objects are earnestly solicited, and will be gratefully acknowledged.

FEMALE MISSION, in connection with the REFORMATORY AND REFUGE UNION.

The subject of fallen females having been brought prominently forward nearly two years ago in some of the public journals, a sub-committee of this Union was formed to inquire into the question, with a view to devise some scheme of practical good, in the least expensive and most effectual manner.

After various conferences with the clergy of the several parishes in the metropolis, and the managers of some of the existing institutions, it was resolved that a centre of action should be provided, through which institutions might be assisted, and where contributions could be received from those who are desirous of aiding in the rescue of this unhappy class.

For this object a handbook was compiled and published, containing a short account of fifty penitentiaries and homes for females in London and the provinces, with particulars as to the ages received, terms of admission, &c.

The services of two female missionaries were then employed for the purpose of seeking out those who were desirous of leaving their evil ways, and directing them to places of shelter and protection.

The sub-committee, who undertook their weekly superintendence, can now report that these missionaries have carried on their difficult work with zeal and steadiness of purpose, and have met with an unlooked-for measure of success.

Out of a large number of cases which have engaged attention during the past eighteen months, *one hundred and fifty-six* appeared to be penitent and anxious to reform, and therefore have been placed in homes or penitentiaries, or otherwise provided for; and in many instances the necessary sum for their admission has been paid by the Union.

Arrangements have been made by which one of the missionaries is able to receive these women at once into her house, until a suitable refuge be provided for them.

About 25,000 tracts and handbills have been distributed in the parks and streets, as well as in houses of bad character, into which the missionaries have gained admission at considerable personal risk and self-sacrifice.

Hospitals have been visited in the hope of permanently benefitting those who were compelled by illness to leave for a time their evil course of life.

The funds received for this special object are now exhausted. An earnest APPEAL is therefore made for donations and subscriptions, in order that the Union may not be compelled to discontinue this important part of its operations.

The following contributions, received since the last report, are thankfully acknowledged:—

	£	s.	d.
Countess of Darnley	2	0	0
T. J. Sanderson, Esq.	7	0	0
Rev. Sir N. Chinnery, Bart.	1	1	0
William Gaussen, Esq.	5	0	0
Thos. J. A. Roberts, Esq.	5	0	0
Thos. Hankey, Esq.	5	0	0
Miss Evans	1	0	0
Thos. Tilson, Esq.	10	0	0
G. H. K.	50	0	0
Ditto, second donation	50	0	0
J. F. Fortescue, Esq.	0	10	6
B. J. H.	0	5	0
Rev. E. B. Evelyn	3	0	0
Chas. Ratcliff, Esq.	1	1	0

These contributions, together with a balance from last account (Feb. 4), of £105 18s. 8d., have been expended as follows:—

	£	s.	d.
Grants to Institutions, with Cases, &c.	141	0	0
Salaries of Missionaries	60	12	0
Temporary Lodgings, Food, and Sundries	38	18	0
Leaving a balance in hand of	6	6	2

President of the Union.—THE EARL OF SHAFTESBURY.

Hon. Secs.—Robert Hanbury, Esq., M.P., 10, Upper Grosvenor Street, W.; Stephen Cave, Esq., M.P., 22, Wilton Place, S.W.

Female Mission Sub-Committee.

A. D. Chapman, Esq.
The Dean of Ripon.
William Gaussen, Esq.
Robert Hanbury, Esq., M.P.
John La Touche, Esq.
W. J. Maxwell, Esq.
George Moore, Esq.

Contributions should be paid to the "Female Mission Fund" of the Reformatory and Refuge Union; at Messrs. Smith, Payne, and Co.'s, No. 1, Lombard Street; Messrs. Ransom, Bouverie, and Co., 1, Pall Mall East; and at the Office of the Union, 118, Pall Mall, S.W.

CHARLES GWILLIM, *Secretary.*

AID is asked for many poor CLERGYMEN in DISTRESS, wanting food and raiment. Donations of money and clothing will be thankfully received by Rev. W. G. JERVIS, Secretary to the Poor Clergy Relief Society, 345, Strand, W.C.

METROPOLITAN ASSOCIATION for IMPROVING the DWELLINGS of the INDUSTRIOUS CLASSES; incorporated by Royal Charter, dated October 16th, 1845; with perpetual succession.

DIRECTORS.

Chairman.—Sir RALPH HOWARD, Bart.

Deputy Chairman.—JOHN WILLIAM TOTTIE, Esq.

George William Alexander, Esq.
Major-Gen. Edward Pery Buckley, M.P.
The Right Hon. the Earl of Carlisle, K.G.
Stephen Charles Denison, Esq.
Edward Enfield, Esq.
Sir William Fraser, Bart., M.P.
Hon. D. Francis Fortescue, M.P.
Thomas Field Gibson, Esq.
Frederick David Goldsmid, Esq.
The Right Hon. Lord Claud Hamilton, M.P.
William Egreton Hubbard, Esq.
Edwin Hill, Esq.
Sir Samuel Morton Peto, Bart.
T. Southwood Smith, Esq., M.D.
Russell Scott, Esq.
William Arthur Wilkinson, Esq.
Horace Wilkinson, Esq.

The necessity for the prosecution of the objects of this Association is continually brought before the public by the press, and in the reports of the officers of various sanitary boards, the only result of which has hitherto been the formation of various societies in addition to this Association, of smaller scope, though having the same objects in view.

The experience of thirteen years has convinced the Directors that the only mode in which the existing evils resulting from the improper housing of large masses of the people in densely-populated districts can be effectually and permanently alleviated, is by the exercise of such powers as they possess, and that the desire to do this must, at the present time, be exerted by one extended and powerful combination, instead of a variety of disjointed attempts, each necessarily burdened with expenses of its own, pressing upon the body of proprietors with a weight proportioned to the contraction of the area of its operations.

The Charter confers power to raise £100,000 capital, in shares of £25 each, to be expended in England and Wales, and to increase such capital to any extent, from time to time, with the sanction of the Board of Trade and the Shareholders.

To enter into contracts under the common seal of the Association.

To declare dividends not exceeding 25 per cent.; surplus to be applied in further promoting the objects of the Association, with the approval of the Board of Trade.

Constitution—Shareholders incorporated, and liabilities of each limited to the amount of his investment.

Directors elected by the Shareholders, two retiring every year, but capable of re-election.

Supervision by the Government, through the medium of the Board of Trade, for the purpose of securing the permanence of the original intent.

It is gratifying to know that, wherever the operations of this Association have been felt, the result has been the improvement of the accommodation afforded in the neighbouring dwellings; but greatly-increased efforts are requisite, both to meet the extent of the existing evil, and to perfect the remunerative character of the undertaking.

The Directors, therefore, invite the co-operation of the capitalist, and, to this end, his inspection of their buildings undermentioned.

The tenant class are earnestly requested, for the sake of their comfort, their health, and the economy of their dwellings, to make themselves acquainted with the accommodation hereby provided.

Every information may be obtained on application to the Secretary, Mr. CHARLES GATLIFF, 19, Coleman Street, London, E.C.

The existing property of the Association is as follows:—

Pancras Square, Old Pancras Road	110	families.
Ingestre Buildings, New Street, Golden Square	60	do.
Nelson Square, Snow's Fields, Bermondsey	108	do.
Albert Street, Mile End New Town	60	do.
Pelham Street, Mile End New Town	35	do.

WHY GIVE MORE?—Excellent TEAS, Black, Green, and Mixed, are now on sale, for Family Use, at 2s. 8d. per pound, at NEWSOM and Co.'s Original Tea Warehouse, 50, Borough. Near London Bridge Terminus. Established A.D. 1716.

ALARM GUN.—Capt. NORTON'S ALARM GUN, without vent or touch-hole, fired at the muzzle by friction, for protection against burglars, poachers, &c., is to be had of the London Gunmakers: Field, Blisset, and Beckwith, Holborn; Reily, New Oxford Street; Lang, Cockspur Street; Daw, Old Broad Street; and Wilkinson, Pall Mall.

F. FUSEDALE, FASHIONABLE TAILOR, 4A, King Street, Holborn, London, W.C., begs to call the attention of the public to his superior Stock of Winter and Spring Goods, also to his unequalled 16s. Trowsers, which he is enabled to supply owing to the very extensive demand for them. A perfect fit guaranteed.

PERSONS about to Decorate should inspect SILAS TUCKER'S splendid assortment of PAPER HANGINGS, at his Warehouse, 234, High Holborn, ten doors East of Little Queen Street, London. Estimates for every kind of Decoration; also for General Repairs in Town and Country.

SPECTACLES and STEREOSCOPES, by GEORGE COX, Author of "Spectacle Secrets."—Photographic Apparatus, Dissolving Views, Telescopes, Achromatic Microscopes, and all Optical, Mathematical, and Philosophical Instruments. The Sight carefully suited, at the Manufactory or at the purchaser's residence, and any article exchanged after trial. Pre-paid Orders carriage free.—GEORGE COX, 5, Barbican, E.C., Inventors' and Manufacturers' Agent. Established 150 years.

SPECTACLES—MICROSCOPES—TELESCOPES.—FINE STEEL FRAMES, with REAL PEBBLES. 6s. 6d.: ditto, Best Glasses 5s. 6d., 4s. 6d, 3s. 6d.: Solid Gold, 20s.; Silver, 10s. 6d.

BERNARD DAVIS, 430, Euston Road, Regent's Park (close to Trinity Church), Optician to the Ophthalmic Institutions. Country residents can be accurately suited by stating age, &c. Enclose stamps, or P. O. order, payable Upper Baker Street, London.

MICROSCOPES, equal in power to the largest made, in mahogany cases, 21s., 17s. 6d, 12s. 6d. Ditto, with all necessaries for every purpose, in upright Mahogany Cabinet, magnifying 60,000 times, £4 4s., warranted.

POCKET TELESCOPES, define ten miles, 10s. 6d.; ditto, 20 miles, 21s.

BERNARD DAVIS, Optician, &c., 430, Euston Road, Regent's Park (formerly called New Road).

PHRENOLOGY APPLIED TO CHILDREN may lead to the avoidance of many of the errors so frequently committed in their education and subsequent destination. During Mr. DONOVAN'S long and extensive practice as a consulting phrenologist, his attention has been particularly directed to this most important branch of celebral science. Consultations from 9 to 6 daily. Free Lectures on Monday evenings, as usual. 1, Adelaide Street, Trafalgar Square, W.C.

CIVIL SERVICE.—Merchants, Civil Engineers, and Surveyors' OFFICES.—Foster's Initiatory Counting-house, 161A, Strand, next door to King's College Gate.—This Institution is intended as an intermediate between school and business, where gentlemen are thoroughly prepared to perform the duties in the above.

SAVINGS' BANK DEPARTMENT.

SOUTHWARK, METROPOLITAN, and PROVINCIAL FREEHOLD LAND and HOUSE SOCIETY.

Trustees,

Thomas Pillow, Esq., James Pollock, Esq, and W. H. German, Esq.

FIVE PER CENT. ON DEPOSITS.—Dividends payable on and after the 1st of January and the 1st of July.

Offices: 4, Wellington Chambers, London Bridge, Southwark.

RICHARD BRETT, *Secretary*.

Prospectuses forwarded on application.

Established 1800.

CHASSEREAU AND ROBERTS, Practical Dyers and Cleaners, 19, BLACKFRIARS ROAD (Two doors from Surrey Chapel), at OLD KENT ROAD (Twelve doors south of the Swan), and at 46, CASTLE STREET, Hemming's Row, Leicester Square.

All the modern and most approved Processes applied in every Branch of the Trade. Strict attention paid with regard to punctuality and cheapness.

THE MARKET FOR EDUCATED FEMALE LABOUR.

A PAPER READ AT THE MEETING OF THE ASSOCIATION FOR THE PROMOTION OF SOCIAL SCIENCE, BRADFORD, 1859.

(*Abridged.*)

I HAVE been asked to prepare a paper on the condition of women in England; and believing that their claims are so far advanced as to admit of being beneficially advocated in detail, I have resolved to confine my attention to the nature and extent of the Market for *Educated* Female Labour.

Everybody here present will at once admit that the theory of civilized life in this and all other countries, not excluding the democratic States of America, is that the women of the upper and middle classes are supported by their male relatives: daughters by their fathers, wives by their husbands. If a lady has to work for her livelihood, it is universally considered to be a misfortune, an exception to the ordinary rule. All good fathers wish to provide for their daughters; all good husbands think it their bounden duty to keep their wives. All our laws are framed strictly in accordance with this hypothesis; and all our social customs adhere to it more strictly still. We make no room in our social framework for any other idea, and in no moral or practical sphere do the exceptions more lamentably and thoroughly prove the rule. Women of the lower class may work, *must* work, in the house, if not out of it—too often out of it.

Educated women must work. It is not my fault that I am obliged to assert this; nor your fault if you are compelled to believe it. Our theory and our practice are wide apart in this matter, and the cause of the discrepancy is as deep as the cause of strikes or commercial crises; nay, deeper still, as the cause of misfortune, improvidence, or crime in human nature.

The aristocracy are rich enough to make some invariable, though scanty, provision for their female members; but the middle class is at the mercy of a thousand accidents of commercial or professional life, and thousands and thousands of destitute educated women have to earn their daily bread.

Of course the first resource of these ladies is teaching; nothing else is obviously present to them. Now listen to the result. The reports of the Governesses' Benevolent Institution, one of the largest charities and most efficient organizations for the assistance of industry which exists in the kingdom, reckon fifteen thousand governesses as an item in our population. Fifteen thousand educated women, chiefly single or widowed, unsupported by their male relations, and in innumerable cases obliged to support *them!*

If any one wants to learn the truth about the condition of the educated working woman in England, let him consult the reports of the Governesses' Benevolent Institution. It is divided into several branches of usefulness. There is a Home for the disengaged at 66, Harley-street, London, and an elaborate system of Registration, by which last year fifteen hundred names were entered, and eleven hundred obtained situations. It may be recorded as a passing fact that the hall-book of the house, where Home and Register are jointly located, should record the visitors of one year as twenty-four thousand. There is a Provident Fund for the securing of annuities, of which we are told that the first payment, by a lady contracting for one of these annuities, was paid on the 20th of June, 1843, and that the amount now invested is 177,292*l.* 10*s.* 3*d.* There is also a fund out of which Elective Annuities are created, and a system of temporary assistance managed by a committee of ladies. The applications for this, in 1858, were eight hundred and thirty-eight, and the grants four hundred and ninety-three, to the extent of 1,346*l* 8*s.* 8*d.* The total number of applications have been ten thousand three hundred and thirty-four; of grants, five thousand five hundred and seventy-one; and the total amount of gifts, 14,284*l.* 12*s.* 4*d.* Lastly, there is an Asylum for Aged Governesses' at Kentish Town; it contains twenty-two apartments duly filled.

Let us now see how and why these unhappy women endure such misery. We have roughly the means of ascertaining; for every May and every November an election occurs to the annuities, and I find one hundred and forty-five cases of candidates printed in the list for last May, of whom some three or four only could receive an annuity.

Surely then in a country where the chances of provision for women are so frightfully uncertain, parents in the middle classes ought,—

Firstly, to train their daughters to some useful art, however humble:

Secondly, to repress all desire of forcing them into tuition, because it is more "genteel:"

Thirdly, to insure their lives when they cannot lay by money for their female children.

The father, by his labour of head or hand gains sufficient to support his wife, and say three children, one of whom is a girl. The father will certainly send his two boys to school, whether it be to a twopenny, or to an expensive boarding-school: the girl will probably be sent also for a few years to one much inferior; but if there is work to be done at home she will be kept at home to do it. In the middle-class family we have taken as a type, she is much employed in making shirts for her two school-boy brothers. We have heard of a case in which some young ladies, who were offered gratuitous instruction in one of the best ladies' colleges, were kept at home for that purpose. Her learning is not insisted on, while her brothers are urged forward, and every facility given for them to pursue their studies at home. When the girl is fourteen or fifteen, we shall certainly find her taken away from school, if not earlier; while the boys proceed to some higher place of instruction, or begin to learn a profession. But now that the daughter is permanently under his roof, perhaps the father, who depends entirely on his yearly income, may begin to have some little anxiety as to her future. Perhaps he may ardently wish, for an instant, that he could leave her an assured livelihood, or a means of gaining one. He balances in his mind the expense of training her as a first-rate governess; but the expense would be very great, and he has not courage or energy to look for any exceptional work for his young daughter; he would not make her a clerk or a nurse. So he silences all anxiety for the future, by saying, "She will marry: indeed, it would be a very bad speculation, a very foolish outlay of money, to give her a trade or profession; she may never want it, and her brothers are sure to want all the money I can spare." Plausible, but fearful logic. It is true that the *chances* are on the side of her marrying, so it is not astonishing that an ordinary father trusts to them; yet the miseries which befall a penniless woman are so great, that if the opposing chance were but as one in a hundred, the parent should provide against it.

But there is another reason why the father confides his daughter's future so wholly to her possible husband: women are so unused to have or to hold property, and the law throws the gifts or the earnings of a married woman so completely into her husband's power, that the father is little tempted to save up his money to give to another man; nor to train up his daughter expensively, when another man has legal power over the fruits of her education, and can take away any money she earns.

And suppose this girl, whom we took as a type, does not marry, and is left penniless and single by the death of her father; what can she do? She is untrained; she cannot be a good governess; she cannot undertake a national school; and her father taught her no business, and gave her no money to set up in one.

And here we come to our second proposition: that all ideas of the superior gentility of governess-ship should be discouraged. It is the overcrowding of the lower departments of that profession which causes such a frightful competition and depression of salaries. There will always be a fair demand and high pay for the very highest class of female teacher, who

Digitized by Google

educates the daughters of the nobility and gentry, and fits them in manner and conversation for the station they will be called upon to fulfil. But why should tradespeople, housekeepers, and widows of all ranks, try and make their girls inferior half-accomplished teachers, instead of honest, happy, business women? Why should they drive them into an *unprogressive profession*, while even in a shop they would have more liberty and leisure and power of making way?

Of course, in urging parents not to make governesses of their daughters, if they can possibly help it, we must look out and try to open other paths. Why, if women must work, are they to be obliged to work only at the hardest, most ill-paid, and unpleasant employments? Are they stronger, more hopeful, more persevering, that by social arrangements they are prevented from working in the progressive and more attractive employments, and thought to lose caste if they enter into business? It was once thought that a *gentleman* could only earn his bread as a soldier; yet even merchants and lawyers are now admitted under that exclusive name! It is but a small list, that of employments now possible; but it will widen every day. Let every father who has no money to leave his daughter, see if he cannot educate and place her in some respectable work—telegraph-clerk, book-keeper, woman of business, *quelconque*—surely in our commercial country it may be done. As to the arts and literature, they must be left to individual capacities.

But the immense field of paid social labour, in schools, prisons, hospitals, workhouses, remains to be worked; and for this the woman's ordinary domestic training does in a great measure render her fit.

Thirdly. Every parent who can save money ought to insure his life for his daughters. It is lamentable to think how small a proportion of our population insures, when it is so cheap, so easy, so safe, and creates help for the women of a family just when, by the death of the helper, they would otherwise be left without resource. But the large subject of insurance in all its branches deserves far more than a passing allusion, and the principle could be applied in numerous ways to the benefit of women.

At the same time, every effort should be made to aid in every way female education. The education of women of all classes is lamentably deficient; it is only necessary to read the Education Commissioners' reports to see how confessedly bad it is.

Girls are not taught so well, nor so many branches of knowledge, as boys; and there is a general indifference as to whether they make any progress or not. I earnestly desire to see benevolent effort directed into this channel. I wish to see the profession of the teacher elevated, and nothing would more surely conduce to it than opening the higher offices in the Educational Board to women. There is no reason why women should not be inspectors and examiners of girls' schools. I would also suggest that the middle-class examinations at Oxford, and other such examinations, be opened to women; and also that incalculable good might be accomplished by establishing examinations for volunteer lady teachers. There is much good done by corps of volunteer ladies assisting in the teaching of schools for the poor and middle classes, and there is no reason why this good should not be extended and increased. The examination should be in particular branches of education, and certificates given as to proficiency.

But the one conclusion which I desire to enforce is, that in all cases it is the *fathers* who are morally responsible for their daughters' welfare. Let each father consider how he can best provide, whether by giving her a special training, by saving money, or by insurance. One or the other he is bound to do; sacredly and morally bound. He has no right, in a country like England, to risk her future on the chances of marriage which may never be fulfilled.

B. R. P.

SYMPATHY WITH THE RED INDIANS.

The following Address to the people of the United States, in behalf of the Indians, from the pen of John Beeson, has been published by the Indian National Aid Society, 55, Broadway, New York.

The rapid settlements of our people upon Indian lands has reduced several tribes to misery and desperation; and unless prompt and wise measures are devised they will soon become extinct.

The apathy to their fate arising from the sentiment which affirms that they are *destined to perish*, no more satisfies the truly humane and Christian mind, than it would to be indifferent to the comfort of the aged and sick whose end is near; for it is felt that we are in both cases responsible for their welfare to-day, irrespective of what may be their circumstances to-morrow. Philanthrophists erroneously solace themselves with the thought that it is a law of nature that the Indian should disappear with the "*forest and the buffalo*," forgetting, that if this were even so, the Indians ought to be saved by preserving a sufficiency of these for their use during their transition from the savage to the civilized condition.

But facts demonstrate that forests and buffaloes are no more necessary for the Indian than for the white man, and that when treated with the common civility and good judgment by which Rarey tames the wildest horse, and by which the trees and the squirrels in the parks of Philadelphia and on Boston Common flourish, and which every man owes to his fellow man—I say with such treatment the Indians would live and thrive in our midst, as naturally as these, and would emulate those around them in the attainment of the highest conditions of human life.

It is true that devoted men have worn out their lives in missionary effort, and the country has spent millions ostensibly to Christianize the Indians. But the well-known law by which the stream cannot rise above its source, is potent in morals as well as in hydraulics. And hence Christian doctrine, at whatever cost or faithfulness it is presented to the Indian, unless it is accompanied with Christian conditions, will be for ever useless. Who does not see the impossibility to save and elevate our frontier Indians, while the superabounding influences are to debauch and destroy them? and who does not see the equal impossibility of a remedy for this state of things, so long as the action of both the government and the church is biassed with the paralysing sentiment which affirms that "*destiny*" or God wills that they should perish? I dwell upon this point; its vital importance to our own people will be perceived by the consideration of the superior condition which the public morals would attain with a prevailing sentiment the reverse of that which we have named. If, for instance, the life-inspiring words that "God wills all men to be saved," that progression and not annihilation is His law for man, and that the march of the civilization of a great nation like ours, should be characterized by the diffusion of peace and goodwill unto all with whom it comes in contact—I say if these were the permeating sentiments of our people, and if young Americans, under these influences, went forth as saviours and enlighteners of the Aboriginal race, who does not see how much more nobly we should fill the mission which God and nature has entrusted us with?

A true civilization demands of us, as a Christian people, to cultivate forbearance, magnanimity, and justice, between the races; and to treat the Indians as friends and allies, instead of as *aliens and enemies*. It asks us to appropriate a territory, which, for extent and adaptation, will be worthy of our nation to give, and of the Indian tribes to accept, within which they shall have the unmolested enjoyment of social, religious, and political freedom, as one of the Sovereign States, and be aided in the development of their resources by the practice of the arts, agriculture, and general commerce, so as to become a self-sustaining and progressive people.

Until this is done missionary efforts cannot save the race from destruction; and we can do all this at a less cost than is required to support the present system of Indian agencies and forts, and standing armies and frequent wars. For we should not only save the lives and property of our citizens, the deterioration of morals, and the waste of public funds, but we should change hundreds of thousands of enemies into friends, and cause them to become a source of wealth and strength to the country, instead of, as at present, a cause of loss and weakness.

And there should be no objection to this on account of what has passed; for if the Indians have been severe in their revenge, they have not been more so than others, with far less provocation; and though they are called "*savages*," yet it is affirmed by high authority, that as a race, they are "*remarkable for their hospitality to strangers, and for their fidelity to friends; that they have never been first to break a treaty, have never shed a drop of Quaker blood.*"

We owe the Indian race a kind and respectful recognition, as the progenitors of Randolph and Jefferson, and for the heroism and love of liberty which it holds in common with our own race, as well as for

Digitized by Google

the historic associations which inseparably links the two together.

We are, therefore, bound by the respect which we owe to ourselves—to the age—and to posterity to transmit, not mere relics and records of a race extinct, but a living, thrifty community of the people from whom we have derived a continent.

It will be seen that since the treaty was made a few years ago, by which the Indians were to have the absolute possession of the country west of the Mississippi, a whole tier of States, stretching west and south of that river and round the western slope of the Pacific coast, has been taken from them. We see, also, Kansas and Washington territories almost meeting over the Rocky Mountains, and already governments are organized in the territories of Dacotah, Nebraska, Utah, New Mexico, and Arizoni, and arrangements are in operation to divide them into States, so that now there is really no acknowledged Indian territory west of the Mississippi, except the space between Kansas and Texas; and even this is being encroached upon, and under present circumstances, there is no reason to believe that the Indians are more secure there than they have been in other sections from whence they have been driven. The fertile valleys of Oregon and California, and Arizoni, and Washington territories, teeming with exhaustless treasures of mineral wealth, are monopolized by our people; while the tribes who occupied them, some of whom are distinguished for their industry, and would grace any community in the land, for their intellectal and moral worth, are driven away homeless to starve upon the mountains, and the saying is heard, that "*we must either feed or kill the savages.*" Thus they are made paupers and vagabonds, and then held up as "*savages to be fed or killed*" by those who have outraged them. Every reflecting mind will see that such treatment is unjust and unworthy the sanction of our people, and cannot be persisted in without a total departure from all moral principle, and from that "righteousness which exalteth a nation." Let the tongue and pen of every lover of justice respond to this appeal, and a year will not roll round—another Fourth of July will not be celebrated—but with the participation of the red men with the white in a common heritage of Freedom and Peace.

In connection with this subject the following resolutions were adopted at a Mass Meeting, held in Faneuil Hall, Boston, in the month of October last:—

1st. *Resolved*, That there is neither necessity nor justice in excluding the Indians on our western frontier, from public sympathy and from the protection of civil law.

2nd. *Therefore Resolved*, That a committee of seven be appointed by this meeting, whose duty shall be to use the necessary means to promote a thorough interest in their condition. It shall be authorized to send agents to the distant tribes, to assure the Indians of friendship, and to gain correct information of their needs; to issue suitable publications, and to aid in getting up a series of Mass Meetings in various cities, and as soon as practicable, convene a National Convention, which shall discuss the details for an improved Indian Department, to be presented for the Action of Congress during the coming session.

3rd. *Resolved*, That a premium of One Thousand Dollars be offered for the best treatise on the following points:—

1st. The causes why the Indians have not been Christianized.

2nd. The causes of their fading away.

3rd. A plan for their future government.

4th. The location and extent of the domain or domains which should be appropriated for their final settlement.

4th. *Resolved*, That the Treasurer and the Secretary of the Association for the Promotion of the Gospel among the Indians and others, as established in the city of Boston, be the acting officers for the purposes herein named.

SIR JOHN RATCLIFF.

The retirement of this distinguished philanthropist from the Mayoralty of Birmingham, an office which he has held for three consecutive years, has been made the occasion of an ovation which Sir John has well deserved, and which Birmingham has honoured herself in awarding. On Wednesday, 9th November, a public banquet was given to the retiring Mayor; and as a proof of the universal esteem in which he is held, every member of the council was present except one, who was unavoidedly prevented by domestic bereavement.

About 200 sat down to dinner, among whom were the Earl of Lichfield, the Right Hon. G. B. Adderley, M.P., and several other gentlemen of influence and distinction. On this occasion Birmingham assembled to do honour to one of her best sons, of whom it has been said that his munificence, whether displayed in unbounded hospitality or in private charity, has been unexampled in the local annals of that great seat of enterprise and industry, over whose municipal councils he has so ably presided. Every good cause found in Sir John a ready patron; and it will especially be remembered that the inauguration of the Social Science movement was under his auspices. The ex-Mayor retires from his anxious responsibilities amid the praises of all parties, with undiminished popularity, and with an unblemished reputation.

The following extract from the columns of the *Birmingham Times*, will show that Sir John Ratcliff is not the prophet without honour in his own country and among his own people.

"We have this week to chronicle an event which must afford sincere gratification to the inhabitants of Birmingham, and to all those who delight in seeing true worthiness and merit acknowledged and rewarded. The public banquet to Sir John Ratcliff, our late estimable Mayor, affords an illustrious example of the love which all men have, in a greater or lesser degree, for true nobility of soul, for patient merit, and for ardent devotion to the well-being of the people. Great men are frequently honoured with fulsome adulation, tinselled trappings, and hollow lip-service; but good men receive the worship of the heart, the respect and estimation of the virtuous, and the homage of the bad. In the darkest corner of the most depraved heart dwells a latent spark of virtuous feeling, which will spring exultant to an angel's form, when a good action of a virtuous man, like Ithuriel's spear, awakes it from its torpor and its lethargy. We doubt not that the private charities of Sir John Ratcliff, actions known only to himself and his Maker, have touched a spring in many a dark and life-weary soul, which has set in motion the moral machinery of the desolate and stricken man, and linked him once more with humanity and heaven; whilst his public munificence to our benevolent and philanthropic institutions has won for him the respect and esteem of his fellow townsmen, and the blessings of the poor, the suffering, and the ready to perish. The munificence of our late Mayor, however, was not confined to private charities and public benevolent and charitable institutions, but during his three years of office was displayed in a variety of ways, and on several remarkable occasions. No one will have forgotten the enterprising, spirited, and liberal manner in which Sir John inaugurated the Industrial Exhibition of 1857, in aid of the funds for the liquidation of the debt on the Midland Institute, the offer to guarantee the expenses of the same, emanating from him. Our late Mayor further distinguished himself and the town by his hospitable entertainment of the Princes of Oude, the Duke of Cambridge, Lord John Russell, Lord Stanley, Lord Brougham, Lord Shaftesbury, and other great and celebrated men, at his own private and entire cost, and not for his own benefit, but in honour of his official position and for the well-being of Birmingham. We cannot forget either the invitation to the National Association on Social Science which Sir John gave in October, 1857, and his entertainment, not only to the notabilities already named, but to every member of the society. His hospitality to the Corporation and the gentlemen of Birmingham also deserves especial mention as being highly praiseworthy, directed as it was to the healing of breaches, and the cementing of good feeling amongst the members of the Council and other influential individuals. His entertainment of the Mayor of Melbourne was doubtlessly calculated to effect a good understanding between ourselves and the colonists, and was a discreet and wise thing to do under the circumstances. Last, but not least, Sir John's entertainment of, and invitation to Her Majesty, may be mentioned, as an instance of princely hospitality, and an act of public service not easily to be obliterated from the memories of the people of Birmingham."

OXFORD AND CAMBRIDGE MISSION TO CENTRAL AFRICA.

We are able to state some of the leading points in the origin and progress of this mission, from unimpeachable authority.

It appears that the Rev. Wm. Monk, of St. John's College, Cambridge, has been, for several years past, active in the promotion of missionary work in the University of Cambridge. In his intercourse with the junior members of that University he noticed that *many men talked of becoming missionaries, but that few actually did so.* On the other hand, he could not but be impressed with the urgency of the appeal constantly made by the

Digitized by Google

great missionary societies *for men*. After long and anxiously pondering these facts, he resolved to found a society among the junior members of the University for the purpose of finding, *not money, but men*. He had noticed that pecuniary support for carrying on missionary work was generally the only object of active canvass. This led to the establishment of "The Cambridge Church Missionary Union," and subsequently of "The Gospel Propagation Union." These societies, of which Mr. Monk is the principal founder, have exerted considerable influence in stimulating the work of missions in Cambridge. The first of these societies was established in 1856, the second in 1858. It is a remarkable fact, that since their establishment nearly ten times as many young men as formerly have offered themselves as missionaries, and that nearly all of these were members of one or both of the above-mentioned societies.

Encouraged by such success, Mr. Monk invited Dr. Livingstone to visit Cambridge, for the express purpose of awakening the missionary zeal of the University in favour of Africa in general, but of the regions opened up by Livingstone in particular. The doctor agreed to accept the invitation; and finally it was arranged for the great traveller to give a lecture on the subject in the Senate House, Cambridge, on the 5th of December, 1857. This building was readily granted by the Senate Council, although it had never before been used for such a purpose.

The lecture was a great success, as was that delivered in the Town Hall on the following day.

In order to keep up a permanent interest in the cause, Mr. Monk undertook to publish these two lectures, Professor Sedgwick contributing a preface—the volume referred to in our leading article being the literary result of Livingstone's visit to that famous seat of learning. This book exactly answered the expectations of its editor in keeping alive the interest excited, as well as in stereotyping Livingstone's own words and sentiments.

In November, 1858, the Bishop of Capetown visited Cambridge, with the view of interesting the University in his own work, and of trying to do something for Livingstone's newly-explored regions. Circumstances naturally led his Lordship and Mr. Monk to hold a conference on the subject. The Bishop approved of Mr. Monk's suggestion, and offered to form a committee for the purpose of sending out a Cambridge mission, in accordance with the understanding arrived at with Dr. Livingstone just before he left the country in March, 1858. The committee was immediately formed, and at the first official meeting, it was proposed that Oxford should be asked to join Cambridge in the enterprise; and in the event of such co-operation being obtained, it was further agreed that the mission should be styled "The Oxford and Cambridge Mission to Central Africa." Mr. Monk was deputed to visit Oxford in March, 1859, in company with the Rev. G. Williams, of King's College, for the purpose of getting a committee formed there. In May last the large meeting was held in the Sheldonian Theatre, which was numerously attended, and was most successful. The Cambridge representatives on that occasion were, the Reverends Professors Selwyn and Browne, the Venerable Archdeacon Hardwick, and the Reverends G. Williams and W. Monk.

In May Mr. Monk was deputed to form a London committee, which is now large, influential, and actively at work.

On the 1st of November last the great meeting was held in the Senate House at Cambridge, the details and results of which are now so widely known.

The above is a brief outline of the principal facts, which have gradually led to the inauguration of one of the most important Christian missions ever set on foot. May God bless its operations, and guide its promoters in their high and noble work!

KINGSTON, JAMAICA.

First Annual Report of the St. George's Home and Reformatory for Boys.

In the early part of last year, the attention of the Committee having been drawn to the deplorable fact of the large and accumulating amount of juvenile vagrancy and crime in this city, it was determined, under a deep conviction of the strong claims on their Christian sympathy and exertion, to attempt the formation of a Boy's Reformatory in connection with St. George's Chapel.

The Institution was accordingly opened on the 1st of July, 1858, on which day Mr. Joseph Henry, the person selected as Master, was placed in possession, with three boys as inmates; and on the 16th day of the same month, the Reformatory was duly certified by His Excellency the Governor, in Executive Committee, under the provisions of the Industrial Schools' Act of 1857.

Some difficulty was experienced in obtaining a suitable locality for the Reformatory. The premises now occupied, No. 46, Upper Knight Street, were selected, not only on account of the healthiness of situation, but also as possessing the advantage of a small run of land capable of being cultivated as a flower and vegetable garden. The buildings being out of order, considerable expense was incurred at the outset in necessary repairs, in enclosing the land, and laying pipes for supplying it with water. The Committee regret that, through the want of funds, they have not yet been able to accomplish other repairs and improvements, by which additional accommodation might be gained, and the comforts and economy of the Institution be promoted.

The details of receipt and expenditure during the year of management, which terminated on the 30th of June, 1859, are exhibited in the account current and statements appended to this Report. A reference to these documents will show that the Reformatory has been kindly assisted, by grants and allowances from the Government, to the extent of 258*l.* 10*s.* 9½*d.* The sum of 156*l.* 0*s.* 3*d.* has been realized by private donations and subscriptions; and the further sum of 112*l.* was appropriated to the Reformatory from the proceeds of a Bazaar, held in May, 1858, for the benefit of the charities connected with St. George's Chapel.

The expenditure for the year has amounted to 421*l.* 1*s.* 3½*d.* It must be observed, however, that the full number of inmates was not completed for more than eight months after the Institution had been opened, so that the expenditure has not been uniform in the earlier and latter portions of the year. In the opinion of the Committee, the cost of a Boy's Reformatory in Kingston should not be estimated lower than 12*l.* per annum for each inmate—a sum considerably below the average expense of similar institutions in the towns of Great Britain.

A small quantity of vegetables raised in the garden has been made available for food in the Reformatory. The Committee do not anticipate any considerable return of profits, either from this source or from the other departments of industrial work. There can be no doubt that a town locality does not afford the same facilities for *self-support* as might be obtained in the country. The main object, however, of the Committee is to qualify the boys for employment as agriculturists, and they are training them as far as possible, with a view to this paramount object. It has been their anxious wish that the boys should be thoroughly instructed in industrial work which may be useful to them in after life. With this object they have been endeavouring to make arrangements with a master-cooper to open a workshop in connection with the premises, for the purpose of teaching this very useful trade; but, chiefly from pecuniary and other obstacles, the plan has not yet been carried out. It is, however, still under the consideration of the Committee.

Eighteen boys attend at the St. George's Free Industrial School, where they receive instruction in the trades of shoe-making, tailoring, and plaiting straw; this arrangement has been made in the hope that even a moderate acquaintance with these industrial pursuits will be of service to the boys in any sphere of life in which they may hereafter be employed.

The Committee have reason to be satisfied with the progress made in the ordinary school department. With a very few exceptions the boys had been entirely untaught when received into the Institution; they have now obtained a moderate proficiency in reading, writing, and Biblical knowledge. Being exposed, from their earliest infancy, to the baneful influences of the streets, their moral condition was very deplorable. They were, for the most part, ignorant of the simplest elements of religious knowledge, and to all appearance devoid of any discernment between right and wrong. It has been the object of the system pursued to implant religious feelings and principles in their hearts; to form them into habits of kindness and gentleness to one another, implicit obedience to authority, cleanliness, regularity, and order, and a general truthfulness and uprightness in their ordinary conduct. This has, indeed, been a labour of much difficulty, and anxiety; and its progress was often interrupted by the influx of new comers—an evil which it was impossible to avoid, while the full complement of inmates had not been attained. On the whole, however, their moral improvement has been satisfactory; the humanizing influences of home and family life, have had a marked effect; and visitors have almost invariably noticed the general happiness and contentment which manifest themselves throughout the Institution.

The present number of inmates amounts to forty-two. The total number admitted was forty-four; one of these, a child, whose health had been destroyed by previous neglect and starvation, died in the Institution, after a protracted illness, on the first of July, 1859. Another boy absconded at the time of the Kingston races, and has not since been heard of. The demands for admission on behalf of orphan and destitute children, since the first opening of the Reformatory, have been urgent and numerous. Not less than fifty poor children have been refused admittance, in consequence of the impossibility of maintaining so large a number of inmates: and several months ago, the Committee were very reluctantly compelled to inform the magistrates of their inability to receive any additional children of the vagrant class. This is a fact which surely demonstrates the necessity of additional Reformatories, and other kindred agencies, by which these objects of compassion may be reclaimed, and made a blessing, instead of a reproach to the community.

The Committee do not feel that their experiment has as yet been sufficiently tried to warrant them in pronouncing any decided opinion as to its results. They have already experienced disappointments, and many causes of anxiety. Among these may be mentioned the case of a boy, whose uniform good conduct had given rise to the most encouraging hopes. It was discovered that he had suddenly absconded with another of the inmates from the Institution. They obtained the key of the gate by a trick which showed them to be adepts in artifice and cunning. They carried off a quantity of yams; and, since their return, they have confessed to a series of other depredations, which they committed on their way from the Reformatory to Spanish Town. An account of these robberies, as detailed by the boys themselves, will give some idea of the manner in which the juvenile Arab class is maintained to the great annoyance and expense of the community. They first stole a dog, and sold it to a coolie. They then knocked down a fowl which they carried to a deserted hut, where they cooked it with the

Digitized by Google

stolen yams; afterwards, they robbed a child of a dinner of bread and cooked provisions, with which she was going on an errand. They then entered a poor woman's house, on pretence of getting fire, and stole a knife; they secreted themselves in the neighbourhood while she was cooking her husband's breakfast, and as soon as she went out to call him, they took the door from its hinges, and plundered the house; further on they went to a shop to buy cakes, from which they stole pipes, fish, and other articles. In Spanish Town they associated themselves with other vagrant boys, who live by plunder; one of them was discovered there and brought back to the Reformatory; the other was detected in shop-lifting, tried, and again sentenced to the Reformatory by His Honour the Chief Justice; immediately after his return, he made an ineffectual attempt to escape, for which a severe punishment was inflicted, and since then his conduct has been good. In other cases the work of reformation has been more visible, and substantial; one of the earliest inmates at first exhibited an insuperable restiveness under the restraints of the Institution; he was discontented, and continually desiring to "get into the streets." On one occasion he got possession of a knife, and attempted to commit suicide. It is to be hoped that this wicked act has been the turning-point of his life. His disposition has undergone a complete change; and he is now one of the most trusted, and best conducted of all the inmates.

Without entering into more minute particulars, the Committee may state that they have reason to be thankful, on the whole, for the result of their undertaking. They have experienced the usual chequered vicissitudes of those who are contending with evil; but they believe that much good has been done, and they see before them a wide field for hopeful exertion. They desire to record their sincere thanks to His Excellency the Governor, His Lordship the Bishop, His Honour the Chief Justice, and other kind friends and visitors who have made a personal inspection of the Reformatory, and testified their approbation of its arrangements. The Committee are convinced that the more the public interest is attracted to the condition of the juvenile classes, and to the great work of reforming them, the more will the influence of that sympathy be felt, both within and without the precincts of the Reformatories. But other influences must be combined with those of the Reformatory. If any success is to be achieved in the cause of juvenile reform, there are other social agencies which must co-operate in carrying out the common object. As it is the main object of the Reformatory to diminish the criminal class from which the prisons are recruited, so, by a higher ascent to the sources of crime, something must be attempted to reduce the supplies by which juvenile vagrancy exists. Facts which have come under the observation of the Committee, enable them to declare with almost absolute certainty, that the prevailing neglect of marriage, the absence of all proper influences of domestic life, the general profligacy of parents, and the lack of vital religion, are the prolific causes of juvenile depravity in the city of Kingston. Nor do they doubt that an increased attention to sanitary provisions, an improvement in the dwellings and material comforts of the poor, renewed educational efforts, and closer, and more extended appliances of the gospel of salvation—all which remedies are capable of immediate and proper adjustment—would, with the Divine blessing, effect a speedy and substantial change in the social aspect of the country.

In the department with which they are more immediately concerned, the Committee would respectfully invite the consideration of the Legislature to some anomalies in the existing law.

There is no provision for compelling parents to contribute to the maintenance of their children who have been convicted of crime or vagrancy, and sentenced to the Reformatories. Without such compulsion, it appears that parents will not perform an obligation, which, upon every principle of policy and justice, should be enforced upon them. In the case of fatherless and motherless orphans, it is evident that the parental obligation is transferred to the State. But as the law now stands, this natural order of responsibility is reversed. The criminal class is provided for, while the orphans are neglected. In the case of children convicted of crime, and sentenced to the Reformatory instead of the Penitentiary, an allowance of 6½*d.* per day, or about 15*s.* 8*d.* per month is paid by the Government, although such children may have parents capable of maintaining them; whereas in the case of children sent by magistrates as *vagrants or destitute*, the Government allowance only amounts to the very inadequate sum of 6*s.* per month. No allowance whatever is made for orphans who have not been received under a magistrate's warrant. In this respect an alteration of the law seems to be very much required; and the Committee would venture to express their earnest hope, that the Reformatories will receive from the Legislature a more liberal support than has hitherto been accorded to them. If the managers of these Institutions provide for the general expenses of their establishments, such as house-rent, salaries, working materials, &c., it is not surely too much to expect that the public should defray the cost of maintenance, which, according to the average of prison expense, has been estimated at 6½*d.* per day for each inmate. It appears also to be desirable that some encouragement should be given to managers who are willing to employ competent persons as masters of trades, or to undertake the responsibility of training teachers for Reformatories, employing them in their own Institutions as pupil or assistant teachers.

The Committee consider that the period of detention in the Reformatory might, in many cases, be advantageously extended beyond the age of sixteen years; and they deem it of the utmost importance that the question of employment of the reformed class, after they have attained that age, should be settled as soon as possible by the wisdom of the Legislature. If they should be permitted to return to the contaminating influences from which they have been reclaimed, it is only too obvious that all the labour and expense of reforming them will have been expended in vain.

The Committee are endeavouring to qualify the boys entrusted to their care for a future life of industry and usefulness. They have engaged in this work in hopeful trust that the Divine blessing will water the seed which they have planted in faith; but they cannot conclude this their first Annual Report without making a renewed urgent appeal to the philanthropy of all classes and denominations of their fellow-subjects. They are willing to assume a large share of responsibility and labour; but they feel that their efforts ought not to be cramped from want of means, or their burden increased by pecuniary anxieties. In asking for money to be laid out in the prevention of crime, they are asking for that which will be saved hereafter in paying for its punishment; and the expense of the one bears a very small proportion to that of the other. While, therefore, they acknowledge with gratitude the measure of support which has already been accorded to them, they would solicit a renew[illegible] of aid from their former subscribers, and inv.te the co-operation of those who have not hitherto assisted in promoting their cause.

The Committee have, in conclusion, to express their thanks to the Rev. Messrs. Radcliffe and Milne, for the sermons preached, and the collection made in the Church of Scotland, in this city; and the manager considers it right to state that, through the kind care of Drs. Bowerbank and Campbell, the Committee have been relieved of all anxiety and expense for medical attendance on the inmates of the Reformatory.

EXCESSIVE NUMBER OF BEER-HOUSES.

The following extract from a paper read by John Taylor, Esq., at the recent conference of Social Science, at Bradford, reveals a state of things that ought to suggest to every philanthropist the most anxious enquiry for an adequate remedy.—"I found an enormous means of supply of intoxicating liquors by the beer-shops, public-houses, &c. I took the large map constructed for the National Temperance League, on which the public-houses, &c., of the metropolis were marked, and it was shown that there were 10,256 of them, exclusive of 2617 breweries; which gave one house for every 125 persons above the age of 14. But knowing that it might be said that Londoners were a 'beery set,' and that the case was not so bad in the country, he proceeded to show that it was in some instances worse. For example, in the North Riding of Yorkshire there were 1459 houses for the sale of intoxicating liquors, or one in every 73 of the population above 14; in the East Riding, 1474, or one in 96; in the West Riding, 5478, or one in 130; the total being 8411, or one in every 114 of the population in the whole county of Yorkshire above 14. Among the practical remedies proposed, the first was the repeal of the Beer Bill, respecting which there was but one opinion. The plan proposed by the National Temperance League was to the effect that no new licences should be granted; that the present holders should be allowed to continue upon good behaviour; but the licence should not be renewed on the death or bankruptcy of the holder. In this way, and with stringent police regulations, the great bulk of the present beer-houses might be cleared away in a few years. It was proposed to repeal the Act of George II., which licensed singing and dancing saloons in connection with public-houses. It was further suggested that the licensing of public-houses might be transferred from the magistracy to an elective body, by which means public opinion might be more directly effective in limiting the present enormous number of public-houses—such licensing boards to have the power to determine the nature of the licence, and the hours that the houses should be allowed to be open. In this way each district would be able to determine the question of Sunday trading."

The Mud-Larks of London.—On Friday week the Rev. J. H. Wilson delivered an address, in the Sailors' Institute, Shadwell, on "The Mud-Larks of London." Mr. Wilson showed that there were from five hundred to six hundred of these people, chiefly boys and girls, who lived by searching the mud of the Thames at low water, and that they were thus engaged both in summer and in winter. They lived in courts and alleys on both sides of the river, but, for the most part, between London Bridge and Blackwall. He had seen these poor children, and had reason to believe that, if they were looked after and cared for, many of them might be trained to useful employments if first brought into the ragged schools. The name was not very felicitous, but it was highly characteristic, and there was a gregarious power in association, which, were the mud-larks associated, might be used for great good. The earnings of the mud-larks were from 2000*l.* to 3000*l.* a-year, that being the amount they would receive for bones, coals, and other articles thrown into the river or dropped from the coal barges. At the close of the meeting, a committee was formed to consider the best means of promoting the moral and social welfare of the Mud-Larks of London.

Notices to Correspondents.

Our Correspondents are requested to observe that we cannot be answerable for the insertion of any Articles received after the 22nd of the month, or Advertisements after the 27th, though we shall always endeavour to meet their wishes.

The Advertisements in "*The Philanthropist*" will henceforth be confined to Charitable Institutions, and such as bear immediately on the social improvement of the community. Existing contracts will, of course, be concluded.

The Editor requests that any circumstances connected with Charitable Institutions, which it may be thought advisable to bring before the public, may be communicated to him at 337, Strand, on or before the 18th of each month.

N.B.—As "The Philanthropist" will be published in future by Mr. Tweedie, 337, Strand, the Editor requests that all communications may be forwarded to him there, where they will receive immediate attention.

Notice.—All sums due to "The Philanthropist" for Advertisements, and for Subscriptions from this date, to be paid to W. Tweedie, 337, Strand. No other person is authorized to give Receipts.—Jan. 1st, 1859.

Notice.—Subscribers of £1 1s. and upwards to the Reformatory and Refuge Union, 118, Pall Mall, will be supplied on application with "The Philanthropist," a Monthly Journal of Social Economy.

*** Attention is called to the following Scale of Charges for Advertisements:—*

CHARITABLE INSTITUTIONS IN THE WEST INDIES.

It has sometimes been said that our West Indian fellow-countrymen look upon their darker-coloured peasantry only as sugar-producing animals, and pay no attention to their moral or religious training. We believe that charges of this kind are usually based upon ignorance of facts, or the common fallacy of generalizing from a few individual cases.

However this may have been the case in former times, there exists no ground at present for such an assertion. We have already mentioned in this Journal the establishment of a Reformatory in Jamaica, and of a Reformatory and two Ragged Schools in Barbados; and we have now before us two documents proving that the upper classes of the West Indian colonies have not only promptly followed the Reformatory movement of this country, but, in some instances, set an example which might be profitably imitated by the employers of labour at home.

The first of these documents is a letter published in the *Glasgow Daily Herald* of November 5th, "from an experienced official gentleman in the West Indies to a mercantile house in Glasgow." It is dated from Trinidad, an island which (as we gather from other portions of the letter) is slowly recovering from depression by the help of the Indian immigrants, for whose benefit chiefly the following Institutions have been established:—

"There is," says the writer, "an Orphan Asylum and Training School in the district of Tacarigua, which has been inaugurated for upwards of two years, partly at the expense of individuals and partly at that of the Government. It accommodates upwards of fifty orphans, whose parents died either at sea or previous to embarcation. The rector of the parish, and a committee of landholders, superintend the working of this Institution, subject to the inspection of Government. This Training School bids fair to be of great ultimate utility, both to the orphans and to the country which has adopted them, although at present the extreme youth of the children gives it more the appearance of a nursery. An Institution of a somewhat similar nature was attempted many years since in the district of Savannah Grande, but was abandoned in consequence of the great depression which, in 1847, followed the opening of the English markets to slave-grown sugar. It has been again partially resumed, and steps are being taken to secure its efficiency. There is a third Institution, started by a gentleman on his own property, at which from fifteen to twenty Indian children receive elementary English instruction. Besides these instances of the anxiety shown by the colony to advance the comfort and well-being of the Indian immigrants, the district schools are so closely reticulated over the whole of the country as to be easily available to all children whose parents choose to permit their attendance."

The other document to which we refer is the "First Annual Report of the St. George's Home and Reformatory for Negro Boys, established in Kingston, Jamaica, on the 1st of July, 1858."

This Institution is managed by the Rev. D. H. Campbell, a Kingston clergyman, assisted by a committee; and is supported by grants from the local government and private local benevolence, in about equal proportions.

It appears to be very economically worked, as the annual expense per head is calculated at 12*l.*, very much less than the ordinary expenditure of our English Reformatories.

True it is, that the outlay for firing, blankets, and warm clothing, must be very light in Jamaica, and we see from the balance-sheet that rent and water-rates are very moderate. The same difficulty, however, is experienced there, as in the mother-country, of making the Institution self-supporting; and the committee wisely regard this less than the main object they have in view, namely, "that the boys should be thoroughly instructed in industrial work, which may be useful to them in after-life . . . . . to implant religious feelings and principles in their hearts; to form them into habits of kindness and gentleness to one another, implicit obedience to authority, cleanliness, regularity, and order, and general truthfulness and uprightness in ordinary conduct."

The present number amounts to forty-two committed cases, besides eighteen boys in the Free Industrial School; and, though many disappointments have been experienced, the committee are generally satisfied with the progress made.

The negro population, in this locality at least, do not seem to have improved so much as their friends could have wished, or as in this country they are generally supposed to have done; for the committee state that they can "declare with almost absolute certainty that the prevailing neglect of marriage, the absence of all proper influences of domestic life, the general profligacy of parents, and the lack of vital religion, are the prolific causes of juvenile depravity in Kingston."

An evil tree cannot bring forth good fruit; and we are not, therefore, surprised to read the many applications, by magistrates and others, for the admission of children, which have been refused for want of

Digitized by Google

room—a circumstance which, while testifying to the practical utility of what has been done, calls loudly for the enlargement of this, or the establishment of similar Institutions.

The Kingston Reformatory is certified under the Jamaica Industrial Schools Act, of 1857, which combines the provisions of our Youthful Offenders and Industrial Schools Acts (17 & 18 Vict., c. 86, and 20 & 21 Vict., c. 48), with this important difference, that there is no provision for compelling parents to contribute. Now, we take leave to say, that without such provision, the establishment of Institutions for taking children away from the control of their parents is productive of more harm than good, especially among the negroes, whose ideas of parental responsibility are, if possible, looser than those of the same class among ourselves. The observations of the committee on this point are most just; and we hope that this omission may be speedily supplied by the legislature. With the other complaint of the committee that more is done by the State for the criminal than for the non-criminal child (a complaint often uttered among ourselves), we have less sympathy. The State money is granted, not in charity, but for the benefit of the community at large; and the only excuse for the State interfering and spending money on these children is, that prevention is better than cure, and it is cheaper and wiser to check the criminal tendency in the bud, than to punish it, after suffering from its depredations, hereafter. Crime excites the jealousy of the State; misfortune (except, of course, actual pauperism) is left to the charity of individuals. This we hold to be a fair general exposition of the duty of the State; but an exception may wisely be made in favour of friendless orphans, who, although without a tendency to crime, are liable to be led into it: and this has not been overlooked by the Jamaica law. The words "*vagrants or destitute*" in the magistrate's warrant, are large enough to include all orphan children who are without natural protectors or means of support; but these, we think, should not, as a general rule, be received into the same Institution with those who have been convicted of crime.

The committee naturally look with apprehension to the period of discharge, and express a hope that the Legislature will not permit the reformed inmate to return to the contaminating influences from which he has been rescued.

We hope so, too; and trust that no morbid dread of interfering with the liberty of the subject may deter the authorities from putting in force the remedies of apprenticeship or emigration, which seem alone to solve the difficulty with us.

In conclusion, we are sure that none can read the simple and earnest language of the report, which we print in another portion of this impression, without feeling that the same spirit animates the workers in those distant tropical regions and the promoters of the same good cause at home.—

"Cœlum non animum mutant, qui trans mare currunt."

OXFORD AND CAMBRIDGE MISSION TO CENTRAL AFRICA.

One remarkable and honourable characteristic of our times is, that our philanthropy chooses for itself the largest spheres of operation. Disdaining the merely traditional and national limits which the world has so long respected, it finds its appropriate and congenial sphere wherever there is a wrong to be redressed or a right to be vindicated. It is the genius of our holy religion that inspires us with this large-heartedness, and forbids us to limit our charitable zeal to the land of our nativity.

There are some who enforce the time-honoured maxim, that charity begins at home to an extent that seems to rebuke our missionary enterprises as encroaching on paramount domestic claims; but it is remarkable, that the great works of missionary zeal are carried on by those whose private benevolence is the most active and sincere, while they who have no sympathy for the outcast families of man, take little heed to the miseries of those who surround them. Or, if we view the matter from a national point of observation, we are justly entitled to boast that our own country is distinguished for missionary enterprizes beyond all nations of history, and beyond all nations of modern times. And yet in the records of the past, or in the annals of our contemporaries, there is nothing to be compared with the private benevolence which is the characteristic glory of old England.

It is with peculiar interest that we have watched the formation of the Oxford and Cambridge Mission to Central Africa. It is not often that the sister Universities are to be seen acting in concert for a common object. We are accustomed to see them engaged in mutual rivalry; honourable, indeed, but rivalry, nevertheless. But here, they are revealed to us in a new light, that sheds an equal lustre on them both. We heartily concur in approval of Dr. Livingstone's judgment in making Oxford and Cambridge the centres of his efforts for the propagation of the gospel in Africa. He knew well the influences they can control, the energies they can unfold, the zeal and intelligence they cultivate. We would by no means ignore the valuable Missionary labours that have already been bestowed on Africa; but there are many considerations which commend this project to our special favour.

The objects of this Mission are revealed in the following resolutions, passed at a Conference of the Members of the Oxford, Cambridge, and London Committees, held at Cambridge, on the 2nd of November, 1859:—

"1. That the plan of this Association be the establishment of one or more stations in Southern Central Africa, which may serve as centres of Christianity and Civilization, for the promotion of the spread of true religion, agriculture, and lawful commerce, and the ultimate extirpation of the slave trade.

"2. That to carry out this plan successfully, the Association desire to send out a body of men, including the following:—

"Six Clergymen, with a Bishop at their head, to be consecrated either in this country, or by the three Bishops of Southern Africa; a Physician, Surgeon, or Medical Practitioner, and a number of Artificers, English and native, capable of conducting the various works of building, husbandry, and especially of the cultivation of the Cotton Plant.

"3. The Association contemplate that the cost of establishing such a mission, cannot be estimated at less than 20,000*l.*, with 2,000*l.* a-year promised as annual subscription to support the mission for five years to come.

"4. That the Secretaries be desired to open communications at once with the other Universities, with the clergy and friends of missions at large, and with the great centres of manufacture and commerce, to invite them to aid, by their funds, counsel and co-operation, in carrying out this great work for the mutual benefit of Africa and of England."

The scheme thus propounded, involves the double object of civilization and evangelization—a combination the most happy in itself, and the most promising in the prospects it unfolds. The savage tribes to whom this mission is contemplated, have long been wrapped in the darkness of utter barbarity, and excluded alike from the advantages and decencies of civilization; and it is manifest that, if through the labours of missionaries they are brought under the benign influences of Christianity, they must at once renounce their primitive and barbarous habits, and their savage and sanguinary code.

The Christian can no longer be a savage; for the higher life in which the proselyte aspires to walk, necessarily involves the conditions of enlarged social refinement and improved social ethics.

Hence, whenever missionary labours have been successful among savages the spread of religion has subserved the interests of commerce and civilization; and they who have sat as disciples at the feet

Digitized by Google

of English missionaries have soon learnt to copy the industry and the domestic arts of their teachers.

In this result, all must have rejoiced; but it is certainly not the special province of religion to become the pioneer and servant of science, of commerce, and of civilization. On the other hand, it is her right to press them into her service, and to demand that they shall contribute their utmost to her triumphs.

Dr. Livingstone, whose experience and intelligence well qualify him to offer an opinion, says that our missionary labours must be accompanied by a Christianized commerce. As might have been expected, it is found that commerce diminishes the jealousy of the heathen, and cherishes and expands that salutary feeling of mutual dependence which, in many ways, prepares for the success of the missionary. Civilization and evangelization cannot be divorced —they must march hand-in-hand through the dark domain of pagan idolatry; but each has its own proper sphere of operation, and its own distinctive triumphs to win. Hitherto, it has been usual for commerce and civilization to follow in the wake of the missionary, and to profit by his self-denying labours; but it is now proposed that these powerful influences should assume their proper place as auxiliaries to the gospel.

It is a glorious thing when the devout and apostolic man can point, not only to the converts he has gained for Christ, but to the collateral advantages which his labours have brought in expanded commerce, in extended civilization, in improved and uplifted races; but it is much more appropriate to require that commerce and civilization shall dispense their peculiar blessings by their own proper agents, and then point upwards to the higher and holier gifts of that religion to which they have ministered.

As to the resources of the African continent, and especially to that great central part to which this mission is more particularly directed, the travels of Livingstone have proved beyond all doubt their extent and their wealth.

This immense area contains many vast forests, large lakes, and fertilizing and navigable rivers. It is one of the richest fields for agricultural wealth which modern enterprise has discovered. By the most careful experiments it has been shown, that large tracts are suitable, both from the nature of the climate and from the character of the soil, to agricultural purposes, and especially to the cultivation of the cotton-plant. In this respect the experience and observations of Dr. Livingstone have been fully supported by other enterprising men. Upwards of twenty years ago, a Manchester merchant incurred considerable expense in experiments of this kind on the Gold Coast, though with little result. Succeeding attempts have been much more successful. In connection with these experiments it is only right to make honourable mention of Mr. Clegy, a well-known philanthropist and manufacturer, and also of the late Miss Ann Gurney, a relative of Lady Buxton. At Abbeokuta, a native town of 100,000 inhabitants, about 60 miles inland from the port of Lagos, with which it is connected by water communication, there is now an industrial institution, which undertakes, at certain fixed charges, to collect, to clean, and to pack the cotton brought by the native chiefs and small farmers. The Institution also directs the shipment of cotton to Europe, and the owners gladly wait till the produce is sold in Manchester, and until the goods they order in return are transmitted to them.

An amusing incident is related of one great chief, who ordered in this way a moderator-lamp. Placing it with other goods upon a table, he invited a large body of brother chiefs to gaze upon his treasures, and, with native eloquence, told them of the advantage of growing cotton and sending it to Manchester, so that, whatever he might choose to order from England was sent direct, addressed to him by name, in Abbeokuta. He ended his remarkable harangue by saying, "All England is at my feet;" a speech which proved that the spirit of enterprize had been fairly awakened.

This Institution was completed in 1855, during which year the entire quantity of cotton received in this country from Africa was 1650 lbs. The increase of the trade is, however, remarkable; for in 1856, the exportation reached to 11,492 lbs.; in 1857, to 35,419 lbs. After this the cotton was sent through different channels, though principally through the Abbeokuta Institution, which, for the last two years, has transmitted 150,000 lbs. annually.

The quality of this produce is found to be the most serviceable; and thus, with the illimitable resources of vast regions of virgin soil, there promises to grow up, under the fostering care of philanthropists and missionaries, a legitimate and remunerative commerce, which must, eventually extinguish the accursed slave-trade of Africa, and at the same time necessitate some important changes in the condition of the African races who now rear the cotton-crops in the Southern States of America.

It is well for these poor outcasts that attention has been directed to the development of the produce of their soil. Already the most gratifying evidences are afforded of the immediate effect of this policy on the foreign slave-trade. One instance may suffice for illustration. The chiefs in the neighbourhood of Abbeokuta, who, a few years ago, sold their slaves and their kidnapped victims at 14*l.* each to the Portuguese slave-dealers, to be shipped across the Atlantic as opportunity presented, have lately bought again, at 12*l.* each, those who remained unsold, having found the need of labourers for the cultivation of their cotton-farms, and for the preparation of their palm oil. Domestic slavery may still exist, as indeed it does; but the influence of this Institution and of the Mission is found to exercise a beneficial check on its many evils, and all Christian converts are bound to oppose slavery in all its forms. No field of operations promises such success as that of Africa, and many considerations conspire to point it out as having special claims on our Christian zeal and benevolence.

To say nothing of the early dawn of civilization which it witnessed, and of the historical renown of many of its cities, it is associated with one of the brightest periods of Christian history. It had its early churches and its illustrious bishops, whose examples of piety belong now to the world, and whose writings expound the primitive doctrines of our religion, and adorned the literature of our churches. But the light that once burned so brightly has been extinguished, the candlestick has been removed out of its place; and in the midst of the long night of darkness that has ensued, Africa has suffered untold injuries from her Mahomedan conquerors, and still greater cruelties from her Christian persecutors.

Under any circumstances, it would be our duty to reclaim, as far as possible, these interesting sons of once mighty races from the degradation of savage barbarism, and from the cruel grasp of the man-stealer. But in consideration of the countless wrongs we have ourselves inflicted on these helpless creatures, it becomes an imperative obligation to atone by every means in our power. Christendom owes to these outcasts a terrible debt. Long has she degraded and bartered them—snatching them from their homes to sacrifice them on the altar of Mammon; but now, awakened to a sense of her responsibilities and guilt, she summons the injured tribes and offers as the best atonement the advantages of her commerce, the example of her freedom and industry, the appliances of her wealth, and the blessings of her holy

Digitized by Google

religion. 'Tis an auspicious era for mankind when they who give and they who receive both alike are blessed.

To Dr. Livingstone undoubtedly belongs the chief honour of this noble enterprize. It is based upon his experience and travels, and was suggested by his practical sagacity. While in this country, he visited the two Universities with a view to stir up a missionary spirit in reference to Africa. In Cambridge, especially, he met with a brilliant reception, and the permanent efforts of his visit and lectures are well known. These lectures were afterwards published by the Rev. W. Monk, M.A., of St. John's College, together with a prefatory letter by Professor Sedgwick, a life of Dr. Livingstone, and a valuable Appendix, the whole forming a compendium of information on the Central South African question.

The object of this interesting work* was not only to embody this information in a permanent record, but, at the same time, to foreshadow the enterprize to which so many great names are now committed. In the month of May last, a most influential meeting was held on the subject in the Sheldonian Theatre, at Oxford, and as already intimated, on the first of November, another brilliant meeting was held in the Senate House, at Cambridge, at both of which meetings, important resolutions were unanimously passed.

The lustre of many great names inaugurates this noble enterprize with remarkable promise. Professor Sedgwick has already, by his pen and by his influence, pleaded for it most eloquently. The Right Hon. W. Gladstone, M.P., has given to it his eloquence and influence. The Bishop of Oxford, who, in the illustrious name of Wilberforce, has an hereditary claim to speak on behalf of injured Africa, is among its warmest supporters. Sir George Grey, Governor of the Cape, of whom it has been said that he has dedicated his life to the solution of the problem how civilized and uncivilized men could be brought together without the ruin of the one or the degradation of the other, most forcibly urges its claims. The heads and professors of both Universities have given their sanction and their aid to the project, recommended as it is by so many lofty considerations. The name of Livingstone, however, is the tower of strength around which all cluster; his genius, his patience, his perseverance, his heroic philanthropy, and truly missionary character, inspire the enthusiasm which sustains the enterprise. We doubt not that sufficient funds will be forthcoming. The appeal has been made; and a cause like this cannot languish for lack of pecuniary resources. So much earnestness and devotion must become contagious, and they who cannot otherwise assist this glorious mission, will only be too glad to contribute from their wealth to its adequate support.

To Mr. Monk, who is a personal friend of Dr. Livingstone, is due the entire credit of organizing and directing this movement. He has caught the spirit of the apostolic man whom he admires, and amid the anxious and pressing duties of a large parish, has laboured with a steadiness of purpose, with a self-denying application, and with a tact and energy which cannot be too highly praised. But for him, it is more than probable that Livingstone's appeal to the youth of the Universities would have been lost: in fact, that Livingstone would not have visited Cambridge at all. He caught his spirit, he treasured up his appeals, and diligently pressed them on the notice of influential men, until the matter was fairly taken up and set on foot under the most favourable auspices.

"I go," said Livingstone, "again to Africa. I know that in a few years I shall be cut off in that country, which is now open. Do not let it be shut again. I go back to Africa to try to make an open path for commerce and Christianity. Do you carry out the work which I have begun. I leave it with you."

Such was his parting request. We joyfully record the enthusiastic response it has enkindled.

* Dr. Livingstone's Cambridge Lecture, edited by Rev. W. Monk, M.A., F.R.A.S. London: Bell and Dalby.

OUR RELATIONS WITH CHINA.

On the evening of the 14th ult., an interesting lecture was delivered on the above subject, at Crosby Hall, Bishopsgate Street, by the foreign editor of the *China Telegraph*, who has been for fourteen years a resident in China, and who nearly lost his life in the well-known poisonings at Hong Kong.

The lecturer, who is well-informed on all matters relating to China, condemned the precipitancy of the attack on the Peiho forts, and pleaded that it was not on record that the plenipotentiary of any country had endeavoured to obtain the ratification of a treaty at the mouth of the cannon. He defended the Chinese from the broad charge of treachery, and contended that for some time suspicions had been created that we proposed something more than the ratification of the treaty; and when a large force appeared at the mouth of the river, these sinister suspicions were confirmed, and a determined resistance was the natural consequence.

The lecturer admitted that we cannot now do otherwise than send out a large force, to show the Chinese that we have power to redress any wrong; but argues that, even should we force our way to Pekin, we shall gain no substantial advantage, but find ourselves in the midst of thickening embarrassments.

He strongly opposed the proposition of establishing a resident ambassador there, as likely only to lead to further complications.

Far from justifying the Chinese in their internal government, and in their equivocal policy towards foreigners, he urged a just and considerate treatment, rather than a vindictive chastisement of the disaster of the 21st June.

The lecturer said that no doubt the Russians had assisted the Chinese with guns, if not with officers; and he spoke in terms of the highest reprobation of the British *employés* at the Chinese custom-house at Shanghai, who, he alleged, had committed flagrant acts of high treason, in supplying the Chinese with arms and ammunition.

The lecturer thought the French alliance would add to our embarrassments; and he looked with suspicion on the collection of so large a French force in those distant seas, where the French had no trade to protect. He pointed out that their most important relation with China was her coolie trade, and he denounced their attack on Cochin China as a most wicked sham.

Calmly reviewing the gravity of this question, as at present presented to the Government, the lecturer resumed his seat amid the applause of the audience.

FEMALE LABOUR.

Perhaps no paper read at the recent conference of the Social Science held in Bradford merited more attention, or has since given rise to more discussion, than Miss Parkes's admirable essay on Female Labour. It is no more than just to say that Miss Parkes has treated this difficult but important subject with great ability, and with much practical good sense.

Recently the demand for the extension of female labour has been urged with a persistence that shows the urgency of the matter, and the hold which the subject has taken on the popular mind. But though much thought has been bestowed on the question, yet it has not, hitherto, received a satisfactory solution. We all stumble on the theory that assumes wo-

Digitized by Google

man's entire dependence upon man, and hesitate to renounce an opinion that comes recommended to us by established usage, by the promotion of much domestic happiness, and by the obvious intention of Nature.

The framework of modern society is, however, so artificial that we are compelled to pause and consider whether this theory may not be modified with great advantage.

We have been taught to consider the position of woman in the social compact as a fair test of a nation's refinement, and we are not disposed to relinquish the test. Nevertheless, it may be well for us closely to scrutinize the manner in which the test is applied. It will not be denied that the practical working of the theory is of much more importance than its mere abstract propriety. The real question is, How far do we practically secure to women their proper share of social influence and happiness? If, when we teach them entire dependence on father or husband, and train them accordingly, without the knowledge of any profession, we could secure them against the contingency that would deprive them of their natural protectors, then no serious injury and suffering would arise from this source.

But if women are exposed to this contingency, as indeed they are, then it becomes a serious wrong to educate them without qualification for independent support. The fact is that, by the present system, we make woman an ornament of society, and look to her merely to adorn and refine the homes which are reared by the energy of man.

This view is in itself perfectly correct, and if life were all sunshine, the plan would succeed admirably; but as it is not so, it is proposed that we should qualify women for useful and profitable employment, so that if, through any domestic calamity, they are thrown on the resources of their own industry, they may find some sphere of useful labour open to them.

It is thus far that the principle is theoretically sound; but when we come to discuss the matter in its practical bearings we find the inquiry beset with serious difficulties; and surely it is best that these difficulties should be fairly examined, for we must ever be mindful of those practical considerations, the neglect of which mars many a well-intentioned scheme.

The first inquiry that forces itself on our attention is this—into what new fields of remunerative labour are we to direct female industry? We have not heard that any fields of enterprise absolutely new are contemplated. It is proposed to employ females as telegraph-clerks, in watch-work, and in other duties which require delicate and skilful manipulation. It is also suggested that they should be more extensively engaged in book-keeping and commercial pursuits generally, as in France.

Now it should not be forgotten, that these proposals involve an encroachment on the spheres already occupied by male industry; and, therefore, just to the extent to which female labour is introduced will male labour be displaced. Little, therefore will be gained if we impose on the gentler sex a large amount of additional toil merely to force strong men into idleness. That will be taking us back to the conditions of savage life, with a vengeance. We own, nevertheless, that we do not fear any such evil consequences will follow, if proper care be taken in the selection of suitable occupations. The experiment has already been tried in many cases, without any disturbance of the labour market.

It will, however, be necessary for the promoters of this movement steadily to keep in view the fact, that there are two conditions essential to the successful employment of female labour. First, it must be quite as efficient as male labour; perhaps it ought to be superior, so that prejudices may be overcome. In the spheres already indicated we have no reason to doubt its efficiency; and, indeed, where delicate manipulation is required, men cannot compete with females. But it must also be cheaper; for without the weighty considerations which economy suggests, the experiment will never have a trial. We might allude to the working of the factory system as an illustration; also to the experience of many trades in the metropolis, such as envelope-making, book-folding, sewing, &c. In these cases, the delicate fingers of women are specially adapted to the work, and their labour is obtained at a cheap rate, hence these duties are, to a great extent, resigned to them; but if either of these conditions were wanting, these opportunities of industry would undoubtedly be closed against females.

We do not, by any means, wish to discourage this praiseworthy attempt to ameliorate the condition of a large and interesting class; but perhaps it is not altogether unnecessary, in the enthusiasm of the moment, to suggest that, though the introduction of female labour into new spheres may have become a necessity, yet it would not be an unmitigated good. Here, again, may we borrow an illustration from the factory system. Every one knows that it has had a most injurious effect on the domestic habits, to say nothing of the morals, of the young females of our manufacturing cities. These matters are now largely discussed; and in Bradford, right in the heart of the manufacturing districts, prizes are at this very time offered for the best essays on an important collateral subject suggested by Lord Shaftesbury, at the recent meeting of working men, held during the sittings of the Social Science Association. His Lordship said—"He thought working-men might have little social conferences of their own; and amongst other questions they might discuss these—whether it was not desirable to keep married women at home, instead of letting them go out to work; whether the working man does not lose more by the absence of his wife from domestic duties, than he gains by her earnings in the factory or at other employment away from her home?"

There can be no doubt that home is woman's proper sphere of duty, and that that social economy approaches nearest to perfection which is best able to retain her in the sphere for which she has an instinctive aptitude.

Now, though it is more especially on behalf of forlorn single women that the present appeal is made, yet the appeal itself opens out the whole question of female labour. Miss Parkes offers these suggestions. First, that every girl in the middle classes should be taught some useful art. Secondly, that tuition shall no longer be regarded as the only genteel occupation. And thirdly, that either by saving or insurance, a direct provision should be made for female children. The first and second propositions are well worthy of consideration. If successfully carried out, they would tend greatly to alleviate the serious evils of which we hear so much complaint. But if the third suggestion received the attention which it deserves, the evils would well-nigh be prevented altogether; and, with the facilities of the present day, it is by no means so difficult a task to make such a provision. It becomes, indeed, a very grave question whether, by improved habits of providence, we might not entirely avoid those painful necessities which compel unprotected females of the middle classes to struggle for their daily bread.

REFORMATION OF PRISONERS.

Art. I.

Punishment and not Reformation is, doubtless, the primary end of imprisonment. An over-strained and too ideal philanthropy has of late years indulged itself by reversing this order, and placing

Digitized by Google

Reformation before Punishment in prison treatment, so as to arm Justice with a weapon more akin to the schoolmaster's mild *rod*, or the pastor's milder *staff*, than her own keen and sure *sword*, which we are taught to believe "she beareth not in vain." The reformation of a criminal, however deeply important to himself and to society, which it rids of a rogue, is undoubtedly not the *end* of his imprisonment, nor the *object* for which he is imprisoned, but is an accidental issue that grows out of the chief one—it is a blessing to be gathered by the way in seeking the primary object; it is like the health and vigour which the husbandman acquires when he cultivates his lands for the sake of their produce, or the fruits gathered from the trees, which we grow for the sake of their timber. To save a soul from death, or to snatch a sinner from ruin, is the greatest work that man can attempt; but people are not sent to prison for this object, any more than they are sent to the hospital to be fed and clothed. Just as Justice, in capital cases, cannot wait for the condemned murderer till his soul is fit for death, so, in lesser punishments, she cannot be allowed to give place even to the spiritual wants of a prisoner. She must have her due, otherwise imprisonment is only a farce; but she must *not* have her due *at the cost of* humanity and religion; it must be, and in a Christian land it will be, in a manner that is *consistent* with each of these. Her demands must be met; but if, in answering them anything can be done for the thrice-blessed end of reclaiming the offending one or restoring the lost, let it be done by all means, and let it be done in the best way possible. This is, we believe, to assign the true place to "Reformation;" and it is because reformation has been too often put in its wrong place, and made to *reign* where it ought to be only a *guest*, that the attempts to reform criminals by prison treatment have so often proved failures, and sometimes have drawn down reproach and contempt. Offenders have been talked of and dealt with as if they were sentenced only to the schoolroom or the chapel instead of to hard labour and the cell. The original idea on which prisons were first built does not cease to exist, though we have so materially changed our mode of carrying it out. A prison, as a prison, is not a place of *pleasure* or of *profit*, but of PAIN, and *punishment* is the connecting link between crime and pain; its object is to unite the two and to bring suffering to bear upon sin; but the true punishment of a Christian land is that which will endeavour to make pain profitable; which will inflict and instruct at the same time; which will teach, as Gideon taught the offenders of Succoth, "with thorns of the wilderness and briars," and when men "are bound in fetters, and holden in the cords of affliction," will, after divine model, make that the occasion to "show them their work and their transgression that they have exceeded," opening their ears to discipline, and commanding that they return from iniquity.

Our object in these articles will be to speak suggestively on "Reformation;" but before we do so, we wish to give to punishment its full distinction, and place our proper subject in its right position. We desire, therefore, to state it as our belief that the system of punishment now adopted in most well-regulated prisons—a system which is the result of many years' inductive inquiry and earnest thought—seems an approximation to, if not the realization of, the most appropriate and successful mode of correction which human laws could annex to crime, or even which a Christian community could desire.

A wisely-managed system of separate confinement combines all that justice could ask of pain and suffering with all that mercy and Christian love could desire of benefit and blessing to the prisoner who suffers; it so unites punishment with good order, and administers it with discipline, as to destroy in it the idea of vengeance, and to ensure for it that respect of the sufferer which induces him to receive it as a bitter but beneficial medicine, administered by the kindest skill, rather than as the nauseous and injurious drug which cruelty forces down his throat. We shall hope, however, to present the readers of THE PHILANTHROPIST with some further remarks on this branch of our subject in a succeding number. S. C. B.

CAPTAIN M'CLINTOCK AND THE FRANKLIN EXPEDITION.

DURING last month, at one of the largest meetings, perhaps, ever held of the members of the Royal Geographical Society, Captain M'Clintock, the distinguished Arctic navigator, read a memoir of his voyage on board the "Fox," in search of the survivors of the expedition of Sir John Franklin.

Captain M'CLINTOCK said there were two important questions which had been so frequently asked him that he gladly availed himself of that opportunity of offering some explanation upon so deeply-interesting a subject. The first question was, whether some of the 105 survivors might not be living among the Esquimaux? The various families or communities of Esquimaux met with by Rae, Anderson, and himself, at different times and places, all agreed in saying, "No: they all died." The western shore of King William Island, along which they were compelled to travel for two-thirds of their route, was uninhabited. None of them had met natives there, consequently it was very fair to conclude that the Esquimaux but seldom resorted to so inhospitable a locality.

With regard to the probability of procuring the means of subsistence, independently of the Esquimaux, he stated what was shot by his own sledge-party—and they never lost a chance of shooting anything—during the journey along the lands in question, which occupied them for seventy-nine days, and covered nearly a thousand geographical miles of distance. The sum total amounted to two reindeer, one hare, seventeen willow grouse, and three gulls. The second question was, why had the remains of so few of our lost countrymen been found? It was indeed true that only three of the hundred and five were discovered; but it was to be borne in mind that from the time they left their ships they were dragging sledges and boats, and therefore they must have travelled almost constantly upon the ice—not upon the land—consequently all traces or remains there vanished with the summer thaw of 1848. There was no doubt that many relics still remained strewed along the uninhabited shore of King William Island, beneath the snow; but, as it was most carefully examined three times over, he could not think that any conspicuous object, such as would be put up to indicate where records were deposited, could possibly have escaped them. The summer at Port Kennedy proved a warm one, yet the ice did not permit them to move until the 9th of August, and the object of the expedition having been attained, they commenced their homeward voyage.

An interesting discussion followed on the results of Captain M'Clintock's expedition.

Captain COLLINSON gave it as his opinion that after Franklin and his comrades abandoned the ships, it was almost impossible, having regard to the question of provisions, and to the probable rate at which they would be able to travel, encumbered as they were with sick, with boats, and facilities for prosecuting their journey, that they could have reached further than the bottom of the estuary of the Great Fish River, and that they all perished. He thought that Captain M'Clintock had nobly carried out the motto with which he entered upon his expedition, "Persevere to the end;" and, in after time, it would be remembered, that after the nation's treasure failed, "the widow's mite" prevailed.

Captain SHERARD OSBORN, as an Arctic navigator, said he could not resist the conclusion that the search for Franklin was now closed.

Captain SNOW believed it possible that some members of the Franklin expedition still survived; the evidence was not conclusive that they were all lost; and he pledged his word, if health were spared to him, and whether he was assisted or not, that he would depart next spring, with the view of going over the whole ground,

Digitized by Google

and, if need were, would ally himself with the Esquimaux until the riddle was solved.

Sir R. Murchison, in adjourning the meeting, said it was a great fact, in which all those naval officers who had taken part in the discussion, whether belonging to Her Majesty's service or to the mercantile marine, agreed, that although Captain M'Clure was worthily rewarded for making *a* North-West passage, Franklin was the man who made *the* North-West passage.

A VISIT TO PORTLAND GAOL.

Weymouth is a pleasant bathing-place, sacred to the memory of George the Third. It has many attractions: one of these is the Portland Convict Establishment, which, by the kindness of Captain Clay, we were permitted to inspect the other day.

To reach Portland, which is almost an island, the better way is to take a passage in one of the numerous steamers which ply between Weymouth and Portland. In half-an-hour you will find yourself at the bottom of the chalk hill on which the prison is built. If you are sound in limb, and not deficient in wind, you will find yourself at the principal entrance of the gaol. We arrived there at a quarter to one, and there met the principal warder, who kindly conducted us all over the place, and explained to us the nature of the important works carried on. When we entered the men had just dined, and were collected in the yard previous to being examined and walked off in gangs, under the charge of their respective officers, to work. The gangs consisted of various numbers, of from fifteen to thirty; each officer felt each man, to see that nothing was hidden, and examined his number, to see that it was all right. As soon as this operation was over, the gangs marched out, some to quarry stones for the breakwater below; and others, by far the larger number, to construct the enormous barricades and fortifications which the Government has ordered as a defence for that part of the world. The prisoners who cannot stand this hard work are employed in mending clothes, in making shoes, in baking and brewing, in the school-room, and other offices necessary in such an enormous establishment. In this latter employment no less a personage than Sir John Dean Paul has been occupied till very recently. The scene was a busy one; all around us were convicts—here quarrying, there employed in the manufacture of iron, or in carpenters', or masons' work—all working well, and many of them cheerful, in spite of the presence of an official, and little apparently heeding the sentry standing near, with loaded gun, ready to shoot, if need be, a run-away. We have heard gentlemen say that at Bermuda and at Gibraltar the convicts will not work. All that we can say is, that at Portland they do, and so effectually, as to cost the country but little more than four or five pounds a-year. Our out-door inspection over, we then went over the sleeping apartments, and the chapel, and the kitchen, and laundry and bakery. The impression left on us was very favourable. The food was of the plainest but most satisfactory character. The chapel was a handsome building, capable of containing fifteen hundred people, and the sleeping apartments were light, and airy, and well-ventilated. Each cell opens into a corridor, and, there being a series of three or four stories, each sleeping apartment can contain from a hundred to five hundred men; in each cell there is a hammock, and all that is requisite for personal cleanliness, besides a book or two, which the convict is allowed to have from the library. Of course, the manner of life is somewhat monotonous. Before coming to Portland the prisoners have passed their allotted time (generally about nine months) in what is termed separate confinement at Pentonville, Millbank, Preston, Bedford, Wakefield, or some other prison adapted for the first stage of penal discipline. Upon their reception they are made to undergo medical inspection, a change of clothes, and are required to bathe; they are then informed of the rules and regulations of the prison, and moved to school for examination in educational attainments, with a view to their correct classification. Afterwards they receive an appropriate address from the chaplain, and are allowed to write their first letter from Portland to their relations. They are then put to work, and are made to feel that their future career depends in some measure on themselves. Thus there are four classes, and the convict in the best class may earn as much as two shillings a-week, which is put to his credit and paid him when he becomes free, partly by a post-office order payable to him when he reaches his destination, and partly afterwards. The dress consists of fustian, over which a blue smock frock with white stripes is thrown. Convicts who are dangerous and have maltreated their keepers, instead of the frock have a coat of a somewhat loud and striking character. Then, again, a yellow dress denotes that the convict has attempted to escape; and further, a blue cloth dress denotes that the wearer, engaged as a pointsman, has but little more time to stay, and has a little more freedom entrusted to him. In the working days in summer the prison-bell rouses all hands at a quarter past five, allowing an hour for washing, dressing, and breakfast. Then comes morning service in the chapel. They are then marched off to labour, where they remain till eleven, when they return to dinner. At half-past twelve they are again paraded and dismissed to labour till six. Suppers are distributed to each cell at half-past six, and at seven evening service is held in the chapel. The prisoners then return to their cells. At eight all lights must be put out, and silence reigns in every hall, the slippered night-guards alone gliding through the long and dimly-lighted galleries like so many spectres. Attendance at chapel, and walking exercise in the open air, are the two great features of the Sunday's employment; and, as a further change, we may mention each prisoner is allowed half a day's schooling per week. Surely here, if anywhere, the convict may repent of his crimes, and be fitted to return to society a wiser and better man! We cannot exactly say what are the effects of all this; but surely the convicts must be the better for this separation from their usual haunts and associates. Portland Prison is admirably adapted for carrying out a great experiment in the treatment and improvement of the criminal classes. It has now been in existence twelve years, and the experiment hitherto has succeeded. At any rate, if it is a blunder, it is not a costly one, like some establishments nearer town.—*Weekly Record.*

ABRIDGED REPORT OF THE CHAPLAIN OF THE COUNTY HOUSE OF CORRECTION, USK, MONMOUTHSHIRE, to the Magistrates in Quarter Sessions assembled at Usk, October 17th, 1859.

"My Lords and Gentlemen,—In presenting to you my eighth annual report, I have the satisfaction of being able to announce a continued diminution in the number of prisoners, which in 1857 was 833, last year 770, this year only 723; the decline being 110 from the first-named year, and 47 from the last. The females have during these two years greatly decreased; in 1857 they were 257, and now only 193.

"The re-committals of males have this year advanced from 94 to 112, but those of the females (which generally are in a much higher proportion than those of the other sex) have declined from 99 to 76; this number being fewer than in 1856 by 28.

"The most marked decrease, however, has been among juvenile delinquents; these last year were 54 of both sexes, now only 28. The boys, last year, were 41, now only 18. The girls three years ago were 31, but have now dwindled down to 10. These remarkable alterations commenced since 1856, after the magistrates of the county had first begun to send children to Reformatories; since then 7 girls have been sent, viz.:—4 to Miss Carpenter's, Bristol, 2 to Liverpool, 1 to Birmingham—and 5 boys, of whom 1 was sent to Kingswood, 1 to Neath, and 3 to our own Reformatory now opened at Little Mill—making 12 committals to Reformatories in three years, during which period juvenile crime has decreased in the county from 63, its number in 1856, to 28, its number, for both sexes, in 1859. As soon as delinquent children found themselves the subjects of special notice, and knew that a place of five years' detention was about to be opened, and when parents understood that payment to the amount of 5*s.* a-week could be demanded of them, a sudden check seemed to be put on juvenile offences; delinquents were wanting for want of delinquencies; for four months after the Institution was ready for the reception of boys, 1 boy only appeared, and during the whole 7 months, 3 only have been judged fit subjects for so long a detention, the minimum being 2 years. Through these 7 months, 12 boys only have been sent to Usk prison; during the same months of the previous year the number was 22. It is plain, then, that the attention and labour bestowed on the case of juvenile offenders have not been without their early fruits, appearing, not only in the rescue of convicted, but of unconvicted boys as well.

Digitized by Google

"Social and Moral Condition of Prisoners.—Under this head I would observe that few who come to the House of Correction at Usk are apparently deliberate and professional delinquents, who choose crime from love of it, and intentionally make it their means of living; they are mostly such as are drawn into offences through their connection with profligacy and intemperance. A very large proportion of men are those who are industriously pursuing the ordinary callings of their station in life, earning good wages, and purposing to live honestly, but who, unhappily, regarding the highest pleasure of life to consist in drinking to excess, and selecting the Sabbath for the day of its chief indulgence, recklessly throw away those restraints which would have kept them in honesty and credit, lose their self-respect, and easily fall into crimes of which otherwise they would have been incapable. One instance, among many like ones, may illustrate this too-common case. It is that of a well-instructed and industrious Welsh artizan, who for twelve years worked in London on very high wages, and was recently convicted and sent here for a robbery. He was, unhappily, addicted to drinking, but in London 'took the pledge,' and kept it for two and a half years. At the end of that time he had saved 97*l.*, and possessed 50*l.* worth of joiner's tools, but the offer of rum on some special occasion tempted him to 'break out;' he returned to drinking, and soon all his savings, and his tools as well, melted away, his poor wife died of grief, and, deprived of work, he wandered back, a destitute and bereaved drunkard, to South Wales, where the misery caused by drink led him to fly to his destroyer for consolation. Crime and conviction naturally followed, and a seven months' sentence is the result. The many instances of relapsed 'teetotallers' whom I see in prison, and the nature of their crimes, assure me that nothing makes a man a more desperate drinker, and therefore a more dangerous neighbour, than a broken pledge; such a man drinks his conscience into that recklessness, which is a sure precursor of crime, and the history of many such drunkards illustrates what I have always believed to be true, viz:—that 'teetotalism' when it stops short of real religion is a very uncertain foundation for a drunkard's cure.

"Knowledge and Instruction of Prisoners.—1. *Religious.* With a few exceptions, a prisoner is generally one who has never had, or has thrown away, the opportunity of instruction in early life, and is, therefore, even if able to read, very ignorant of the elementary truths of religion; the little knowledge he possesses is generally very indistinct and unpractical, while his habitual neglect of the means of grace leaves him few opportunities for improving it. But his imprisonment is a brief period snatched from a careless and godless life, in which, without abating one tittle of his punishment, we may confer on him a lasting good, by in some degree repairing the evils of his early and subsequent neglect. It has been my endeavour so to improve this season, not only by private religious instruction, but also by giving thrice a-week, at the daily chapel service, a plain and literal explanation of the Scriptures and Liturgy—a mode of instruction which awakens in many a new and intelligent interest in services so seldom explained and often misunderstood by the poor; and which supplies materials for thought and research to the prisoner when he returns to his lonely cell. I have continued also to encourage the learning large portions of Scripture by heart. Solitude and freedom from distraction greatly favour this employment, and some are enabled to commit to memory whole gospels and epistles and numerous psalms. The mere interest excited by this occupation acts beneficially on a prisoner's mind when here; and seems sometimes totally to alter the character and conduct of the discontented and restless; but the chief benefit of so storing the memory is to be looked for in after-life; the man who was a drunkard before he came in, may return when discharged, to his drunken habits, or the abandoned female to her profligacy; but even if the Word treasured up do not immediately work a reformation of character, it is a great thing gained if, during the few months rescued from a life of intemperance and vice, the mind can be impregnated with some portions of the life-giving word of God, which, however long dormant, may some day spring up and prove a source of the greatest consolation and instruction."

Correspondence.

We have been requested to publish the following letter, which was called forth by a letter from Lord Llanover, in which his lordship withdraws his subscription from the Reformatory at Usk, on the ground that the experiment has been extremely unsatisfactory.

Usk, October 10th, 1859.

My Lord,—The opinion which your Lordship expresses of the Reformatory School at Little Mill, coming from one in such high position and influence, would indeed tend to discourage those who for three or four years have given their incessant and gratuitous labours for the benefit of the county, were that opinion not founded on a misconception of facts which I am happy to be able to correct.

The necessity for the Reformatory School arose from the facts that for the seven years previous to its opening there had been an average of thirty-six boys annually committed to Usk prison, and that the prison is manifestly a most unsuitable place to send them to. The necessity that then existed can only be lessened by the Reformatory doing its work in effecting a *decrease* of juvenile delinquents. That decrease, I am happy to state, has already commenced, and is the main cause of the small number of boys (which is four, three being from this county).

The mere fact of the opening a place of five years' detention, where parents can be compelled to pay 5*s.* a week for their boys, has already tended to reduce the numbers, which in 1858 were forty-one, and this year but eighteen,—the reduction having commenced directly the school was set on foot. This fewness of boys we consider a most satisfactory feature, as it must arise either from the diminution of juvenile delinquents, or from their offences being of so trivial a character that the magistrates do not see fit to sentence the boys to so long a term, the minimum being two years.

Your Lordship will remember that the school has only been open seven months; and, with deference, I would submit that we have hardly had time yet to judge of the results, much less to conclude that they are "entirely unsatisfactory." I am thankful to say, as it regards the boys, nothing can be more gratifying than the result as at present seen in the marvellous change which industry, instruction, and training have, with God's blessing, effected on the four lads now there. The ground, also, is under full cultivation and productive.

I am, my Lord,
Your Lordship's obedient servant,
STEPHEN C. BAKER,
Hon. Sec.

PREVENTION BETTER THAN CURE.

To the Editor of the Philanthropist.

"Men's thoughts are much according to their inclinations; their discourse and speeches according to their learning and infused opinions; but *their deeds are often as they have been accustomed.*"—Bacon.

Sir,—That the Reformatories are producing some effect towards the diminution of crime in this country is now becoming an universally-admitted fact; and it must be a source of gratification to the workers in the noble cause of reformation, to find that the seed they have sown is at last bringing forth fruit. But there is still a nobler work left for us to accomplish—prevention from crime is better than reformation after crime. It is quite right to endeavour to reform those already entangled in the meshes of crime; but that is not enough—we should direct our strongest efforts to prevent others, who are yet free, from getting into the net.

Where, then, is the field for our exertions? A few paces from any of the great thoroughfares of the metropolis will bring the pedestrian into the garden-ground of crime—into the streets and alleys of the poor. Let him pause at the corner of one of these streets, and a single glance around will present a terrible picture to his view.

The feeling of the philanthropist on looking on such scenes is one of hopelessness and despair; he sighs deeply when he thinks how little is done to ameliorate the condition of the miserable creatures he beholds. He looks around and sees those devourers of the poor—the gin-shop, the low print and song shop, the store-dealer's, or receiver of stolen property, the dark and dismal houses, crowded to excess, and the dirty and filthy streets, each busily doing its work of degradation; and the magnitude of the evil to be overcome appears to him to be too great to be accomplished by any means of man's device.

Such are the nurseries of crime—well known no doubt to most of your readers—here are the inclinations of young and

Digitized by Google

old bent into the crooked ways of sin; here are their minds filled with wickedness and impurity, and here do they learn to become adepts in crime.

But what, it may be asked, is the object of repeating all these well-known truths? Simply for the sake of showing the necessity which exists for greater exertions being made for the prevention of crime amongst the poor, by improving their dwellings, and their moral and social condition. The means of assisting the well-disposed to an honest course of life are in the hands of the public, and if we look at the question in the most unworthy point of view—viz., as a saving of expense to the country—we might soon arrive at the fact that a few shillings spent in placing the means of education alone within the reach of the poor man's child, would often be the means of saving him from a life of misery to himself and from a large expenditure to the country.

The several societies already in existence, and the ragged schools and unions, are not as yet powerful enough to grapple successfully with the enemy. What is wanted is a society acting with energy and unity of purpose, on a large scale and well supported by the public. Surely, to aid in such a work is the duty of all, and it is a duty, moreover, in which all parties and denominations can take part. Does the man on shore, when he beholds a fellow man fast sinking in the waves of the sea, need to be assured that that sinking man is of his own peculiar opinions—is a Christian, a Jew, or a heretic—ere he stretch forth his arm to save him? Decidedly not: he sees in that sinking form a fellow-creature ready to perish, and a natural instinct impels him to render every assistance in his power.

Reader, the weeds are growing fast in our streets and in our alleys; the poor are day by day sinking in the great depths of misery. Do you know no hand to come forward and help till the ground? Do you know no one who will stretch out a saving arm?

H. R. L.

WORK FOR THE PHILANTHROPIST AND THE SCHOOLMASTER.

(*From the Brighton Examiner.*)

SIR,—The recent preparations for Confirmation have doubtless brought out many discouraging things—shortcomings and failures—as to the amount and quality of the knowledge necessary for the occasion.

This must have been remarkably so, in cases where the Examiners were careful and pains-taking, not being satisfied with mere mechanical answers.

I will relate my experience on this matter, because I believe that the instances with which I have come into contact represent numerous others of the same description, for which the same remedy offers that I have tried, and am about to suggest.

Several young persons have been preparing for Confirmation in the neighbourhood where I reside. Taking an especial interest in two of these candidates, I assisted them to fill up their examination papers with the requisite answers, and otherwise instructed them.

They were *well up* in the Catechism, which they could answer without hesitation, and apparently knew it thoroughly, having, as they told me, been accustomed to "say their Catechism" every week at home, and to repeat it at the Sunday school, one girl for five, the other during a period of four years. But noticing that a few of the words were rather oddly pronounced, I required the answers to be written down in my presence from memory.

The following specimen will prove how few clear ideas—if any—the words could have suggested to their mind. I have only transcribed some of the more remarkable blunders (disjointedly), as it would occupy too much of your space to give the answers entire, and the following are sufficient for my purpose:—

My douty to yoards—whith awl my
My duty towards—with all my
hart, whith awl my sould, an whith awl
heart, with all my soul, and with all
my strank — To worbes hem—to but my
my strength—To worship him—to put my
all trus en hem, to cawl abun hem, to
whole trust in him, to call upon him, to
hunner is houly nam an is ward, and
honour his holy name and his word, and
to saver hem truely—&c.
to serve him truly—&c.

My douty to mnaber is to loaf hem as
My duty to my neighbour is to love him as
me sailf—to loaf, hunner, an sucker, my
myself—to love, honour, and succour, my
farther an muther—To hunner an bay
father and mother—To honour and obey
Quean, an awl hat ar but in tuarey
the Queen, and all that are put in authority
unner aer—To siment sailf—my Gunvers,
under her—To submit myself—my governors,
spetuale payries and mairs — To auder
spiritual pastors and masters— To order
sailf a long an revindly, &c.
myself lowly and reverently, &c.

To heart nobudy, by ward or daid — To
To hurt nobody, by word or deed — To
be treue an jest in awl my daileness, to
be true and just in all my dealings, to
ber no musen no hanker in my heart, to
bear no malice nor hatred in my heart, to
kep my ands from peking an stilen,
keep my hands from picking and stealing,
an my tung from evel spicking, laying,
and my tongue from evil speaking, lying,
an slunen.
and slandering.

The foregoing will appear the more remarkable, when it is known that these two young women are very well-spoken, and it will prove that their facility in using such fair language in *speech*, is entirely mechanical, or, as it has been well described, "sensational;" regulated by the ear, and depending on that power of imitation which the voice has, in reproducing sound which the ear takes note of.

Such cases as these show the value of *dictation* as a test, in the first instance, of what the children know, and what they really can do, and it becomes a very important means of practising and exercising the faculties of thought and memory in a very useful manner.

I believe it is possible for children to perform the most wonderful feats of *verbal repetition*, without attaching a single corresponding idea to the sounds uttered; but if the pupils are required to *write down* their answers, or to follow on their slate the voice of the teacher, they cannot pass off with a superficial idea of the subject upon which they are exercised.

Correct spelling and reading are two of the most important matters to be attended to in the education of children. Let them know each word well, its characters and its meaning; but, if they are allowed to "get over" a jumble of sounds without any sense being presented to their mind, the whole lesson is worse than useless, because, instead of being interested and instructed, the children become wearied and listless, and think learning a bore. Thus the most precious time of their life is wasted, and, after school-days, they have neither time nor inclination to redeem their lost opportunities.

I am, Sir, yours truly,

ALPHA BETA.

WET-NURSING.—The interesting paper on this subject, prepared by Mrs. Barnes, to be read before the conference of the Social Science Association is now in the printer's hands, and will be published in the course of a few days. In our next issue we shall have a few observations to offer on this subject, the social bearings of which have undoubtedly been greatly underrated. Mrs. Barnes has most carefully studied the question of which she treats, and we think has been well advised by those friends who have urged her to give the public the benefit of her thoughts.

A GOOD FAMILY MEDICINE CHEST, with a prudent use, has saved many a life; and yet we think the idea might be improved upon, and reduced to a more simple form. Take some good compound, such as COCKLE'S ANTIBILIOUS PILLS, and we find that the desired end may be obtained without scales and weights, or little mysterious compartments and enchanted bottles with crystal stoppers. Others might be used, but Cockle's Pills, as tested by many thousands of persons, and found to answer their purpose so well, may be set down as the best.—*Observer.*

REFORMATORY FOR JUVENILE MALE CRIMINALS under 16 years of age.—The HOME in the EAST, Old Ford, Bow, near London.

PRESIDENT,
THE EARL OF SHAFTESBURY.

TREASURER,
JOSEPH CRANE, ESQ.

BANKERS,
MESSRS. HANKEY & Co.

HONORARY SECRETARIES,
A. J. SCRUTTON, Esq., 81, Old Broad Street;
THOMAS SCRUTTON, Jun., Esq., 3, Corbet Court, Gracechurch Street.

GOVERNOR,
Mr. J. W. GORDELIER, at the Institution.

Fifty youths are maintained at an annual average cost of about £1000.

In addition to the ordinary operations of the Institution, the following efforts call for special funds:—

New workshops, with appropriate fittings, newly erected at a cost of £300.

Emigration of seven youths to Canada in April next, £85.

Contributions in aid of either of the above objects are earnestly solicited, and will be gratefully acknowledged.

METROPOLITAN ASSOCIATION for IMPROVING the DWELLINGS of the INDUSTRIOUS CLASSES; incorporated by Royal Charter, dated October 16th, 1845; with perpetual succession.

DIRECTORS.

Chairman.—Sir RALPH HOWARD, Bart.

Deputy Chairman.—JOHN WILLIAM TOTTIE, Esq.

George William Alexander, Esq.
Major-Gen. Edward Pery Buckley, M.P.
The Right Hon. the Earl of Carlisle, K.G.
Stephen Charles Denison, Esq.
Edward Enfield, Esq.
Sir William Fraser, Bart., M.P.
Hon. D. Francis Fortescue, M.P.
Thomas Field Gibson, Esq.
Frederick David Goldsmid, Esq.
The Right Hon. Lord Claud Hamilton, M.P.
William Egreton Hubbard, Esq.
Edwin Hill, Esq.
Sir Samuel Morton Peto, Bart.
T. Southwood Smith, Esq., M.D.
Russell Scott, Esq.
William Arthur Wilkinson, Esq.
Horace Wilkinson, Esq.

The necessity for the prosecution of the objects of this Association is continually brought before the public by the press, and in the reports of the officers of various sanitary boards, the only result of which has hitherto been the formation of various societies in addition to this Association, of smaller scope, though having the same objects in view.

The experience of thirteen years has convinced the Directors that the only mode in which the existing evils resulting from the improper housing of large masses of the people in densely-populated districts can be effectually and permanently alleviated, is by the exercise of such powers as they possess, and that the desire to do this must, at the present time, be exerted by one extended and powerful combination, instead of a variety of disjointed attempts, each necessarily burdened with expenses of its own, pressing upon the body of proprietors with a weight proportioned to the contraction of the area of its operations.

The Charter confers power to raise £100,000 capital, in shares of £25 each, to be expended in England and Wales, and to increase such capital to any extent, from time to time, with the sanction of the Board of Trade and the Shareholders.

To enter into contracts under the common seal of the Association.

To declare dividends not exceeding £5 per cent.; surplus to be applied in further promoting the objects of the Association, with the approval of the Board of Trade.

Constitution—Shareholders incorporated, and liabilities of each limited to the amount of his investment.

Directors elected by the Shareholders, two retiring every year, but capable of re-election.

Supervision by the Government, through the medium of the Board of Trade, for the purpose of securing the permanence of the original intent.

It is gratifying to know that, wherever the operations of this Association have been felt, the result has been the improvement of the accommodation afforded in the neighbouring dwellings; but greatly-increased efforts are requisite, both to meet the extent of the existing evil, and to perfect the remunerative character of the undertaking.

The Directors, therefore, invite the co-operation of the capitalist, and, to this end, his inspection of their buildings undermentioned.

The tenant class are earnestly requested, for the sake of their comfort, their health, and the economy of their dwellings, to make themselves acquainted with the accommodation hereby provided.

Every information may be obtained on application to the Secretary, Mr. CHARLES GATLIFF, 19, Coleman Street, London, E.C.

The existing property of the Association is as follows:—

Pancras Square, Old Pancras Road	110	families.
Ingestre Buildings, New Street, Golden Square	60	do.
Nelson Square, Snow's Fields, Bermondsey	108	do.
Albert Street, Mile End New Town	60	do.

FEMALE MISSION, in connection with the REFORMATORY AND REFUGE UNION.

The subject of fallen females having been brought prominently forward nearly two years ago in some of the public journals, a sub-committee of this Union was formed to inquire into the question, with a view to devise some scheme of practical good, in the least expensive and most effectual manner.

After various conferences with the clergy of the several parishes in the metropolis, and the managers of some of the existing institutions, it was resolved that a centre of action should be provided, through which institutions might be assisted, and where contributions could be received from those who are desirous of aiding in the rescue of this unhappy class.

For this object a handbook was compiled and published, containing a short account of fifty penitentiaries and homes for females in London and the provinces, with particulars as to the ages received, terms of admission, &c.

The services of two female missionaries were then employed for the purpose of seeking out those who were desirous of leaving their evil ways, and directing them to places of shelter and protection.

The sub-committee, who undertook their weekly superintendence, can now report that these missionaries have carried on their difficult work with zeal and steadiness of purpose, and have met with an unlooked-for measure of success.

Out of a large number of cases which have engaged attention during the past eighteen months, *one hundred and fifty-six* appeared to be penitent and anxious to reform, and therefore have been placed in homes or penitentiaries, or otherwise provided for; and in many instances the necessary sum for their admission has been paid by the Union.

Arrangements have been made by which one of the missionaries is able to receive these women at once into her house, until a suitable refuge be provided for them.

About 25,000 tracts and handbills have been distributed in the parks and streets, as well as in houses of bad character, into which the missionaries have gained admission at considerable personal risk and self-sacrifice.

Hospitals have been visited in the hope of permanently benefitting those who were compelled by illness to leave for a time their evil course of life.

The funds received for this special object are now exhausted. An earnest APPEAL is therefore made for donations and subscriptions, in order that the Union may not be compelled to discontinue this important part of its operations.

The following contributions, received since the last report, are thankfully acknowledged:—

	£	s.	d.
Countess of Darnley	2	0	0
T. J. Sanderson, Esq.	7	0	0
Rev. Sir N. Chinnery, Bart.	1	1	0
William Gaussen, Esq.	5	0	0
Thos. J. A. Roberts, Esq.	5	0	0
Thos. Hankey, Esq.	5	0	0
Miss Evans	1	0	0
Thos. Tilson, Esq.	10	0	0
G. H. K.	50	0	0
Ditto, second donation	50	0	0
J. F. Fortescue, Esq.	0	10	6
B. J. H.	0	5	0
Rev. E. B. Evelyn	3	0	0
Chas. Ratcliff, Esq.	1	1	0

These contributions, together with a balance from last account (Feb. 4), of £105 18*s.* 8*d.*, have been expended as follows:—

	£	s.	d.
Grants to Institutions, with Cases, &c.	141	0	0
Salaries of Missionaries	60	12	0
Temporary Lodgings, Food, and Sundries	38	18	0
Leaving a balance in hand of	6	6	2

President of the Union.—THE EARL OF SHAFTESBURY.

Hon. Secs.—Robert Hanbury, Esq., M.P., 10, Upper Grosvenor Street, W.; Stephen Cave, Esq., M.P., 22, Wilton Place, S.W.

Female Mission Sub-Committee.

A. D. Chapman, Esq.
The Dean of Ripon.
William Gaussen, Esq.
Robert Hanbury, Esq., M.P.
John La Touche, Esq.
W. J. Maxwell, Esq.
George Moore, Esq.

Contributions should be paid to the "Female Mission Fund" of the Reformatory and Refuge Union; at Messrs. Smith, Payne, and Co.'s, No. 1, Lombard Street; Messrs. Ransom, Bouverie, and Co., 1, Pall Mall East; and at the Office of the Union, 118, Pall Mall, S.W.

CHARLES GWILLIM, *Secretary.*

WHAT WILL THIS COST TO PRINT? is a thought often occurring to literary minds, public characters, and persons of benevolent intentions. An immediate answer to the inquiry may be obtained, on application to RICHARD BARRETT, 13, Mark Lane, London. R. B. is enabled to execute every description of PRINTING on very advantageous terms, his office being furnished with a large and choice assortment of Types, Steam Printing Machines, Hydraulic and other Presses, and every modern improvement in the Printing Art. A Specimen Book of Types, and information for authors, sent on application, by

RICHARD BARRETT, 13, MARK LANE, LONDON.

CONTRIBUTIONS to the REFORMATORY and REFUGE UNION are earnestly solicited for the following purposes:—

General Fund—For maintaining the General Operations.

Refuge Fund—For making Grants to Refuges, Emigration, &c.

Female Mission Fund—For maintaining a Mission to Fallen Women.

Bankers—Smith, Payne, and Co., 1, Lombard Street; and Ransom, Bouverie, and Co., 1, Pall Mall East. See Third Annual Report, to be had on application at the Office of the Union, 118, Pall Mall, S.W.

ONLY ONE APPLICATION.
INSTANTANEOUS, INDELIBLE, HARMLESS, and SCENTLESS.

In Cases, post-free, 3*s.* 3*d.* and 6*s*, direct from E. F. LANGDALE'S Laboratory, 72, Hatton Garden, London, E.C.

"Mr. Langdale's preparations are, to our mind, the most extraordinary productions of modern chemistry."—*Illustrated London News*, July 19, 1851.

A long and interesting report on the products of E. F. Langdale's Laboratory, by a Special Scientific Commission from the Editor of the *Lancet*, will be found in that journal of Saturday, January 10th, 1857. A copy will be forwarded for two stamps.

AGENTS WANTED.

A NEVER-FAILING RECEIPT for 30 Stamps, to make the HAIR GROW and CURL.

A very valuable RECEIPT for 30 Stamps, to make a FIRST-CLASS HAIR-DYE.

LADIES! If you wish your Skin to be Clear, Fair, and Blooming, send me 30 Stamps, and I will forward you the receipt. Its effect is surprising. It removes Tan, Freckles, Pimples, and other unsightly marks. It is perfectly harmless, and may be prepared by any lady at a trifling cost. These Receipts are superior to anything of the kind hitherto discovered.

IMPORTANT to every Man who keeps a Horse, Cow, Sheep, or Pig. The receipt to make the celebrated HORSE and CATTLE FOOD, for 13*s.* per cwt., the selling price being 42*s.* and 50*s.* per cwt.

N.B.—Two receipts sent for 44 Stamps; three for 60 Stamps; or the four for 78 Stamps.

Address, Mr. J. TAIT, Chemist, Newcastle-on-Tyne.

WORKS PUBLISHED BY W. TWEEDIE,

ESTABLISHED 1853.

THE A B C RAILWAY GUIDE is, as its name implies, a complete and intelligible guide to Railway Travellers. It has become indispensable to all who are in the habit of using any of the several lines that diverge from the metropolis. It is found in all the Government offices, in the clubs, hotels, public libraries, and reading rooms, and is fully recognised as an invaluable medium for advertisements. To its characteristic advantages are added a guide to strangers in London, including all the principal places of public interest and of public amusement, a guide to the steamboats, a guide to the Metropolitan railways, cab fares, &c. The plan of the Guide is as simple as A B C; the stations are arranged in alphabetical order, and immediately beneath each are full particulars of all arrivals and departures to and from the metropolis.

Published monthly, price 6d.

TOWN LIFE. By the Author of "Liverpool Life," and "Rambles in the Lake Districts."

"There are a freshness and an earnestness about this work which are quite pleasing to the reader, and a truthfulness in every picture which adds much to its value. The dreadful effects of intemperance, of improvidence, of loose and vicious habits, of debauchery, and the many other horrible vices and immortalities of 'town life' are graphically portrayed by the author, but without exaggeration. Indeed, we scarcely think it would be possible to exaggerate the vices which are carried on in the heart of a large town, and therefore plain unadorned truth is, as in every case, far the most effective and telling. The author of 'Town Life' has evidently personally visited all the places and scenes which he describes, and has been a patient and careful observer of the different phases of character he has met. He has described these different scenes in a most graphic but simple manner, and has throughout shown the baneful influences which the indulgences he has described have upon the social and moral condition of the people. We assure our readers they will peruse the book with not only pleasure, but with profit, and we strongly recommend it to their notice."—Derby Telegraph.

London: W. Tweedie, 337, Strand.

MR. JEFFREY'S RESPIRATORS, WITH ALL THE RECENT IMPROVEMENTS BY HIM.—The Wholesale Agent to the Manufacturers of these important instruments begs to remind all sufferers from irritation in the throat and lungs that it was to give comfort to these organs he invented an instrument able duly to warm and moisten each entering breath, so as to form a genial and portable climate for them, and that to effect this with the least possible obstruction to the currents of the breath inwards and outwards that elaborate and delicate combination of the most highly-conducting metal for which he introduced the name Respirator, is essential. It is this construction which, by benefitting thousands annually, has given a world-wide celebrity to his name.

It is of the utmost importance to discern between the genuine effects of the true respirator and the deceptive effects of merely keeping out cold by a partial obstruction of the breath, ultimately so undermining to the health. No prudent person could, even as a matter of economy, trust vital and delicate organs, upon the safety of which life depends, to any but the most perfect instruments producible by art.

The Manufacturers could easily produce showy articles at one-third of the price, yielding a much larger profit.

Preventive respirators—for the mouth, dwarf, 9s.; hand, 10s. to 16s.; for the nose, the nasal, 16s. Curative respirators—nasal, ordinary oral, 12s.; expansible oral, 21s.; for mouth and nostrils, orinasal, 14s. to 24s. Procurable of the Agents throughout London and the kingdom. Wholesale Agent to the Manufacturers, W. Tweedie, No. 337, Strand, W.C.

CHARITABLE TRUSTS.

At a meeting of the Law Amendment Society on Monday, January 23, an important discussion took place on the subject of Charitable Trusts. At the meeting of the Social Science Association at Bradford, Vice-Chancellor Page Wood read a paper on this subject, which formed the basis of the debate.

The Vice-Chancellor, who occupied the chair, said that it would be unnecessary for him to read his paper on Charitable Trusts, which was now to form the subject of discussion, as it had been printed, and was in the hands of members of the society, but he would state briefly the reasons for the amendment of the law which he had proposed. After referring to the importance of having a proper law for the administration of the large amount of property appropriated, either by gift or bequest, to charitable purposes, he observed that there was a limit imposed upon owners of property, in regard to the period during which they could direct the appropriation of it to persons of their own family, and he could not see any sound reason why the same principle should not be acted upon, in regard to charitable gifts or bequests. The foundation upon which definitions of property after death were allowable in law was, that they were intended for the good of mankind, for, strictly speaking, there existed no right, either in morals or in natural law, whereby a man was entitled to direct what use should be made, after his death, of the property which had been his during his lifetime. The municipal laws, however, of different countries stepped in, and, with the view of encouraging industry, allowed a man the privilege of exercising a control over that of which, naturally, he was no longer the master. Thus, the same principle of policy directed bequests for family purposes, and those for charitable trusts; but there was this distinction observable in its application to each case. It was universally recognised as a matter of public good, that a man should leave the enjoyment of his property to the members of his own family, but there could be nothing more absurd than to allow any man to select from the catalogue of public purposes any or more, and say that it or they were for the public good. It was tantamount to placing a legislative power in the hands of an individual which was both strange and anomalous. This power was first given for the advancement of religious purposes, and subsequently to forward those of particular guilds, these corporations, both lay and clerical, becoming the perpetual trustees of the funds bequeathed them, since by law they never died; and the law of mortmain was intended to remedy the evils to which such a state of things gave rise, and so prevent the perpetual alienation of property. Having referred to the absurd character of several bequests held to be valid as for charitable purposes, he went on to consider the principle which pervades the two acts for the reform of the universities—namely, that of sweeping away from educational foundations all restrictions as to the particular schools, particular localities, and particular families, and making them subservient to the purposes of education generally. That principle ought to be further acted upon, and in those places where large funds were in the hands of trustees to be given out as doles, such funds ought to be diverted from such pauperising purposes, and applied to the foundation of a school or some other purposes which would really be for the benefit of the locality—that having been obviously the intention of the original donors. Where, too, there existed, as in Westminster, several institutions identical in their purposes, it should be in the power of the Charity Commissioners to fuse them, and, by getting rid of one staff, and applying the funds thereby saved to the common object, make one excellent institution out of two indifferent ones. In general, he would not allow any person to devise property, either real or personal, for any *quasi* charitable object, unless that object was approved of by the Charity Commissioners, or some other public body. He would also, as in the case of bequests to individuals, limit the appropriation of the property to the objects of the charity within some fixed period, except in regard to charities already established, under any decree or order of the Commissioners under the statute of Elizabeth, or of the Court of Chancery, or already established with the consent of the Charity Commissioners; and he would give the Charity Commissioners power from time to time, on the application of the Attorney-General, to remodel the application of charitable funds dispensed in doles, and with them found schools or hospitals; and in relation to all other charitable endowments whatever, they should, on the application of two-thirds of the governors invested with the control, and with the assent of the Attorney-General, have the power to alter and enlarge their scope. The changes which he proposed, then, were as follows:—First, with regard to dispositions of property for charitable purposes *inter vivos*, he would put personal property on the same footing as real; secondly, he would put a restraint on posthumous gifts for a imilar purpose; and lastly, he would prepare a cheaper and more convenient mode of remodelling all charities than now existed.

Mr. Edwin Field stated that sixteen years ago, when he gave evidence before Lord John Manners' mortmain committee, he insisted upon the propriety of the principle advocated by the Vice-Chancellor, that there should be a limit imposed on the term of the appropriation of charitable endowments, but there existed in that committee so strong a religious feeling, that there was something sacred in the will of a dead man which made it sacrilege to interfere with it, that, in their report, they passed by all mention of it. He concurred in the Vice-Chancellor's object, but to some of his proposals he had objections. He was strongly opposed to requiring a license from the Charity Commissioners or any other public functionaries before allowing an endowment. What was necessary was, first, to protect the donor against undue influence; secondly, to protect the public against the mischievous application of charitable funds; and thirdly, to protect the incomes of the charities themselves from misappropriation. With regard to the first of these objects, he thought the death-bed rule which prevailed in Scotland, requiring sixty days, sufficient. As to the protection of the public against mischievous dedications, he thought the rule against perpetuities would be adequate. In regard to the proposal that the Charity Commissioners should have the power of interfering with the freedom of bequest, it was open to the gravest objections, and would not be endured in this country. Great mischief arose from a public body regulating matters that should be left to the opinions and tastes of individuals. The true security would lie in the power of modifying the application of the fund at the end of the period, which the rule against perpetuities would allow. He would himself regard all gifts and bequests to chapels, athenæums, and such institutions, as partaking rather of the character of property to be applied for the personal purposes of the donor or testator than as charitable trusts. Lastly, with regard to the protection of public charities themselves from misapplication, he would propose that trustees should be paid for the performance of their duties, and that their accounts should be published. In the case of small charities, he thought that investments in land should be prohibited. He thought the Charity Commissioners should be confined to functions parallel to those of the Poor Law Board, and should only superintend and regulate what was done by the district.

Mr. Hastings adverted to what had been done in the parish of St. Nicholas, Bristol, an account of which would be found in the Transactions of the National Association for 1858, as showing how useless charities might be applied to beneficial purposes. He agreed with Mr. Field as to the evils that might arise from giving the power of sanctioning charities to the Charity Commissioners.

Mr. Blundell thought that testators might be allowed a greater latitude, if restrictions were placed on the duration of bequests for charitable purposes.

Mr. Hare said he concurred in a great deal of what had fallen from Mr. Field, that there should be a perfect freedom of

Digitized by Google

disposition left to the testator, subject to the principle that the bequests should not be for purposes subversive of public morals, reserving to the State the power of modifying it, after a certain period, whenever, in the altered circumstances of the time, such modification might become necessary. Where there at present existed such a bequest as that of a man who left his property in perpetuity for the benefit of all those of his own name who were related to him, he would by an actuary calculate the extent of each man's right in it, then sell it and divide the proceeds in accordance with that calculation. In cases of other charities, and of almshouses, he would allow the inhabitants of the district to elect to them after the period to which he had referred. With regard to the chapels, &c., to which reference had been made, he thought that if they were to be perpetuities, they ought to be subject to the control of the State.

Mr. Edward Webster said that the difficulty of reconciling an unlimited power of giving property for charitable purposes, with the public welfare, had existed in this country from a very early period; hence the Statute law had, from time to time, declared to what extent, and for what specific objects, property may be dedicated to charity. Doubtless, the existing law required amending; but he would not agree that the right to make a will for charitable purposes should be taken away, or that the previous sanction of any official board should be requisite. In no case ought a person to be able to give away his property in charity without first providing for those towards whom he was under a moral obligation—for example, his wife and children. It appeared to him that the law would be sufficiently amended if there were an Act of Parliament declaring what charitable objects were consistent with the public welfare, and confirming the power to dispose of property in charity to those objects, and enabling the trustees of all existing and future charities, with the consent of the Court of Chancery, not only to alter or modify their trusts so as to make them, as occasion would require, in accord with the objects so declared, but to alien their real property and to transpose their money securities. A great discouragement to charitable dispositions of property would be occasioned if a charity could endure no longer than the lives of persons in existence, specified and known when the gift comes into operation, and for twenty-one years after the decease of the survivor of them. A gift to charity, and a devise or a legacy for other purposes, were, in truth, essentially different; and he thought, therefore, the rule against allowing a perpetuity of limitations ought not to be applied to charities. With these qualifications, he thought gifts to charity ought to be unrestrained, and he, therefore, could not concur with those suggestions in the paper which contemplated limiting the power to a gift by deed, and rendering the previous consent of the Charity Commissioners necessary. In that respect he thought that the suggestions, if carried out by the Legislature, would be a gross and very unnecessary interference with the liberty of the subject.

Lord Stanley said that the difficulty of the inquiry arose from the fact that they were obliged to consider in it three or four great social questions all connected with it, although each was in itself distinct, and required, for its examination, more time than was at their disposal. They had not only been considering the distinction between the alienation of funded and that of landed property, but also the distinction between giving and bequeathing each description of property; and they had also been trying to discover if they could find any better means for the regulation of property left to public uses. He would not go into the first of these questions, except to make one remark which occurred to him, which was, that there was an obvious difference in the character of landed and funded bequests. With regard to the former, supposing that 5 per cent. of the whole landed property of the kingdom belonged to charities, it was impossible that there could hereafter be any increase in such landed property, whereas the same proportion of personal property might, in process of time, come to be greatly diminished by the increase of this species of property. They would, of course, all agree in the abstract proposition, that no man had a right to direct what should be the perpetual application of his property, for it was in no man's power to tell what might be the requirements of society in five hundred years to come. With regard to such bequests, the State had from time to time interfered, but it had done so in an irregular and violent manner. He was opposed to all proceedings of that character, and wished to see the interference of the State conducted upon a fixed rule; and he also wished to see removed from it everything of an arbitrary character. Then arose the question, whether they should prohibit or regulate charitable devises, for one or other of them was necessary. Any attempt at prohibition would, he conceived, be founded in mistake; for, as in the Gerrard Trust in Philadelphia, there were cases of men having no relatives or friends, and it would be highly objectionable to prohibit them making, by bequest, what use they pleased of the property they had acquired by their own industry. The remedy for all cases in which the bequests were doing harm, was not to be found in diverting them from public use, but in applying them to the nearest cognate purpose consistent with public policy, and where the area of a charity was too narrow he would widen it. With regard to giving the Charity Commissioners power to forbid a bequest, it would raise a jealousy of Government interference, and, in cases of rival religions, lead to considerable trouble. He had at present no further observations to offer, but thought the whole question was one which ought to be further discussed.

The Chairman said that the suggestions marked 3 and 4 at the end of his paper might be considered as the practical parts of his proposal, and, with regard to them, much difference of opinion was not likely to exist. With reference to the prior suggestions, he had foreseen the objections likely to be raised, and he was still of opinion that they could not be considered valid. The mode of licensing proposed was objected to by Mr. Field as involving the interference of Government officials; but he did not propose to give the Government the power. It was proposed that it should be done by means of this judicature. The Commissioners were to have control only over the details of the scheme, in cases of additional endowment of any existing charity, and in other cases they were to have power to reject a scheme, for cause to be assigned, and subject to appeal to the Court of Appeal in Chancery. With regard to the time for interfering with the appropriation of property to charitable purposes, Mr. Hare and Mr. Field proposed to come in at the end of fifty years. It was admitted that some one must step in at some time, and it appeared better that this should be done at once. The owner of the property would thus have the means of knowing how it was to be disposed of, and it would be more fair to him to adopt this course. With regard to the districts determining the application of property devoted to charitable purposes, as proposed by Mr. Field, this would give rise to a system of jobbery.

The discussion was then adjourned.

REFORMATORY LEGISLATION.

The National Reformatory Union held a meeting on Saturday the 28th January, at 3, Waterloo Place, Pall-Mall, to take into consideration the suggestions made by Mr. Sydney Turner, which appeared in the last number of the Philanthropist.

Lord Brougham, the President of the Union, took the chair.

Among other noblemen and gentlemen present at the meeting were Lord Stanley, M.P., Sir Stafford Northcote, Bart., M.P., Mr. Cane, M.P., Mr. Garnett, M.P., Rev. Sydney Turner, Mr. Barwick Baker, Capt. Crofton, C.B., Mr. Gladstone, Mr. Wheateley-Balme, Rev. H. G. Barton, Rev. W. C. Osborne, Mr. G. W. Hastings, Mr. Martin Ware, jun., Mr. Latham, Mr. Bastard, Rev. W. P. Trevelyan.

Mr. T. B. G. Baker brought before the meeting the necessity for a penal Reformatory. Usually, boys could be easily managed in a Reformatory School, but there was occasional, though unfrequent, need of some special means of coercing the refractory. He had had one boy in his own school whom he was obliged to keep constantly in a cell, and with a man to watch him all day and be with him at his work.

Lord Brougham inquired what age the boy was, and whether he was of sound mind?

Mr. Baker said that the boy was about sixteen years of age, and that he was of as sound a mind as any one could be said to be who was of an extremely violent and ungovernable disposition. This was a rare case. Out of 200 boys who had passed through his hands not more than six had been subjects for a penal Reformatory. But even with this few it was impossible to deal in an ordinary school; they must be somewhere where they felt that resistance was useless, and from whence they could not escape. Parkhurst was surrounded with high walls, and was, moreover, situated on an island, and seemed

Digitized by Google

therefore, peculiarly adapted for the purpose required. He thought it undesirable to separate the older from the younger boys in a Reformatory, as the former frequently acted as a sort of elder brothers to the latter. The Secretary of State should have the power to transfer boys to the penal Reformatory.

Rev. S. TURNER, in answer to Lord Stanley, stated that there had been a few boys discharged from Reformatories as incorrigible. Generally where one Reformatory had not suited a boy, he was removed to another which suited him better. He objected to the use of Parkhurst for the purpose proposed. He thought that the military discipline there was unsuitable to these boys. Parkhurst would not provide for girls. But he thought that there would be quite enough of the class of boys to justify the establishing of a penal reformatory, the more expressly as such an Institution could be better managed if the inmates were not numerous. The difficulty of aggregating the boys together would not be great, as their fault is usually violence of temper rather than depravity. He considered that the aggregate number of inmates of Reformatories had now probably reached its maximum, but as the boys in the penal Reformatory would need to be detained for a considerable period there, we cannot expect to have after awhile fewer than sixty or seventy.

Lord STANLEY asked whether it would be desirable to bring together all the worst boys (amounting probably to sixty or eighty). He feared that they would make each other still more depraved. Who is to exercise authority over them? If the Secretary of State, on the complaint of the manager, this would be practically allowing that officer to inflict punishment on the boys, and greatly increase the punishment beyond the sentence.

Some observations were also made by Sir S. Northcote, Mr. Latham, Mr. Osborne, and others, but no formal resolution was passed on the question, it being suggested by Lord Brougham that a committee should be formed for its further consideration.

The other suggestions of Mr. Sidney Turner were considered *seriatim*, and the following resolution was passed:—

"That a Committee be appointed to consider the several points which have been brought before this meeting, to obtain further information, and to report upon them.

"That the Committee prepare heads for an amending and consolidating Bill to be submitted to Parliament, and that the Committee be empowered to call another meeting of the Union when the Bill has been prepared.

"COMMITTEE.

"Sir S. Northcote, Mr. Sydney Turner, Mr. Garnett, Mr. Wheatley-Balme, Mr. Barwick Baker, Mr. Gladstone, Mr. Cave, Mr. Ware, Mr. Hastings, with power to add to their number.

"That a copy of this resolution, and of extracts from the PHILANTHROPIST, be sent to secretaries of the Reformatory and Refuge Union, and that the Committee of that Union be requested to name such members as they think fit to form a joint Committee with the gentlemen appointed by this Committee."

During the meeting the following letter was read, from the Rev. Ishmael Fish, manager of the Castle Howard Reformatory:—

To the Secretary of the National Reformatory Union.

DEAR SIR,—I regret that I shall be prevented from attending the meeting of the Union, to be held to-morrow; the more so, because the subjects to be discussed are of unusual interest.

The necessity for a penal Reformatory must have been long felt by all Reformatory managers. So strongly has it pressed of late upon this Institution, that a memorial has recently been sent, numerously signed by members of the Committee, to the Home Secretary on the subject.

Two days ago an incorrigible boy completed a term of three months' imprisonment, in Northallerton Gaol, for gross insubordination. To have him back here would be entirely destructive of all discipline in this school. I am, therefore, acting an odd fiction in giving him leave to reside with his father for thirty days. He ought to go to a Penal Reformatory.

Two weeks ago three boys absconded (one of them a very bad boy, who has been eight or ten times convicted, and recently brought here from another school, from which he had twice absconded). On the same day they ran away they broke into a clergyman's house, and committed a serious robbery. I should certainly like to have the very bad planner of this outrage prosecuted, but recent experience of a prosecution of one of our boys at Assizes for arson (respecting the commission of which offence there was no possible doubt, but who was found "*not guilty*" of *malice*, and who is now here) deters me from taking that step. A penal Reformatory is the place for him.

I could multiply examples, but forbear.

I apprehend the question which is of present moment, is how is such a Reformatory to be established? Let us first go to the Government unitedly and urge the certifying of Parkhurst. We shall probably then learn what is the real difficulty in the way of such a course. The only difficulty of which I have ever heard lies in the objections of the manager there.

Failing Parkhurst, let the Committee of the Union immediately open a subscription list, with a view to the establishment of such a school. I imagine little difficulty would be found in obtaining a suitable building, in the shape of some disused House of Correction, that would answer the purpose. When once established, let the *schools making use of it* contribute, *pro rata*, any excess of cost above the treasury allowance.

I believe there would be no difficulty in raising funds; nor do I apprehend any in the way of obtaining a proper staff.

The subject of the Amendment and Consolidation of the Reformatory Acts is a wider one, on which I would suggest as follows. My experience goes to show that it would be desirable to have power to renew the licence (20 & 21 Vict., s. 55 c. 13) for several months, say six. I do this *now*, but without authority; and it works well.

When a boy is committed for absconding, power should be given to magistrates to add a further period of detention.

Power should also be given to managers (with the consent of the Secretary of State) to apprentice or authorise to enlist boys.

We want also to know what is the effect of an absconding upon the sentence; *i. e.* whether the period of absence stands part of the detention or not.

I think I may safely promise to any well-considered measure that would embrace the above points, the cordial support of this Committee: and there is reason to hope that many Yorkshire members of Parliament would lend their aid in passing it. At any rate, I can promise that they all should be requested to do so.

I am, sir, yours faithfully,
ISHMAEL FISH, Chaplain.
Castle Howard Reformatory, Welburn, York, Jan. 27, 1860.

BIRMINGHAM REFORMATORY INSTITUTION.

THE annual meeting of the subscribers and friends of this institution was held at the Music Hall, on Tuesday evening; the Right Hon. the Earl of Shrewsbury and Talbot in the chair. The attendance included Lord Calthorpe, Lord Lyttelton, Sir John Ratcliff, the Right Hon. C. B. Adderley, M.P., Thomas Lloyd, Esq. (Mayor), M. D. Hill, Esq. Q.C. (Recorder), T. C. S. Kynnersley, Esq., &c., &c. Letters of apology for non-attendance were received from Lord Leigh, the Earl of Lichfield, Viscount Ingestre, the Hon. and Rev. G. M. Yorke, Sir John Pakington, Bart., M.P., W. Scholefield, Esq., M.P., &c., &c.

The Rev. W. GOVER having opened the proceedings with prayer,

Mr. W. MORGAN read the report, which referred to the satisfactory completion of the Staffordshire Wing. This addition will enable the committee to extend the benefits of the institution to double the number of boys formerly provided for; and the warmest thanks were due to the magistrates and gentry of Staffordshire, by whose munificent contributions, through the Earl of Lichfield, as Chairman of the County Sessions, the work has been accomplished. The total amount of the outlay upon the new wing had been 826*l*. The enlargement of the institution had compelled the committee to give their serious consideration to the comparative advantages of the different branches of industrial pursuits in which the inmates may be trained, and the result had been a decided opinion in favour of open-air agricultural labour. They had, therefore, made arrangements for occupying an additional quantity of land, and had also engaged a carpenter to work on the premises in making such furniture as might be required, and to instruct the boys, so that at least some of them might be qualified to gain their livelihood by following that trade. The other trades, in addition to gardening, taught and practised at the institution, are those of the tailor and shoemaker. The committee think it very desirable that the parents' contributions

Digitized by Google

should be enforced. It is therefore suggested that the magistrates should invariably investigate the parents' circumstances at the time of each child's committal; and that in future no child should be received unless it is shown that inquiry has been made as to the parents' circumstances, and that a weekly sum will be paid, or a sufficient reason given for non-payment. The committee report with much satisfaction that they continue to receive information of the good character and prosperity of many of the former inmates of the school. Six boys have emigrated to Canada during the past year, only one of whom had misconducted himself. The statistics of the school are as follows:—Boys in the school December 31st, 1858, according to last annual report, 50; admitted during 1859, 10; total, 60. Emigrated during the year 1859, 6; returned to their friends and known to be doing well, 4; absconded, 3; died, 1; total, 14. Now in the school, 46. By the enlargement of the school, accommodation is now provided for 100 boys. Of the ten boys admitted last year, the following are the number of their previous convictions, so far as the same can be ascertained:—Seven had been convicted once; one had been convicted twice; and two had been convicted three times each. Two of them could neither read nor write. Three could read a little. Four could read and also write imperfectly, and one could read and write well. Seven had both parents living, and three had lost their fathers, but had step-fathers living. The boys all work either as shoemakers, tailors, or gardeners, and in other industrial occupations which circumstances may from time to time furnish. An analysis of the expenses shows the following result as the average cost per week of each boy:—House expenses, including keep of agents, per week, 3*s.* 2¼*d.*; clothing, 6¼*d.*; salaries, 2*s.* 11*d.*; rent, 3*d.*; furniture and incidental expenses, 1*s.* 7¾*d.* Total, 8*s.* 7*d.* The committee recommended a revision of the laws of the institution, and, in conclusion, referred in feeling terms to the eminent services in the Reformatory movement of their late townsman, Mr. Joseph Sturge.

Charles Ratcliff, Esq., the treasurer, read the financial statement, which showed on the building fund a balance due of 276*l.* 19*s.* 6*d.*, of which sum 200*l.* had been promised by the Staffordshire magistrates, and the committee were prepared to provide the remainder as soon as the accounts are properly audited. The general account showed a balance in favour of the institution of 407*l.* 17*s.* 7*d.* From this there had to be deducted, balance for the new wing, 76*l.* 19*s.* 6*d.*; and fittings and furniture, &c., 247*l.* 2*s.* 1*d.*; leaving a balance in favour of the institution of 83*l.* 16*s.*

The noble Chairman said he was glad to avail himself of this opportunity, because he felt a great interest in the Reformatory movement, which had been successful in many parts of the country, but in no case more so than at Saltley. A short time since the public and the Legislature were struck with the great increase of juvenile crime, and the great anomaly of the enormous costs attending the prosecution of little criminals for very trifling offences, and the contamination which their young minds received in prison; and so great was the impression made upon the public mind by these facts, that it resulted in the establishment of Reformatories. To those who did not approve of the system he would recommend that they should visit the schools and judge for themselves whether it was not better for a poor unfortunate boy—in most cases more sinned against than sinning—to be kept in a place where he would learn his duty to his God and his country, than to send him to prison where he would obtain additional incentives to vice. The noble Chairman said he had seen a letter from the Rev. Sydney Turner, in which that gentleman, speaking of the Saltley Reformatory, says:—"I was much impressed, on my visit of inspection last October, with the marked progress that appeared to have been made in the Reformatory on each of the three essential points of industrial training, good order, and school instruction. The land was in much better cultivation, and the working, look, and manner of the boys much more decided. The discipline of the school seemed much better, and yet, if anything, more kindly and school-like. The intelligence and information which the boys evinced in answering any questions gave me great satisfaction. I do not think there was a boy in the school who could not read more or less easily, showing that the rear ranks had been looked after and attended to, and the master's care not concentrated, as is too often the case, on the clever and better taught. You may like to have the opportunity of stating, as signs of the steady and safe working of the Reformatory system, that the number of boys for commitment to Reformatories has so much decreased that very few of the schools are full, and that we have altogether nearly 300 vacancies. On the other hand, and in very close relation to this cheering fact, we have the parents' payments steadily increasing, reaching this quarter 468*l.* 7*s.* 1*d.*, and for the year, 1,717*l.* 5*s.* I wish I could say that Birmingham bears its full proportion of these. I hardly think it does; the amount we have got from thence being, for the last twelve months, only 48*l.* 16*s.* (The remittances to Saltley have been 37*l.* 1*s.* 3*d.*) Circumstances to which I do not wish to allude may probably have hindered our police operations in Birmingham, but I hope you may have the opportunity of expressing strongly your conviction of the necessity of steady pressure on this point of parental responsibility, and of pointing out to the magistrates and police authorities at Birmingham that we (*i. e.* I) must depend mainly on their support for carrying out this part of the Reformatory system effectually. Every parent should, if possible, pay something. The amount matters less than the principle. But in almost every case the child must have cost something for food, clothing, &c., and that something should be paid towards the costs of the child's better training." The noble lord expressed his entire concurrence in the opinions of Mr. Turner. He considered the mainspring of the Reformatory to be parental responsibility; and he believed that if the claims were properly enforced the system would be self-supporting.

The adoption of the report was moved by the Mayor, who expressed his willingness to provide for the emigration of three boys during the ensuing year.

Sir John Ratcliff seconded the motion, which was carried unanimously.

T. C. S. Kinnersley, Esq. (the stipendiary magistrate), in moving a vote of thanks to the committee, said, in the spring of 1856, the number of juvenile offenders—that was, boys under sixteen years of years—in the gaol was eighty-three, and the number last week was only eleven. He understood from the report of Mr. Sydney Turner that the general diminution of crime in the whole kingdom between 1856 and 1860 was twenty-six per cent., whilst the falling-off in this town had been 87½ per cent. This was a fact so strong as almost to be incredible, but it was nevertheless true. But how was it to be accounted for? In a great measure it was owing to the Reformatory movement, and the power given to magistrates to send boys who were notorious criminals to Reformatory schools for a lengthened period. But he believed the Act, which was known as the Juvenile Reformatory Act, was only one form of the reformatory process which has been carried on for many years, and the good that had resulted during the last few years might be attributed to the operation of the Juvenile Offenders' Act. He believed the cause of the great decrease of crime in Birmingham was owing to the satisfactory manner in which the magistrates carried out the Juvenile Offenders' Act. Mr. Kynnersley concluded by briefly referring to the great good which had been accomplished by the Discharged Prisoners' Aid Society.

Mr. Alderman Sturge seconded the motion, which was carried unanimously.

Mr. D. Hill, Esq. (the Recorder), moved the next resolution, conveying the thanks of the promoters of the Institution to Lord Lichfield, and the noblemen and gentlemen of the county of Stafford, who had contributed to the handsome fund for the erection of the new wing. He said his object in attending that evening was to express his deep sense of the value of Reformatory institutions generally, and of the one in Birmingham in particular. For many years after he held the office he still held—that of Recorder—it was his painful duty to administer a law as barbarous in its conception, and as injurious in its operation, as could be well imagined. He said barbarous in conception, because it treated the poor tender infant with the same severity as the grown man, for the same offence; and injurious in its operation because it trained him in a school of vice by sending him to prison, especially as prisons were formerly governed; it was, in fact, the sacrifice by society to its own ignorance of a poor miserable young creature, to be returned again into society as a double vengeance, and as a redoubled punishment upon that society who had so ill-used him. It was with the deepest interest that he attended a meeting in this town, now eight years ago, at which the true principles of the treatment of criminal children were laid down. The first result of that meeting was the establishment of the Reformatory, the anni-

Digitized by Google

versary of which they attended that evening to celebrate; and he could not mention the foundation of that Institution without recurring to what was so vividly impressed upon his memory—the exertions of his excellent friend Mr. Adderley—(renewed cheering). He generously placed at the disposal of the promoters five acres of property, at the low price of only 5s. per acre; but that was so trivial a matter, compared with the sacrifices Mr. Adderley had made, and compared with his constant and zealous attention from that time to the present to the interests of the school, that it was doing that gentleman an injustice to allude to it. The Conference of which he had spoken was repeated in 1853, and the second important result was the passing of the law of 1854, by which the whole treatment of criminal children was fundamentally changed, and changed for the better, as they all knew. From that period to the present there had been a rapid extension of Reformatory principles and practice throughout England and Wales. Before the first Conference in Birmingham, there were, so far as he knew, only two Reformatories in the kingdom, the one (established by the Philanthropic Society) at Red Hill, and the other, which he regretted no longer existed, at Stretton-on-Dunsmore, in this county. But in those days unfortunately no aid was vouchsafed by the State, and the latter institution was kept alive only by the unwearied exertions of a gentleman now no more—Mr. Townsend Powell. After his decease it dwindled away, and could not even survive until the period at which it would have been taken up by the statute passed in 1854, granting an allowance of so much per head by the Government for every lad sent to these institutions. And right it was that the public, through the Government, should contribute towards this great object; for criminals were thereby withdrawn from prisons where they would have to be maintained at a greater expense, and if the Government had paid for the maintenance of these offenders entirely, it would have been pecuniarly a great gainer. Yet this was as nothing compared with the moral gain. With regard to the assertion that crime had so much diminished, he would not enter into any misgivings he might feel upon the matter; but he hoped and trusted that the change might be permanent; at all events, whilst it lasted it was a matter for sincere congratulation. He had great confidence, nevertheless, in the statements that had been made and vouched for by Mr. Sydney Turner, a gentleman who could not be too much praised for the devotion of a whole life to the Reformatory work. He had carried it on with a zeal and ability that had been blessed with extraordinary success; but they might each and all rejoice in having been the humble instruments of contributing to so much good. There were many reasons, however, why they should moderate their satisfaction. A few years ago they scarcely knew anything of the extent of crime in this country; but lately Government officers had been employed in obtaining information from the various constabulary forces throughout the realm; and the information thus collected had been reduced to figures by Mr. Redgrave, who estimated the criminals in the country at the awful number of 160,000. Of these 25,000 are in gaols, hulks, or convict prisons, and the remainder are at large. It could not be supposed that each of the latter class had a less income than 20*s.* per week, which must be considered a very moderate estimate by those who know the coarse luxuries in which criminals revel; but to obtain 20*s.* by theft implies a loss to the community to a much greater amount, because the purloiner cannot dispose of the property he has stolen to the nefarious depredators who assist him by furnishing him with capital and buying the produce of his crime, without giving them an enormous profit. Mr. Hill believed he was below the mark in saying that for every £1 obtained by criminals, twice that amount was abstracted from the community, which sum, multiplied by the 135,000 criminals at large, would reach the enormous amount of £13,000,000 sterling per annum. He mentioned this fact to show that after all that had been done there remained an immense task to be performed. All that judges and ministers of justice could do was limited within narrow bounds; and they must look to the co-operation of the people at large. All they could do was to punish when crime had been proved, but society could effect much more by means of a variety of preventive operations in diminishing the number of those who desire to commit crime. Meanwhile it was delightful to know that the public mind was excited to such vigour that where one person was formerly to be found using his benevolent efforts to keep his neighbour's children out of crime, ten or twenty were now so engaged in supporting Ragged-schools, town missions, and other kindred institutions. The learned Recorder dwelt at some length on the monster evil of England—the drinking habits of the people—as one great source of crime.

The motion was briefly seconded by Lord CALTHORPE, and carried.

A vote of thanks to Charles Ratcliff, Esq. (treasurer), and Messrs. C. Ratcliff and W. Morgan (honorary secretaries) was moved by Lord LYTTELTON.

The Right Hon. C. B. ALDERLEY, M.P., in seconding the vote of thanks, said:—The cause of the smallness of the meetings on this subject is the general recognition at last of the very plain truth at the bottom of Reformatories, that children must be educated. Any subject of controversy and of passion—a Reform meeting—would fill this room. Now, admitted, firstly, that children violating the laws of society onght not to be punished as adults; and, secondly, that where children are found wholly neglected by parents running riot; we must first see to their being corrected and sent to school, at all events, and then that the parents are caught, and made to feel their own responsibility. Such simple and self-evident propositions one only now wonders were ever contested. Yet some still maintain that the adult criminals of a country are not the growth cf its criminal youth; in other words, that cutting off springs will not dry rivers, nor destroying nurseries extinguish a breed. Fondness for paradox is the disease of some minds, and the exposure of the paradox by flat experience only attaches them to it with more generous sympathy. The fact that the juvenile wards of gaols are emptying, only a third of their old number of inmates being found, even including those in Reformatories, who also, by Mr. Sydney Turner's statement, are rapidly diminishing—gaols closed in Gloucestershire—starved out for want of fresh blood—are no proofs to such minds that schooling neglected children prevents their becoming lawless. We owe much to these *parabolani*, or testers of problems, which no one else could be induced to dispute. How otherwise should we get truisms raised into notice, or self-evident necessities taken up and attended to? Now that these State schools for little reprobates have become a national establishment, our chief danger is forgetting that it is a parent's responsibility after all, which we are publicly undertaking, and that we must not relieve the parent of his natural obligation, but enforce it upon him, or we shall be doing more harm than good. We, at Saltley, make a rule—and all Reformatories without such a rule are mischievous—that no child is ever to be admitted, unless in the admission-paper it is stated, either that his parent si ordered to pay at least as much as the child would cost him at home, or the reason why this order has not been made.

The adoption of the alterations in the laws of the Institution was moved by the Rev. J. T. BURT, and seconded by the Rev. W. GOVER.

Thanks were afterwards voted to Mr. W. Tarleton, the honorary surgeon, on the motion of the Rev. J. H. BURGES, seconded by the Rev. C. BRITTAIN; and to the Teachers of the Training College, for their services as Sunday-school teachers, on the motion of Mr. C. REEVES.

A similar compliment was paid to the noble Chairman, and the proceedings terminated.

M. DEMETZ.—We regret to say that M. Demetz, so well known as the founder of Mettray, and who has so greatly advanced the cause of Philanthropy in France, has been seized with an attack of paralysis, and now lies at Nice in a precarious state.

ACCIDENTS BY FIRE.—Clergymen, medical men, district visitors, and all benevolent individuals who have opportunities of personally knowing the habits and wants of the poor, are requested to give attention to the following remarks and suggestions:—Numerous severe and fatal burnings and scaldings take place amongst poor children during the winter season, through being left by their parents in a room with a fire, *without a guard on the bars.* Coroners, in holding inquests on such cases, frequently express surprise that fires are *so* left, and children *so* exposed to danger. The poor, upon being questioned on the subject, say they cannot afford to provide themselves with fire-guards. A few ladies have, in consequence, undertaken to supply poor families with suitable "guards," upon receiving a written recommendation, subjected to certain regulations. Every information will be afforded upon application to the matron, Mrs. Muzzall, 2, Waterloo Street, North, near the church, St. Peter's District.

Notices to Correspondents.

The Editor requests that any circumstances connected with Charitable Institutions, which it may be thought advisable to bring before the public, may be communicated to him at 337, Strand, on or before the 14th of each month.

NOTICE.

It is requested that Reports of Meetings, Pamphlets, Reviews, or other matter communicated for the benefit or notice of "The Philanthropist" may be forwarded, if possible, to the Editor, on or before the 14th of the month, that they may have the attention to be desired.

Notice.—All sums due to "The Philanthropist" for Advertisements, and for Subscriptions from this date, to be paid to W. Tweedie, 337, Strand. No other person is authorized to give Receipts.—Jan. 1st, 1859.

Notice.—Subscribers of £1 1s. and upwards to the Reformatory and Refuge Union, 118, Pall Mall, will be supplied on application with "The Philanthropist," a Monthly Journal of Social Economy.

FRIENDLY SOCIETIES.

There are few more pitiable sights than an old age of indigence closing a life of toil, even though that indigence may have been caused by thoughtlessness or extravagance. How much, then, are they to be compassionated who actually owe this sad condition to their prudence and thrift. Yet this is by no means an uncommon case. The last Report* of the Registrar of Friendly Societies in England, Mr. Tidd Pratt, shows as in a wreck chart, the disastrous end of many of those institutions on which industrious men rely for support and independence; some, indeed, ruined by misconduct and fraud, but the greater number bearing in their constitution the seeds of inevitable destruction. The failure of these Societies, as we learn from the Report before us, generally arises from one of the following causes:—The small number of members of which a Society consists; the insufficiency of the contributions to meet the payments, particularly those of superannuation; the uniformity of contributions, irrespective of age; the allowance of sick pay in chronic cases; the want of a separate account for each particular benefit assured; the imprudent investment of funds contrary to the Act; the want of a regular audit; the periodical division of funds when the Society is prosperous; and, lastly, no distinct provision for the expenses of management.

A notable instance of unsoundness and mismanagement combined is presented in the history of the "Mutual Benefit Society," which commenced in 1820, and was dissolved in hopeless insolvency last year; the funds contributed for annuities, endowments, and payments at death having been most unjustifiably expended on totally different objects. In the words of the Committee of Investigation, the Society was commenced in error, and maintained by misrepresentation. The disappointment and misery caused by this catastrophe were very widely spread, yet the Society had no lack of good names as patrons; and here the Registrar comments severely, but most justly—and his remarks would apply to many cases besides Benefit Societies—on the reckless way in which such patronage is bestowed. "Doubtless," he says, "many persons joined on account of the names made use of, and it certainly appears that noblemen and gentlemen should not lend their names, unless they intend to take some interest in the supervision, as although there is no legal, there is certainly a moral responsibility."

Among Societies of less pretension the most fertile source of ruin is the periodical meeting at a public-house, the landlord of which, while taking credit to himself for charging no rent for their room, makes treble profit out of their consumption of liquor. The landlord considers a Society of this kind as his property. We have even heard of its being valued in the goodwill of the house. The natural consequences are, that funds are squandered, and men are allured, by their very prudence, into drunkenness and dissipation.

The law of Friendly Societies appears to be still very imperfect, for while it is penal to circulate rules not certified by the Registrar, no penalty attaches to the omission of the annual return, nor can the Registrar refuse his certificate in all cases in which he disapproves of the rules; he is therefore obliged to confine himself to regretting "that the formation of Friendly Societies, where the funds are shared periodically, still continues," though "these Societies are very deceptive to the members." The immense importance of this subject appears from the fact that since the first Friendly Society Act, in 1793, to the end of 1858, 28,550 societies had been enrolled, of which 6,850, have ceased, leaving still in existence 21,700, of which 9,997, as we learn elsewhere, have deposited £1,563,842 in Savings' Banks, and 571 others have invested with the National Debt Commissioners no less than £1,980,682.

We are glad to find, therefore, that though not even Mr. Tidd Pratt can protect Friendly Societies from mismanagement, he has done his best to give them a good constitution by publishing in the Appendix of his Report a complete model set of rules and tables, in which the rocks and shoals above enumerated are carefully avoided. We commend them to all who wish really to ensure the benefits for which they lay by a portion of their earnings, and especially to those of our readers who from their position and circumstances are liable to be consulted on such matters.

CHARITABLE TRUSTS.

It has been stated by Sir James Kay Shuttleworth that no less a sum than £800,000 a year is expended, or ought to be expended, as income from charitable endowments; a sum adequate, if rightly applied, for all our charitable, educational, and reformatory wants, but frittered away, under misapplication and mismanagement, until little good, and often much evil is found to be the result. Sometimes the funds intended for the relief of old age and necessity are diverted to personal or political objects, as in the instance mentioned by Canon Girdlestone from his own parish, where money doles amounting to hundreds a year were disbursed at elections, for the purpose of securing votes. Sometimes mere improvidence and mismanagement dry up the income of the charity; and, after fattening parasites and officials, leave a miserable residue for the poor. Sometimes the endowment itself has been foolish or hurtful from the commencement, and pauperizes parishes and families from the mere abundance of injudicious bounty. No subject can more

* Pursuant to 18, 19 Vict., c. 63, s. 45, ordered by the House of Commons to be printed.—5th August, 1859.

Digitized by Google

demand the attention of the legislator and the statesmen, as well as the philanthropist, than that of the wise regulation of the funds which have come down to us from the piety of former generations, and the cautious amendment of our existing law, so as to prevent an undue and licentious exercise of the power of individual bequest.

This great question, so wide and difficult in its nature and bearings, was handled by Vice-Chancellor Sir William Page Wood at the Social Science Meeting at Bradford, in a paper which he read to the Jurisprudence Department, and which has since appeared in the published *Transacsions* of the Association. At the request of the Law Amendment Society, this paper has been separately printed, and was discussed by the society at a meeting which we report elsewhere; the Vice-Chancellor himself, Lord Stanley, and other competent men, taking part in the debate. Considerable difference of opinion was apparent as to the nature of the legislation that would be most desirable, some advocating an entire restriction on the right of perpetual devise for charitable purposes, unless the object have been approved by the Charity Commissioners, or some similar body; others deprecating interference with the liberty of gift or bequest, but devising greater facilities for re-modelling the endowment when its original purpose shall cease to be useful. The Vice-Chancellor certainly gave some very strong instances of the improper use men make of the liberty of bequest:—

"One testator, not long since, bequeathed £300 a year to be for ever applied as a pension to some person who had been *unsuccessful* in literature, and whose duty it should be to support and diffuse by his writings the testator's own views as enforced in the testator's publications. An inquiry was directed as to whether the testator's publications contained anything contrary to religion or morals, and this being answered in the negative, the so-called charity was established.

"In another case a testator gave a fund to trustees, one-half of the income of which was to be distributed amongst fifteen maidens of his parish of the poorer sort, between eighteen and twenty-five years of age, who should be the prettiest, and should have been most regular in their attendance at church, and the other half among fifteen spinsters, who should be upwards of fifty years old, with the like 'qualifications.'"

Upon such gifts as these the question arises, how far the law ought to permit such a fanciful disposition of property. The right of giving or bequeathing must, like all rights, be exercised for the good of the whole community, or else it ceases to be valid. No man has a right to use his income while he lives for the injury of others, and far less ought he to be permitted to tie it up after his death for purposes of frivolity and whim. Our Legislature has been hitherto far too tender of such follies, and we hope to see, under the safe guidance of such men as Sir W. Page Wood, a better rule adopted and enforced. His observations on posthumous charity are worth deep consideration:—

"I am of opinion that all posthumous charity should be very strictly regulated. It is very rare that charity properly so called, can, in any sense, be predicated of posthumous gifts. The preference of the poor in general to the testator's own relatives is far more often the result either of superstition or vanity than of benevolence. I remember having heard the late Sir Robert Peel state that the grandchildren of a so-called munificent founder of a great public institution in London had applied to him for a grant of public money on the ground of their having been beggared for the public benefit. At the same time I recollect an anecdote of a man at Marseilles having borne through life the character of a miser, who by his will stated that he had observed the suffering occasioned by want of water in the town, and had resolved to sacrifice all his own comfort to provide for that want, and now devoted his accumulations to that purpose. This, no doubt, was true charity. I would not then prohibit, but regulate very strictly, gifts by will for charitable purposes."

With the specific suggestions made by the Vice-Chancellor for an alteration in the law we do not at present meddle; the more so as we understand the Government have a Bill on this subject in preparation, which will be introduced into the House of Commons during the present session. We shall then revert to this important question, and hope to contribute some aid towards the enactment of a safe, moderate, but still efficient measure, which may regulate, without unduly restricting, the stream of charitable bequests, and may add a powerful engine to the efforts now being made in so many directions for the social improvement of the people.

REFORMATORY LEGISLATION.

A MEETING of the National Reformatory Union was held last Saturday to consider the suggested alterations in the Reformatory Acts which were communicated to us by the Rev. Sydney Turner, and appeared in our number of last month. Lord Brougham was in the chair; and Lord Stanley, Sir Stafford Northcote, Mr. Cave, M.P., Mr. Sydney Turner, Mr. Barwick Baker, Mr. Latham, Mr. Wheatley Balne, and others, took part in the proceedings. The question of a Penal Reformatory was discussed at some length, and some striking examples of the need for such an establishment were brought forward. The suggested alterations in the law were generally approved, and some additional hints thrown out. Ultimately a committee was appointed, composed jointly from the gentlemen present at the meeting, and the Reformatory and Refuge Union, to consider the matters brought forward, to draw up the heads of a Bill, and to report thereon. It is quite clear that the time has arrived when (by the light of past experience) the Reformatory Acts can be improved in details, and probably consolidated in one useful statute. In regard to the Industrial Schools Act, of which some mention was made, we do not feel so sure. It has hitherto been assumed that the Act cannot be worked; but we should, at least, like to see the experiment more generally tried. We were much struck by the arguments of Mr. Oliphant in a paper read by him at Bradford, and would advise its perusal by those who despond of doing anything without fresh legislation. The Industrial Schools Act is, no doubt, faulty, but tact and perseverance will do much even with a worse law. At all events, we hope the two subjects will be kept distinct, and that the Committee will not attempt to embody Reformatory and Industrial School legislation in a single statute. Any such attempt will lead to inevitable failure.

MARRIED WOMEN AT HOME.

WE have much pleasure in drawing the attention of our readers to the following essay, both as interesting in its own origin, and by its own merits; and also as treating on a subject which all who have seen much of the day-labour of married women, with families, among the poor, will have felt to be very important. To persuade them that for every shilling they carry away from home they lose another by their absence, would be as desirable as it may be difficult. The greatest help that could be given in that direction would be from these women's husbands, and we rejoice heartily to see that the working men of Bradford are giving their attention to the subject. If every working man brought home his earnings, and gave his wife cheerful help and counsel in the spending of them, there would be less temptation to her to make mistaken efforts to eke out the week's money.

The reward offered for the essays, and, therefore, their production, and the consequent consideration of the subject by working men, is entirely owing to the meeting of the National Association for the Promotion of Social Science, held at Bradford last autumn. Lord Shaftesbury suggested the idea in his address, in the following question:—

Whether it is not desirable to keep married women at home, instead of letting them go out to work?—whether the working man does not lose more by the

Digitized by Google

absence of his wife from domestic duties, than he gains by her earnings in the factory, or at other employment away from home?

A lady present thereupon offered two prizes—viz. one guinea for the best essay on this subject, and half-a-guinea for the second best; the competitors to be working men.

The Rev. Dr. Fraser, president of Airedale College, and George Wood, Esq., A.M., kindly undertook to adjudicate on their relative merits.

The essay placed first, on account of the composition, is written by Mr. Benjamin Wainwright, Warehouseman.

The essay placed equal to it, on account of its exposition of the subject, is by Mr. John Clark, operative Dyer, Hall Lane.

The subjoined is Mr. B. Wainwright's paper:—

The condition of woman in social life is one of the surest tests of a nation's progress in civilization; and the degree of estimation in which she is held by the various classes in a nation, shows to what extent that civilization prevails. The natural influence of woman is to refine, to purify, to elevate; and wherever she occupies her proper position, and is permitted, by the usages of society, to exert these natural influences, the result will be a refined and exalted state of society. This is a fact taught us in the history of mankind; and there have not been wanting writers of some note, who have asserted that, in consequence of the influence of woman, where she is honoured most, the nations are the wisest, the greatest, and the best. However this may be, whether woman has been able to accomplish so much in the process of civilization or not, there can be no doubt of the fact, that those races of mankind, and those nations which have been ever foremost in all the excellencies of civilization, have been precisely those amongst whom woman has occupied an honourable and dignified position, The greater the refinement, the rank, the *status* of a people, the more respectful and dignified is that people in its conduct towards woman; while the lower the *status*, the more degraded does woman become, until she often sinks into the mere drudge and slave of one who is wholly given up to the indulgence of appetite und sense. Such are the facts of history; they are singularly suggestive and are deserving of notice in a paper like the present.

Without stopping to discuss the reasons for holding the opinion we are going to express, we believe that the proper work of woman is to elevate, to purify, to refine the sterner nature of the other sex. Man, by the conditions of his existence, is under the necessity of mingling in, and battling with all the adverse circumstances and influences of life. The hard and stern realities of daily life come in antagonistic forms and agencies across his path, compelling him to the constant exercise of a stern and unyielding will. The absorbing claims of trade or profession—the perplexing alternations of profit and loss—the attention required in adjusting and superintending the niceties of mechanical operations—the management of wayward and intractable powers—the concentration of the mind to the sole consideration of success in the varied enterprises of commerce, and the consequent forcible subjection of what are most frequently considered the disturbing forces of the affections, impart to man the characteristics of much that is hard, angular, and unloveable. The whole tendency of man's daily occupation is to make him very much of the nature of a machine; and without a proper development of the more genial and loveable traits of humanity. Were it not, therefore, that other influences are brought to bear on him, softening, subduing, and drawing him out of the sphere of business and his daily occupation into a higher and less selfish region of existence, he would generally become a monster, and be transformed into a walking ledger, a living cash-book, a great moving trade transaction, or an embodied occupation. This counteracting influence to the petrifying tendencies of daily employment on men, is found in woman. She, by her charms and her graces, prevents him from being unhumanised, and keeps alive in his breast those softer and tender emotions which, while they adorn and beautitify, dignify and ennoble.

When there are, in addition to the ordinary influences of woman, superadded those of the wife and mother, then, not only is her influence greater than heretofore, but her sphere of operation is enlarged. She still moves about in the world, brightening and beautifying it with the graces of her presence. She is still felt as a living power, calling forth and quickening into life, by the secret potency of her own sympathy and affection, all that is high, ennobling, divine-like in man. But, above and beyond all this, as a wife and a mother she exerts special and more powerful influences. By taking upon herself these ties, without withdrawing herself away from the world, she has assumed the task of specially caring for a portion of the large field of human sympathy and affection. With a solemn purpose, a high resolve, and a devotedness of heart which woman alone can give, if she be true to herself, she says—here will I cultivate all that is beautiful, true, and good. Man is too prone to make this field a hard, barren road, fitted only for purposes of utility. Woman, with a more correct taste, and a higher appreciation of the requirements of life, seeks to fringe that pathway with flowers. The wife and the mother instinctively, if not purposely, tries to adorn and beautify. By kind looks, gentle words, and an irresistible tenderness of manner, she encourages the strong man to persevere in his utilitarian purposes, and at the same time wins him over to a love of the beautiful. Her influence is thus direct and reflective, and is only the more powerful in these relationships because it is more concentrated. It is a mistake to suppose that woman's influence in her married, as compared with her unmarried state, is necessarily lessened:—the opposite is the truth! It is only as a wife and a mother that her influence becomes really manifest in moulding and fixing character. Unmarried women unquestionably exercise a great influence on society, but that influence is, on the whole, more on the sentiments and emotions, than on those deeper parts of our nature which constitute the character:—it is more evanescent in its nature than that of married women.

Further, the married woman, besides being a wife and a mother, is the mistress of a home. All the cares, the duties, and responsibilities of the house belong more especially to her. The management of all domestic concerns rests almost entirely with her. Order, cleanliness, and comfort have to be maintained in all the divisions, and by every member of the household; disease and want have to be kept, if possible, outside the door, and sufficiency and health within. Much of this must be done, and can be done properly only by the mistress of a house. Order, cleanliness, comfort, these are the essential requisites in every home to health and happiness, and these every married woman may secure if she will. However, for the doing of these things, there needs a constant presence, an unwearied care, and a never-failing prudence. A daily effort must be put forth; from dewy morn to shadowed eve the energies must never flag. None will or can do these things like the wife, the mother, and the mistress. There is no one else has such an interest in them, or possesses the same moving principle to care about them. An hireling, whose sole interest is in the wages to be obtained, will not and cannot discharge properly the duties of a home; it is absurd to expect that any other consideration can supply the want of a near personal interest and advantage in every, even the smallest, task or duty belonging to a household. Those duties are often so minute, individually so trifling, and, to one not belonging to the house, so vexatious, that it needs all the forbearance of a wife's affection, and all the patience of a mother's love, to discharge them efficiently. To delegate them to others, or in any way to neglect them, is to open wide the door for all domestic evils. Any occasions, therefore, which draw the married woman frequently away from home are, to that extent, injurious to the interests of the household over which she is placed. But if the occasional absences from home result in evil consequences, how much more must it be so when that absence is daily, and during the whole day?—they are and must be altogether disastrous, and inevitably bring unhappiness into a family. The want of motherly control is the certain forerunner of disorder and misrule, dirt and extravagance, crime and disease.

Although such as the above *are* the practical results of the employment of married women away from home, large numbers, whatever be the reasons, are so employed in all parts of the community. There is no particular district in the country to which this is peculiar; it prevails in the rural districts, as well as in the manufacturing districts, and the results, though somewhat modified according to the different circumstances of the two classes, are in both cases of an evil character. In the manufacturing districts, however, these evils are more palpable, partly owing to the density of the population, and partly owing to the peculiarities of town and city life. The evils

Digitized by Google

are exaggerated in their forms and manifestations, from the force of example and the abundant means available for their sustenance. The principal modes of employment for married women in large towns are, the factory, washing and cleansing, and nursing. We can hardly say which of these kinds of employment, in itself, is most objectionable; the first, without doubt, is the most regular, and, we believe, is most sought after. As a general rule, therefore, we may state that married women who are employed away from home are engaged in that work from six in the morning to six at night—that is, the home must be left in most cases by half-past five in the morning and is not reached much before half-past six in the evening. At the latter hour the body is wearied, the mind is dull, all the energies of nature want repose,—comfort is necessary, and what are the facts? Such things it is impossible to have. Instead of home being a place of rest and recreation to the toilworn visitor, it is another place of labour. Still in the factory and at home, at home and in the factory, it is work, work, work! Can there be any wonder that such a state produces evil consequences? Assuredly not.

Those married women, and the husbands of such who either permit or compel them to work away from home, must have very imperfect notions of the nature and use of a home. We look upon it as a place of rest from the toil, care, and anxieties of the world without. Not a place of idle rest or inactivity, for it has its cares and anxieties, but these are of such a nature as to call forth the sympathies and affections of our natures, whilst they at the same time suffer those powers which have been jaded during the day to rest and invigorate themselves. On the contrary, those, where the married women work away from home, cannot look upon home in any other light than as a combined cookshop, lodging-house, and wash-house. Such people cannot desire any of the advantages belonging to a home; they voluntarily forego most of the highest pleasures of this life.

Where there is such a general practice of any mode of life as to make it notorious, there must be some supposed or real advantages connected therewith. And undoubtedly in the present case, there is some supposed benefit, or there is great ignorance. We believe that the greatest cause of the evil we are speaking of, is ignorance of what contributes to true happiness. This ignorance produces a careless feeling regarding home, and this again tends to perpetuate the ignorance which is its own cause. This remedy lies, in a great measure, though not entirely, with the woman. But there can be no doubt that it is generally because of the earnings of the married woman that she goes, or is sent out to work. For there are some women who will not stay at home—and these are mothers too! The wages earned in this way are so small that the expenditure in other ways more than counterbalances the increased income. If there are no children the want of comfort tends to produce extravagant expenditure, and too frequently both man and wife resort to stimulants for that varied enjoyment of which they deprive themselves at home. Such are frequenters of the dancing saloon, the concert room, the theatre, and the taproom. If there be children in the family, often all which is earned is paid to some one for imperfectly looking after and caring for the children in the absence of the mother. The children also grow up wild and riotous, they are constantly running into danger, they frequently catch cold from imprudent exposure to the weather, and a very large proportion are murdered by this neglect while in infancy.* Further, in a poor man's house where there are children, there is a constant need of mending, that the clothes may last as long as possible; but where the mother is frequently away from home this cannot be done as it ought to be, and an increased expenditure is necessary to keep the family decent in appearance. So is it also in many other trifling matters, all of which help to drain the purse, but are too minute to need mention here, but from the consideration of which it is our firm conviction that the families, where the married woman works away from home, whether there be children, or there be none, are in no way benefited by the small addition her wages make to the income.

* Report of Poor Law Commissioners, 1849.

Another plea for this kind of labour is that of necessity. Our answer to that is given above in our having shown that extravagance, waste, and neglect, more than outweigh the advantages supposed to be gained. Still, passing by that, we deny the necessity! Especially in our manufacturing towns, every man, and every family under ordinary circumstances can earn enough to sustain themselves in their own station in life. We know that some deny this; and it is not very long since we heard a person affirm to the contrary in a large public meeting in this town. Knowing all this, from careful observations on this subject, we are compelled to come to the conclusion that the working man *can* keep himself and family, aye, and, *if he will*, make some provision for the contingencies of life. It has been done, it is being done, and it will in the future be done.

The employment of married women in factories and elsewhere, is injurious to the interests of the working man. We often hear many amongst us complaining of the scarcity of work; yet, some of these very grumblers are overstocking the labour market. They are suffering in their homes for want of the performance of necessary labour, and at the same time are driving themselves and others out of the market by sending their wives to labour away from home. This is suicidal, and in most instances proceeds from an ignorant selfishness, which grasps at anything, careless of everything but a present advantage. Married women are thus put into competition with all other classes of the community, and the mother becomes the means of compelling her own daughter to toil for less wages, that she may neglect her duties at home.

Women at home; emphatically, married women at home! That is their place, there are their proper duties to be found, and there alone can they be of the highest service to their husbands and their children, and to the world. By them it may be made a joyous place; without them, or neglected by them, it is cold, cheerless, and repelling.

We can conceive of but one remedy for this evil, namely, that of the working classes generally forming a truer idea of the nature and duties of a home. So long as it is looked on merely as a house where people can most conveniently wash, eat, and sleep, we cannot hope for any improvement in this respect. But could those who are guilty in this matter be persuaded that they are wrong, could we convince them that their homes may be made places of the purest enjoyment, founts of unfailing happiness when properly cared for, then we think they would wean themselves from this evil, and cultivate the sweet and endearing affections which flourish best around the hearth. What sweet and holy influences have gone forth from many humble homes, like the passing of the south summer breezes, breathing fragrance through all the chequered scenes of a long and otherwise wearisome life! What mighty impulses have been given by the fireside of a cottage home, which have afterwards thrilled through and swayed the hearts and minds of thousands! What associations have clustered round many a poor man's house, that have been like ministering angels to him, purifying, cheering, strengthening, elevating, ennobling him in the midst of his daily toil! How often has the thought of home, and the remembrance of its scenes and lessons, come with overwhelming power to the wanderer, driving him back into the path of rectitude and virtue. Let our married men and married women ponder on these things, let them try to realise them, and all the pecuniary gains they may secure by working away from home will sink into utter insignificance, besides the real substantial blessings that will spring up on their own hearth, and make their lives a constant succession of pleasure and happiness.

GUIANA DIOCESAN CHURCH SOCIETY.

The anniversary meeting of the British Guiana Diocesan Church Society was held at George Town, Demerara, on the 3rd of March last, His Excellency Governor Wodehouse in the Chair.

In the report we find enumerated the general objects of the Society, which are—

1. The support of Missions to the Indian tribes within the colony, and the propagation of the Gospel among the Coolies and other heathen immigrants.

2. Assistance in the maintenance of clergymen and catechists in destitute districts, and in providing residences for them.

3. Aid in the building, enlarging, or repairing of Chapels and School Houses.

4. The support of Schools and training of Schoolmasters.

5. The circulation of the Holy Scriptures, and the Book of Common Prayer.

6. The supply of religious and educational works.

Digitized by Google

7. The affording of temporary assistance to aged and infirm clergymen, and the widows and orphans of the clergy.

As it would be impossible to attempt these various objects under separate organizations in a colonial dependency, they have all been included within the range of the efforts of one Society. All of them are such as the wants of the inhabitants point out as necessary to be accomplished; and the best efforts of members of the Church connected with the colony are worthily bestowed in the endeavour to promote them.

It is stated that by the increasing liberality of the Colonial Legislature in providing for the clergy, and the education of the people generally, the Society is, for the present, relieved, excepting in destitute districts, of a portion of its responsibility in connection with its second, fourth, sixth, and seventh objects. But there is a positive certainty that the demands upon it for the first, third, and fifth objects, to which, from its establishment, the greater part of its means have been devoted, will, for the future, be much increased. The efforts which the proprietary body are now making for the development of their estates could not fail to bring about such a result.

Up to the present moment the Church had hardly been able to take any steps in respect to the propagation of the Gospel among the Coolies and other heathen immigrants, owing principally to the difficulty of finding persons qualified by a knowledge of their languages to teach them. But as immigration from India was now likely to be settled on a permanent footing, and that from China was fairly commencing; and as it was not unlikely that immigrants of all classes, as the colony becomes better known to them, would make it their permanent home, it was clear that the very magnitude and pressing nature of the duty would oblige the Church to devise and provide for, at no distant date, some distinct instrumentality for the spiritual instruction of these people.

Some of them, it is said, who had been serving as domestic servants had already, through the teaching of their employers, been led to embrace the Christian faith. Others, in several instances, had been received into, and brought up in the parochial and day-schools, and had thus been trained in the principles of religion from their youth, some few had arrived from India baptized members of the Church; but the great majority of them had been left unimpressed, excepting so far as, on the one side, their isolation from the mass of heathenism in India, and on the other, their closer and more intimate contact with the Christian institutions of England in the colony, might have disarmed their prejudices against Christianity, or broken in upon the continuity of their practice of idolatry, and their veneration for its rites. But it was clear that the instruction of these people ought to be the result of some systematic though *unobtrusive* effort on the part of Christians connected with the colony. Much good, it is stated, might be done were the wives of the clergy, and of the proprietors and managers of the different estates, to take in hand the instruction, for two or three hours every week, of the younger and infant children; and the various schools, it is hoped, would gradually absorb the elder children. In order to deal with the *adults*, however, instructors ought to be procured who know their language. But from the efforts now made by the various Christian communions in India to increase their staff of instructors, it is to be feared that no teachers will be procurable from that quarter; and the only other alternatives seem to be, either to send young men from England to Hindostan for instruction in the languages of India, with the express view to their ultimate service in this colony; *or else to endow or support one or more studentships at St. Augustine's College, Canterbury*, for the study of the oriental tongues; the holders of which would have to pledge themselves to labour subsequently and principally, though not exclusively, among Indian or Chinese immigrants in the colony. They might, from time to time, be appointed to those parochial cures in which the population had become to a great extent, if not almost wholly, immigrant. To effect either of these objects, a considerable yearly amount would be required; but it is hoped that means may be found for making a beginning, in the manner that may be most approved on maturer consideration, early next year.

The third object of the Society concerns the building, enlarging, and repairing of Chapels and School-houses. The Society has given aid, for one or other of these purposes, in twenty-five instances, since it was first established.

Schools are connected with nineteen of the chapels, or else are held in them; the majority of them are in or near large and important villages occupied by the creole population; while nearly all of them, with the exception of those in the river districts, are contiguous to the large mixed populations of the sugar estates. These chapels and chapel-schools cannot fail to improve the character of the people. The youth brought up in them have greater advantages than those who were born immediately before or after the period of emancipation. These last, for the most part, avoided any efficient training or control up to the time of their reaching manhood; and they have, consequently, disappeared from the churches and chapels as they have from the fields and boiling-houses. But the greater facilities of instruction of the present day will, it is hoped, produce a different result with the rising generation, keeping them more within the pale of civilization, as well as more concerned to labour for its appliances. "For the sake of these and other similar Institutions (continues the Report), which it may, in time to come, be called upon to assist, we venture urgently to solicit aid from you towards the funds of the Society; and we have greater reason for pressing these claims on your attention, inasmuch as the colonial legislature have determined in future to grant no aid towards the erection or maintenance of any churches or chapels other than the parish churches. They have increased the salaries of the ministers of these chapel-schools, and provided for their teachers; but they have determined to leave the buildings themselves, in a great measure, to be supported by the voluntary principle. We say *in a great measure*, for where a school is held in any chapel, the Government will grant a moderate rent for the use of the building, to help to keep it in repair. Still, notwithstanding the liberality of the Government, the demands on the voluntary principle are very great, in order to keep these chapel-schools in good working order; and often we have known their efficiency curtailed through the want of means to place or keep them in proper repair. But we wish here to call your attention to the fact that our Society does not expect the contributors to its funds to do *all* the work; on the contrary, it makes its grants with the view rather to *encouraging* than *superseding local* efforts; and its grants have often been supplemented by sums of more than quadruple their amount, which have been raised by the clergy and their congregations in the several localities where such assistance has been sought."

The fifth object is considered likely to engage the increasing care of the Society, for not only will the increase of education make it necessary to introduce copies of the Scriptures and the Book of Common Prayer in the English tongue in larger numbers; but there ought to be, it is said, at the Society's depository in Georgetown, a good stock in hand, for sale or distribution, as the case may be, of the publications (including Tamil and Hindustani versions of the Scriptures and Prayer-Book, or of detached portions of them), of the Calcutta and Madras committees of the Society for promoting Christian Knowledge. A supply, also, of the Scriptures and Prayer-books, and religious tracts, and other publications, in the Chinese language, ought at once to be provided. Very many of the Chinese can read, and they are glad to be possessed of printed matter in their own tongue.

One of the resolutions adopted at the meeting was to the effect that "the anticipated arrival of a large body of immigrants from India and China entails an additional responsibility on this colony, and that it is most desirable that a large increase should be made in the funds of the Society, in order to assist in training or introducing Christian teachers, conversant with the Chinese and Indian languages." The Colonial Government Secretary, in moving the above resolution, made the following remarks:—"They found that the natural increase of the population did not suffice for the wants of the colony, but it was necessary to introduce additional people. The most suitable persons they had been able to procure were almost universally heathens. Was there nothing, he might ask, of the providence of God in this? They had been called upon for ages to send missionaries to heathen countries, but here they had, for the benefit of both parties, the heathen brought to a Christian colony. The attainment of the object, it might be assumed, was nearer, when they were brought away from the associations and habits to which they had been accustomed."

BARBADOES ASSOCIATION.

A GENERAL meeting of the "Association of Non-Resident Proprietors and others for the improvement of the Religious and Social Condition of the Labouring Classes in Barbadoes," was held last month at 4. Mincing-lane, London—Stephen Cave, Esq., M.P., in the chair.

The Report, which was read by the Rev. R. C. Burton, Hon. Secretary, stated that 1,256*l.* 5s. had been received, and 758*l.* 15s. 9d. disbursed, of which 445*l.* had been expended during the year on infant schools and Scripture readers—the Association having assisted in establishing 12 of the former, besides paying 7 teachers of 513 children; that of the latter, there were 25 on the list, who, in addition to visiting, held public services in 121 places, with an average attendance of 3,435 persons; that 20*l.* had been placed in the hands of the Agricultural Society of Barbadoes, to be distributed in prizes for good conduct. The Report went on to say, that on several estates schools had been built and maintained at the cost of the proprietors, and sites granted for chapels; and concluded by recommending that steps should be taken for the improvement of the dwelling-houses of the labourers, and the establishment of penny banks, medical clubs, and similar institutions.

The BISHOP of BARBADOES, in bearing testimony to the useful work of the Association, stated that much had also been done by residents and by the Legislature; that, in place of 18 island curates, with 150*l.* a-year, there were now 23, with 200*l.*, and that the educational grant had been raised from 3,000*l.* to 5,000*l.* The great difficulty lay in obtaining good teachers. There was also a great want of middle schools.

After some observations by Mr. Jones PILE, member of the Legislative Council, Messrs. Pilgrim, Grasett, Clement, Lumley, &c., the report was adopted.

Grants to the amount of 95*l.* were then confirmed; the sum of 250*l.* was granted to the Bishop for Scripture readers and school books; and four amounts of 10*l.* each to various infant schools.

STATISTICS OF THE EXTENT OF CRIME IN ENGLAND AND WALES.

A CORRESPONDENT of the *Economist* gives the following results of an inquiry into the extent of crime in proportion to population in England.

The following tables have been compiled from Mr. Redgrave's returns, with the intention of exhibiting crime in proportion to population. With this design—and these details, or similar ones, would enrich the volume of Judicial Statistics for future years—the proportion to the population of each police district will be indicated (1) of the known criminal class; (2) of the number of persons proceeded against, either by indictment or summarily.

From a calculation, based upon official tables, it appears that, for the entire population of England and Wales—

There exists 1 acknowledged member of the criminal class to each 137 of the population.

And that 1 person out of every 41 has been proceeded against in the courts of justice during the year 1858.

From these tables, then, may be arranged, in the first place, the two following lists, from which it will be at once perceived in which police districts the numbers of the known criminal classes in proportion to the population are above the average for England and Wales, and in which counties the numbers fall below the average. The average for the entire population being one criminal to every 137 persons, it follows that—

ABOVE THE AVERAGE.

Are	Proportion to Population.
1. Warwick	1 in every 55
2. Southampton	„ 55
3. Rutland	„ 58
4. Nottingham	„ 66
5. Worcester	„ 66
6. Bedford	„ 72
7. Bucks	„ 72
8. Berks	„ 79
9. Stafford	„ 81
10. Dorset	„ 85
11. Herts	„ 89
12. Cambridge	„ 89
13. Leicester	„ 89
14. Essex	„ 92
15. Norfolk	„ 96
16. Monmouth	„ 108
17. Derby	„ 115
18. Huntingdon	„ 116
19. Sussex	„ 117
20. Devon	„ 134
21. Lincoln	„ 136

BELOW THE AVERAGE.

22. Wilts	„ 140
23. Suffolk	„ 145
24. Surrey	„ 153
25. Durham	„ 156
26. Wales	„ 159
27 Hereford	„ 164
28. Somerset	„ 166
29. Lancashire	„ 170
30. Metropolis	„ 176
31. Gloucester	„ 177
32. Salop	„ 181
33. Kent	„ 186
34. Northumberland	„ 197
35. Cumberland	„ 198
36. Westmoreland	„ 201
37. Northampton	„ 216
38. Cheshire	„ 219
39. Oxford	„ 230
40. York	„ 233
41 Cornwall	„ 262

In the next place, the police districts may be arranged according to the proportion to the population, of the total number of persons in each county judicially proceeded against, either summarily or upon indictment, in the year 1858. The average for England and Wales is 1 act of procedure to every 41 of the inhabitants. Hence it follows that the first eight counties are above the average proportion, and the last thirty-three are below it:—

ABOVE THE AVERAGE.

	Proportion.
1. Metropolitan District	1 in 23
2. Lancashire	„ 24
3. Durham	„ 27
4. Northumberland	„ 30

38. Wilts	„ 97
39. Rutland	„ 98
40. Sussex	„ 98
41. Dorset	„ 133

It requires but a superficial consideration of these two lists, and a comparison of both with the statistics from which they are derived, to perceive—although our ignorance of a certain integral portion of our population is less great than formerly—how little we really know of our criminal classes. Both the above tables possess a certain specific value of their own. Both are, to a certain point, indicative of the extent of crime. We are bound to consider that the information both convey, so far as they publish facts, is absolutely correct. And yet it is hardly not too much to affirm of both, that they are as much at variance with, if not contradictory to, each other, as they possibly could be. The second list—that, viz., which shows the proportion of the number of persons proceeded against to the population, is, of the two, the one more to be relied upon as a proof of the ravages of our criminal population. It is based, it is true, only upon the records of detected crime—and hence only exposes a portion of the disease. Yet, as far as it goes, the list is an unimpeachable witness, and the facts to which it bears evidence are of the first importance. A comparison of this table with the one which concerns the number of known criminals, proves how very incomplete and imperfect is the last. It shows how little we really know of the number of the criminal classes. It proves that we are only beginning to recognise the existence, and the extent, of such a population. A glance at the estimated averages, in both lists, for England and Wales, is sufficient to show this. It cannot, indeed, be safely said that 1 person in every 41 passes through the hands of the police in the course of the year; whilst only 1 in every 137 is registered as a known criminal, at large, in the official records; because, in all probability, the average of prosecutions is greatly increased by the

Digitized by Google

repeated offences of professional criminals. Each professional criminal, no doubt, undergoes more than one prosecution, on an average, yearly. But, even after allowing fully for this, the disproportion between these results is most obvious. Nor is there more than a single method to account for it—the alarming state of our ignorance of the criminal population. The fact that many persons of good character are proceeded against for the first time would, of course, tend to equalise these averages; though, with all the allowance which can be made, the proportions appear to be hopelessly incongruous.

A comparison of some of the details of these two catalogues will indicate our want of accurate information on this matter. In the list of districts arranged according to the case of procedure, there are 8 which stand above the proportional average of crime—the Metropolis, Lancashire, Durham, Northumberland, Stafford, Monmouth, Cheshire, and Salop. Only 2 of these occupy a similar position in the table which shows their relative position according to the population of acknowledged criminals; and these are Monmouth and Stafford. Again—the Metropolis, with 1 case of procedure to every 23 inhabitants, can note but 1 in 178 of her inhabitants as a recognised law-breaker; the proportion being upwards of 1 to 7. Lancashire, with 1 case of procedure to 24 persons, knows but 1 man in 170 to be a professional outlaw; the proportion being, again, 1 to 7. Again—in Cheshire the proportion of cases of criminal adjudication to those of criminal profession is 1 to 5: in Durham and York it is the same: in Northumberland it is 1 to 6: in Salop, 1 to 4: in Cumberland, Wales, Westmoreland, Northampton, Somerset, and others, 1 to 3. But these relative proportions are not always preserved. In some cases they are materially modified; in others, they are completely altered, and the tables are altogether turned. This is mainly noticeable in the agricultural districts. For example, in Berks, Bucks, Cambridge, Norfolk, Herts, Worcester, and some other counties, the proportionate number of cases proceeded against judicially and of known criminals are very nearly identical. And, again, in other countries, *e.g.*, Bedford, Essex, Warwick, &c., the proportions are positively, and to a slight degree, reversed. These exceptions, however, do not invalidate the general and clearly-defined law of social politics, that the number of the population of the acknowledged criminal classes of the country bears but a small proportion to the numbers of those who are objects of procedure in our courts of justice. Naturally, we may expect that in future years, with a police establishment more entirely organized, and more experienced in their work, this proportion will decrease, until what is at present the exception, in a few cases, becomes the law in most, or all; when, namely, the proportional numbers of known criminals surpasses those of criminal adjudication. Then our recognized and professional class of law-breakers will be so exactly known, that fewer acts of depredation will be committed with impunity before detection. Then shall we be in a more fit position to deal with crime as a malady of which we know the extent, and shall be enabled to take more certain measures, if not for its cure, at least for its determent. Meanwhile, the above tables, apart, and of themselves, notwithstanding their necessary imperfections, are sufficiently valuable, as containing information previously unknown, to warrant publicity; as containing, too, the elements of knowledge on which may be based a more exhaustive and a more perfect system of criminal legislation.

THE SCIENCE OF PRESERVING HEALTH.

(From the *Brighton Gazette*, November 17, 1859.)

THE attention of schoolmistresses, teachers, and all female educators is respectfully invited to the following statements:—

1. Several ladies are making arrangements to form in Brighton a regularly-organized Branch Society of the Ladies' National Association for the Diffusion of Sanitary Knowledge.

2. Sanitary Science is a study which is unfortunately too much neglected in the education of the young; because young ladies must practise the piano or the harp for several hours daily, study foreign languages, or draw and paint, or learn other accomplishments, no time is left for the acquirement of that most important knowledge, how to preserve health; indeed, it is too often sacrificed in the pursuit of other objects of study.

3. At the request of a few ladies, a medical gentleman, who has devoted much time and attention to sanitary subjects, has consented to give, gratuitously, a few private lectures, on the Laws of Health, and the knowledge of preserving it.

Female teachers of public schools, pupil teachers, and all ladies interested in this branch of education, can be admitted, and will receive further information relating to the time appointed for the lectures, &c., upon enclosing name, address, profession or otherwise, to "Sanitas," care of Messrs. Simpson, King's-road, Brighton.

WET NURSES AND LYING-IN INSTITUTIONS.

(From the *Brighton Gazette*, January 5, 1860.)

THE half-yearly report of the British Lying-in Hospital, Long Acre, states that, "an important regulation has recently been made by the Board, relating to wet nurses." The following is a copy of the resolution:—

"The Board, considering that it is advisable to refrain as far as possible from encouraging the employment of wet nurses, except in peculiar cases, resolved: Any person desirous of engaging a wet nurse or by means of this hospital, must produce a certificate from the medical attendant, stating that for the safety of the mother or child it is absolutely necessary that a wet nurse be engaged. The matron shall keep a book in which to enter the names and addresses of applicants for wet nurses; and this book, together with the medical certificates forwarded to her, shall be laid before the weekly board from week to week for inspection."

We gave insertion some time ago to a correspondence referring to a similar plan, which has been adopted by the Governors of the Brighton Lying-in Institution, West-street. Wet nurses are not now recommended from this Institution unless to meet cases of emergency subjected to the opinion of the medical attendant. This is a judicious rule which we would gladly see enforced at other similar institutions.

We understand from a lady, who has visited several of these establishments, that the British Lying-in Hospital is one of the best managed institutions of the kind she has seen in the metropolis.

SCHOOLS OF COOKERY.

Culinary art is but imperfectly understood in our land of roast beef; we attempt to produce the variety of trifles which garnish a French dinner-table, and, disgusted with our failures, fall back upon the interminable roast and boiled, hashed and cold meats, which are popularly supposed to be the greatest miseries of wedded life. 'Twere well indeed for wedded life if it was so; but, without doubt, ignorance of cooking is a great source of discomfort in the domestic life of the middle classes, who, unable to afford the expense of a talented professed cook, and too much occupied or otherwise disinclined to attend in person to the arrangements of the kitchen, are left to the tender mercies of a servant, who, from ignorance of aught but the simplest traditionary requirements of food, makes the worst of everything submitted to her hands. The acknowledged necessity of giving servants some regular instruction before we intrust them with the important office of purveyors to our stomachs has produced a School of Cookery, where for a small charge young girls are instructed in correct principles of cookery and domestic economy. Some are taught only sufficient to render them efficient plain cooks, others dive deeper into the mysteries of the *cuisine*, and become proficient in soups, ices, and confectionery.

On Tuesday we visited the School for Cookery, which is situate at No. 90, Albany-street, and were much pleased with the arrangements, which appear admirably adapted for the purpose intended, to teach the various branches of cookery. The immediate cause of our visit was a lecture by Mr. Lafier, the professed cook of the place; he operated upon a neck of mutton and a sole in the most admirable and cleanly manner. His remarks, which were excellent, and always to the point referred chiefly to the mistaken notion that heat, dirt, and smell were inseparable from cooking. He also showed the uses to which the remnants might be applied, and certainly made the most of the joint before him. He suggested mistresses being versed in some measure in the art of cooking, so as not to be so utterly dependent on the vagaries of their servants. The manner in which he treated the articles set before him was admirable, and if his pupils emulate the cleanly style of his operations they must be treasures in any kitchen.

The School of Cookery is an important step in the right direction; whether as wives of mechanics, or servants in our own families, it is invaluable that girls should be taught to turn everything to

Digitized by Google

the best advantage. Connected with the school is an arrangement by which sick persons can be supplied with broth, jellies, and other necessaries. We cordially recommend the School to the attention of our readers, especially heads of families, who can appreciate the advantage of a *competent* cook.—*Englishwoman's Review.*

Reviews.

Transactions of the National Association for the Promotion of Social Science, 1859. Edited by G. W. Hastings, Esq. London: Parker.

The Transactions of the National Association for the Promotion of Social Science, containing the addresses delivered, and the select papers read, at their meeting at Bradford, last October, have just reached us. We intend to take the earliest opportunity of bringing before our readers some of the interesting information they bring forward on the special subjects of this journal.

The Social Science Almanack and Handbook for 1860. W. Kent and Co. (for the proprietor), Paternoster Row.

Among the Almanacks for the year we notice one entitled "The Social Science Almanack and Handbook for 1860." It gives a *resumé* of the subjects dealt with by the National Association for the Promotion of Social Science, with accounts of the meetings which have been held at Birmingham, Liverpool and Bradford, and will prove useful to members or intending contributors to that popular body of peripatetic philosophers. A variety of useful matter of a miscellaneous nature is included in its pages.

We have to acknowledge—unfortunately at the last hour of going to press—the receipt of "The Journal of Prison Discipline and Philanthropy," published in Philadelphia.

It contains a prospectus of a new gaol for the city of Baltimore, of which both the architectural arrangement and the proposed internal economy promises to Baltimore what is attained so encouragingly by many other American prisons—namely, reforming the prisoner for the future, rather than degrading him for the past. Another article on the "Texas Reformation, with a few words on the County Prisons of Texas" generally, swells the burden of proofs that, while the *recent* is allowed intercourse with the *hardened* offender, prisons may punish, but they will never *prevent* crime. Article III., on "The Criminal Statistics of England and Wales," and Article IV., on "The Reformation of Female Discharged Convicts," contain most interest to the English reader. We quote the closing passage of the latter article :—

"We cannot refrain from expressing the conviction that the more rigidly persons who have been convicted of crime can be separated one from another, until their resolutions to lead an amended life are fully confirmed and well tested, the less the danger of a relapse. We are aware of the arguments sometimes used—viz., that these principles cannot be tested till the parties are exposed to temptation. But there are temptations enough in the ordinary circumstances of life. If a young woman, discharged from the penitentiary, and received into some Home or Refuge, should be kept from all association with those who have been in like condemnation, until she is prepared for, and provided with, some place in the country, the first day in her new position would present temptations enough to test her newly-acquired strength. Industry, honesty, truthfulness, and sobriety are everyday virtues. If they are possessed they will show themselves without urging, but while under any degree of restraint or inspection these virtues may be counterfeited. It is not needful to put them into the company of a vagrant, a thief, a liar, or a drunkard, to bring them out. On the contrary, our true policy is to keep them as far apart as possible, and especially when the virtues are struggling to supplant the vices.

"Let our penitentiaries and county gaols provide for strict individual separation, accommodation, and employment of all prisoners, of every grade, tried and untried. Let kind, judicious, intelligent friends visit them, express proper sympathy with them, and hold out encouragement to them. Upon their discharge, let there be found a place of temporary refuge where they can be comfortably provided for, relieved from the pressure of immediate temptation, exempted from any associations unfriendly to their permanent reform, and prepared by a reasonable probation for some employment. The moment this is accomplished, and some benevolent heart is opened to give the party an opportunity to retrieve a forfeited place in the confidence of the community, let it be embraced with a continuance of the watchful care which may be still needed in unforeseen emergencies.

"With these precautions and aids, we are confident thousands of our convicts might be rescued from reckless criminality or hopeless despair, and some of the most prolific sources of crime be dried up. The Government is bound, by every consideration of public policy, to aid liberally in restoring to honest and virtuous ways those who have been subjected to penal suffering, and who are disposed to amend their lives. Its functions do not begin nor end in arrests, convictions, and sentences. It is to employ all practicable means of keeping people out of crime, by encouraging and sustaining schools—literary, industrial, and reformatory, and bringing *all* the children and youth of the country under their influence. And when, in spite of all these wholesome provisions, men and women do betake themselves to criminal courses, and have suffered the just reward of their deeds, it is the duty of the Government not to leave them, at the expiration of their sentence, to shift for themselves, but to hold out a kind hand to them, if they are inclined to better ways, and assist them to regain a creditable position among their fellow men. Society has the worst of it if they relapse into their previous associations and practices. And hence, we earnestly plead for the support and encouragement, by public and private liberality, of every sensible scheme to convert a convict into an honest man—an enemy of society into a friend and helper."

It is impossible to do justice to the candid and earnest spirit in which the progress of philanthropic labour in both countries is compared. An excellent summary of it is contained in the accompanying letter from the editor of the Journal, a part of which we quote in conclusion :—

"You have many advantages over us in the *unity of your Government.* If each of your counties was a separate, independent sovereignty, you would find some obstacles to general improvement in the administration of criminal law, which you do not and cannot appreciate. We have our advantages under our system of government, but they are not so available to *repress vice* as they are to *encourage and promote virtue.* A man who will behave himself has a grand chance here to succeed in life, but a rogue has almost equal advantages to pursue his lawless career."

The Leisure Hour for January contains among its usual wealth of entertainment, and instruction, two papers on female employment, to which we particularly desire to draw attention.

The first treats of female labour as at present in demand and use, classifying its branches into four departments, viz.—Professional, Business (such as salesmen in shops), Needlework, and Special (such as book-folding and flower-making.) With the exception of the first, all these are filled by women of the same class as domestic servants, and often crowded by the distaste to service, which has increased so rapidly during the last twenty years.

The second treats more especially of "Educated Workwomen," for whom the main difficulty in female employment lies. To this paper it is that especial notice is due for the healthy and business-like tone in which it handles a subject with which prejudice and absurdity have often been so mingled, that it was hard to hear or speak common sense about it. A third paper is promised, which shall enter on the practical consideration of what new fields of employment can and will be opened for educated women; the second stopping short at "the culminating point that it were well for women to work."

But in reaching that point there are some passages so practical and unanswerable in their statements and arguments that we cannot resist quoting them for the benefit of our readers.

"Our ancestresses worked more than women of the like rank do now, neither were they ashamed to be known as workers. Indeed, they had an honest pride in being considered good bakers, good brewers, good spinners, and sometimes weavers. Machinery has changed the working men, and, in like manner, altered the need of women's working in manifold ways, too varied to enumerate; therefore it stands to reason that women must be provided with different kinds of occupation if they are to work at all.

Digitized by Google

"Meanwhile, it is certain that if some classes of women suffer through overwork, ill-paid work, and want of work, there are those of other classes who suffer, though in another way, from the indolence and *ennui* engendered by doing no work at all. Women thus fall short of the measure and proportion of bodily and mental strength allotted them by nature.

"To work well, and to work willingly, women must regard work not as a hard necessity or as a temporary pursuit, easily to be followed, and as easily departed from, but as one that cannot fail to be of advantage to them in every condition of life. It were a great gain to the cause of the employment of women, were it accepted as a truth that, to bring up women properly to be single, is also to bring them up best fitted for marriage.

"As to any moral objections urged against women working more than we have been accustomed to see them do, we consider them as futile as those urged under the apprehension that work is calculated to injure their refinement, or destroy their sympathies. An assurance of independence and a cheerful activity are, on the contrary, more likely to keep both lively; as we are every day made painfully aware that poverty and its natural attendant, discontent, rapidly encourage rudeness, and harden all good feeling. The sad effects of destitution or idleness upon the more numerous and less educated classes of women are too well known to require comment.

"It may be somewhat wounding to male vanity to hint at another small fact—a fact, nevertheless, as real, and leading, likewise, to as much unhappiness as the others just quoted. We mean the fact that marriage is too often regarded as 'a refuge for the destitute;' that hundreds of women marry simply, and without disguise, for an establishment, the happy husband being merely a something that *must* be accepted along with the house and furniture. The results of such bargain-making are obvious, and require no illustration from us. Had women a sufficiency assured them, they would marry from higher motives and purer feelings, and thus many elements of discord would be for ever banished from the domestic sphere."

Correspondence.

To the Editor of the Philanthropist.

SIR,—Will you allow me a space in your columns to state the objects of a proposed Home at the West End for respectable single women of the following classes.

1. For female servants with good characters from their last situations.

2. For day workers who are employed in shops, or as dressmakers' apprentices, &c., on the recommendation of their employers.

Each inmate to pay *two shillings* per week.

A registry to be opened on the usual terms.

The difficulty experienced by many in obtaining respectable servants, and of being able to rely on the characters they receive with them, will, it is hoped, induce mistresses and employers to use every means in their power for the protection and welfare of those under their care; at the same time pledging themselves to give only true and faithful characters when called upon to do so.

The many temptations which surround young persons in the above-named classes must render the establishment of such an institution most desirable, and under the charge of a Christian and sensible matron, and the supervision of an active ladies' committee, it might be the means, with God's blessing, of preventing much evil.

I may add that it is also proposed to connect with the Home a SICK FUND, which all servants and day workers in the neighbourhood be invited to join.

Doubtless many of your readers may be acquainted with the practical working of similar institutions, as well as with the most efficient manner of carrying out the Sick Fund, and any information on these points will be thankfully received, if addressed to C. Brassington's Library, Kensington.—I am, Sir, yours obliged, C.

ACCIDENTS BY FIRE.—Clergymen, medical men, district visitors, and all benevolent individuals who have opportunities of personally knowing the habits and wants of the poor, are requested to give attention to the following remarks and suggestions:—Numerous severe and fatal burnings and scaldings take place amongst poor children during the winter season, through being left by their parents in a room with a fire, *without a guard on the bars.* Coroners in holding inquest on such cases, frequently express surprise that fires are *so* left, and children *so* exposed to danger. The poor, upon being questioned on the subject, say they cannot afford to provide themselves with fire-guards. A few ladies in Brighton have, in consequence, undertaken to supply poor familes with suitable "guards" upon receiving a written recommendation, subjected to certain regulations.—*Brighton Gazette.*

APPEAL ON BEHALF OF CHILDREN OF DEAD INDIAN SOLDIERS.—The newly-founded Lawrence Asylum at Ootacamund, on the Neilgherries, was opened as a refuge for the daughters of dead Indian soldiers. Many of these orphans have fallen into the hands of natives, and the training they are likely to receive may be better imagined than described. The administrators of the Lawrence Asylum are willing to receive all these poor children, to clothe, feed, and educate them in the faith of their fathers, if funds are placed at their disposal. They have already done much, but the demands on them are overwhelming, and they can only appeal to the public at large for aid in a noble cause.

HOLLOWAY'S OINTMENT AND PILLS.—DIPHTHERIA, SORE THROAT, GLANDULAR SWELLINGS.—Some twenty years ago, diphtheria raged in Paris to an alarming extent, and in Boulogne, in 1855, its presence produced consternation by the desolation it left in its track, and gained the appellation of the "Egyptian pestilence." Diphtheria is a variety of typhoid fever, perfectly under curative control, by Holloway's Ointment and Pills, which assuage the fever, diminish the thirst, disperse swollen glands, prevent inflammation in the throat, and speedily heal the hazardous ulcerations on the tonsils which always accompany the complaint. Various are the remote causes of this pestilence, but impure blood directly produces it. The ointment must be well rubbed upon the chest and throat twice a-day at least.

WANTED.—As GARDENER and LABOUR-MASTER at a Reformatory School, a Young Man, unmarried. Salary, £25 per annum, with board and lodging. Apply to F. G. W. LATHAM, Bradwall Hall, Sandbach.

FOR BEST TEAS AND COFFEES GO TO EDMONDS', 93, TOTTENHAM COURT ROAD.

WHY GIVE MORE?—Excellent TEAS, Black, Green, and Mixed, are now on sale, for Family Use, at 2s. 6d. per pound, at NEWSOM and Co.'s Original Tea Warehouse, 50, Borough. Near London Bridge Terminus. Established A.D. 1745.

ALLEN'S PATENT PORTMANTEAUS, AND TRAVELLING BAGS, WITH SQUARE OPENING; Ladies' Dress Trunks, Dressing Bags, with Silver Fittings; Despatch Boxes, Writing and Dressing Cases, and 500 other articles for Home or Continental Travelling. Illustrated in their new Catalogue for 1859. By post for two stamps.

J. W. ALLEN, Manufacturer of Officers' Barrack Furniture, and Military Outfitters (see separate catalogue), 18 and 22, Strand

SPECTACLES and STEREOSCOPES, by GEORGE COX, Author of "Spectacle Secrets."—Photographic Apparatus, Dissolving Views, Telescopes, Achromatic Microscopes, and all Optical, Mathematical, and Philosophical Instruments. The Sight carefully suited, at the Manufactory or at the purchaser's residence, and any article exchanged after trial. Pre-paid Orders carriage free.—GEORGE COX, 5, Barbican, E.C., Inventors' and Manufacturers' Agent. Established 150 years.

SPECTACLES—MICROSCOPES—TELESCOPES.—FINE STEEL FRAMES, with REAL PEBBLES, 7s. 6d. and 10s. 6d.: ditto, best Glasses, 5s. 6d., 4s. 6d., 3s. 6d.; Solid Gold, 20s.; Silver, 10s. 6d.

BERNARD DAVIS, 430, Euston Road, Regent's Park (close to Trinity Church), Optician to the Ophthalmic Institutions. Country residents can be accurately suited by stating age, &c. Enclose stamps, or P. O. order, payable Upper Baker Street, London.

MICROSCOPES, magnifying from 5,000 to 15,000 times, mahogany cases, 21s., 17s. 6d, 12s. 6d. Ditto, with all necessaries for every purpose, in upright Mahogany Cabinet, magnifying 60,000 times, £4 4s., warranted.

POCKET TELESCOPES, define ten miles, 10s. 6d.; ditto, 20 miles, 21s.

SMALL POCKET TELESCOPES, of immense power, and to show Jupiter's Moons, &c., by night, 60s.

MAGIC LANTERNS and SLIDES complete, 6s. 6d., 9s. 6d., 11s. 6d., 18s. 6d., 21s., 30s., up to 90s. Catalogues free for one stamp.

PHRENOLOGY APPLIED TO CHILDREN may lead to the avoidance of many of the errors so frequently committed in their education and subsequent destination. During Mr. DONOVAN'S long and extensive practice as a consulting phrenologist, his attention has been particularly directed to this most important branch of cerebral science. Consultations from 9 to 6 daily. Free Lectures on Monday evenings, as usual. 1, Adelaide Street, Trafalgar Square, W.C.

SAVINGS' BANK DEPARTMENT.
SOUTHWARK, METROPOLITAN, and PROVINCIAL FREEHOLD LAND and HOUSE SOCIETY.

Trustees,
Thomas Pillow, Esq., James Pollock, Esq., and W. H. German, Esq.

FIVE PER CENT. ON DEPOSITS.—Dividends payable on and after the 1st of January and the 1st of July.

Offices: 4, Wellington Chambers, London Bridge, Southwark.

RICHARD BRETT, *Secretary.*

Prospectuses forwarded on application.

ALARM GUN.—Capt. NORTON'S ALARM GUN, without vent or touch-hole, fired at the muzzle by friction, for protection against burglars, poachers &c., is to be had of the London Gunmakers: Field, Blisset, and Beckwith, Holborn; Reily, New Oxford Street; Lang, Cockspur Street; Daw, Old Broad Street; and Wilkinson, Pall Mall.

CIVIL SERVICE.—Merchants, Civil Engineers, and Surveyors' OFFICES.—Foster's Initiatory Counting-house, 161A, Strand, next door to King's College Gate.—This Institution is intended as an intermediate between school and business, where gentlemen are thoroughly prepared to perform the duties in the above.

Printed for the Proprietors, by WOODFALL and KINDER, Angel Court, Skinner Street, London; and sold by W. TWEEDIE, 337, Strand.

February 4, 1860.

Thomas Field Gibson, Esq.
Frederick David Goldsmid, Esq.
The Right Hon. Lord Claud Hamilton, M.P.
William Egreton Hubbard, Esq.
Edwin Hill, Esq.
Sir Samuel Morton Peto, Bart.
T. Southwood Smith, Esq., M.D.
Russell Scott, Esq.
William Arthur Wilkinson, Esq.
Horace Wilkinson, Esq.

The necessity for the prosecution of the objects of this Association is continually brought before the public by the press, and in the reports of the officers of various sanitary boards, the only result of which has hitherto been the formation of various societies in addition to this Association, of smaller scope, though having the same objects in view.

The experience of thirteen years has convinced the Directors that the only mode in which the existing evils resulting from the improper housing of large masses of the people in densely-populated districts can be effectually and permanently alleviated, is by the exercise of such powers as they possess, and that the desire to do this must, at the present time, be exerted by one extended and powerful combination, instead of a variety of disjointed attempts, each necessarily burdened with expenses of its own, pressing upon the body of proprietors with a weight proportioned to the contraction of the area of its operations.

The Charter confers power to raise £100,000 capital, in shares of £25 each, to be expended in England and Wales, and to increase such capital to any extent, from time to time, with the sanction of the Board of Trade and the Shareholders.

To enter into contracts under the common seal of the Association.

To declare dividends not exceeding £5 per cent.; surplus to be applied in further promoting the objects of the Association, with the approval of the Board of Trade.

Constitution—Shareholders incorporated, and liabilities of each limited to the amount of his investment.

Directors elected by the Shareholders, two retiring every year, but capable of re-election.

Supervision by the Government, through the medium of the Board of Trade, for the purpose of securing the permanence of the original intent.

It is gratifying to know that, wherever the operations of this Association have been felt, the result has been the improvement of the accommodation afforded in the neighbouring dwellings; but greatly increased efforts are requisite, both to meet the extent of the existing evil, and to perfect the remunerative character of the undertaking.

The Directors, therefore, invite the co-operation of the capitalist, and, to this end, his inspection of their buildings undermentioned.

The tenant class are earnestly requested, for the sake of their comfort, their health, and the economy of their dwellings, to make themselves acquainted with the accommodation hereby provided.

Every information may be obtained on application to the Secretary, Mr. CHARLES GATLIFF, 19, Coleman Street, London, E.C.

The existing property of the Association is as follows:—

Pancras Square, Old Pancras Road	110	families.
Ingestre Buildings, New Street, Golden Square	60	do.
Nelson Square, Snow's Fields, Bermondsey	108	do.
Albert Street, Mile End New Town	60	do.
Pelham Street, Mile End New Town	35	do.
Pleasant Row, Mile End New Town	11	do.
Queen's Place, Dockhead	10	do.
Albion Buildings, Bartholomew Close, Aldersgate Street	24	do.
	418	do.
Soho Chambers, Old Compton Street, Soho	128	single men.
Metropolitan Chambers, Albert Street, Mile End New Town	234	do.
	362	do.

PHOTOGRAPHY.—This beautiful and wonderful art has long been in the hands of mere charlatans and speculators, whose imperfect knowledge and unskilful manipulations have produced only vile caricatures of our friends. Mr. Barrable, 244, Regent-street, is the first, who, with the reputation of an artist, has applied himself to the study and practice of Photography. In his studio the most beautiful portraits are produced at half the usual prices charged at the West End for much inferior articles. Mr. Barrable respectfully invites the public to an inspection of his specimens.

ROYAL NORTHERN SEA-BATHING INFIRMARY: established in 1811.—A New Infirmary, long very much needed, is now in course of erection. £2,000 is required to complete it. This Charity is intended to provide a Home for patients, from all parts of the kingdom, requiring sea air. It is supported entirely by voluntary contributions, and these are earnestly solicited.

THOMAS HUTTON CROFT, *Hon. Sec.*

PERSONS about to Decorate should inspect SILAS TUCKER'S splendid assortment of PAPER HANGINGS, at his Warehouse, 234, High Holborn, ten doors East of Little Queen Street, London. Estimates for every kind of Decoration; also for General Repairs in Town and Country.

Established 1800.

CHASSEREAU AND ROBERTS, Practical Dyers and Cleaners, 19, BLACKFRIARS ROAD (Two doors from Surrey Chapel), at OLD KENT ROAD (Twelve doors south of the Swan), and at 46, CASTLE STREET, Hemming's Row, Leicester Square.

All the modern and most approved Processes applied in every Branch of the Trade. Strict attention paid with regard to punctuality and cheapness.

Digitized by Google

CONTRIBUTIONS to the REFORMATORY and REFUGE UNION are earnestly solicited for the following purposes:—

General Fund—For maintaining the General Operations.

Refuge Fund—For making Grants to Refuges, Emigration, &c.

Female Mission Fund—For maintaining a Mission to Fallen Women.

Bankers—Smith, Payne, and Co., 1, Lombard Street; and Ransom, Bouverie, and Co., 1, Pall Mall East. See Third Annual Report, to be had on application at the Office of the Union, 118, Pall Mall, S.W.

ROBERT HANBURY, Esq., M. P., } *Hon. Secs.*
STEPHEN CAVE, Esq., M.P. }

CHARLES GWILLIM, *Sec.*

The following sums are thankfully acknowledged:—

PENCILS! PENCILS! PENCILS!

GOOD STATIONERY, at reasonable Prices,

At G. BLIGHT'S, 168, Fenchurch Street, London, E.C.

WHAT A NUISANCE!!!

There's the point gone again, just in that fine outline, too; AND THE GRIT!!! Oh, what *shall* I do?
I *must* try those Gilbert's Pencils that Blight sells.
Let me see, it's G. BLIGHT, General Stationer, 168, Fenchurch Street, London, E.C.

And he sends a set of six different shades, post free, for Eighteen Postage Stamps.

F. FUSEDALE, FASHIONABLE TAILOR, 4A, King Street, Holborn, London, W.C., begs to call the attention of the public to his superior Stock of Winter and Spring Goods, also to his unequalled 16s. Trowsers, which he is enabled to supply owing to the very extensive demand for them. A perfect fit guaranteed.

GLENFIELD PATENT STARCH,
Used in the Royal Laundry,
And pronounced by Her Majesty's Laundress to be the finest Starch she ever used.

WHEN YOU ASK FOR

GLENFIELD PATENT STARCH,

SEE THAT YOU GET IT,
As inferior kinds are often substituted.
Sold by all Chandlers, Grocers, &c. &c.
WOTHERSPOON and CO., Glasgow and London.

PRIZE MEDAL LIQUID HAIR DYE.
ONLY ONE APPLICATION.
INSTANTANEOUS, INDELIBLE, HARMLESS, and SCENTLESS.

In Cases, post-free, 3*s.* 3*d.* and 6*s.*, direct from E. F. LANGDALE'S Laboratory, 72, Hatton Garden, London, E.C.

"Mr. Langdale's preparations are, to our mind, the most extraordinary productions of modern chemistry."—*Illustrated London News*, July 19, 1851.

A long and interesting report on the products of E. F. Langdale's Laboratory, by a Special Scientific Commission from the Editor of the *Lancet*, will be found in that journal of Saturday, January 10th, 1857. A copy will be forwarded for two stamps.

AGENTS WANTED.

A NEVER-FAILING RECEIPT for 30 Stamps, to make the HAIR GROW and CURL.

A very valuable RECEIPT for 30 Stamps, to make a FIRST-CLASS HAIR-DYE.

LADIES! If you wish your Skin to be Clear, Fair, and Blooming, send me 30 Stamps, and I will forward you the receipt. Its effect is surprising. It removes Tan, Freckles, Pimples, and other unsightly marks. It is perfectly harmless, and may be prepared by any lady at a trifling cost. These Receipts are superior to anything of the kind hitherto discovered.

IMPORTANT to every Man who keeps a Horse, Cow, Sheep, or Pig. The receipt to make the celebrated HORSE and CATTLE FOOD, for 13*s.* per cwt., the selling price being 42*s.* and 50*s.* per cwt.

N.B.—Two receipts sent for 44 Stamps; three for 60 Stamps; or the four for 78 Stamps.

Address, Mr. J. TAIT, Chemist, Newcastle-on-Tyne.

WORKS PUBLISHED BY W. TWEEDIE,
337, STRAND.
ESTABLISHED 1853.

THE A B C RAILWAY GUIDE is, as its name implies, a complete and intelligible guide to Railway Travellers. It has become indispensable to all who are in the habit of using any of the several lines that diverge from the metropolis. It is found in all the Government offices, in the clubs, hotels, public libraries, and reading rooms, and is fully recognised as an invaluable medium for advertisements. To its characteristic advantages are added a guide to strangers in London, including all the principal places of public interest and of public amusement, a guide to the steamboats, a guide to the Metropolitan railways, cab fares, &c. The plan of the Guide is as simple as A B C; the stations are arranged in alphabetical order, and immediately beneath each are full particulars of all arrivals and departures to and from the metropolis.

Published monthly, price 6d.

TOWN LIFE. By the Author of "Liverpool Life," and "Rambles in the Lake Districts."

"There are a freshness and an earnestness about this work which are quite pleasing to the reader, and a truthfulness in every picture which adds much to its value. The dreadful effects of intemperance, of improvidence, of loose and vicious habits, of debauchery, and the many other horrible vices and immoralities of 'town life' are graphically portrayed by the author, but without exaggeration. Indeed, we scarcely think it would be possible to exaggerate the vices which are carried on in the heart of a large town, and therefore plain unadorned truth is, as in every case, far the most effective and telling. The author of 'Town Life' has evidently personally visited all the places and scenes which he describes, and has been a patient and careful observer of the different phases of character he has met. He has described these different scenes in a most graphic but simple manner, and has throughout shown the baneful influences which the indulgences he has described have upon the social and moral condition of the people. We assure our readers they will peruse the book not only with pleasure, but with profit, and we strongly recommend it to their notice."—Derby Telegraph.

London: W. Tweedie, 337, Strand.

MR. JEFFREY'S RESPIRATORS, WITH ALL THE RECENT IMPROVEMENTS BY HIM.—The Wholesale Agent to the Manufacturers of these important instruments begs to remind all sufferers from irritation in the throat and lungs that it was to give comfort to these organs he invented an instrument able duly to warm and moisten each entering breath, so as to form a genial and portable climate for them, and that to effect this with the least possible obstruction to the currents of the breath inwards and outwards that elaborate and delicate combination of the most highly-conducting metal for which he introduced the name Respirator, is essential. It is this construction which, by benefitting thousands annually, has given a world-wide celebrity to his name.

It is of the utmost importance to discern between the genuine effects of the true Respirator and the deceptive effects of merely keeping out cold by a partial obstruction of the breath, ultimately so undermining to the health. No prudent person could, even as a matter of economy, trust vital and delicate organs, upon the safety of which life depends, to any but the most perfect instruments producible by art.

The Manufacturers could easily produce showy articles at one-third of the price, yielding a much larger profit.

Preventive Respirators—for the mouth, dwarf, 9s.; hand, 10s. to 16s.; for the nose, the nasal, 16s. Curative Respirators—nasal, ordinary oral, 12s.; expansible oral, 21s.; for mouth and nostrils, orinasal, 14s. to 24s. Procurable of the Agents throughout London and the kingdom. Wholesale Agent to the Manufacturers, W. Tweedie, No. 337, Strand, W.C.

FOR BEST TEAS AND COFFEES
GO TO EDMONDS',
93, TOTTENHAM COURT ROAD.

WHY GIVE MORE?—Excellent TEAS, Black, Green, and Mixed, are now on sale, for Family Use, at **2s. 8d.** per pound, at NEWSOM and Co.'s Original Tea Warehouse, 50, Borough. Near London Bridge Terminus. Established A.D. 1745.

ALLEN'S PATENT PORTMANTEAUS, AND TRAVELLING BAGS, WITH SQUARE OPENING; Ladies' Dress Trunks, Dressing Bags, with Silver Fittings; Despatch Boxes, Writing and Dressing Cases, and 500 other articles for Home or Continental Travelling, Illustrated in their new Catalogue for 1859. By post for two stamps.

J. W. ALLEN, Manufacturer of Officers' Barrack Furniture, and Military Outfitters (see separate catalogue), 18 and 22, Strand.

SPECTACLES and STEREOSCOPES, by GEORGE COX, Author of "Spectacle Secrets."—Photographic Apparatus, Dissolving Views, Telescopes, Achromatic Microscopes, and all Optical, Mathematical, and Philosophical Instruments. The Sight carefully suited, at the Manufactory or at the purchaser's residence, and any article exchanged after trial. Pre-paid Orders carriage free.—GEORGE COX, 5, Barbican, E.C., Inventors' and Manufacturers' Agent. Established 150 years.

SPECTACLES—MICROSCOPES—TELESCOPES.—FINE STEEL FRAMES, with REAL PEBBLES, 7s. 6d. and 10s. 6d.: ditto, best Glasses, 5s. 6d., 4s. 6d., 3s. 6d.; Solid Gold, 20s.; Silver, 10s. 6d.

BERNARD DAVIS, 430, Euston Road, Regent's Park (close to Trinity Church), Optician to the Ophthalmic Institutions. Country residents can be accurately suited by stating age, &c. Enclose stamps, or P. O. order, payable Upper Baker Street, London.

MICROSCOPES, magnifying from 5,000 to 15,000 times, mahogany cases, 21s., 17s. 6d, 12s. 6d. Ditto, with all necessaries for every purpose, in upright Mahogany Cabinet, magnifying 60,000 times, £4 4s., warranted.

POCKET TELESCOPES, define ten miles, 10s. 6d.; ditto, 20 miles, 21s.

SMALL POCKET TELESCOPES, of immense power, and to show Jupiter's Moons, &c., by night, 60s.

MAGIC LANTERNS and SLIDES complete, 6s. 6d., 9s. 6d., 11s. 6d., 18s. 6d., 21s., 30s., up to 90s. Catalogues free for one stamp.

PHRENOLOGY APPLIED TO CHILDREN may lead to the avoidance of many of the errors so frequently committed in their education and subsequent destination. During Mr. DONOVAN'S long and extensive practice as a consulting phrenologist, his attention has been particularly directed to this most important branch of cerebral science. Consultations from 9 to 6 daily. Free Lectures on Monday evenings, as usual. 1, Adelaide Street, Trafalgar Square, W.C.

SAVINGS' BANK DEPARTMENT.

Workhouse Boy: Report of Meeting of Workhouse Visiting Society 534

THE LONDON SHOEBLACK SOCIETIES.

On Monday evening, the 6th February, the Annual Winter Festival of the Ragged School Shoeblack Societies, of London, was held at St. Martin's Hall, and was presided over as on former occasions by the Earl of Shaftesbury. The hall was crowded in every part. Among those present were Lord Radstock; Sir R. Mayne; Mr. R. Hanbury, M.P.; Mr. H. Pownall; Mr. J. MacGregor; Mr. J. Fowler; Mr. G. Oliphant; Mr. M. Ware; Mr. J. Payne, and the principal supporters of the various Shoeblack Societies.

The boys were regaled with tea and cake in the lower rooms of the building, and were then marched on to the platform, where their varied uniforms and bright banners presented a very gay appearance. We subjoin a list of the Societies present, with the number of boys in each, and the amount earned during the past year, in the streets:—

	No. of Boys.	Earnings.
Ragged School Shoeblack Society (Red Uniform)	59	£1746
East London Shoeblack Society (Blue Uniform)	106	1094
South London Shoeblack Society (Yellow Uniform)	40	669
North-West London Shoeblack Society (White Uniform) . .	16	140
West Kent Shoeblack Society (Green Uniform)	13	120
West London Shoeblack Society (Purple Uniform)	15	216
Islington Shoeblack Society (Brown Uniform, Red Facings)	26	240
Notting Hill Shoeblack Society (Blue Uniform. Red Facings)	26	200
Union Jack (Limehouse) Shoeblack Society (Red Uniform, Blue Facings)	18	133
	319	£4548

There is another Society in London, namely, the Roman Catholic Society of St. Vincent de Paul, which, though not present on this occasion, is on friendly terms with its Protestant rivals.

As the system pursued by the Shoeblack Societies may not be known to some of our readers, we make the following extracts from the last report of the "Red" Society, which was the first established in London. The arrangements of the other Societies are very similar.

"There are at present ten Shoeblack Societies, for the employment of scholars from Ragged Schools in London and its vicinity, which are based upon the same principles, and governed, in the main, by the same rules as the Ragged School Shoeblack Society. All these Societies met at the Winter Treat, held at St. Martin's Hall, on the 9th of February last.

"The dates of their establishment, and other particulars, are shown in the following table:—

	Date of Establishment.	No. of Boys.	Earnings during the Year.
Raggged School (Red Uniform).	1851	71	£1785
East London (Blue) . . .	1854	82	934
South London (Yellow) .	1854	49	625
North-West London (White)	1857	20	135
West Kent (Green) . . .	1857	13	90
West London (Purple) . .	1857	21	196
Islington (Brown—Red Facings)	1857	25	235
Notting Hill (Blue—Red Facings)	1857	15	109
Kensington (Brown—Purple Facings)	1857	14	119
Union Jack, Limehouse (Red—Blue Facings) .	1858	16	80
		326	£4308

"An arrangement has been made between these Societies, by which each is confined to its particular district, in order that no rivalry or jealousy may be felt between those who are engaged in the same work.

"There is, besides these, a Roman Catholic Society, which is not confined to any particular district, but occupies stations in all parts of London. This Society employs about fifty boys; their badges are marked with the letters "S.V.P."

"A brief statement of the system of operations of the Ragged School Shoeblack Society may be interesting.

"No boys are employed by the Society unless they are recommended by the Superintendent of some school in connection with the Ragged School Union.

"The Schools from which boys have been recommended to this Committee during the past year are the following:—

Field Lane.	Brunswick Street.
Huntsworth Mews.	Camden Town.
Maida Hill.	Crawley's Yard.
George Yard.	St. Anne's Lane.
Clare Market.	Broadway, Westminster.
Brewer's Court.	Neal's Yard.
Foster Street.	Little Coram Street.
Plumtree Court.	Great Queen Street.
Charles Street, Drury Lane.	Bedfordbury.

"There are several other Ragged Schools in the central parts of London, from which no boys have been sent. The Committee will be happy to receive recommendations from the Superintendents of such Schools should they have any scholars of suitable age and character, for whom they are unable to find other employment.

"The boxes and uniforms are deposited at the Society's office, where the boys assemble in the morning at 7 o'clock. After prayers, they repair to their stations for the day, where they remain till the hour of return in the evening. The stations are arranged in four classes, two of which are within, and two without, the boundaries of the city; and the boys are placed in corresponding divisions, each boy occupying the stations in his own division in regular succession. The hour for leaving the station varies from 4 o'clock to 6 o'clock, according to the season of the year.

"The charge for cleaning the boots and brushing the trousers is one penny. Each boy is required to deliver up the whole amount earned during the day, which is then applied in the following manner:—Sixpence is returned to the boy as his allowance, and the remainder is divided into three parts; one-third is paid to the boy at once in addition to the sixpence; another third is retained by the Society for the payment of working expenses; and the remainder is paid to a fund which is reserved as a bank, to be laid out for the boy's benefit, in the purchase of clothes, or other necessaries, as the Committee may think fit. When a boy leaves the Society, the balance of this fund is paid over, on his behalf, to the superintendent of his school.

"When the day's work is over, the boys return to their own homes, or to the Refuges to which they belong; and all are expected to attend their own schools on Sundays, as well as on week evenings. To ensure regularity, each boy is furnished with a card, on which his attendance at school is marked. All work is, of course, suspended on Sunday."

After the Meeting had been opened, Mr. G. Oliphant stated the present condition of the various Societies and explained their mode of operation: he particularly observed upon the increasing difficulties caused by the "opposition" Shoeblacks, who are under no control, and crowd round the stations of the Society's boys and insult their customers, and not unfrequently rob them of their brushes and blacking. The Committees of the Societies had no desire for a monopoly of the occupation, but only wished that as their boys were confined to particular stations the opposition boys should also be obliged to take up stations of their own. Their present uncontrolled licence encouraged habits of idleness and dishonesty, and was injurious to themselves as well as annoying to the Society boys. Mr. Oliphant concluded by asking for the support of the public, both by pecuniary contributions, and by assisting in providing the boys with places when they leave the Societies.

Addresses were then delivered by the Rev. W. Cadman and the Rev. H. Blunt, In the intervals of the addresses pieces were sung by the boys of the Red, Blue, and Islington Societies.

The Earl of Shaftesbury said, it was impossible to attempt to carry on this

Digitized by Google

great movement if it were to be separated from religion. If it could be so carried on it would be more pernicious than if it were to stop at once; but he contended that it never would be able to succeed without religion, and if they tried the experiment they would have a miserable failure. The noble lord then stated that he had seen 3000 of the worst characters in the metropolis assembled in the Victoria Theatre on Sunday evening; and such was the decorum they observed, that during the whole of the sermon, which lasted an hour and a quarter, a pin might have been heard to drop in that vast assemblage, and when they left there was such order observed, that they did not experience the slightest inconvenience. This, he contended, was entirely attributable to the influence of religion on the people, and that influence, which was so potent in this instance, ought to be maintained for the support of the institutions of the Shoeblack Society. He then apologized for being obliged to leave, and said that Mr. Pownall would supply his place. His lordship then left, and was enthusiastically cheered.

Mr. Pownall, on taking the chair, distributed prizes to those boys who had distinguished themselves during the past year by industry and good conduct at their stations.

Mr. J. Fowler, the Treasurer of the "Red" Society, read a song, composed by himself, called "The Shoeblack's Song."

The meeting concluded by singing the National Anthem, after which the boys marched out through the hall with the banners displayed, the bands of the "Blue" and "Yellow" Societies playing with great spirit.

CHARITABLE TRUSTS.

The adjourned discussion on Vice-Chancellor Sir W. Page Wood's paper on Charitable Trusts was resumed, at the sixth General Meeting of the Law Amendment Society, held on Monday, February 6th.

Mr. Chadwick said, he considered that the first step to the regulation of endowments in future would be, to achieve an improved administration of the existing accumulation of trusts, and he would by such improvement direct and encourage, rather than discourage, bequests to public purposes. In these times, solitary men, who were great in acquisition and miserable in expenditure during their lives, who had no kith or kin on whom to advantageously bestow their property, might be encouraged by an improved administration to devote it to public purposes. Indeed, property left beyond the bounds of natural expectation, and therefore of preparation, seldom did any good to the recipients; and clergymen of wide social experience could give numerous instances of ruin, and sometimes of insanity, occasioned by unexpected successions to property. In an industrial community, it is demoralizing to disassociate property, the results of labour, from labour, mental or bodily, as the only means for its attainment out of the direct line of parental duty and care, and filial duty and expectation and preparation. On such grounds, he was in favour of the plan expounded by Mr. Bentham in his paper "Escheat v. Taxation," of making the State the second, if not the first, cousin of everybody, in cases of intestacy. But as respects the existing trusts, instead of conferring the power of dealing with them on the commissioners of charity solely, he (Mr. Chadwick) would bring in the aid of the departments charged with the special subject-matters to which the trusts or foundations related, or might, by an extended application of the *cy pres* doctrine, be held to relate, as bequests of doles, to the poor-law department; but above all, the administration of educational trusts to the educational department. For these purposes, he proposed that the whole of the jurisdiction and functions of the Court of Chancery, beginning with the educational trusts, should be transferred to a real and special and judicial committee of Privy Council, to exercise a real and active visitorial power through the itinerant inspectors at present charged with the promotion of education, and who have acquired public confidence in their work. The procedure which he proposed would be this:—The Privy Council school inspector, on being called upon, or on his visits on his circuit, would examine the existing wants of the population in the place of the foundation. In ascertaining the amount of the funds, he might have the aid of an assistant commissioner of charities. Having prepared the scheme, he or they would call a meeting of the parties interested in the town, and hear their suggestions or objections therein; and, after such hearing, prepare a report, with an improved scheme, and promulgate it locally. It would then be submitted to the Committee of Privy Council, and executed upon its order, if there were no appeal.

Mr. Lawrence said, that whatever value might attach to the suggestions of Mr. Chadwick as to the remodelling of existing charities, the first question to be considered with reference to the paper they were now discussing, was, what plan it was proper to adopt as to charitable gifts and bequests for the future. He could not agree with the Vice-Chancellor as to the propriety of interfering with such dispositions. He did not think that the cases of charitable bequests for foolish or unworthy purposes which had been brought forward were anything but exceptional. The great bulk of charities were intended for wise and beneficent purposes, and he was unwilling that any check should be placed on bequests of this nature, which would tend to lessen their number. Why should an arbitrary law be drawn at the end of fifty years, or any other period, beyond which the benevolent intentions of a testator could not be secured? With regard to Mr. Webster's proposal, that in no case ought a person to be allowed to give away his property in charity without providing for his wife and children; how would it be possible to determine what was a proper provision? As to defining the objects of usefulness which a testator was to be allowed to set up—who is to do so? Society is continually advancing—new plans for benefitting mankind are discovered—and it would be impossible for any body of men, however enlightened, to say beforehand that any scheme proposed by a testator would not operate beneficially when fairly tried. A few years ago, ragged schools would have been considered as chimerical and absurd—after being in operation, it had been found that they had done much good. He had ventured to express his dissent from some of the views brought forward on the subject of charitable trusts; but he considered the matter as one deserving the attention of the Society, and he would, therefore, move that a special committee be appointed to consider the laws relating to charitable trusts, and to report thereon to the Society.

Mr. H. G. Allen seconded the motion. There were difficulties on all sides connected with the subject now under consideration; but the evils of the existing system were not so great as to justify any sweeping changes. The system of doles, which existed to a great extent in this country, was no doubt bad, and he thought the Vice-Chancellor had proved the mischief to which it gave rise, and the necessity of some remedy being applied. It appeared to him desirable that the objects of the testator should be reviewed after a time had shown their effects, and the charity commissioners might be useful for this purpose.

Mr. Couch could not agree with the views of Mr. Lawrence and Mr. Allen, that you should not interfere with the charitable gifts or bequests until the effects of the disposition were shown. He thought the restriction should operate from the first, so that the donor or testator might know the limitations and conditions to which his proposed endowment would be exposed. He was of opinion that there should be no distinction between the disposition of real and personal property for charitable purposes. The object of the Mortmain Acts might be originally derived from feudal principles; but the whole matter must now be considered with reference to an enlarged public policy. The question was, whether property of any sort should be taken out of commerce, without the consent of the State, and a public sanction of the objects contemplated. With reference to the great end of public utility, the difference between the two kinds of property was one only of degree. Another question was, whether restriction should be applied to gifts made by persons during their lives, as well as to gifts by will. It might be more necessary that there should be a restriction in the latter case, than where a man made a gift in his lifetime; but still, in this case some restriction was required. Again: there was a question as to the nature of the restriction—whether it should operate when the gift was made, or at the end of a certain period. He was in favour of the latter, and for a fixed period instead of the duration of any lives in being, as it would be of advantage that a man should have an absolute power of saying what was to be done with his property in respect of the charitable objects he contemplated for a definite period. Whether the scheme was likely to work well would during that time be shown—it would operate as an experiment—and then it might be proper to obtain the approval of the community or the Government through some properly-qualified organ.

Mr. J. Pope Hennessy, M.P., said, that the whole tendency of our legislation, in modern times, had been in favour of the free trade principle, and we ought to hesitate before adopting a different principle with regard to charities. There was one class of cases with which the law dealt hardly, viz.—what were called *superstitious uses*. But though the law of this country prohibited such uses, they were carried into effect by secret trusts, binding only on the conscience of the trustee. A testator left money to a certain person without any express trust, and wrote to him a letter stating the object of the legacy, and the legatee acted according to the directions in the latter document. In conjunction with Mr. Bowyer and Mr. Hutt, he had introduced a Bill on this subject into the House of Commons, which was on the same principle as that of Sir J. Romilly in 1847.

Mr. S. B. Bristowe thought the question one of great public interest, and to which the labours of this Society might be most usefully directed. He thought there was no sound distinction between real and personal property, with reference to charitable endowments considered as matters of public policy. The best course would be for the Legislature to lay down certain broad rules for the guidance of persons intending to deal with their property for charitable purposes, whether by will or by gift, within which rules they might feel themselves safe. The present uncertainty was most undeniable, and often misled testators.

Mr. Arnold White said, that taking the analogy of entails, and the power of cutting them off, a large enabling power might be given to certain persons interested in the charity to modify its application. Who the persons should be to whom this power might be entrusted, would depend on the nature of the charity.

Mr. Jackson said, that the Committee would have to consider the state of the law with regard to the restrictions on the devise of real property for charitable purposes, and to see whether the Mortmain Act, with the exceptions it contains, and those that have been subsequently made by other Acts, is wise and just. They would have to look to its operation during the period it had been in force, and then to consider whether similar restrictions are required in the case of personal property. The revision of Charitable Trusts was another question of great importance. He thought that if, after a certain period, a charity was found to work badly, another scheme should be applied. It would be advantageous, that there should be a fixed time during which the original scheme should be allowed to go on. Although on an average, the period during which settlements held was only twenty-five years, arising from a fresh settlement being made as soon as the eldest son attained the age of twenty-one; yet to select a certain number of lives, and then to have an additional twenty-one years, would give a period of nearly a hundred years.

The motion was then put and carried.

The Society then adjourned till Monday, the 20th February, at 8 o'clock.

Notices to Correspondents.

The Editor requests that any circumstances connected with Charitable Institutions, which it may be thought advisable to bring before the public, may be communicated to him at 337, Strand, on or before the 14th of each month.

NOTICE.

It is requested that Reports of Meetings, Pamphlets, Reviews, or other matter communicated for the benefit or notice of "The Philanthropist" may be forwarded, if possible, to the Editor, on or before the 14th of the month, that they may have the attention to be desired.

Notice.—Subscribers of £1 1s. and upwards to the Reformatory and Refuge Union, 118, Pall Mall, will be supplied on application with "The Philanthropist," a Monthly Journal of Social Economy.

POST-OFFICE SAVINGS' BANKS.

From "A Practical Treatise on Savings' Banks," by Mr. Scratchley, announced for publication, an extract on the plan of Post-office banks has already been published.

Mr. Scratchley shows that the plan of connecting Savings' Banks with the Money-Order Offices was originally proposed by Mr. Whitbread, M.P., so far back as 1807. It was passed as "approved in committee of the House of Commons" that year, and apparently made no further use of. The more recent plans of Dr. Hancock,* Mr. Sikes of Huddersfield,† and others, seem substantially the same as those of Mr. Whitbread's bill, which Mr. Scratchley has inserted at length, and which had two great objects — 1st, to enable the poorer classes to obtain government security for their savings, by buying *stock or bank annuities;* and 2ndly, to enable persons living by the wages of their labour to make *assurances* for the benefit of their families.

The plan for effecting the first object was very simple.

An office for receiving and investing the savings of the poor was to be established, to be called "The Office of the Poor's Fund;" "such and so many commissioners" to be appointed for the management of the fund as the Crown should see fit: "any two of such commissioners" having authority to execute sales, transfers, or investments: the commissioners to appoint an accountant to be approved by the commissioners of the treasury, and who should be removable under the same conditions.

Any person certified by a justice of the peace to be subsisting wholly or principally by the wages of his or her labour to be entitled to the benefits of the fund.

The deposits were to be made in bank notes, or cash, to any amount not exceeding 5*l.* at one payment. The sum paid in by each depositor during one year was not to exceed 20*l.*, nor was the total of any investment to exceed 200*l.*

Remittances were to be made to the accountant by the General Post, and the postmaster of the place from which the remittance was sent was, "being thereunto required," to enter the name of the depositor, date, number of the note, &c., and also, if required, write or stamp the same upon the note: he was to be entitled to receive a payment of one penny in the pound on every deposit so entered.

These deposits being all conveyed to one central office, and placed to the credit of the depositors in a cash account in the books of the office, were to be vested by the commissioners in the purchase of "some of the *perpetual annuities* transferable at the Bank of England." This was to be done weekly, and every investment credited to the respective depositors, from whose cash accounts it was taken, in the stock accounts raised with him or her in the books of the office.

Dividends on annuities or stock were to be credited to the persons entitled to them, but were not to be *payable* till they should amount to 10*s.*

Persons wishing to draw all or part of their savings were to give in a notice to that effect, signed in the presence of a justice of the peace, clergyman, churchwarden, or overseer; and every week the commissioners were to sell out the shares of such persons, and transfer them to their cash accounts, whence they were immediately payable to the owners, on a warrant being signed by the accountant, and a receipt given by the depositor for the same.

* Paper on Savings' Banks, by W. Neilson Hancock, LL.D., 1852.

† Letter to the Chancellor of the Exchequer, by C. W. Sikes, 1859.

Digitized by Google

A cheque or order, properly attested, might be given by the depositor for the payment of his withdrawable money; such orders to be endorsed by the persons to whom they should be made payable; also to be taken in payment by all collectors of public revenue; cheques or orders to be transmissible through the General Post.

Remittances made through the Post Office to be acknowledged from the Poor's Fund Office through the same post; as also certificates of stock purchased, when the sum laid out shall have been sent through the General Post.

Finally, the expenses of the management of the Poor's Fund to be met by grants, issued by the commissioners of the treasury, in such sums as they should judge to be sufficient.

This was the substance of Mr. Whitbread's scheme, the execution of which would be facilitated now by the number, and the use made of the Money Order Offices. The increase in the amounts remitted through the Money Order Offices is 70 per cent., within twelve years, while the receipts of the savings' banks have only increased 7½ per cent.

Mr. Sikes' pamphlet proposes to establish a *Central Savings' Bank* in London, to which deposits may be sent through the Money Order Offices, in sums of not less than 1*l.*, and be acknowledged by the return of Savings' Bank Interest Notes to the amount remitted, which shall entitle the holder to receive the amount of his deposit, with the addition of interest at 2½ per cent. a year. To avoid these Interest Notes being brought into circulation as a currency, they might be signed or marked with the owners' names, so as to be available only to them or their representatives.

The objections made to carrying out this plan are, that the establishment of a Central Bank in London, "as a *centre to the Money Order Offices*," is opposed to the recommendation of the Parliamentary Committee of 1858, that a *Savings' Bank Commission* should be appointed to receive and invest the collected monies accumulated by the Savings' Banks from individual depositors, and that "the connection between the National Debt Commissioners and Savings' Banks should be terminated."

Also, that it would be unadvisable to change the system in any way that might shut up the existing Savings' Banks, or that might *centralize too much the "control of the savings of the working classes in the hands of the Government.*"

Also, that the great use of the Money Order Offices at present does not prove their services to the working classes, so much as to the smaller transactions of commerce generally.

Also, that as the transactions of Savings' Bank business will always be at some loss to the nation, it is essential to confine their benefits to the industrious classes: *this* is effected by the trustees and clerks of *local* Savings' Banks, by a mere Money Order Officer it would not be.

That it would be better to extend the present Savings' Bank system by Branch Penny Banks; for as the minimum of 1*l.* proposed to be transmissible through the Post Office would require some such nurseries of deposits, it would be as easy to extend the old system as to make a new one.

This, viz. the extension and improvement of the present system is the substance of the concluding "Recommendations" of Mr. Scratchley's pamphlet: combining such use of the Money Order Offices as should enable depositors, distant from a Savings' Bank, to pay in their money "on behalf of *the nearest Savings' Bank*," and have it so received and transmitted to the Central Office. For this accommodation a charge of one penny, for any sum under 5*l.*, to be made.

Also, that this accommodation should be available for branch banks, as well as for individuals, both for paying in and drawing out money. Mr. Wortley, an experienced actuary of Savings' Banks, suggested in 1859 (in a letter to the Right Hon. Sir C. Wood, Chancellor of the Exchequer), that by the proper use of the existing official accommodation for supplying Savings' Banks they might be multiplied and extended without "any great proportionate addition of expenses."

This, another writer suggests, might be done by grouping the existing Savings' Banks so as to place one "out-teller" or superintendent, and one chief accountant at the head of each Union. Savings' Banks being open in each district but during one day of the week, the superintendent would be able to attend each branch in succession one day of every week; while at present six managers are required for as many banks. He would forward to his head branch a statement of each day's transactions.

The accountant would be required to enter these transactions to their several accounts in the ledger, make all calculations of interest, and transmit to the Savings' Bank Office in London a report of the week's work.

It is calculated that by this system the number of offices in direct communication with the centre would be about 100, for the expenses of which, on the present system of management, 1000*l.* might be allowed to each branch.

This is a very imperfect abstract of Mr. Scratchley's pamphlet. Clearness of statement and conclusion on such a subject, are not attainable but by an experienced financialist. But the plans suggested here are so simple that all, who interest themselves in the formation of provident habits among the poorer classes, may comprehend them, and must wish that any and every facility to deposit his savings may be presented to the working man.

THE BROCKHAM HOME AND TRAINING SCHOOL.

"A Few Words in Behalf of Orphan Girls in Union Houses," and "A Plea for the Helpless, or Timely Prevention," by the same author, are two little pamphlets, simply but ably stating the ordinary method of providing for orphan girls in workhouse schools and its results, and also drawing attention to a Home opened for such children at Brockham, near Reigate.

That such training schools for servants are imperatively needed is unquestionable, and that to prevent crime in the rising generation is a more hopeful task than to arrest it in the existing one, is as undeniable. No one who has ever heartily taught and laboured in schools for the poor, but will have felt it is the homes and the parents that undo all the school and the teacher may have done. A school, therefore, which would enable a child's training to be fully carried out, even had it an average home to return to, would be most valuable. What must it be to the workhouse child, whose whole faith in God and man may be hanging on those few years during which the ratepayers will not maintain her as the child she is, but send her out to a low service, to be returned, too probably, on their hands, before half those years are past, as the woman she ought not to be?

These children, being generally hired by the lowest class of tradespeople, because they may be had at a lower rate of wages than would procure any other servant, start in service at a disadvantage. They are asked to accomplish, at eleven or twelve years of age, an amount and a diversity of labour which might dismay a stout girl of eighteen. To the consequences of this system we quote a melancholy testimony, from one of the pamphlets mentioned:—

"It is a fact proved by a careful examination of the registers, that out of

Digitized by Google

forty girls who were sent out to service during the past year, 1858, from one of the largest parishes in London, only three were found to be remaining in their places, and doing well, at the end of the year. Of twenty-two who had done badly in the first three months, some were merely marked in the register, 'Left her place,' but the majority were marked, 'Absconded.' Some, again, 'Sent back as a liar—as a bad girl.'"

The workhouse has no place for girls so returned but the "adult ward." Of workhouse girls once admitted into that ward we are not now speaking. The *Journal of the Workhouse Visiting Society* for February contains a special article on that subject, which pleads facts, beyond all arguments, in favour of "homes" and industrial schools.

We are not saying this in sweeping condemnation of the workhouse system of putting these children to service directly they are of an age to be thought worth engaging. So long as they *are* engaged, so long will they be sent to service. Workhouses are public property, and as such are worked to the best advantage in a pecuniary view only. We would rather see private energy and individual piety raising up such Homes as Brockham, and rescuing the workhouse child to their shelter, than have a legal restriction on the age for service or apprenticeship, prolonging the child's life as a pauper. In the workhouse school, be the teaching and training ever so good of its kind, it is *head* work after all; in the Homes, it will have been born of the hearts that raised them, and have good hope to wake a response in the hearts of the orphans adopted into them.

There is another wide chapter concerning young servant girls, upon which time and space will not now admit of entering, viz. the practicability of ladies taking such young girls into their houses, and making their own servants. There are causes enough of dissatisfaction in the ready-made ones to prompt them to try a new, or rather an old, method. Our grandmothers trained their own servants, and had their reward. Our mothers and wives do not, and they have theirs. Doubtless there are many objections. Manners, customs, nay, bodily constitutions, have changed greatly with the passing generation. Still, women are better educated, and knowledge is power; power which it rests with our own wills to apply, where and how we believe it to be needed.

FRIENDLY SOCIETIES.

The Rules and Tables published by Mr. Tidd Pratt for the use of Friendly Societies have been printed for Her Majesty's Stationery Office, with instructions for the founding of such societies on sound principles, which may ensure them, as far as possible, from failure or mismanagement.

In the prefatory notice to these instructions (a copy of which may be obtained by application to the Registrar of Friendly Societies) it is strongly advised no one should become a member of any Society at a distance, or through an agent, as by doing so his personal influence over the alteration of rules, or arbitration of disputes, is lost.

The rules given by Mr. Tidd Pratt would guarantee the members of a society adhering to them from disappointment, and it is earnestly to be wished that all existing Friendly Societies would revise their regulations, where they differ essentially from those laid down by the Registrar, more especially in the separation of funds and assurances for particular objects. In societies where the same fund serves for different benefits, there is a perpetual source of discontent among the members; as, for example, when the payment in sickness is heavily drawn upon, the expectants or recipients of old age pay fear for the undue reduction of the fund. Their fears may be ungrounded, but they are unconvincible; whereas, if the funds were distinct, no such discontent could arise.

The preliminary instructions, which we subjoin, will best explain the principles of the rules that follow them.

"The object of the following instructions is to promote the general welfare of the working classes, by enabling them to establish, upon sound principles, Friendly Societies; to provide against the natural evils and exigencies of sickness, old age, and death; and to act on those principles of mutual assurance and support which are now so generally adopted by the more opulent members of society, and to guard them against the many plausible but ruinous schemes by which they are too often deceived.

"In a society founded on the following rules, it is as certain as it is possible to be, that the benefits subscribed for by the members will be received by them. The sickness tables cease at sixty years of age, up to which period the data upon which they are founded are well tested. The annuities, of old-age pay, commencing at sixty, will be guaranteed by the Government, and the sums payable at death by an assurance company of long standing. No further certainty in these respects is attainable.

"Every member should be at liberty to subscribe to one or all of the objects, according to his ability or inclination, with the exception that persons insuring against sickness must also insure for medical attendance as long as they reside within the limits of the society; and females as well as males may be members for any of the benefits except *relief in sickness.*

"All money received for sick pay, endowments, and expenses of management, should be invested in a savings' bank, Government security, or on the securities authorized by the Friendly Society Act.

"The management of the society should be vested in a committee, consisting of honorary and benefit members, or of benefit members only; and there should be trustees, a treasurer, visitors, secretary, and auditors. *The only paid officers should be the secretary and auditors.*

"The accounts should be kept so as to show the contributions paid to and out of the fund subscribed for each particular benefit, as well as for expenses of management.

"The society should be self-supporting, for which purpose each member should be required to pay a small sum per month for the expenses of management; and the place of meeting should, if possible, be at some public institution or school-room. If that cannot be obtained, and there is no other place except an inn or a public-house, a certain fixed payment should be made for the use of the room, lights, and fire, with a stipulation that no beer, &c., should be brought into the room until all business was concluded, when each member should pay for any refreshment he might require. When an anniversary or annual feast is held, the contribution thereto, and attendance thereat, should be voluntary, though there seems no objection to a rule that every member who lives within a given distance should have a ticket sent him, which, if not returned at a certain time, say a week before the day of the feast, he should be required to pay for.

"In a society formed on these principles every member will have to pay only such contributions as may be required by the rules and tables for the benefits he wishes to receive, and there will be no compulsory charges for *beer, feasts, useless paraphernalia, or other extras.*

"The benefits assured to male members, as provided in the rules and tables, should be,—

"1st. Medical attendance.

"2nd. Weekly allowance in sickness until sixty.

"3rd. Endowments of sums from 10*l.* to 200*l.*, payable in five years and upwards for children, or persons of any age.

"4th. The society should act as the agents of some old-established life-assurance office, for securing sums payable at death, from 20*l.* to 200*l.*

"6th. A small monthly payment must be made to defray the necessary expenses of management.

"Care should be taken to admit as members insuring against *sickness* such persons only as are of good health, and of good moral character.

"No entrance-fees should be required, nor should any fines be incurred for non-attendance, or not serving office, except that of visitor.

"The tables have been approved by experienced actuaries, and the *premiums* required are the lowest compatible with safety to the insured. Each member will pay according to his age at the time of admission, and will therefore bear his own burden, so that the young will not have to pay for the increased risk of the aged."

THE NURSERY FOR SEAMEN, WHICH THE FISHERIES PRESENT,

Considered with reference to the Apprenticing of Boys from School Ships and Reformatories afloat.

By C. W. Eddy, M.A., Oxford, late Radcliffe Travelling Fellow.

Those who are accustomed to regard with complacency the industrial advance of England within the last half century as nothing but a triumphal career of steady and rapid progress, may be startled to learn that one source of national wealth which used to be a subject of national pride, and has largely contributed to the establishment of our national ascendancy, is drying up, and seems likely to fail entirely, unless some measures are taken for its restoration. It is a fact which excites but little attention, but nevertheless one, in my opinion, of great significance and importance, that the whale fisheries—a branch of industry which formerly gave employment to a large number of seamen, and constituted one of our greatest and best nurseries for the navy—have now fallen almost entirely into the hands of our formidable rivals for maritime greatness, the Americans and the French. A few British ships, chiefly from Scotch ports, still make their trips each season to the whaling grounds of the northern seas, but they are few indeed in comparison with the large fleet which used annually to leave our shores; this, however, is but the effect of natural causes—the black whale, which formerly frequented the shores of Greenland, having sought still more northern and inaccessible waters; perhaps also having declined in numbers, as must be the case with every species of game which is not protected by rigorous restrictions. The decline of this branch of the fisheries, then, however much to be deplored, can excite no surprise; but it may fairly be a matter of surprise and regret that the great sperm-whale fisheries, which now far exceed that of the black whale in importance, should have fallen so much out of our own hands, and into the hands of our rivals; and it will be perceived that I do not exaggerate the extent of this loss when I mention that by the latest returns, the number of American vessels (ships, barks, and brigs) engaged in the trade is upwards of 600, with an aggregate tonnage of 146,000 tons, employing about 16,000 men afloat; whilst the number of English vessels engaged in the same venture is just 17. The causes of this transfer I consider to be simple and removable, and it is surely worth an effort to recover, if possible, so great a field of maritime enterprise, and render it once more a training ground for our own seamen, as it is now almost exclusively for theirs. The exigencies of whaling cannot but render it the best of all nurseries for seamen. For in the first place, the ships engaged in this business carry more than double the number of men employed in vessels of the same class in the merchant service; and on the long voyages which they make (occupying from two years and a half to three or even four years), the crews are compelled to rely on their own resources: their duty does not end with merely navigating and trimming the vessel, but, in emergencies, extends to the departments of shipwright, mast-builder, rigger, &c.; accomplishments which greatly enhance their value as seamen, and, in naval warfare might be turned to the utmost account, as, for instance, in repairing damages after an engagement. Moreover, the very nature of their occupation makes them good boatmen, for they are engaged in boats, frequently from six to twelve hours at a time, in the pursuit of whales, and the capture of these requires no small share of skill, energy, and courage. I conceive that some useful purpose may be served by pointing out the probable cause of the depression of our whaling interest, and suggesting the steps to be taken to win it back; in particular I wish to urge the consideration whether maritime schools might not be rendered in some measure subservient to this great end, and I would press the subject on the notice of masters of reformatories, from whom I hear grievous complaints that the navy refuses to take their boys. Now the navy may decline to take boys directly from reformatories out of a not unreasonable apprehension, lest, by so doing, the tone and *prestige* of the service should be lowered; but if they were filtered through fisheries, which would train them for a sea-faring life, the former chapter in their history would be lost sight of, and they would no longer be rejected.

I have said that the French whaling fleet exceeds ours; this, I believe, is mainly owing to their perseverance in a system, without which probably French whaling would hardly exist: they encourage this and all their foreign fisheries by a high scale of bounties, notoriously and avowedly with the view of providing a hardy class of sailors for their navy, well knowing that fisheries have in all times been the real nursery of the greatest navies. This system of bounties of course I do not recommend for adoption, but the formidable nature of the force thus kept up by the French may be judged from the fact that they have now about 12,000 men engaged in their Newfoundland fisheries alone, although the only territory which they possess in that part of the world consists of two or three small islands, the Miquelons, in the Gulf of St. Lawrence, which were restored to them by us in 1815, as a harbour for their cod fleet; and the particular service expected from these 12,000 seamen may be surmised from the historical fact, that in the year 1840, when M. Thiers, then Prime Minister, used every endeavour to persuade Louis Philippe to declare war on England (in consequence of our resistance to the dismemberment of the Turkish empire), the whole of the French cod fleet was warned to return to France; and had matters proceeded to extremity, this formidable force would at once have been drafted on board their navy for service against us. As I have said, the French whaling system derives its support from bounties and differential duties made in its favour. Not so with the American whaling interest. The excitement, and hazard, and hardy enterprise involved in a whaling voyage has peculiar charms for the *youth* of the New England States; and sperm whaling may, in fact, be well looked on, as it is by these youths, as a species of sport, and that of the most exciting kind, and whalemen as a class of hunters. It is a very usual, and is considered a very creditable and spirited way of commencing life, for the "Green Mountain boys" of Vermont, the "New Hampshire boys," the lads of Connecticut, Massachusetts, and Maine, to go at an early age on a whaling trip, whence they expect to return in two or three years' time with dollars enough in hand to enable them to make a fair start in life. It has been my good fortune to enjoy the friendship of several Americans who have commenced life thus, and having returned at the end of a thirty months, or three years' cruise, with a few hundred dollars in their pocket, have then quietly established themselves in some regular business, or profession, on shore; and I can answer, from my own knowledge of these persons (one of whom is a distinguished author), that such a commencement of life has exercised no deleterious effect on their moral nature, but has contributed to develope and strengthen all those qualities which go towards the formation of a simple, straightforward, manly, and independent character. The system followed in the American whaling fleet (as in their other fisheries) is that of each one on board having a share or lay in the venture, and this is the essential point in whaling. It cannot exist on any other footing (unless subsidized by bounties); that is to say, vessels sailed on the pay system cannot compete on even terms with those which adopt the system of shares; and the reason of this lies in the sporting nature of the occupation. As well might it be expected that chamois hunters, if paid regular wages, would bring home as many head of game as those who had the stimulus of earning their bread solely by their success in the perilous chase, as expect the pursuit of the sperm whale to succeed on the pay system. The success of a whaling voyage depends chiefly on the vigilance of the look-out. When the whaler arrives on her ground, the foretop-gallant mast is struck, and a "crow's nest" substituted for it, which is occupied from daybreak till nightfall by relieffs of men, scanning the horizon for the well-known indication of a whale. As soon as this is seen, "there she spouts!" is the cry, the boats drop from the falls, and, each manned with five oarsmen and a steerer, they race towards the spot. Then begins frequently a long and hazardous struggle, and stern trial of pluck and endurance, if the whale is strong, and does not at first striking receive a severe wound. It may easily be supposed that in a rough sea and bad weather the look-out man may not be over eager to give the signal which shall condemn his shipmates to a hard day's work, unless he and they are directly interested in the result; but where this is the case (as in American ships), then to keep a bad look-out becomes a kind of treason to his mates, and is so regarded by them. Indeed, the common interest which all have in the efficiency of each member of the crew has given rise to a severe code of laws in the whaling fleet, and sanctions the abandoning an inefficient man at the first inhabited land the ship may make. The shares vary from a 150th part of the profits of the voyage for a "green hand," to a 50th part for a boat-steerer. Of

Digitized by Google

course this latter post is the object of ambition: it is at once the post of honour and the post of danger. It is the steersman who throws the harpoon, and on his eye, and nerve, and sharp word of command, seconded by the alacrity of the crew, that the success of the attack and the safety of the boat mainly depend: for the sperm whale is a fierce and formidable opponent, and woe to the boat which is within reach of his tail when he "sounds." Each ship generally carries four boats, and there cannot be a more gallant and animated sight than is presented by these whale boats in the pursuit and attack of the monsters of the deep.

I offer these details, to give an idea of the nature of the service, and the pluck, and skill, and vigilance, and courage, which it demands and developes; and to show how improbable it is that our vessels should compete with the Americans in this great fishery, until they are sailed on the same plan of shares. It is true that the profits of whaling are not now as great, in spite of the present high prices of sperm oil and bone, as they were before the whales had been driven from the home waters into such remote regions as the Ockotsch Sea and Behring's Straits, which they now frequent; but yet it is found sufficiently enticing to maintain in full force the American whaling fleet of 600 ships which sail from New Bedford, New London, Nantucket and Sag Harbour, and California, whilst the number of our ships engaged in it is fast dwindling away to nothing.

Now I have had the opportunity of making ample inquiries on the subject at the American whaling ports, and I fully believe that the cause I have mentioned is the only and a fully sufficient one to account for this extraordinary declension. There is no apparent reason why this system should not be introduced into our whaling squadron (it can no longer be called a fleet), and the importance of the interest in a national point of view appears to me to warrant the urging it with some earnestness on the attention of shipowners. And if whaling be, as I am persuaded it is, a healthy and ennobling employment, I would also urge it on the notice of the governors of reformatories and maritime schools, as a very proper calling to which to commit some of the boys who are entrusted to their charge.

But in recommending the whale fisheries to public attention, I am far from wishing to do so at the expense of our other fisheries, both home and foreign. I consider the whole subject to be one of the greatest national importance, viewed solely in the light of affording the most reliable resource for manning our navy; I consider that the only manner in which this essential element of a powerful navy, the "personnel," can be permanently maintained in a free country governed by the popular will, is by retaining on our coasts, or within easy reach of our shores, a large class of sailors engaged in productive industry, who would be ever ready to act as a seamilitia on board ship; for no popular assembly will ever have the firmness constantly to maintain in times of profound peace a large and expensive armed force in utter idleness. Undoubtedly, as long as we retain any foreign commerce, we have the means of withdrawing a certain number of men from the merchant service, and placing them on board our men of war, through the temptation of high bounties; but this, as we have lately experienced, is a work of time, and not at all calculated to meet a sudden emergency; and besides, it should not be forgotten that whatever measure of success attends this operation inflicts a corresponding loss and embarrassment on the merchant service; for the number of sailors is not thereby increased, but merely a part of them are withdrawn from their proper occupation of ministering to the national wealth and resources, for the more immediately pressing one of protecting that wealth and defending the national honour.

It should be remembered that seamen engaged in regular commerce are for the most part the hired servants of shipping firms, and the offer of high bounties for entering the navy is to many of them a temptation to evade their engagements, and cannot but exercise a disturbing effect on the normal relations between them and their employers. I do not see, indeed, that high bounties, as an inducement to sailors to enter the navy, can be regarded otherwise than as an unnatural and immoral shift, dictated by the pressure of a panic, to tempt men from their proper allegiance; and moreover, it is one which, in case of a real emergency, would probably break down. With fisheries the case is quite different. Fishermen are generally their own masters—the true yeomen of the seas. They do not violate an engagement with an employer by entering whenever they please on board a man-of-war. They are ever at hand to man the national fleet should an emergency arise, and there are no such thorough seamen as those who from an early age have been cradled on the waters.

Viewed in this light, it appears to me that our fisheries are deserving of the serious consideration of Parliament and the public press. Have they of late years met with the encouragement they deserve? I fear not. If the public mind were duly impressed with the importance of this great interest, would any English minister have ventured on such an insult to the Newfoundland fishermen in offering to yield a large extent of this coast to the exclusive possession of their French rivals as nearly goaded them, a year or two ago, into revolt, and drew from them a solemn declaration, that, rather than tamely submit to so gross and wanton an act of injustice, they would entreat the Government of the United States to extend to them the protection of its flag. The indignant remonstrances of these poor fishermen happily reached the ear of Parliament, and led to the appointment of a joint commission, which is understood to have but lately made its report, therefore the subject is likely to engage some share of public attention; and let us hope that the newly-awakened jealousy of the ascendancy of the French marine over our own, may prevent this great national interest (the Cod fisheries) from being sacrificed to meet the views of our ambitious neighbours.

ON TRAINING GIRLS AS NURSES.

(From the *Journal of the Workhouse Visiting Society*, February, 1860.)

In Mr. Lloyd's paper on Workhouse Schools (*Journal*, No. IV., p. 118) there is a recommendation, the feasibility of which can be proved by instancing a case where it was successfully carried out. He remarks on the advantage a large workhouse possesses in the opportunity of training nurses for the sick. "By admitting girls from the school, well educated, into the hospitals and lying-in-wards under the direction of the resident surgeon, and supervision of the paid nurses, they may be trained systematically in all the responsible duties of such important and rarely-qualified service—a training available for their own benefit hereafter in our public hospitals, or in retaining them in the house." Some years ago, the writer, who then was engaged in the administration of the poor-law in Ireland, had, on many occasions, his attention directed to the disastrous results of the ignorance and incapacity of those who, as midwives, attended the wives of the poor workmen and labourers; and with the view of providing a superior class of attendants, as well as of giving a means of livelihood to some workhouse orphans, an attempt was made to send some few well-educated and intelligent girls as pupils to the Rotundo Lying-in-Hospital in Dublin. This attempt was unsuccessful, upon the plea that no legal power existed to sanction the payment of the necessary fee, which was a sum about equal to two years' maintenance in the workhouse. It was then resolved to try the next best plan, but even this involved some violation of the workhouse rules. Some girls were selected, whose demeanour and conduct in the school offered some guarantees that the effort to serve them and raise their condition would be appreciated. The regular staff of nurses in the hospital was diminished, and none left there but elderly women of good character: two girls were sent together into each department under each nurse, to whom they were assistants while they were companions to each other. They went to the doctor's surgery for medicines, went round with him on his visits, received his directions, administered his remedies, and reported to him the results. They aided the nurse to scour the wards, to do such washing as was required, and took their turns at the cooking. Their intelligence and education ensured them respect from the patients; and this was greatly aided while their own self-respect was excited, by their wearing a neat, tidy, servant-like dress, in which nothing of the pauper garb was traceable. There was not a single drawback to the success of the experiment. The medical officers could entrust wines, spirits, and delicacies necessary for the comfort of the poor patients without dread that they never would leave the hands of the old tea-drinking, comfort-loving nurse, to reach the lips of the sufferers. They found, too, that their directions, being clearly understood by young, fresh, active minds, whose lives had got a purpose and an occupation, were more readily and more completely carried out. The wards were better kept, the poor were better cared for, and therefore more patient; in every respect a

Digitized by Google

marked improvement was observable in the hospital arrangements. Thus one anticipation was fulfilled, and so too was the other, for at times the doctors had it in their power to recommend to persons in their private practice, who needed nurse-tenders, one or other of the tidy, skilful, and attentive young women from the workhouse hospital. Once started in life, the writer believes that not one ever had any necessity to re-enter the workhouse; others similarly selected from the school-girls, took the places of those who had gone; and it was with no little gratification that, years after his official connection with the locality had ended, to his inquiries about what had become of the girls thus trained, he received the cheering answer that the future of every one as she left the workhouse had been respectable, and as satisfactory as he could have expected or even desired.

Manchester Industrial Institute.—(From *Manchester Guardian*, Feb. 28, 1859.)—Under this title there was, about a month ago, opened in Tasle Street, near John Dalton Street, an establishment which, if it meets with the encouragement it deserves, will in all probability do much good service in aiding to restore to honesty those who, having been the inmates of a prison, are nevertheless anxiously desirous to avoid a recurrence of that which led to their punishment. This establishment and its promoter, with their undoubted claims upon the public, nevertheless do not seek long subscription lists or large donations; and the merit of the promoter cannot be lessened by the fact, or by any inferences drawn from it, that he essentially bases his scheme upon fair trade principles. He will employ any willing man or lad, who on leaving prison desires to be honest, but knows not where to look for the means of so gaining a bare livelihood. Will the public buy the produce of their labour, in the shape of cocoa-fibre mats and matting of all kinds? That is the main question; although, for a reason which will appear, some public pecuniary aid at the outset is necessary, unless the whole risk of the attempt is to be thrown upon the young and earnest promoter. That gentleman is Mr. J. H. Walker, of Bridge Street; and his industrial plan is simply this:—Most, if not all, convicts, while in gaol, are employed in making mats or matting; so the same kind of employment is chosen for the Institute. The men and lads must work, under proper superintendence, from six in the morning until six in the evening; any one who chooses, may work until ten at night. A satisfactory amount of work must be done by each, but all will be paid, at least, a fair price per piece, according to his production. In the cases of married men, a certain sum will at first be paid weekly, even though the piece price of his work should not amount to that sum: for Mr. Walker believes, and rightly, that confidence and kindness are important auxiliaries in aiding to reformation even the most contrite offender, and that a man is not the less likely to become and remain honest, because he finds that he can at once, on leaving gaol, do something that shall help his wife and family as well as himself. A few weeks' willing practice will enable any man to earn the sum referred to; and the more speedily he gains skill, the more quickly will his weekly earnings increase. Lads will be paid throughout, just as much as they could get elsewhere by the same kind of work. At present, there are twelve men and lads employed; there is reason to believe that the number will this week be doubled; and fifty can be employed in the premises as they now exist. But bodily labour alone is not relied upon by Mr. Walker. He has gained a few permanent and other helpers, who together will do much to make the Institute educational also—at least, to continue, under happier auspices, the instruction to which incarceration may have introduced the workers. Between six in the morning and six in the evening, half-an-hour is allowed for breakfast, and an hour for dinner; and from three to four o'clock, school instruction will be given. On Saturday evening, Professor Scott delivered to the workers, and their wives and friends, a very interesting address on "Speech," there being about thirty persons present. An address is to be delivered on each Saturday evening; and already the list contains the names of twelve gentlemen who have volunteered their services, and amongst them being Professors Williamson and Roscoe, Mr. J. A. Hammersley, and Mr. T. Wright. We need only add, that the cellar which has been taken has been well lighted and comfortably fitted; and that the few simple rules to be enforced seem excellently calculated to secure order, and to develope self-respect. The Industrial Institute is not likely to make much display before the public, nor is it desirable that such should be the case; but publicity at the outset is necessary to the success of the scheme, which is unique, at least in this neighbourhood, and does not clash with existing preventive or reformatory institutions; and we have suggested the most practical mode of ensuring its success.

STATISTICS OF THE EXTENT OF CRIME IN ENGLAND AND WALES.

We continue the extract from the *Economist* given in our last number.

Having thus said all that seems needful to be said upon the numerical aspect, either positive or proportionate, of the criminality of England and Wales, viewed in each county as a whole, and independent of the prevailing characteristics of the districts, it is necessary to consider the subject of crime, when these elements are taken into account. Of course the great integral division of the population is that which separates the town inhabitants from those of the country. The two following tables, then, will indicate similar information to that which was in the first instance recorded,—(1) in the case of the county districts apart from the towns, and (2) in the case of the borough population of each district apart from the country people. In the tables the aggregate of results for the several boroughs is stated in the case of each county; since a more minute classification, in the present instance, is impossible. It may be repeated that the total number of boroughs with police establishments in England and Wales is 174.

Little would be gained by going over the ground traversed in the consideration of any tables which concerned the police districts of England and Wales divided arbitrarily into town and county populations. The characteristics and mode of life of the inhabitants of the various county and borough districts are so diverse, that no practical benefit would arise from any classification according to the results of crime. Any arrangement that is made must be based, as far as possible, upon identity of calling in the different districts. Of course, the manufacturing and the agricultural are the two main callings of the English people. But these are oftentimes mingled in the same district, without a possibility of separation; and mining and maritime populations tend to make the arrangement still more intricate. The following list, however, partly taken from Mr. Redgrave's labours, and partly supplying what he omitted, will perhaps be of service to judge of the general results of as careful a division of the counties population as circumstances permit. This catalogue divides the districts into five heads:—

1. The Eastern agricultural districts.
2. South and South-West agricultural districts.

State of Criminality in Counties.	Population.	Proportion of known criminals to population. 1 in every	Numbers of known criminals.	Proportion of persons proceeded against to population. 1 in every	Numbers of persons proceeded against.
Total of the 41 counties (including the Principality) of England and Wales . . .	10,948,406	144	76,010	182	107,504
Eastern agricultural district—Essex, Norfolk, Suffolk, Lincoln	1,269,908	115	10,983	92	13,724
South and South-Western agricultural districts—Hants, Wilts, Dorset, Somerset .	1,022,071	104	9,744	73	13,893
Chief Midland agricultural districts—Cambridge, Northampton, Bedford, Herts, Oxford, Bucks, Berks	919,513	103	8,890	68	13,489
Chief manufacturing districts—Chester, Derby, Durham, Gloucester, Lancashire, Leicester, Nottingham, Salop, Stafford, Warwick, Worcester, York	4,691,176	150	31,216	155	30,119
Remaining districts—Cornwall, Cumberland, Devon, Hereford, Huntingdon, Kent, Monmouth, Northumberland, Rutland, Surrey, Sussex, Westmoreland, Wales	3,035,768	200	15,147	83	36,279

Digitized by Google

3. Chief Midland agricultural districts.
4. Chief manufacturing districts.
5. Miscellaneous districts, in which the counties, from geographical position, or character of population, do not fall within the range of the other divisions.

Of these districts, the greatest number of persons proceeded against judicially come from the last, or the miscellaneous division; the largest number of known criminals from the manufacturing districts. These results, however, are irrespective of population, and form only a portion of the sum totals, which show

107,504, as the number of persons proceeded against, and

76,010, as the number of known criminals,

in the country districts of England and Wales. When the population of each separate division of counties is taken into account, the following results appear:—

I. The average proportion of known criminals to the entire population of the counties being 1 to 144; the Midland district, with proportion of 1 to 103; the South-Western, with 1 to 104; and the Eastern agricultural district, with 1 to 115, are above the average for England and Wales. The manufacturing and miscellaneous districts, with the respective proportions of 1 to 150 and 1 to 200, are below the average.

II. The average proportion of known criminals to the entire population of the country districts is 1 to every 102. Hence, the only district wherein the average falls below this point is the manufacturing one, the proportion in which is 1 to 155. The proportions in the other districts are, according to their position on the list, (1) 1 to 92; (2) 1 to 73; (3) 1 to 68; (5) 1 to 83.

The borough districts require somewhat more elaborate treatment. The differences between the various classes of towns are wider, and their characteristics are more strongly defined. Hence, to derive any practical information of importance from Mr. Redgrave's statistics, we must divide the towns according to the prevailing pursuits of its inhabitants, and observe the results which their aggregate returns afford. Of course it will be impossible to arrange the whole 174 towns, which possess a police force, under any number of heads, however numerous. We must determine the number of divisions we propose to make, and then group around them the more important boroughs of each class. Eight divisions will almost prove an exhaustive arrangement of the various classes of English towns and cities, and a total of fifty-five boroughs, divided between these eight different classes, will supply data sufficient from which to obtain such practical conclusions as the results supply. The eight divisions Mr. Redgrave classifies as follows:—

1. The Metropolis.
2. Pleasure towns.
3. Commercial ports.
4. Towns dependent on agricultural districts.
5. Seats of cotton and linen manufacture.
6. Seats of woollen and worsted manufacture.
7. Seats of small and mixed textile manufacture.
8. Seats of the hardware manufacture.

The towns included under this classification—and the statistics of crime they afford—will appear from the following table:—

State of Criminality in large Towns.	Population.	Proportion of known criminals to population. 1 in every	Numbers of known criminal class.	Proportion of persons proceeded against to population. 1 in every	Numbers of persons proceeded against.
Total of the 173 towns in England and Wales in which police establishments exist (excluding the Metropolis)	4,496,413	103	43,621	21	218,057
The Metropolis (including the City)	2,545,650	178	14,291	23	108,931
Pleasure towns—Brighton, Bath, Dover, Leamington, Gravesend, Scarborough, Ramsgate	197,960	94	2,085	48	4,111
Commercial ports—Liverpool, Bristol, Newcastle-on-Tyne, Hull, Sunderland, Southampton, Swansea, Yarmouth, Tynemouth, South Shields	905,820	93	9,674	29	31,253
Towns dependent on agricultural districts—Ipswich, Exeter, Reading, Shrewsbury, Lincoln, Winchester, Hereford, Bridgewater	160,557	78	2,056	48	3,337
Seats of cotton and linen manufacture—Manchester, Preston, Salford, Bolton, Stockport, Oldham, Blackburn, Wigan, Staleybridge, Ashton-under-Lyne	758,183	154	4,910	29	26,284
Seats of the woollen and worsted manufacture—Leeds, Bradford, Halifax, Rochdale, Huddersfield, Kidderminster	380,860	175	2,168	48	7,867
Seats of the small and mixed textile manufactures—Norwich, Nottingham, Derby, Macclesfield, Coventry, Newcastle-under-Lyne, Congleton	263,984	113	2,329	49	5,313
Seats of the hardware manufacture—Birmingham, Sheffield, Wolverhampton	418,140	47	8,729	41	10,224

The Metropolitan district, as containing a population distinct from all others, is placed in the above table in a class by itself. The averages for the other 173 borough police towns are (1) for the proportion of the criminal classes to the population 1 to 103, (2) for the proportion of persons proceeded against to population 1 to 21. Hence we find—

I. with regard to the recognized criminal classes,

That the chief seats of the hardware manufacture, with a proportion of 1 to 47; the towns dependent on agricultural districts, with 1 to 78; the commercial ports, with 1 to 93; the pleasure towns, with 1 to 94; are above the average for the boroughs of England and Wales: and

Towns.	Population, about	No. of the police.	No. of known criminals.	The houses they frequent.	No. of known indictable crimes committed.	No. of persons proceeded against for: Indictable offences.	Summary offences.	Total.
II. Pleasure Towns.								
Leamington	15,600	21	118	38	75	54	255	309

Sheffield	135,300	180	778	148	453	283	4,121	4,404
Wolverhampton	49,900	62	1,536	208	638	178	2,312	2,491

Digitized by Google

That the following classes are below the average: the seats of small textile factories, with a proportion of 1 to 113; of cotton and linen, with 1 to 154; of woollen and worsted, with 1 to 175; and the Metropolis, with a proportion of 1 to 178.

II. With regard to the proportionate numbers of persons proceeded against,

The different classes arrange themselves according to the following scale: (1) London proceeds against 1 person in every 23; (2) the commercial ports and the seats of cotton manufacture against 1 in 29; (3) the seats of hardware factories against 1 in 41; (4) pleasure towns, agricultural towns, and seats of woollen manufacture, against 1 in 48; (5) and seats of textile manufacture against 1 in 49.

It is impossible to form any definite idea of the extent of crime in the large towns from a consideration only of the results of any single class, however well arranged. Taken town by town, the figures of the returns become more well defined than in the aggregate;—and hence may be more completely realized by those who study them. With a view to supply this want, a table has been prepared, in which three towns from each of the seven more important districts has been selected, that the results may be seen, individually, at a glance, on the preceding page.

In order to make similar returns to those which go before for the county districts apart from the boroughs, and for the towns distinct from the rural population, it only remains to give an abstract of two tables which it is needless to produce in detail. These tables show comparatively what has been stated in the case of the 41 police districts of England and Wales, the proportions, namely, to the respective populations, of the police force, of the number of known criminals, and of the number of persons proceeded against judicially:—

	No. of the police.	No. of known criminals.	No. of persons proceeded against.
41 Police districts, town and county, in England and Wales	1 in 888	1 in 137	1 in 41
40 County police districts	— 1,375	— 144	— 102
174 Town police districts	— 576	— 119	— 21

This portion of the subject may be concluded with a summary of those tables which record the extent of crime in the aggregate, in the various districts of England and Wales.

I. of Crime according to sex, in which case round numbers will be used:—

	No. of the known criminal classes.		No. of persons proceeded against for Indictable offences.		Summary offences.		Total.	
	Male.	Female.	Male.	Female.	Male.	Female.	Male.	Female.
40 County districts	55,600	20,000	10,000	2,000	77,600	18,000	87,600	20,000
174 Town districts	26,000	33,000	12,000	6,000	242,000	66,000	254,200	72,000
41 Town & county	81,600	53,000	22,000	8,000	319,800	84,000	342,000	92,000

II. of crime independent of sex, and here definite numbers will be employed:—

Police Districts.	Population.	No. of the Police establishment.	No. of the criminal class, as far as known to the police, and the houses they frequent.		No. of known indictable crimes committed.	No. of persons proceeded against for		
			Persons.	Houses.		Indictable offences.	Summary offences.	Total.
40 County police districts	10,948,406	7,962	76,010	9,901	17,575	11,904	95,600	107,504
174 Borough police districts	7,042,063	12,294	58,912	15,219	40,293	18,554	308,434	326,988
Total of police districts, town and county	17,990,469	20,256	134,922	25,120	57,868	30,458	404,034	434,492

"ECONOMY, THE PARENT OF GENEROSITY."—Economy should be recognized and inculcated as a principle—a rule of life, not only in educational establishments but in private families. The principles of economy can be applied to every department of service — every circumstance of life. Extravagance in dress, which is an evil of no small magnitude in the present day, may be corrected and cured by attention to economy. Economy, however, has positive as well as negative, qualities; it teaches not only to abstain from unnecessary outlay, but admonishes as to the careful use and handling of articles under our charge. We have the highest authority for practising and teaching economy in the words of our Saviour: "*Gather up the fragments that nothing be lost.*" And in nature we see the same principle carried out—the same Divine idea and intention ever operating. Nothing is really in excess—nothing useless. Every atom has its destined purpose to fulfil; nothing therefore need be wasted, unless by the ignorance or wilfulness of man; the gifts intended for his good are perverted and turned from their proper use, and thus fail to answer the intentions of an All-wise, All-merciful Creator. Prodigality is often mistaken for liberality; but those who are careless and lavish in their expenditure have generally some selfish end in view; and if others benefit through such means, they do so incidentally; for the good of his fellow-creatures forms no part of the spendthrift's schemes. True economy—that is to say, good management—is as distinct from meanness as from extravagance.—*Monthly Paper of The London Society for the Protection of Young Females.*

Reviews.

Thoughts and Suggestions on the Causes of and Remedy for Juvenile Delinquency. A Pamphlet by "A District Visitor," published at Wolverhampton, containing an account of the "Richmond Infant Nursery and Training Institution," and of the "Training Home for Orphans, at Sandwell, Birmingham."

THE former of these Institutions is for the benefit of girls only; the latter is partially available for boys also. One peculiar feature of the Richmond Institution is the connection of a Public Nursery with a School, where the elder sisters, otherwise kept at home, "to mind the baby," may be trained to perform that and other household duties efficiently.

In every effort to protect the families of day-labouring women from the consequences of the mother's absence, it should ever be borne in mind, that their object is *not* to encourage the present generation of mothers to neglect their homes, — as many benevolent persons have objected against Infant Schools and Public Nurseries,—but to train the future mothers in such orderly and self-respecting habits as should make their remaining at home essential to their own convictions of economy and maternal duty. We fear that at present the infants of most mechanics' families would be better off at a Public Nursery than at home; we desire to see the day when they will be as well nursed at home, without losing that individuality of a mother's care which no Institution can supply. We quote from the account of the Richmond School in proof of how excellently that Institution seems calculated to supply this desired training.

"To prevent, therefore, the disruption of family ties, and to provide employment for girls away from the evil influences of their own neighbourhood, a plan has been tried, and is now offered for *general* adoption in populous places, of combining the care of infants with the training of young girls as servants. The plan has many advantages.

"1. Girls under 14, formerly kept at home 'to mind the baby,' are now enabled to attend school; the infants being deposited in the nursery, instead of being left at home, their sisters are released from a charge for which they are wholly unfitted.

"2. The girls who are employed as nurses act entirely under the guidance of an experienced matron, and are by her trained to do all that the infant requires, properly and skilfully. Perfect cleanliness being enforced, the health of the infants is not endangered as in the streets. A regular supply of good and wholesome food being provided, both for the girls and for

Digitized by Google

the infants (unless when nursed by the mother) their constitutions are improved, and while the girls are thus made better able to perform their work, the infants, being less fretful and ailing than before, do not tax their powers, or try their patience, as when deprived for hours of their needful nourishment.

"3. None but girls who can bring certificates of good conduct from the school they have attended, and from the Parochial Minister, being admissible into the Institution—encouragement is given to all the girls attending the different Parochial Schools, to seek to deserve such a certificate, by persevering in diligence and obedience, in the hope of obtaining this asylum and introduction into life, when they quit school.

"4. The Institution, combining industrial training, not only in nursing infants, but in every description of household work, in working for the matrons and other inmates, preparing food for the infants, cleaning furniture, and kitchen utensils, laying and lighting fires, washing all the household and nursery linen—the girls received into it are gradually fitted either for domestic service, or for the duties of wives and mothers, when they obtain homes of their own.

"The Institution is supplied with linen for the use of the poor during childbirth or sickness, and with ready-made clothing, which is sold to the poor at the cost price only of the material, such garments being made, washed and ironed by the girls of the Institution; a constant supply of useful needlework is provided for their leisure hours, while they are also encouraged to bring their own clothing to mend or make. The instruction given in washing and ironing enables the girls to assist their mothers at home, if necessary, in those employments.

"6. Connected with the Institution is a Clothing Club, and Pence Savings' Bank—in the former, the parents, by depositing a few pence weekly, may obtain annually useful articles for themselves or children—in the latter, a portion of each girl's weekly payment (for her services in the nursery) being placed, a fund is formed towards the expense of her outfit when she obtains a situation in service.

"During the winter months, a soup-kitchen is open, whereby the poor are supplied, at a trifling cost, with nourishing food, prepared by the girls under the direction of the housekeeper. On two days in each week dinners of roast and boiled meat are cooked, and on two other days the soup is supplied to all holding subscribers' tickets, on payment of 2*d.* for meat, and 1*d.* for soup.

"8. All infants in the nursery above two years old attend an adjoining Infant School. Many infants are thus brought under instruction who would otherwise be left at home, or taken into the streets, the mothers leaving home at 6 o'clock or 7 o'clock, and the school not opening till 9 o'clock. The infants are escorted to and from school by girls attending a school contiguous to the Infant School.

"9. From 2 o'clock to 4 o'clock the girls in the Institution are instructed by ladies (who kindly volunteer their services) in reading, writing, and simple arithmetic.

"10. Young girls from 14 to 18 are received into the Institution (when out of place) on payment of 5*s.* weekly by their friends. It is strongly recommended that the Public Nursery and Training Institution form part of every National and Infant School. The nursery should be a large airy room, on the *ground floor*, at one end of the school buildings, and communicating with them by a covered way, opening into a smaller side room where the mothers may rest while nursing their infants, and, if possible, into a small garden or play-ground detached from the general school play-ground. This place will enable the girls employed in the Nursery and Training Institution to attend school for two hours daily. Such girls should, if possible, be taught in a separate class room, by *ladies* interested in them (as in the Richmond Institution) so as not to overburden the schoolmistress.

"The boon to a hard-working woman, of placing her infant in a large and airy apartment; where the strictest attention is paid to its health and cleanliness, where a number of little companions of different ages may amuse it, where she herself may come to nurse and feed it in the intervals of her labour, where her elder girl may be employed, under proper superintendence, in watching her infant, while she is also learning other useful branches of a woman's occupation, cannot be calculated, and need not be dwelt upon.

"Let but such institutions be connected with every National School. Let no girl be allowed to leave without passing at least six months in the Training Institute, and *then only* for some desirable situation in a family known to some of the school managers, where she will still be watched and cared for, and we shall hear comparatively little of youthful female profligacy. *Crime* will be the *exception*, not alas! as it now is, the *rule*, in our populous places—domestic servants instead of being scarce, will abound, and fidelity, industry, efficiency, and respectability, will cease to be rare qualifications in that necessary and most useful class of the community."

The Training Home at Sandwell has peculiar advantages, as affording the children the same *practical* training which actual domestic service under an educated mistress would give. We quote again from the little pamphlet in question, and which, it should also be stated, is sold to aid the funds of the Institution, as well as to draw attention to its schemes and labours.

"The Rev. J. P. Norris, Inspector of Schools for South Staffordshire, feeling the want of some efficient system of industrial training for young girls, who, on leaving school, enter at once into the factories, many early, and undertake the duties of life, entirely ignorant of household work, unable to cook, or in any other way promote the comfort of their husbands—suggested (in his Report, published early in 1856) the establishment of Training Homes, wherein girls might acquire those habits of industry and economy which would enable them to make their homes attractive to the working men, who now, from the want of such comforts, are driven to the taverns for their meals. The liberality of the Earl of Dartmouth, to whom this idea was communicated, afforded the opportunity of forming such a Home in his family mansion at Sandwell, near Birmingham. The want which had been felt in the Richmond Institution—and which must always be felt in all similar institutions for training servants—viz. some one to be waited on, and some *real* family work to be done by the girls—is there supplied. The mansion being also a home for widows, and a school for orphans and other young ladies, the young girls are daily employed in waiting on them, and thus acquire a facility in the duties of their respective *places*, each being *bonâ fide* a servant in the house, acting as house, parlour, kitchen, scullery, dairy, or laundry-maid. So successfully has this plan worked there, that in fifteen months sixteen young girls have been placed in situations, and of these only six have disappointed their employers. The failure of these girls is noticed because it illustrates the importance of *early training*. They were all girls placed in the Home after they had attained the age of 16. Not a single failure occurred where the girls were admitted at the age of 13 or 14; but after that age it is found that habits of idleness and slovenliness are too confirmed to yield to the influence of a few months' training."

State Industrial School for Girls, at Lancaster, U. S.

THE Fourth Annual Report of the Trustees of this Institution has just reached us. Under the name and character of an Industrial School, this admirable Institution takes the place of a Reformatory; and hitherto it has effected the work of one with more than common success. While girls of all ages, from 7 to 18, are received within its walls,—or rather its shelter, for *walls* form no part of the system—all of character prematurely tainted in some shape or other, the system of dividing them into groups or families not too large for the personal, individual knowledge and influence of each matron, seems to have a purifying tendency, which no Reformatory classification, by age or crime, can attain. On what principle, and on whose discrimination the children are assigned to each matron, we do not gather; but that it is by sound judgment may be inferred from the fact, that they are transferred from one to another where any evidence of such change being beneficial shows itself in any particular child. We subjoin extracts, first from the Report of the Trustees to the Governor and Council of the Commonwealth of Massachusetts, and subsequently from that of the Superintendent and Chaplain, the Rev. Bradford K. Peirce, which will enable our readers to draw their due conclusions between this and ordinary Reformatory system.

"There is another consideration in connection with this subject, which the Trus-

Digitized by Google

tees regard as all-important in the process of reformation, but which they fear has too often been neglected or entirely overlooked, to wit, self-culture or self-government. It is well known to every parent, that the same system of discipline will not prove salutary with different dispositions. Most reformatory institutions are controlled and managed by prescribed rules and regulations, to which all must submit. The inmates eat, drink, walk, work, sleep, speak, and we had almost said *think*, by direction of the overseers. Now, while the operations of these rules are adapted to one disposition, they too often serve to render another still more incorrigible. In our Institution, the matron or mother being mistress of her own house, and not subject to fixed rules, she, like a natural mother, adapts her discipline to the capacity and disposition of each inmate: hence her power and success. But this is not all. Where children and youth are governed by such a system of fixed rules, where they are practically automatons—moving at all times by command, hardly allowed to think, much less to have any independent, voluntary action—how are they to habituate themselves to self-control and be capable of self-government when they leave the Institution and are thrown upon their own resources? And here a very grave question presents itself, to wit, whether to this military discipline, this lock-step system, habitually practised upon them, depriving them of all opportunity for independent action, or self-control and self-government, we may not attribute the many failures of reform and the many relapses after they are left to themselves. What opportunities have been afforded them to think, to act, to resolve, to cultivate hope and ambition, and what encouragement and confidence can such discipline inspire? Did any parent ever adopt this process with success? If not, then how can we expect to succeed where vicious propensities have taken deep root?"

"There is really no similarity between the condition of the girls in the House of Reformation and in the Industrial School. To the former the inmates were sent from the courts as criminals, were treated as criminals, were confined and watched, with few opportunities and fewer inducements for reformation. They well understood, in reference to each other, that they were criminals, came from one city, from the same streets, the same scenes and associations of impurity, and were still so near to them that they could reach them again in a few hours after their discharge. The matrons were simply jail-keepers, exercising a constant surveillance over them,—themselves of an entirely different class, eating at a different table, and associated only with their hours of labour and with acts of discipline. With us, every child comes with a favourable *prestige*. They are not regarded, neither do they regard themselves, as criminals. They dress as the children of our common schools, and with as much variety. They pass in and out of their homes, in their hours of recreation, with the freedom of any children and without the clangour of a key. The matrons are with them, eating, working, studying, playing, and sleep in no better, simply larger apartments. They come also from various parts of the State, and rarely know each other when they enter. In each home they are of different ages, dispositions, weaknesses, and habits, thus inhibiting combinations, restraining and exposing vicious propensities. They are not in one body, moved by unelastic and monotonous rules, impregnating each other with the vices of a large company, and drawn by no personal tie to the maternal heart of the matron; but are broken up into several comparatively small families, the inmates of which can be readily changed from one to another, to receive special adaptations. Finally, any persistently vicious girl, whose influence is evil, can be peremptorily discharged from the Institution without resort to the court.

"Of the ninety-eight girls received during the first twelve months, forty-two only are now in the Institution, and there is not one of the number remaining with us that we consider an especially injurious element in our community. We have settled plans in reference to each one of them, as to the course to be pursued in her behalf. Less than half-a-dozen reckless girls have been found in our three years' experience to stand in the way of the advancement of the Institution. The lunatic hospital, the State almshouse, and courageous families, have relieved us of these, and the school never moved on in so much quiet as at the present time. We have no accumulated mass of evil sinking our moral average, as our girls whose training has been considered adequately advanced are rapidly dispersed.

"Classification either as to age or character is unnatural. In society, the wheat and tares grow together. The moment these girls leave the Institution they step into an unclassified society. Classification is a mechanical process to save personal labour; but our girls—each one of them—require personal discipline. We have none entirely good or utterly bad; they share together both the graces and disgraces of humanity. They are not innocent, any of them, of the world; they have seen it and felt its power. We cannot keep them away from the world; they are soon to enter into it again. Our great work is to provide them with an adequate armour to meet the temptations that will assault them. If they succumb to evil communications when daily sustained by the personal sympathy of mature friends, and by all the offices of religion, the prospect of their ultimate victory is small. By the continued tests of character presented through the diverse dispositions and habits of the inmates, both the sincerity and the struggle of their newly-formed resolutions and principles are measured. They associate together now under the eye and in the restraints of the heads of the family; when they leave us, their only governing law is within, and their only restraint the self-control that has been nourished into power in the struggles against temptation incident to the school. It is because the penitentiary system allows no voluntary action, but simply enforces mechanical obedience by physical force, and right action by the absolute absence of temptation or opportunity for wrong-doing, that it fails to reform its subjects."

Bondage in the Bakehouse; or, the Case of the Journeyman Baker. A paper read by JOHN LILWALL, Esq., Honorary Secretary of the Early Closing Association, before the "National Association for the Promotion of Social Science," at Bradford, in November, 1859, and printed in the form of a pamphlet.—Kent and Co., Paternoster Row.

IF, after reading the statement of *how* and *where* the greater part of London bread is made, the consumer has no compassion upon the journeyman baker, he will surely have enough for himself to take any means in his power to remedy the evil. From the statement of the actual state of the bakehouses in pages 4 and 5 of the pamphlet, we quote six of by no means the worst cases.

"1. Under ground—two ovens—no daylight—no ventilation—very hot and sulphurous.

"2. Under ground—no daylight—often flooded—very bad smells—overrun with rats—no ventilation.

"4. Under ground—three ovens—use gas at all times—very hot and sulphurous.

"5. Under ground bakehouse—very dark—obliged to use gas—not high enough for a man 5 ft. 9 in. to stand upright in without hitting his head—very hot—one oven.

"6. Two ovens—very dark—full of cold draught—the rain falls on the man that works at one of the ovens—very small bed in the flour loft.

"8. Under ground—bakehouse very small and hot—ventilation from a hatchway—the men are obliged to go out for air to recover themselves before they can eat."

Add to this that the hours of labour average eighteen hours a-day, and that the journeymen are generally required to sleep on the premises, in dens as objectionable as the bakehouses.

Some movement towards remedying these evils has already been made; commenced by the operatives, but honourably supported by many of the masters.

It is proposed to restrict the period of labour to twelve hours a-day, from 4 A.M. to 4 P.M. Even this involves the men leaving their beds at 3 o'clock, or half-past 3 o'clock in the morning, though that, compared with the eighteen hours and nightwork system, is a minor evil. In conclusion we quote again from Mr. Lilwall's pamphlet.

"I find that the only actual obstacle in the way of their commencing work at the more reasonable hour of 5.30 A.M., or 6 A.M., is the demand on the part of the public for hot rolls for breakfast. Now I cannot believe but that families will relinquish this most unwholesome indul-

Digitized by Google

gence, when they learn that by so doing they will so materially conduce to the comfort and welfare of some ten or twelve thousand human beings (speaking of London alone), who hitherto have suffered so grievously, and yet so submissively, in ministering to their enjoyment.

"In the meantime, and in conclusion, I venture to commend those benevolent master bakers, in the Metropolis, who have abolished nightwork, to the sympathy and support of the public, that they may not be pecuniary losers by the new arrangement, and that others may be encouraged to emulate their excellent example.

"Heads of families should make it a point of conscience to ascertain which of the bakers in their respective districts *are*, and which of them are *not*, included in the latter body. They will have no difficulty in obtaining this information from the journeyman who daily delivers their bread. In those cases—and they will be the large majority—when they find that the baker they respectively patronize adheres to the old system, they will be doing an act of real humanity by telling him in tones which will not be misunderstood, and in which, *as customers*, they will be justified in speaking, that they are resolved that after a given period—say a month from that date—they will not defile their houses by receiving into them any bread which has been baked under such an unchristian, cruel, and ruinous a system."

The Life-Boat; or, Journal of the National Life-Boat Institution, January, 1860. A Quarterly Journal of the Noble Labours of the Royal National Life-boat Institution.

We earnestly recommend it to our readers. In another part of our columns will be found an abstract of the expenses of the Society during the past year, of the lives saved, and the stations established by its exertions. It is stated in the Journal that each station requires, on an average, 30*l.* a year to maintain it in a state of efficiency. The number of lives saved by means of the Society, since its first formation, is 11,337. The Institution has also expended 36,715*l.* on Life-boats, Life-Boat Transporting-Carriages, and Boat-Houses.

The Magdalen's Friend, and *Female Homes' Intelligencer*, advertised in this journal some time since, is announced to be published shortly. The object of the magazine, which will be brought out monthly, is to afford a means of communication to all labouring for the restoration of degraded women, both by the exchange of suggestions through its pages, and also by the publishing such lists of the homes or refuges throughout the kingdom, as shall enable people desirous to help, and ignorant how best to do so, to inform themselves. The price of the magazine being but 3*s.* a year, and it being intended to distribute many copies gratuitously, subscriptions are greatly needed. An early opportunity will be taken of noticing the first number in the Philanthropist.

WRONGS WHICH CRY FOR REDRESS.

"We only wish," writes the editor of a leading London Periodical, "that every member of the House of Commons could study the following before the Second Reading of Mr. Crook's Bill for the Protection of Women and Children employed in Bleach Works, &c.:—

"Ann Simpson (fourteen years old), Elizabeth Hilton (fifteen), Sarah Higson (sixteen).—'We came to work last Friday morning at half past six (at Mr Ridgway Bridson's Bleach-works, Bolton). We worked all Friday night till half-past five on Saturday morning (twenty-three hours). We did not sleep any time in the night, except on Saturday morning at half-past five we laid down on the hooking-box, and slept till a little after seven' (less than two hours' sleep—and with the clothes still on—after twenty three hours' work); 'then we went to breakfast for half-an-hour, and then came and worked till ten minutes past eleven.'—*Report of the Commissioner appointed to inquire how far it may be advisable to extend the Provisions of the Acts for the better Regulation of Mills and Factories to Bleaching Works*, p. 25, No. 236.)

"William Crompton.—'I am seventeen. I have been four years and a half' (that is since he was twelve years and a half old) 'in the dressing shop. We go on till different hours, sometimes early, sometimes late. I worked once *three days and three nights*' (he is only one, remember, among multitudes—children as well as adults—who toil in the same way); 'and not long since, I began work on Friday morning at four, and worked till five on Saturday night (thirty-seven hours). I mostly sleep at meal-times, and only stopped one hour for meals; the rest I ate while I was working.'—*Ibid.*, p. 26, No. 246.

"Elizabeth Edge.—'I am fourteen years of age. I have worked here' (at Mr. Sedden's, Breightmet Bleach-works) 'four years. Three months since I worked *two nights and two days*. I slept four hours the first morning, and not at all the next night. I have very often worked till twelve.'—*Ibid.*, p. 49, No. 491.

"Amelia Wood (fifteen next July).—'I have been at this work about three years. We oftenest begin at five or six in the morning, and oftenest leave off at eleven or twelve. * * * Sometimes we do not leave off till three or four in the morning. My fingers are often very bad; THE CLOTH WEARS THEM THROUGH.'—*Ibid.*, No. 158.

* * * * * *

"Samuel Price, examined.—Mr. Butt: How did you awaken them (alluding to the little children of Mr. Ainsworth's Establishment, near Bolton, when they fell asleep 'standing at their work')?—Many a time by shouting, and at other times getting a board and rapping it on the table, making a loud report that used to startle them, and *I could keep them awake then for an hour, or more than that perhaps*, BY FRIGHTENING THEM."—*Ibid.*, pp. 88, 89, Nos. 1849, 1862.

* * * * * *

Surely this is very terrible. But read on—

"Wright Mather.—'I am foreman of the clamping room. I have four lassies working under me. * * * In summer I have seen the room 130 deg.; in winter it is generally about 80 to 100 deg. We have come at six A.M. and worked till nine P.M. all last week. * * * There are four clamping-rooms, and when they are all agate, there are sixteen females at work in them. In the other drying-place there are five boys; they work very often sixteen, seventeen, and eighteen hours to the day. The heat is very great in that room, from 100 to 150 deg., and that is under the mark.'"—*Ibid.*, p. 25, Nos. 241, 243.

[Take thoughtful note of this heat—'from 100 to 150 deg., and that is under the mark!' In a subsequent examination witnesses stated, concerning the ages of the boys, that 'one was ten,' another eleven, and one thirteen;—working, bear in mind, 'sixteen, seventeen, and eighteen hours to the day,' in a temperature exceeding by some 20 or 30 deg., the general temperature of an Indian summer!']—*Hopley's Letter to the Men and Women of the United Kingdom.*

Scotch Reformatories.—*Sic utere tuo ut non alienum lædas* may be paraphrased, by laying it down that no man has a right to bring up his child so as to be a nuisance to society. If he does so, it is the duty of the State to interfere, and take the child from his keeping. To carry out this principle, the Act 17 and 18 Vict. c. 74, was passed for Scotland, in 1854. It is known by the name of "Dunlop's Act." Under this statute children, apparently under fourteen years of age, found in a state of vagrancy, may be brought before a magistrate, and sent to an Industrial School, the parent to pay for its support, and if this cannot be obtained, then the expense to be defrayed by the parochial board of the parish on which such young person would have been chargeable in the first instance. In Glasgow the children taken under the above Act are sent to the Industrial and Reformatory School in Rotten Row. The total number admitted into the Reformatory department since the Government licence of 10th March, 1855, is as follows:—

	Boys.	Girls.	Total.
In 1855	62	34	96
„ 1856	29	23	52
„ 1857	17	17	34
„ 1858	15	5	20
	123	79	202
Left up till 31st December, 1858 . .	56	31	87
Remaining . . .	67	48	115

On the 31st of December, 1858, the Reformatory department consisted of 67 boys and 48 girls, making a total of 115 for the whole of Glasgow. The Industrial department consisting of children who come voluntarily during the day and work with the others, numbered, at the same date, 42 boys and 24 girls: total 66. It is found both in Glasgow and London, that no inconvenience results from the mixture of these two classes of children, and this is

Digitized by Google

the case when some of the industrial scholars sleep on the premises. This probably arises from both classes of children having the same kinds of parents, and being brought up in similar localities. To a stranger in Glasgow, the absence of children begging in the streets is striking, but it is thought by some that the Act ought to be more vigorously carried out. —*G. H. H. Oliphant, Transactions of the National Association for the Promotion of Social Science.*

Correspondence.

To the Editor of the Philanthropist.

Manchester, Feb. 21, 1860.

DEAR SIR,—When perusing the last year's volume of your very valuable journal, I was delighted to find a Report of the Meeting of the Workhouse Visiting Society, held in June last. I do, from my heart, wish them God speed. I am sure, sir, there is no field of labour that requires the aid of the philanthropist more than this. The workhouse has been for many years past an unwatered and an uncared-for garden—a place crowded with rankest weeds, whose nurture has a most baneful influence on those tender plants that dire misfortune or affliction may have placed there, but who, by proper cultivation, might have adorned their path through life. This is no imaginary view of the case. Pass through the wards of a workhouse in any of our large towns, and you will have a picture presented to your mind that the pen of the most graphic writer would fail to sketch.

There are packed the young and the aged; the robust and the cripple; the man of sound mind and the lunatic; and the clean and the unclean. The husband is separated from his dearest companion, the fond mother bereft of her children, and sister and brother parted. Nay, of all the wretched groups that are hemmed in by the high walls of a poor-house, there are none that excite such sympathy as the latter. Some motherless, some fatherless, many orphans, more illegitimate, and even the most fortunate are deprived of a parent's care. Poor, wretched, helpless children, shut out from the beautiful world in the spring-time of life—caged in a prison-house where they breathe an immoral atmosphere, and there left until the blossoms of youth wither, and the mind becomes a dreary waste for want of due cultivation. Therefore, sir, I hail with delight the efforts that are being made by the Workhouse Visiting Society, to extend a helping hand to those who cannot help themselves.—Remaining, dear sir, yours very humbly,

A WORKHOUSE BOY.

DRUNKENNESS AS AN INDIRECT CAUSE OF CRIME.—Mr. John Taylor read a paper bearing this title. It comprised a variety of important statistics with reference to the number of public-houses in England, their proportion to the population, and the amount of money annually spent in intoxicating liquors. Mr. Taylor stated that the metropolis was divided into 36 registration districts, having, according to the census of 1851, an aggregate population of upwards of 1,600,000 persons above fourteen years of age. The number of places for the sale of intoxicating liquors was 10,256, being one to every 156 persons. The proportion which the number of public-houses bore to the population of some other districts in the country was even still greater. In Yorkshire there were 961,945 persons above fourteen years of age, and the number of places for the sale of intoxicating liquors (including breweries) was 8411, being one to every 114 of the population. The proportion in Cumberland and Westmorland was one dealer to every 93 of the population above fourteen years of age; and in the whole of England there were 105,278 dealers in intoxicating liquors, to a population of 14,000,000, being one to every 234. Mr. Taylor stated that the amount of money annually spent in intoxicating liquors was 60,000,000*l.*, of which it had been calculated that 20,000,000*l.* was spent by the working classes alone. He pointed out that this money might be much more profitably employed in other ways, and dwelt on the indirect criminal action of intemperance through the poverty, ill-health, and want of education directly attributable to it. He thought that great alterations ought to be made by the Legislature in the present public-house system. It was desirable to consider whether the granting of licences to public-houses should be vested in the magistrates, as at present, or placed in the hands of a body especially elected for this purpose, who should have the power of determining the tenure of the licences. In conclusion, Mr. Taylor remarked that the diminution of the use of intoxicating liquors could, after all, be best promoted by the example of the more intelligent portion of the community. — *Transactions of the National Association for the Promotion of Social Science.*

HOLLOWAY'S PILLS.—*Bilious Affections*, induced by atmospheric changes, or too liberal diet, should be checked at once, or serious consequences may ensue: when any one finds his ideas less clear than usual, his eyesight dimmed, and his head dizzy, which indispose him from all exertion, physical or mental, he may be quite sure that he is in immediate need of some cooling and purifying medicine. Let him send at once for a box of Holloway's Pills, which will free him from his sufferings, and speedily renew his usual healthful feelings. If the bowels be irritable, Holloway's Ointment should be rubbed over the stomach and liver every night and morning. It will wonderfully augment the corrective powers of the Pills.

A GOOD FAMILY MEDICINE CHEST with a prudent use, has saved many a life; and yet we think the idea might be improved upon, and reduced to a more simple form. Take some good compound, such as COCKLE'S ANTIBILIOUS PILLS and we find that the desired end may be obtained without scales and weights, or little mysterious compartments and enchanted bottles with crystal stoppers. Others might be used, but Cockle's Pills, as tested by many thousands of persons, and found to answer their purpose so well, may be set down as the best.—*Observer.*

METROPOLITAN FREE HOSPITAL
Devonshire Square, Bishopsgate, City, N.E.
PATRON.
H. R. H. THE PRINCE CONSORT, K.G., &c.
VICE-PATRON.
THE RIGHT HON. THE LORD MAYOR.
This Institution is continually open to the Sick Poor of every nation, without requiring a letter of recommendation. It is entirely dependent upon voluntary contributions for its support, and is urgently in want of Funds.
BANKERS: Messrs. BARNETT, HOARE, and CO., Lombard Street, E.C.
GEORGE CROXTON, *Secretary.*

WANTED, by the MATRON of an Industrial Home; a similar Situation in an Orphan Home, or any other Charitable Institution, where the inmates are younger, or of a better class. Good testimonials from several Clergymen and Ladies. Address A. N., Post Office, Mare Street, Hackney.

FEMALE MISSION.—The Meeting held at St. James's Hall, on the night of Wednesday, the 8th of February, having attracted much notice to the unfortunate class for whose benefit the subjoined Institutions have been established, a Conference of several gentlemen interested in this important movement was held at the offices of the Reformatory and Refuge Union, on Monday, the 13th ult., when the following resolution, proposed by Lord Henry Cholmondeley, and seconded by John La Touche, Esq., was unanimously carried:—"That an appeal be made for funds to assist the various Institutions, in order to provide increased accommodation for young women who are desirous of quitting their evil course of life." It is confidently expected that a sufficient amount may be raised so as materially to assist the various Metropolitan Institutions, and enable them to increase the accommodation, which has hitherto been much restricted for want of funds.

The subject of fallen females has received the careful consideration of the Committee for the last two years, with a view to carry out some scheme of practical good, in the least expensive and most effectual manner.

After various conferences with the clergy of the several parishes in the metropolis, and the managers of some of the existing institutions, it was resolved that a centre of action should be provided, through which institutions might be assisted, and where contributions could be received from those who are desirous of aiding in the rescue of this unhappy class.

For this object a handbook has been compiled and published, containing a short account of fifty penitentiaries and homes for females in London and the provinces, with particulars as to the ages received, terms of admission, &c.

The services of three female missionaries are employed for the purpose of seeking out those who are desirous of leaving their evil ways, and directing them to places of shelter and protection.

The sub-committee, who undertake their weekly superintendence, can now report that these missionaries have carried on their difficult work with zeal and steadiness of purpose, and have met with an unlooked-for measure of success.

Out of a large number of cases which have engaged attention during a period of nearly two years *one hundred and eighty-six* appeared to be penitent and anxious to reform, and therefore have been placed in homes or penitentiaries, or otherwise provided for; and in many instances the necessary sum for their admission has been paid by the Union.

Arrangements have been made by which two of the missionaries are able to receive these women at once into their houses, until a suitable home can be provided for them.

About 25,000 tracts and handbills have been distributed in the parks and streets, as well as in the houses of bad character, in which the missionaries have gained admission at considerable personal risk and self-sacrifice, but generally without much opposition.

Hospitals have been visited in the hope of permanently benefiting those who were compelled by illness to leave for a time their evil course of life.

An earnest APPEAL is now made for donations and subscriptions, in order that the Union may continue this most important work.

The following Gentlemen, members of the Female Mission Committee, will be happy to receive contributions:—Robert Hanbury, Esq., M.P., 10, Upper Grosvenor St., W.
William Gaussen, Esq., 12, Montague Place, W. C.
William James Maxwell, Esq., 9, Wimpole Street, W.
John La Touche, Esq., 24, Norfolk Street, Park Lane, W.
George Moore, Esq., 15, Kensington Palace Gardens, W.
A. D. Chapman, Esq., 2, Hyde Park Square, W.
Or they may be paid to the Female Mission Fund: with Messrs. Smith, Payne, and Co., 1, Lombard Street, E.C.; or Messrs. Ransom, Bouverie, and Co., 1, Pall Mall East, S.W.
CHARLES GWILLIM, *Secretary.*
Offices of the Union, 118, Pall Mall, S.W.

BROWN & POLSON'S
PATENT CORN FLOUR.
The *Lancet* states: "This is superior to anything of the kind known."
IT is respectfully announced that to any application by letter, BROWN and POLSON forward the address (for any village or town in the Three Kingdoms,) of Grocers, Chemists, &c., who supply their Corn Flour at the usual price. Where any similar article is substituted or forced into sale upon pretence of being "the same thing," or "as good as BROWN and POLSON'S," if the name, address and designation are kindly communicated such confidence will be greatly appreciated.
BROWN & POLSON,
Manufacturers to Her Majesty the Queen: Paisley, and 23, Ironmonger Lane, London.

WANTED, in a certified Reformatory for Sixty Boys, a SCHOOL-MASTER, to give instruction in School hours, and to assist the Governor in the general conduct of the Institution. He must be a trained and experienced master, and one who will enter upon his work in a zealous, laborious, and earnestly Christian spirit. Apply, giving references, and stating terms asked, to M. S. R., Reformatory and Refuge Union, 118, Pall Mall, London, S.W.

Printed for the Proprietors, by WOODFALL and KINDER, Angel Court, Skinner Street, London; and sold by W. TWEEDIE, 337, Strand.

Fifty youths are maintained at an annual average cost of about £1000.

In addition to the ordinary operations of the Institution, the following efforts call for special funds:—

New workshops, with appropriate fittings, newly erected at a cost of £300.

Emigration of seven youths to Canada in April next, £85.

Contributions in aid of either of the above objects are earnestly solicited, and will be gratefully acknowledged.

METROPOLITAN ASSOCIATION for IMPROVING the DWELLINGS of the INDUSTRIOUS CLASSES; incorporated by Royal Charter, dated October 16th, 1845; with perpetual succession.

DIRECTORS.

Chairman.—Sir RALPH HOWARD, Bart.

Deputy Chairman.—JOHN WILLIAM TOTTIE, Esq.

George William Alexander, Esq.
Major-Gen. Edward Pery Buckley, M.P.
The Right Hon. the Earl of Carlisle, K.G.
Stephen Charles Denison, Esq.
Edward Enfield, Esq.
Sir William Fraser, Bart., M.P.
Hon. D. Francis Fortescue, M.P.
Thomas Field Gibson, Esq.
Frederick David Goldsmid, Esq.
The Right Hon. Lord Claud Hamilton, M.P.
William Egreton Hubbard, Esq.
Edwin Hill, Esq.
Sir Samuel Morton Peto, Bart.
T. Southwood Smith, Esq., M.D.
Russell Scott, Esq.
William Arthur Wilkinson, Esq.
Horace Wilkinson, Esq.

The necessity for the prosecution of the objects of this Association is continually brought before the public by the press, and in the reports of the officers of various sanitary boards, the only result of which has hitherto been the formation of various societies in addition to this Association, of smaller scope, though having the same objects in view.

The experience of thirteen years has convinced the Directors that the only mode in which the existing evils resulting from the improper housing of large masses of the people in densely-populated districts can be effectually and permanently alleviated, is by the exercise of such powers as they possess, and that the desire to do this must, at the present time, be exerted by one extended and powerful combination, instead of a variety of disjointed attempts, each necessarily burdened with expenses of its own, pressing upon the body of proprietors with a weight proportioned to the contraction of the area of its operations.

The Charter confers power to raise £100,000 capital, in shares of £25 each, to be expended in England and Wales, and to increase such capital to any extent, from time to time, with the sanction of the Board of Trade and the Shareholders.

To enter into contracts under the common seal of the Association.

To declare dividends not exceeding £5 per cent.; surplus to be applied in further promoting the objects of the Association, with the approval of the Board of Trade.

Constitution—Shareholders incorporated, and liabilities of each limited to the amount of his investment.

Directors elected by the Shareholders, two retiring every year, but capable of re-election.

Supervision by the Government, through the medium of the Board of Trade, for the purpose of securing the permanence of the original intent.

It is gratifying to know that, wherever the operations of this Association have been felt, the result has been the improvement of the accommodation afforded in the neighbouring dwellings; but greatly-increased efforts are requisite, both to meet the extent of the existing evil, and to perfect the remunerative character of the undertaking.

The Directors, therefore, invite the co-operation of the capitalist, and, to this end, his inspection of their buildings undermentioned.

The tenant class are earnestly requested, for the sake of their comfort, their health, and the economy of their dwellings, to make themselves acquainted with the accommodation hereby provided.

Every information may be obtained on application to the Secretary, Mr. CHARLES GATLIFF, 19, Coleman Street, London, E.C.

The existing property of the Association is as follows:—

Pancras Square, Old Pancras Road	110	families.
Ingestre Buildings, New Street, Golden Square	60	do.
Nelson Square, Snow's Fields, Bermondsey	108	do.
Albert Street, Mile End New Town	60	do.
Pelham Street, Mile End New Town	35	do.
Pleasant Row, Mile End New Town	11	do.
Queen's Place, Dockhead	10	do.
Albion Buildings, Bartholomew Close, Aldersgate Street	24	do.
	418	do.
Soho Chambers, Old Compton Street, Soho	128	single men.
Metropolitan Chambers, Albert Street, Mile End New Town	234	do.
	362	do.

PHOTOGRAPHY.—This beautiful and wonderful art has long been in the hands of mere charlatans and speculators, whose imperfect knowledge and unskilful manipulations have produced only vile caricatures of our friends. Mr. Barrable, 244, Regent-street, is the first, who, with the reputation of an artist, has applied himself to the study and practice of Photography. In his studio the most beautiful portraits are produced at half the usual prices charged at the West End for much inferior articles. Mr. Barrable respectfully invites the public to an inspection of his specimens.

ROYAL NORTHERN SEA-BATHING INFIRMARY: established in 1811.—A New Infirmary, long very much needed, is now in course of erection. £2,000 is required to complete it. This Charity is intended to provide a Home for patients, from all parts of the kingdom, requiring sea air. It is supported entirely by voluntary contributions, and these are earnestly solicited.

THOMAS HUTTON CROFT, *Hon. Sec.*

BROWN and POLSON'S PATENT CORN FLOUR,

Preferred to the best Arrowroot.

Delicious in Puddings, Custards, Blancmange, Cake, &c., and especially suited to the delicacy of Children and Invalids.

The *Lancet* states—"This is superior to anything of the kind known."

Trade Mark and Recipes on each Packet, 4 and 16 ozs.

Obtain it where inferior articles are not substituted, from family Grocers, Chemists, Confectioners, and Corn Dealers.

PAISLEY, DUBLIN,
77A, Market Street, Manchester, and 23, Ironmonger Lane, London.

WANTED, by the MATRON of an Industrial Home, a similar Situation in an Orphan Home, or any other Charitable Institution, where the inmates are younger, or of a better class. Good testimonials from several Clergymen and Ladies. Address A. N., Post Office, Mare Street, Hackney.

LAMENTABLE REVERSE OF FORTUNE.—A Lady, of advanced age, and of illustrious rank (being the granddaughter, in legitimate descent, of a Royal Duke) is at the present moment in want of the actual necessaries of life. Her claims will shortly be brought before a proper tribunal, when their justice will be fully and publicly evidenced.

In the meantime, whilst proceedings are pending, contributions, however small, are most earnestly solicited, to provide her with food and clothing, and to preserve to her the shelter of a home.

Further particulars, together with a list of gentlemen who can vouch for the accuracy of the above statement may be obtained of Edward West, Esq., 97, Newgate-street, by whom subscriptions will be gratefully received.

CONTRIBUTIONS to the REFORMATORY and REFUGE UNION are earnestly solicited for the following purposes:—

General Fund—For maintaining the General Operations.

Refuge Fund—For making Grants to Refuges, Emigration, &c.

Female Mission Fund—For maintaining a Mission to Fallen Women.

Bankers—Smith, Payne, and Co., 1, Lombard Street; and Ransom, Bouverie, and Co., 1, Pall Mall East. See Third Annual Report, to be had on application at the Office of the Union, 118, Pall Mall, S.W.

ROBERT HANBURY, Esq., M. P.,
STEPHEN CAVE, Esq., M.P. } *Hon. Secs.*

CHARLES GWILLIM, *Sec.*

The following sums are thankfully acknowledged:—

H. E. Gurney, Esq., per R. Hanbury, Esq., M.P.	£500	0	0
Rev. N. T. Ridley	1	0	0
Miss Hall	5	0	0
M. M. C.	5	0	0
G. G.	5	0	0
Sir Hugh Cairns, M.P.	5	0	0
Henry W. Masters, Esq.	10	0	0
W. C.	10	0	0

METROPOLITAN FREE HOSPITAL, Devonshire Square, Bishopsgate, City, N.E.

PATRON.
H. R. H. THE PRINCE CONSORT, K.G., &c.

VICE-PATRON.
THE RIGHT HON. THE LORD MAYOR.

This Institution is continually open to the Sick Poor of every nation, without requiring a letter of recommendation. It is entirely dependent upon voluntary contributions for its support, and is urgently in want of Funds.

BANKERS: Messrs. BARNETT, HOARE, and CO., Lombard Street, E.C.

GEORGE CROXTON, *Secretary.*

SAVINGS' BANK DEPARTMENT.

SOUTHWARK, METROPOLITAN, and PROVINCIAL FREEHOLD LAND and HOUSE SOCIETY.

Trustees,
Thomas Pillow, Esq., James Pollock, Esq., and W. H. German, Esq.

FIVE PER CENT. ON DEPOSITS — Dividends payable on and after the 1st of January and the 1st of July.

Offices: 4, Wellington Chambers, London Bridge, Southwark.

RICHARD BRETT, *Secretary.*

PENCILS! PENCILS! PENCILS!

GOOD STATIONERY, at reasonable Prices,

At G. BLIGHT'S, 168, Fenchurch Street, London, E.C.

WHAT A NUISANCE!!!

There's the point gone again, just in that fine outline, too;
AND THE GRIT!!! Oh, what *shall* I do?
I MUST try those Gilbert's Pencils that Blight sells.
Let me see, it's G. BLIGHT, General Stationer, 168, Fenchurch Street, London, E.C.

And he sends a set of six different shades, post free, for Eighteen Postage Stamps.

GLENFIELD PATENT STARCH,
Used in the Royal Laundry,
And pronounced by Her Majesty's Laundress to be the finest Starch she ever used.
WHEN YOU ASK FOR
GLENFIELD PATENT STARCH,
SEE THAT YOU GET IT,
As inferior kinds are often substituted.
Sold by all Chandlers, Grocers, &c. &c.
WOTHERSPOON and CO., Glasgow and London.

PRIZE MEDAL LIQUID HAIR DYE.
ONLY ONE APPLICATION.
INSTANTANEOUS, INDELIBLE, HARMLESS, and SCENTLESS.

In Cases, post-free, 3s. 3d. and 6s., direct from E. F. LANGDALE'S Laboratory, 72, Hatton Garden, London, E.C.

"Mr. Langdale's preparations are, to our mind, the most extraordinary productions of modern chemistry."—*Illustrated London News*, July 19, 1851.

A long and interesting report on the products of E. F. Langdale's Laboratory, by a Special Scientific Commission from the Editor of the *Lancet*, will be found in that journal of Saturday, January 10th, 1857. A copy will be forwarded for two stamps.

AGENTS WANTED.

A NEVER-FAILING RECEIPT for 30 Stamps, to make the HAIR GROW and CURL.

A very valuable RECEIPT for 30 Stamps, to make a FIRST-CLASS HAIR-DYE.

LADIES! If you wish your Skin to be Clear, Fair, and Blooming, send me 30 Stamps, and I will forward you the receipt. Its effect is surprising. It removes Tan, Freckles, Pimples, and other unsightly marks. It is perfectly harmless, and may be prepared by any lady at a trifling cost. These Receipts are superior to anything of the kind hitherto discovered.

IMPORTANT to every Man who keeps a Horse, Cow, Sheep, or Pig. The receipt to make the celebrated HORSE and CATTLE FOOD, for 18s. per cwt., the selling price being 42s. and 50s. per cwt.

N.B.—Two receipts sent for 44 Stamps; three for 60 Stamps; or the four for 78 Stamps.

Address, Mr. J. TAIT, Chemist, Newcastle-on-Tyne.

PHRENOLOGY APPLIED TO CHILDREN may lead to the avoidance of many of the errors so frequently committed in their education and subsequent destination. During Mr. DONOVAN'S long and extensive practice as a consulting phrenologist, his attention has been particularly directed to this most important branch of cerebral science. Consultations from 9 to 6 daily. Free Lectures on Monday evenings, as usual. 1, Adelaide Street, Trafalgar Square, W.C.

ALARM GUN.—Capt. NORTON'S ALARM GUN, without vent or touch-hole, fired at the muzzle by friction, for protection against burglars, poachers, &c., is to be had of the London Gunmakers: Field, Blisset, and Beckwith, Holborn; Reily, New Oxford Street; Lang, Cockspur Street; Daw, Old Broad Street; and Wilkinson, Pall Mall.

WHAT WILL THIS COST TO PRINT? is a thought often occurring to literary minds, public characters, and persons of benevolent intentions. An immediate answer to the inquiry may be obtained, on application to RICHARD BARRETT, 13, Mark Lane, London. R. B. is enabled to execute every description of PRINTING on very advantageous terms, his office being furnished with a large and choice assortment of Types, Steam Printing Machines, Hydraulic and other Presses, and every modern improvement in the Printing Art. A Specimen Book of Types, and information for authors, sent on application, by

RICHARD BARRETT, 13, MARK LANE, LONDON.

WHY GIVE MORE?—Excellent TEAS, Black, Green, and Mixed, are now on sale, for Family Use, at 2s. 8d. per pound, at NEWSOM and Co.'s Original Tea Warehouse, 50, Borough. Near London Bridge Terminus. Established A.D. 1745.

SPECTACLES—MICROSCOPES—TELESCOPES.—FINE STEEL FRAMES, with REAL PEBBLES, 7s. 6d. and 10s. 6d.: ditto, best Glasses, 5s. 6d., 4s. 6d., 3s. 6d.; Solid Gold, 20s.; Silver, 10s. 6d.

BERNARD DAVIS, 430, Euston Road, Regent's Park (close to Trinity Church), Optician to the Ophthalmic Institutions. Country residents can be accurately suited by stating age, &c. Enclose stamps, or P. O. order, payable Upper Baker Street, London.

MICROSCOPES, magnifying from 5,000 to 15,000 times, mahogany cases, 21s., 17s. 6d, 12s. 6d. Ditto, with all necessaries for every purpose, in upright Mahogany Cabinet, magnifying 60,000 times, £4 4s., warranted.

POCKET TELESCOPES, define ten miles, 10s. 6d.; ditto, 20 miles, 21s.

SMALL POCKET TELESCOPES, of immense power, and to show Jupiter's Moons, &c., by night, 60s.

MAGIC LANTERNS and SLIDES complete, 6s. 6d., 9s. 6d., 11s. 6d., 18s. 6d, 21s., 30s., up to 90s. Catalogues free for one stamp.

FEMALE MISSION.—The Meeting held at St. James's Hall, on the night of Wednesday, the 8th of February, having attracted much notice to the unfortunate class for whose benefit the subjoined Institutions have been established, a Conference of several gentlemen interested in this important movement was held at the offices of the Reformatory and Refuge Union, on Monday, the 13th ult., when the following resolution, proposed by Lord Henry Cholmondeley, and seconded by John La Touche, Esq., was unanimously carried:—"That an appeal be made for funds to assist the various Institutions, in order to provide increased accommodation for young women who are desirous of quitting their evil course of life." It is confidently expected that a sufficient amount may be raised so as materially to assist the various Metropolitan Institutions, and enable them to increase the accommodation, which has hitherto been much restricted for want of funds.

The subject of fallen females has received the careful consideration of the Committee for the last two years, with a view to carry out some scheme of practical good, in the least expensive and most effectual manner.

After various conferences with the clergy of the several parishes in the metropolis, and the managers of some of the existing institutions, it was resolved that a centre of action should be provided, through which institutions might be assisted, and where contributions could be received from those who are desirous of aiding in the rescue of this unhappy class.

For this object a handbook has been compiled and published, containing a short account of fifty penitentiaries and homes for females in London and the provinces, with particulars as to the ages received, terms of admission, &c.

The services of three female missionaries are employed for the purpose of seeking out those who are desirous of leaving their evil ways, and directing them to places of shelter and protection.

The sub-committee, who undertake their weekly superintendence, can now report that these missionaries have carried on their difficult work with zeal and steadiness of purpose, and have met with an unlooked-for measure of success.

Out of a large number of cases which have engaged attention during a period of nearly two years *one hundred and eighty-six* appeared to be penitent and anxious to reform, and therefore have been placed in homes or penitentiaries, or otherwise provided for; and in many instances the necessary sum for their admission has been paid by the Union.

Arrangements have been made by which two of the missionaries are able to receive these women at once into their houses, until a suitable home can be provided for them.

About 25,000 tracts and handbills have been distributed in the parks and streets, as well as in the houses of bad character, in which the missionaries have gained admission at considerable personal risk and self-sacrifice, but generally without much opposition.

Hospitals have been visited in the hope of permanently benefiting those who were compelled by illness to leave for a time their evil course of life.

An earnest APPEAL is now made for donations and subscriptions, in order that the Union may continue this most important work.

The following Gentlemen, members of the Female Mission Committee, will be happy to receive contributions:—
Robert Hanbury, Esq., M.P., 10, Upper Grosvenor St., W.
William Gaussen, Esq., 12, Montague Place, W. C.
William James Maxwell, Esq., 9, Wimpole Street, W.
John La Touche, Esq., 24, Norfolk Street, Park Lane, W.
George Moore, Esq., 15, Kensington Palace Gardens, W.
A. D. Chapman, Esq., 2, Hyde Park Square, W.
Or they may be paid to the Female Mission Fund; with Messrs. Smith, Payne, and Co., 1, Lombard Street, E.C.; or Messrs. Ransom, Bouverie, and Co., 1, Pall Mall East, S.W.

CHARLES GWILLIM, *Secretary*.
Offices of the Union, 118, Pall Mall, S.W.

FOR BEST TEAS AND COFFEES
GO TO EDMONDS',
93, TOTTENHAM COURT ROAD.

ALLEN'S PATENT PORTMANTEAUS, AND TRAVELLING BAGS, WITH SQUARE OPENING; Ladies' Dress Trunks, Dressing Bags, with Silver Fittings; Despatch Boxes, Writing and Dressing Cases, and 500 other articles for Home or Continental Travelling, Illustrated in their new Catalogue for 1859. By post for two stamps.

J. W. ALLEN, Manufacturer of Officers' Barrack Furniture, and Military Outfitters (see separate catalogue), 18 and 22, Strand

BROWN & POLSON'S
PATENT CORN FLOUR.

The *Lancet* states: "This is superior to anything of the kind known."

IT is respectfully announced that to any application by letter, BROWN and POLSON forward the address (for any village or town in the Three Kingdoms,) of Grocers, Chemists, &c., who supply their Corn Flour at the usual price. Where any similar article is substituted or forced into sale upon pretence of being "the same thing," or "as good as BROWN and POLSON'S," if the name, address and designation are kindly communicated such confidence will be greatly appreciated.

BROWN & POLSON,
Manufacturers to Her Majesty the Queen: Paisley, and 23, Ironmonger Lane, London.

WANTED, in a certified Reformatory for Sixty Boys, a SCHOOL-MASTER, to give instruction in School hours, and to assist the Governor in the general conduct of the Institution. He must be a trained and experienced master, and one who will enter upon his work in a zealous, laborious, and earnestly Christian spirit. Apply, giving references, and stating terms asked, to M. S. R., Reformatory and Refuge Union, 118, Pall Mall, London, S.W.

HOLLOWAY'S OINTMENT AND PILLS.—ULCERS, WOUNDS, SPRAINS.—Bad legs, old wounds, and sprains, whether recent or chronic, yield with surprising celerity to the cooling, healing, and curative properties of this invaluable Ointment. It may be relied upon in all such cases as have baffled the skill of our best Hospital Surgeons; no matter the length of time the malady has endured the Ointment, assisted by a course of Holloway's Pills, will quietly but certainly reach the core of the complaint, and thoroughly eradicate it, without additional impediments to pleasure or business. These remedies will overcome the worst forms of disease and the foulest state of the blood: while in glandular swellings, scurvy, and all diseases of the skin, they are equally irresistible.

MUNIFICENT GIFTS.—A benevolent lady who withholds her name, has offered the National Life-boat Institution to defray the cost (amounting to 720*l.*) of four life-boats and their equipments, which the society has decided to station at Newquay and St. Ives, in Cornwall, North Dundrum Bay, in Ireland, and Buckie, on the northern coast of Scotland. Each of these places is noted for the frequency of the wrecks in its vicinity; and at some of the stations, some lamentable loss of life occurred during the heavy storms of last winter. A few years ago, the philanthropic donor witnessed a fearful shipwreck on the Irish coast. Shore boats, one after another, attempted in vain to reach the distressed ship, whose crew were lashed to the rigging. The shrieks of the poor men were indeed very pitiable; but when they saw that help from the shore had completely failed to reach them, their cries, which were distinctly heard on land, became piercing and distressing in the extreme, and were only silenced by the raging sea engulfing them in its bosom. The lady then determined that on a favourable opportunity presenting itself, she would defray the cost of several life-boats, to be stationed on various points of the coast. That opportunity has come, and she has, with no small satisfaction, given prompt effect to her decision. Hereafter her gifts will be blessed and cherished in many a home which would otherwise be bereft of a husband, father, or brother.

ROYAL NATIONAL LIFE-BOAT INSTITUTION.

On Thursday the Annual General Meeting of the friends and supporters of this Institution was held at the London Tavern; Admiral the Earl of Shrewsbury and Talbot, C.B., V.P., in the chair. The meeting was influentially and most numerously attended, and amongst others there were present—Thomas Baring, Esq., M.P., V.P., Chairman; Thomas Chapman, Esq., V.P., Deputy-Chairman; Admiral Sir Thomas Herbert, K.C.B., V.P.; Sir E. S. L. Perrott, Bart.; General Dickson; Sir James Tyler; Admiral Ryder Burton; J. R. Wilson, Esq.; Rev. J. C. Connally, Chaplain H.M. Dockyard, Woolwich; Captain Beamish, R.N.; Admiral Gordon, Trinity House; Captain W. H. Hall, R.N., C.B.; Admiral Sir George Seymour, K.C.B.; Captain Claxton, R.N.; Captain Guthrie, R.N.; Stephen Cave, Esq., M.P.; Captain the Hon. F. Maude, R.N.; Alexander Boetefeur, Esq.; R. B. Forbes, Esq., and many other gentlemen.

The noble Chairman expressed the satisfaction he felt in presiding over the annual meeting of so useful and philanthropic a society as the National Life-boat Institution. He felt assured that the more its truly important operations were known, the more they would be appreciated and encouraged. (Hear, hear.) It was satisfactory to find that the institution was receiving considerable public support, but he hoped it would still be more extensive and liberal, in order to enable the society to maintain in a state of perfect efficiency its noble fleet of life-boats, and gradually to increase their number. After having dwelt on some other points, his lordship called on

Mr. Lewis, the secretary, to read the Annual Report.

It began by stating that the total number of life-boats, including those in course of construction, belonging to the institution, amounted to one hundred and one,—a truly noble fleet, out-numbered, to be sure, by the navies of commerce and of war, but the largest life-saving fleet that the world had yet seen. The life-boats of the Royal National Life-boat Institution had, at various points of our coasts, been actively called into operation on sixty-one occasions during the past year. Two hundred and eighteen lives had been saved from thirty-nine wrecks, and five vessels had been assisted safely into port. For these valuable exertions the total sum paid to life-boats' crews was 733*l.* 18*s.* 9*d.* On these occasions, and on those of quarterly exercise, the life-boats were manned by about 4,000 persons. Nearly all the services took place in stormy weather and heavy seas, and often in the dark hour of the night. The committee lamented that the number of wrecks in the seas and on the coasts of the British Isles, and the consequent loss of life therefrom, had been unprecedentedly large during the past year; no less than 1,646 of our fellow-creatures having met a watery grave. In the case of two wrecks alone—viz., those of the *Royal Charter* and the *Pomona*—upwards of 800 persons perished in the darkness of the night, without the possibility of any assistance reaching them. It was, however, consoling to find, that the exertions which had been made during the past year to rescue life from shipwreck had been attended with great and encouraging success, as was shown by the official return of the Board of Trade: 2,332 having been thus saved. The services of a life-boat were usually only called into requisition when it would not be safe for any other kind of vessel to approach a wreck. The total number of persons saved from shipwreck since the first establishment of the National Life-boat Institution, and for rescuing whom the committee had granted honorary and pecuniary rewards, was 11,401. Language failed adequately to describe the amount of happiness which the saving of so many thousands of persons must have conferred. During the past year one gold medal, twenty silver medals, thirteen votes of thanks, inscribed on vellum, and 1,108*l.* 15*s.* 3*d.* have been granted for saving the lives of 499 persons on the coasts and outlying banks of the United Kingdom. Many of these services had been of the most gallant and noble character. The gold medal had been presented to Joseph Rogers, the Maltese seaman of the *Royal Charter*, who, with a line round him, swam through the heavy surf to the rocky shore, when that unfortunate vessel was wrecked on the Anglesey coast in October last, which line was the means of saving many persons, and which, had not the vessel broken up in so short a time, would undoubtedly have been the means of saving most of those on board. The committee acknowledged the assistance which they continued to receive from the local committees; from the Mercantile Marine Fund, through the Board of Trade; and from the commodore comptroller-general, the deputy-comptroller general, and the officers and men of the coast-guard service. The operations of the committee may be thus briefly stated:—Since the formation of the institution it has expended on life-boat establishments 36,948*l.* 5*s.* 8*d.*, and has voted 82 gold and 658 silver medals for distinguished services in saving life, besides pecuniary awards, amounting together to 12,759*l.* 15*s.* 3*d.* During the past year expenses had been incurred on either additional new life-boat stations, or the replacing of old boats, transporting-carriages, and houses, by new ones, repairs, stores, and alterations of boats, carriages, and houses, and for exercising the crews of life-boats, amounting altogether to 11,120*l.* 18*s.* 3*d.* This great and national work had, however, only been accomplished by the society incurring liabilities to the extent of a further sum of 3,834*l.* The receipts of the institution, from all sources, amounted last year to 11,652*l.* 11*s.* 6*d.* Amongst the interesting incidents connected therewith, the committee gratefully acknowledged the accompanying gifts, specially appropriated, at the request of the donors themselves, to the cost of the following life-boats: Exmouth, (Lady Rolle,) 375*l.*; Porthcawl, Portrush, (M. A. C. S.,) 380*l.*; Kingsgate, St. Andrew's, Thurso, (A. W. Jaffray, Esq.,) 560*l.*; North Berwick, (Messrs. Jaffray and Son,) 180*l.*; Lizard, (the Hon. Mrs. Agar, and T. J. Agar Robartes, Esq., M.P.,) 269*l.* 13*s.* 7*d.*; Fowey, (William Rashleigh, Esq, and the Hon. Mrs. Rashleigh,) 100*l.*; Banff, (Messrs. Macfie and Sons,) 180*l.*; 150*l.*, was also received from the Shipwrecked Mariners' Society, chiefly collected in threepences from its seamen-members in aid of life-boats. During the preceding year legacies had been left to the institution by the late Miss Church, 100*l.*; George Biggs, Esq., Strand, 100*l.*; Edwin Cuthbert, Esq., Denmark-hill, 50*l.*; and from Mrs. Ann Thompson, 100*l.* The report concluded by alluding to the fact that not only was the National Life-boat Institution now one of the most important benevolent societies in our land, but that its operations were known to all the maritime powers of the world. Some of these governments had had life-boats built under the superintendence of the institution, which had already been instrumental in saving many lives. Englishmen resident in distant parts of the globe had also often sent tokens of their approval of its philanthropic labours. The committee made their present earnest appeal on its behalf, in the full assurance that those who would extend to it their support, would not only enhance a work of benevolence and mercy, but of national importance, and would thus aid in helping onward the best interests of the cause of humanity in our country.

The report having been moved and unanimously adopted,

Mr. R. B. Forbes, chairman of the Massachusetts Shipwrecked and Humane Society, spoke of the obligations of the American sister society to the British National Life-boat Institution, for the valuable and practical information it had rendered them on various subjects. He stated that along the coasts of his states they had between sixty and seventy life-saving stations, or an average for one station for every five miles. (Hear, hear.) On looking at the wreck chart of the British Isles, he regretted to see that in some cases hundreds of miles still intervened between some of their life-boat stations. (Hear, hear.) Considering what the National Life-boat In-

Digitized by Google

stitution had already accomplished in behalf of the cause of suffering humanity, whose principles were the same in every clime, he hoped it would continue to prosper, and be enabled to pursue its course of usefulness; for amongst the many noble and benevolent institutions in England, there was none better known and appreciated abroad than its National Life-boat Institution. (Cheers.)

Various other resolutions having been subsequently passed, pledging the meeting to renewed exertions on behalf of the truly benevolent and national objects of the Institution, and the usual complimentary vote of thanks having been given to the chairman, the proceedings, which were of a very interesting character, terminated.

ISLINGTON AND NORTH LONDON SHOEBLACK BRIGADE AND REFUGE.

The second annual tea and public meeting of this institution was held on Monday last, in Myddelton Hall.

At six o'clock a very numerous and fashionable company sat down to tea, gratuitously supplied in aid of the funds by the ladies, who presided over their respective companies at the meeting.

The tables having been cleared, the tea-meeting resolved itself into a public meeting, presided over by the Right Hon. the Earl of Shaftesbury, supported by Sir S. M. Peto, Bart., Robert Hanbury, Esq., M.P., Rev. Daniel Wilson, Rev. W. Vincent, Rev. Henry Allon, Joseph Payne, Esq., Henry Spicer, Esq., &c., &c.

Prayer having been offered by the Rev. W. Vincent, the Hon. Secretary read the annual report, from which the following extracts are taken:—

"The society was established in Oct. 1857, by several gentlemen connected with ragged schools in the north of London, in order to give employment to the destitute boys commonly found in those schools, and to bring them under a course of discipline and training that would form in them habits of industry and honesty, so as to fit them for more important and permanent situations.

"The following is the result of the earnings of the boys for the year 1859:—

"Earnings, 239*l.* 18*s.*; boys' wages, 176*l.* 17*s.* 8*d.*; boys' bank, 39*l.* 12*s.* 4*d.*; retained by secretary, 23*l.* 8*s.*; showing a total of 57,576 pairs of boots cleaned.

"The above shows an increase of 29*l.* 17*s.* 9*d.* earned, or 7,173 pairs of boots cleaned more than the previous year; your committee believe that the amount would have been still larger but for the great increase in the number of opposition boys, and other difficulties they have had to contend with. They are very glad to say, that the first two months of the present year show a large increase compared with last.

"The number of boys admitted has been eighty-three.

"These have been disposed of in the following way:—nineteen have left of their own accord; five have been taken away by their parents; eleven have been dismissed; two have entered the army, one in the band; twenty-one have obtained or been placed in situations; twenty-five remain at present in the society; making a total of above 178 boys who have been more or less benefited since the establishment of the society.

"Besides these, there are several others who have been placed on trial, but from various reasons have not been regularly admitted. Some of those who have left of their own accord have since obtained situations, which are in a great degree traceable to their connection with the society.

"While the society provides the boys with honest work, it does not neglect their instruction. The boys are required to attend school on Sunday, and also on week nights as often as possible. In order to ensure regularity, each boy is furnished on Saturday evenings with a card, on which the superintendent marks his attendance at school during the previous week; thus the influence of the ragged-school teachers, who first rescued the boys from idleness and vice, is preserved.

"But your committee, feeling so strongly the importance of giving the boys every opportunity of acquiring instruction, and finding that many good boys have been hindered from obtaining situations by their imperfect knowledge, they have opened a school for two evenings in the week, at the society's office, when all the boys attend, and this additional instruction, your committee believe, will materially contribute to the advancement and progress of the boys.

"Your committee having found that many of the boys in their employ were orphans, or had been deserted by their parents, or turned out to get their own living, and were therefore compelled to sleep in low lodging-houses, and often in worse places, they determined at once to take steps to open a refuge for these boys, which would be the means of withdrawing them from the evil temptations of their uncertain homes, and would, at the same time, furnish them with more healthy and comfortable accommodation. Through the liberal response made to the appeal so generously headed by the donation of 25*l.* from the Earl of Shaftesbury, your committee are thankful to say that this important step has been taken, and their refuge is now open. Several difficulties retarded the opening of the refuge, and it was some time before a convenient house presented itself; suitable premises in Church-street have, however, now been taken, which have been thoroughly cleansed and fitted up for the purpose, and they have now provided a home for twelve friendless and homeless boys. Each boy pays one shilling a-week for his lodgings, is provided with a separate bed, and not more than three or four sleep in each room.

"Several of the boys who are without homes and parents, on leaving the society for situations, cannot, of course, be accommodated in the present refuge; but your committee will gladly supplement these efforts, by fitting up a portion of their premises as a dormitory for such boys, provided friends will furnish the necessary funds. Thus would the influence of the society be maintained at a time when, in many instances, it is most needed.

"Towards this effort—towards the fittings and support of their school—towards the enlargement of the present refuge, and for the general maintenance of the society,—your committee plead for additional assistance."

The noble Chairman then rose, amid the most enthusiastic applause, to address the meeting. Having just apologised for the absence of his friend, the Duke of Marlborough, who was so much indisposed as to be unable to be with them, his lordship said, that very little could be added to the very excellent report which had just been read. It was so full, and went into every detail so marvellously, that really any person entering the room while the hon. secretary was reading it, might well have thought that he was a minister of State, laying down some great scheme for the improvement of the country; and indeed it was such a scheme as could be well applied to the highest departments of the State. The country at large was getting more and more to see the value of the preventive system. The force and value of it had always been admitted; yet all efforts had been made in the way of remedial measures, but this and all similar institutions took their stand upon the preventive system. It gathered in the young while they were yet untainted, while their young spirits and wills were supple, and capable of being bent in the right direction. He might be answered by some, that a great deal had been done by government in granting large sums for educational purposes. He was very glad that they did so, but at the same time he would observe that the character of the education thus given, although in the abstract very good, was, in relation to society, altogether inappropriate, and in many respects dangerous. They were training those who should look forward to walk in the humbler classes of life in such a way as to fill their minds with high notions, causing them to aspire to a state of things far above their position, but to attain which the youth often resorted to means the most destructive. His lordship also alluded to young girls thus trained, who looked with contempt upon all menial offices. He did not wish to repress honest aspirations in the minds of any, but he did wish to impress upon them this simple fact; namely, that all could not rise to the highest situations, that after all there must be a large number to fill the humbler stations of life, and that men or women could never attain to a higher honour than that of doing their duty in that sphere in which God had been pleased to call them. He believed they had it in their power to a very great extent to repress, if not wholly to suppress, juvenile mendicancy. If the bill which his lordship proposed and passed through the House of Lords, but which was thrown out in the Commons, had passed into law, by this time juvenile mendicancy would have been utterly unknown in the streets of London, for if the parents or guardians of the wretched children found they could turn them to no account as mendicants, they would let them go to school. The system of that society, as propounded by the hon. secretary in the report, was an excellent one. It taught the children, under God, to rely upon their own exertions. It was in some respects a charitable one, but it had also a higher character, for it taught the boy

Digitized by Google

that industry was honourable, and helped him to maintain his position in the scale of society. He liked very much the system they adopted of reposing confidence in the lads in their employ; it was extremely beneficial to the lads themselves, and the large sums of money which the lads had in the bank proved that they had responded to the instruction given them. It begot in the lads the first principle of dignity, a sense of responsibility; it opened up to them a new career, and placed them in the path of honour and virtue. But education must accompany the industrial instruction, and thus the committee were looking, not only to the temporal, but the spiritual welfare of the boys intrusted to their care; and he believed that they thereby added to the security, the honour, and the peace of the country.

Robert Hanbury, Esq., then moved—"That the report which had been read be adopted, printed, and circulated; that the following gentlemen [names read] be the committee and officers for the year ensuing; and that this meeting views with pleasure the continued success of the operations of the society, and hails with satisfaction the opening of a refuge for those boys who were without home." He fully indorsed all that the noble chairman had stated, feeling fully assured that preventive were far better than remedial measures, and that one and all were bound to come forward and assist so noble an enterprise. He much rejoiced in being able publicly to allude to the great movement now on foot for the purpose of bringing the Gospel to bear upon the masses who were hitherto unapproachable; he believed that from it much good would result.

The Rev. Daniel Wilson, vicar of Islington, in seconding the motion, would only interpose a very few words to say how very deeply he valued the great and noble efforts being made for the poor and the wretched outcast, and how very heartily he rejoiced and responded to the sentiments which had been uttered—that they should connect social and moral improvement with special efforts made for the advancement of their eternal interests. It was impossible to fail to observe that God was stirring up the hearts and hands of Christians in an uncommon way. The lads now before them would, in all probability, have now been spending a vicious and degraded life, if it were not for this institution, where they had not simply employment, but discipline, and something to stimulate them to good behaviour and industry. And it was very pleasing to know that each day was begun with prayer, and each day closed with prayer, and he could not but hope that God, in his tender mercy and love, would turn many of their immortal souls to Himself, so that they might not only rise in the scale of society, but that hereafter they might shine as stars in the firmament of heaven.

Sir Samuel Morton Peto, M.P., supported the resolution. Being in the neighbourhood, he thought he would just call in and pay his respects, and say how very cordially he approved of the movement. He noticed with special pleasure that they had a refuge attached to their institution. It was not until he became a member of parliament that he saw the necessity for such a state of things, but when returning home from the House late at night or early in the morning, he frequently noticed poor wretched girls and lads curled up in doorways; and since then he had taken very great interest in the refuge which they had in St. Giles's, where much good had been effected.

The resolution was then put and carried unanimously, after which the boys of the brigade sang, "Hark, 'tis the bells of the village church."

The Rev. Henry Allon, of Union Chapel, Islington, moved the second resolution:—"That this society, which affords employment, shelter, and education to poor and destitute boys, deserves the support and sympathy of the public at large; and that this meeting pledges itself to use every effort to enable the committee to carry on and increase their operations." The rev. gentleman took shame to himself that he had not hitherto interested himself in the cause of ragged schools. He was invited to attend, and finding that the Earl of Shaftesbury was to preside, he felt that it must be a good thing; in fact, he did not know anything good with which his lordship's name was not connected. He then referred to his lordship's eloquent address in the House of Lords on the preaching in theatres. He had very little faith in great and ostentatious schemes—but he had much in little ones which were quiet, unostentatious, and accompanied with spiritual influence, for unless they appealed to the spiritual feelings of these outcasts they would do but little to raise them from their fallen condition. It was a great thing in favour of the institution in behalf of which they were assembled, that it was not purely eleemosynary, but that it helped the boys to help themselves.

The noble chairman then called upon "The deputy assistant judge of the Middlesex Sessions, better known as 'Chief Justice Payne,'" to second the motion, which he did in his usual humorous and poetic style, concluding with his 1423rd tailpiece, amid thunders of applause.

A vote of thanks to the chairman, moved by Henry Spicer, Esq., and seconded by Josiah Wilson, Esq., was carried unanimously; and the meeting concluded with the Benediction.

Reformatory and Refuge Union.—We regret to state that Mr. Charles Gwillim has been obliged by illness to resign the secretaryship of this society. The committee have appointed Mr. A. O. Charles to supply his place.

Mrs. Jameson.—There can be few of us but must have felt, in hearing of Mrs. Jameson's death, that they have lost a friend, if not personally and privately—and their number must be very great—yet sympathetically and publicly. Each among us who values what she valued, and labours where she laboured, must feel that there is one gone from among us whom we could ill spare, for herself as much as for the talents she ever used to help and defend the weak and ignorant.

Notices to Correspondents.

The Editor requests that any circumstances connected with Charitable Institutions, which it may be thought advisable to bring before the public, may be communicated to him at 337, Strand, on or before the 14th of each month.

NOTICE.

It is requested that Reports of Meetings, Pamphlets, Reviews, or other matter communicated for the benefit or notice of "The Philanthropist" may be forwarded, if possible, to the Editor, on or before the 14th of the month, that they may have the attention to be desired.

Notice.—Subscribers of £1 1s. and upwards to the Reformatory and Refuge Union, 118, Pall Mall, will be supplied on application with "The Philanthropist," a Monthly Journal of Social Economy.

TRAINING OF PAUPER GIRLS.

We had the opportunity a few weeks back of visiting a small institution opened and supported by the benevolent exertions of Mrs. Albert Way, at Brockham, in the neighbourhood of Reigate, for the industrial training of pauper girls. The establishment is an industrial school of a very simple and unpretending description—the premises consisting only of a neat cottage and out-buildings, standing in about half an acre of garden ground, cheaply furnished for twenty girls. The staff comprised a matron, who superintended the domestic management, clothing, and needlework, and a laundress who taught the girls to wash and iron; a schoolmistress of the neighbouring national schools attending daily to give them such plain instruction in reading, writing, and ciphering as would make them more useful in their future situations. The air of the whole was that of a well-regulated *home*. The industrial training was evidently real and practical, such as would be likely to make the girls

Digitized by Google

subjected to it really acceptable as servants in a farmer's or tradesman's family. We could not help wishing that the girls in our National and British Schools had more of the same description of instruction, and that more pains were taken to prepare them for that industrial life in which they must earn their livelihood, and for that domestic life which most of them may certainly look forward to at a later period; that more could be done to engraft in them the habit of labour, and to give them more of the skill and experience which would make their labour profitable.

It might be that the greater attention given to the needlework and laundry or housework might interfere with the girls' progress in grammar and geography, but we own ourselves of that old-fashioned class who think a servant and a wife *untrained*, or *ill-trained*, if they can distinguish the indicative from the subjunctive mood, and cannot be trusted to clean a room; or can delineate the map of Africa, and cannot cut out or make up a shirt. The girls in this Brockham School will know their business in the things of daily life, and yet will have their intelligence and memory and general faculties fairly roused and exercised, so as to use them for their own improvement, and hereafter for the elementary instruction of their children.

But the class of children we found this school intended for, naturally raised a painful question. Why should institutions, founded by private charity, and carried on by individual sacrifices, be requisite when we boast of so improved a poor-law—when so many hundred thousands have been spent on model workhouses, and are spent yearly in maintaining and training the pauper child? We anxiously discussed this question with the lady to whom the school owes its origin, and found that she was induced to enter on the work she has undertaken by her own painful experience of the sort of training which the pauper girls in most of our unions experience—a training to indolence rather than industry, and to slatterulv neglect rather than neatness, order, and punctuality. Even where a' schoolmistress is kept, and some efforts made to teach the girls to use their needle as well as to read and write, very few girls are ever taught, or have the opportunity to practise, household work, or to be of the least practical service in a kitchen.

The case might be expected to be far better in the large district schools, whose establishment some years ago was so great a subject of congratulation, and seemed to mark so great an improvement in our plans for *Pauper Training*. But unfortunately the size of these establishments, and the completeness of their arrangements, have stood in the way of any efficient industrial training, though they have secured a far better amount of moral and mental education. When three or four hundred girls are massed together in the same school, and water, heat, light, &c., are all supplied by mechanical apparatus, there is no chance for any but a few individual girls to be set practically to clean a room, or light a fire, or clean a candlestick, or even boil a kettle. Everything is done for them,—the food cooked by steam, the clothes washed by steam,—machines for wringing out the wet, heated closet for drying. All these arrangements—conducive as they may be to the order and economy of the establishment—are destructive of any industrial teaching and practice for the girls who are reared in it. They are necessarily useless and untaught for the places which they are to undertake. Nor is this all. In the rare cases where such girls fall into the hands of kindly and considerate mistresses, their deficiencies are gradually supplied, and their faults corrected, and the girl eventually turns out well; but far more commonly the mistresses they are engaged by are of a different stamp—little fitted to teach, and still less likely to have the patience and forbearance to teach effectually. The girl is continually scolded, and often punished for her incapacity and ignorance. Her temper and better habits lost and injured, her inefficiency and experience in even the common things of household work force her down to the position of the mere drudge of all work, or of any work; and passing from one such place to another, she finds in hundreds of cases the end of her career in the streets, and adds vice and misery to helplessness and idleness.

The words of the matron of a large metropolitan workhouse open a deeply painful subject, when, in answer to Mrs. Way's inquiry if they had many orphan girls, she answered, "Oh yes, everybody wants the orphan girls; they have no parents to complain or interfere!"

We trust that the efforts made at Brockham may have many imitators. The simple and inexpensive system it is carried on upon may well recommend it for a practical pattern. We hope it may succeed in rousing the attention of the guardians of our town and country unions to the importance of making the training of our pauper schools more individual, and especially the industrial training more effective. We hope still more that the attention of society at large may be awakened to the general treatment of the pauper class of children, and that the parish authorities who are answerable for their care and protection, will be compelled to look on them as something more than mere parish property—little serfs or slaves who, as they have been lodged and boarded at the expense of the rates, are the lawful property of the ratepayer; that they will be required to give account of the manner in which they have placed them out, and of the oversight they have maintained to ensure their proper usage, and keep them from vice.

THE OPERATIVE BLEACHERS' SHORT TIME BILL.

It is pleasanter to record success than to urge precautions against failure. The second reading of Mr. Crook's bill has had an unlooked-for majority, and Mr. Hopley's indefatigable efforts for the cause have not been in vain. But while we congratulate ourselves on the favourable issue of the late debate, we must remember it is only "so far, so well;" the bill is not yet law, and the interests and opinions of an influential class are opposed to its becoming so. Nothing but a steadily urged majority in public opinion can ensure it an ultimate majority in Parliament.

REMUNERATIVE LABOUR IN PRISONS.

By Ernest Noel, Esq.

The burdens of taxation, and the means by which the growing expenditure of the country may be met, are subjects which are being constantly brought before the public. The object of the present paper is to consider the possibility of relieving the tax-payers of this country, by reducing the expenditure of public money in the support of prisons, adding to the general wealth of the State, and diminishing the number of unprofitable and non-producing members of the community.

All will agree that an able-bodied man who is kept in idleness, or employed on unremunerative work, is a burden to those who support him. It requires no elaborate argument to show that a man who consumes so many pounds of food per day, and produces nothing in return, is by so much a loss to the State. In the year 1858 there were over 18,000 persons who were sentenced to imprisonment; of these considerably more than one-half were capable of being employed in profitable labour.

By employing prisoners in various trades, it becomes possible to make the prison almost, if not altogether, self-supporting, thereby relieving the ratepayers of a heavy burden; the general wealth of the country

Digitized by Google

is increased; the trade of the town in which the prison is situate is augmented; and (where the sentence is for a longer period than one year) habits of industry are formed by the prisoners; a better opportunity is given them of honestly supporting themselves on leaving the gaol, by teaching them a trade, and enabling them to earn some small sum during the term of their imprisonment, to maintain them, on the expiration of their sentence, whilst they are seeking regular employment. That these statements are not chimerical, that they are practical truths, and not only a beautiful theory, I think may be proved by the results already obtained in the various prisons where the system has been tried.

The county gaol at Wakefield, a prison of which the West Riding of Yorkshire may justly be proud, has already most satisfactorily tested the question of remunerative labour in prisons. The gross cost of the prison for the last six years has been £78,511 2*s.* 7*d.*, the profit derived from prison labour in the same six years has amounted to no less a sum than £32,084 2*s.* 1*d.* Half of this sum was expended on *buildings* and machinery, leaving a balance of about £16,000, which has been saved from the pockets of the ratepayers, no inconsiderable item in a country so burdened with taxation. The average number of prisoners has been 685, and instead of costing the country about eighteen pounds (£18) per prisoner, as they would have done under the old system, the net expenditure for each was reduced to £11 5*s.* 11*d.* This admirably-managed prison has so far successfully proved the advantage of remunerative prison labour as to encourage at least the trial of a fuller development of the system, by which the prisoners might be made to bear a still larger share of the expense their crimes entail on the community. Prisons are places of punishment, and their main object should be the restraining of evil-doers. Every spiritual advantage should be given to their inmates, but this need not interfere with a full working system; and a criminal should know that he will be required to work harder in prison than without its walls, and no amount of work can be fairly considered a hardship that does not interfere with the prisoner's health.

It would be well for this country if all its prisons were conducted on the same system as that at Wakefield, where we may confidently expect that one-half the expense will be earned by the prisoners; but as the thorough labour system has yet in most places to be commenced, it would not be a profitless speculation to consider if it were not possible to improve on that plan which is so successfully carried out in the prison of the West Riding. With this in view, let us examine into the results which have been obtained by the working of a rather different system in the prison at Albany, New York State.

Nine hundred and ninety (990) prisoners were sent to this prison in the year 1855-56. Considerably more than half were sentenced for a term of less than three months (it need hardly be stated the shorter the sentence the more difficult to make the labour profitable). The total expenditure for the year was 15,168 dollars, of which the items were—

	dollars.
Improvements and repairs	372
Furniture	231
Clothing and bedding	1.042
Provisions	7,122
General expense account	6,401
	15,168

To meet this expenditure, no tax or rate was levied, it was not required to ask one farthing from the public, excepting a small sum from *other* counties, who availed themselves of this prison for their criminals.

The income was derived from the following sources:—

	dollars.
Wood workshop	618
Slating do.	4,161
Hardware do.	4,049
Smith's shop	2,637
Female department	2,176
Received from visitors, and fines	526
Board account	4,179
Total income	18,346
Expenditure	15,168
Profit to the town	3,178

Thus it will appear (excluding from consideration all moral results, and the good which this system is calculated to effect amongst the prisoners) that the town of Albany has not been taxed one farthing for the correction of its criminal population, but that it is a gainer of over three thousand (3,000) dollars by the labour of men who otherwise would have lain in gaol, entirely at the public cost, without the means or capacity of earning anything towards their support. I went through this prison with great care. The prisoners are generally healthy, more so than in most other prisons in that county. They were all busily employed—no conversation was allowed in the workroom, and by not overcrowding there was found no great material difficulty in enenforcing this regulation. They rose between four and five in the morning; eleven hours per day were allotted for labour. The meals were taken in their separate sleeping cells. As the object of this paper is rather to recommend the principle than describe the working of the system, I shall not detain the section by entering into details, which, however, are worthy the attentive consideration of all who are interested in prison discipline, or anxious to benefit the criminals, who, in a short time, are absorbed again into the labouring population.

It may be thought by some that the prison at Albany may have peculiar favouring circumstances, rendering the system successful there, whilst inapplicable to other places. This may be possible; at the same time I think an impartial investigation will show that the mechanical power of a prisoner, when properly employed, is sufficient in value to pay for his maintenance, as much in England as in America.

The prison at Albany is no solitary and exceptional case. The State prison of Massachusetts is conducted on nearly similar principles. Mr. Haynes, the warder, a man of great intelligence and worth, told me that they had but little doubt that in a short time, when all their arrangements were complete, the prison would be entirely self-supporting.

At present the accounts show the advantages of the system. The total expenditure was 48,417 dollars. The income derived from the labour of the prisoners was 32,860 dollars, or nearly three-fourths the expenditure.

The main objection, I believe, that has been urged against the system is, the plea that it deprives honest men of a livelihood, and produces discontent amongst the trading classes.

I think, however, that this and similar arguments will not bear the test of a careful and impartial inquiry. The "contract system," the one proposed, and that which is at work both in the prisons in Albany and Boston, is simple in its working, and at the same time meets most of the objections which have hitherto been proposed.

The labour of the convicts is contracted for by tradesmen, and is open to the competition of all, who both supply the raw material, and the machinery requisite, and dispose of the goods when manufactured. By this plan the *prison* does not engage in trade, and therefore cannot be said to compete unfairly with the ordinary tradesman. It benefits the town where the prison is located, by increasing its general trade, at the same time relieves the taxpayer of a useless and heavy burden.

By establishing trades in the prison

Digitized by Google

which are not common in the particular district where the prison is situate, you are not likely to disturb the feelings of the ignorant, and you thus remove this supposed cause of complaint.

There may, doubtless, be some practical difficulties in working this system in England which do not exist in America; but it appears to me at least to merit the serious consideration of those who have the management of our gaols, and to be worthy the attention of those reformers who are attempting to diminish the increasing burdens of the country.

STATISTICS OF THE EXTENT OF CRIME IN ENGLAND AND WALES.

(FROM A CORRESPONDENT OF THE "ECONOMIST.")

THE more important statistics of the extent of crime in England and Wales, when estimated for a single year, have now been placed before the reader. These statistics include most details of the positive amount of criminality, and many details of the proportionate extent. The returns furnished by the police establishment have been arranged so as to indicate the actual numbers of the criminal class, independent of all considerations of locality, population, or employment. The same results have also been calculated with reference to these conditions: and the aspect of crime has been viewed, positively, as existent in certain defined districts; proportionately, in relation to the numbers of the inhabitants; and with reference to any prevailing characteristic of the population, in its different phases, of town and country life, of mercantile, maritime, agricultural, or commercial occupations. These statistics have been produced, more or less fully, for the whole of England, for the urban and rural police districts, for certain agricultural counties, and for several of the larger and more important centres of industrial employment. And to such returns—calculated as they have been, in most instances, without any distinction of sex, age, or antecedents—have been added the most minute details of the characters of the recognised criminal population, statements of the proportion of adult to juvenile delinquents, and tabulated divisions of males from females.

Such details having been stated, the chief object of the present series of letters has been attained. The object proposed, was to place upon record, in a form in which it might be read, and in a position in which it must be seen, the alarming disclosures which the recently published volume of Judicial Statistics, for the first time, bring to light. The mass of information which that portly Blue-book has produced, has, in these letters, been condensed within such limits, which those interested in the subject will, perhaps, consider to be readable; and this summary has been published under circumstances which ensure, at the least, a wide circulation. Hence the more important object with which these criminal returns have been compiled, has been fully realised; and those whose duty and profession it is, either to regulate the conduct of that class which is now proved to exist, or to propose measures for such regulation, are, or may be made, aware of the actual condition of that fearful social malady with which they have to deal. The subscription to these letters, then, has been, up to the present point, literally adhered to—an inquiry has alone been instituted upon the extent of crime in England and Wales. Neither, in effect, will the spirit of the signature be ignored in what remains to be said. The least important portion of the subject has now, in conclusion, to be discussed; and this part will assume—with much diffidence, as dealing with an extremely difficult, though a highly momentous, subject—the form of an inquiry, as to what means we possess for the supervision of the criminal class in this country, and what means we might employ.

The agents and instruments for the diminution of crime in England, if to the public acts of legislature be added the influence of private energy, probably exceed in extent, if not in efficiency, the appliances for similar purposes possessed by any other civilised country. In addition to the untiring efforts of private individuals, of associated societies, and of bodies which are public to all but a national extent, the kingdom in general, by means of both its legislative and executive departments, has of late years devoted itself to the question of the regulation of the criminal population to an unprecedented extent. Neither have these efforts been confined to any section of crime, to any age, or to either sex, of our "dangerous classes." Education, with an unsparing, if not always with a judicious hand, has been forced upon every portion of society:—and this method of reducing crime has taken almost every conceivable shape of day schools and night schools; ragged, reformatory, and industrial schools; evening classes, lectures, reading rooms, and mechanics' institutes. Homes and model lodging-houses have been established to help persons, by various inducements, to keep free from crime: and refuges, penitentiaries, and prisoners' aid societies, to assist them to return to an honest course of conduct when they have fallen into wickedness. Our prison system has been changed—and not only altered, but improved—step by step, until, *as far as it goes*, the English system of convict management leaves little to be desired. The crying evils and abuses of transportation have been abolished; the hulk abomination has become a matter of history; the iniquities in our home depots have ceased; and the more rational treatment of convicts, are responsible beings and Christian men, with the needful adjuncts of separate confinement, associated labour, and the general organisation of a model prison, conducted on scientific principles, has eventually triumphed. Nor is this all. The subject of crime, in many of its varied aspects, has over, and over, and over again, attracted the attention of Parliament. Acts have been passed, and have been repealed. Committees of both Houses have sat, examined, consulted, and issued reports. The executive has been warned, advised, and has become the subject of memoranda issued from the highest quarters. The penal code has been amended, and the consequent condition of the liberation of prisoners has been changed, and both have been altered without being improved. And, lastly, there has been lately established, throughout the country, a constabulary force—and one which, even in its infancy, has proved itself to be something more decidedly beneficial than a hopeful organisation.

Such are, in brief, a few of the means and appliances in our possession for the suppression and regulation of our criminal classes. And how have we employed them? Let the reply of one who has thought much and deeply upon the subject, when requested to state the more important measures of criminal legislation which had been adopted to meet our anomalous position consequent upon a cessation of transportation, be a sufficient answer. More meat, he said, had been issued to the prisoners, beer was supplied to them, and their allowance of suet pudding had been increased.* And this, in truth, is almost the limit of our positive arrangements to counteract the results which arose when the country ceased to possess a colonial outlet for its penal population. For our criminal policy—if that can be called policy, which owes its existence less to principle than to accident—has, of late years, been characterised by indecision and vacillation. To a great extent, it has been founded in expediency; and, instead of progressing with further light and enlarged experience, it has, in some respects, positively retrograded. It is true that select committees have reported on the evidence of men best fitted to give advice; but such reports have systematically, and on points of no small importance, been ignored. It is true that all competent authorities unite in declaring that short sentences are the bane of society, and the moral destruction of the criminal; yet lengthened sentences are very greatly in the minority in the official returns of both. Recent legislation has certainly ensured a diminution in the cost of prosecutions; but the practical working of the "Criminal Justice Act" is to diminish the expense of judicial proceedings by the increased number of committals; and its results, every year more and more apparent, are to offer a premium to the culprit, by pleading guilty, to ensure a speedy return to his professional employment. A ticket of license system has been established; has been reported favourably upon by the official to whom was intrusted its practical working; has been openly and notoriously abused, by those whose duty it was to enforce it; and has eventually, and in practice, been discontinued by the same authority which gave it birth. And this system, admirable in its conception, has been rendered useless by a deliberate renunciation of the essence of its principles, and has been intermitted, not only without just reason, but against all sound argument. Lastly, our recently established police force bids fair to stultify

* Against this alteration, the late Rev. J. Clay, Chaplain of Preston gaol, and no mean authority on a question of prison management, raised an emphatic protest.

Digitized by Google

its office. Instituted amidst considerable opposition, it seems destined to have been established only to become a costly burden and a cumbrous hindrance. Great efficiency can alone redeem, from the charge of extravagance, so expensive an institution; and an annual outlay of nearly one million and a half does not compensate for services which are so scanty, but which might become of so much value.

Let us examine this matter a little more closely. It is fully and freely admitted that the police have performed the duties intrusted to them in a manner, not only creditable to themselves, but in one which left little to be desired. It is entirely owing to this force that we now possess the valuable information upon our criminal population of which we are assured. We have had mapped out for us a sketch of that portion of the community which makes antagonism to the laws its vocation. The boundaries and limits of the criminal area have, it is true, only been dotted out. We know not its extreme dimensions, and we cannot say on what side the neutral ground is most invaded. Beyond the assurance that we are inflicted with a criminal class of enormous proportions, we can definitely state below what figure the estimate does not fall. But if our information of the maximum of crime is incomplete, the details of the minimum are full, almost to complexity. The foregoing statistics bear out this assertion, and present the minutiæ of crime under a large variety of combinations. All this labour was effected by the police establishment; and no one who considers the subject will assert that such labour was insignificant. But when the police have done this—as far as they act as preventative agents to crime—they have done all. They may, and it forms a part of their duty to, apprehend those who, on any particular occasion, are pointed out to them as positive law-breakers. But previous to any such overtact, on the part even of acknowledged and professional delinquents, the police are utterly powerless for good or evil. They are surrounded by an atmosphere of crime to the frightful extent of 135,000 persons who avowedly make criminality a calling. Every member of this pitiable class is individually known to the police of the district he inhabits. They can describe him minutely. They can state of what age the culprit is; what the sex; and what the antecedents. Oftentimes he is personally acquainted with the ministers of justice, and by name; and the professional criminal may be seen issuing from his quarters, and prepared for his foray against society, recognising his official guardian with a nod, half defiant and half familiar. Yet not one single step can the police take to prevent, that which it is their duty to assist to punish when committed. Although a member of the criminal class; although unable to obtain a character denominated "good;" although one who exists "without visible means of subsistence;" although known to be a "suspected person;" although an acknowledged and recognisedly "known thief," living on his ill-gotten gains, and only waiting for fresh needs to rob afresh, yet the police are entirely incapacitated to restrain the career which only fails to be detected. Thus we employ 20,000 men, and pay them annually 1,500,000*l.*—not to prevent crime being committed; not to preserve the peace; not to restrain the rapidly-increasing criminal class; not for any preventative measures whatever; but merely that they may act the part—more effectively perhaps, but still the part—of the old-fashioned country constable, and apprehend those who are specially accused of any specified offence.

It can hardly be conceived that in a nation, in the characteristics of which common sense bears so conspicuous a part, that so suicidal a policy can be allowed, for any length of time, to continue unchecked. All classes of thoughtful persons are conscious of this anomaly in our police system; and it is believed that no body of men more deplore their want of power than the police themselves. Now that we are acquainted with an approximation to the numbers of our criminal class, now that we possess a large body of intelligent men to deal with this class, it does seem little short of political madness to neglect those means of self-preservation which the nature of the case immediately suggests. At present the police establishment completely stultifies the object of its existence, which is not, primarily—and this cannot be too strongly insisted upon—to apprehend crime committed, but to prevent crime prospective. As far as the means within our reach enable us to effect this end, it can be done in but one single manner—by breaking up, and by dispersing the avowedly professional class of habitual offenders, which subsists only by preying upon society. No other plan possesses the slightest chance of permanent success. Industrial education may teach. Religion may train. Refuges may receive. Penitentiaries may reform. Pains and penalties may deter. A police force may capture, and the gaols may incarcerate, and for a time suspend the operations of, individual depredators—but all in vain. Neither prisons, nor police, nor punishments, nor penitentiaries, nor refuges, nor education—and religion is out of the question in such cases—will at all avail, so long as there exists, contemporaneous with a population which respects the laws, a class of society which, with all the *nonchalance* of professional right, systematically and openly sets all laws, human and divine, at defiance.

This, then, is the point to which it was desired to bring the argument, which rests upon the truth of the assertion, that the only practicable way of reducing the extent of crime in England and Wales is to break up and forcibly to disperse its criminal class. And how may this be effected? The conclusion of this letter will be devoted to the consideration of a plan—or rather of its outline—which can hardly fail to accomplish this desirable end, and which possesses this antecedent quality in its favour, that it merely employs measures which already exist, and means which are absolutely ready for immediate use.

Before, however, this plan is submitted for consideration, a glance at matters as they now arrange themselves will tend to obviate certain objections. Our present position, with regard to the criminal classes at large, is strictly one of non-intervention. It cannot be too often repeated, or too widely known, that from the month of January in the present year, convict prisoners have been, and are being, discharged from the government gaols, at periods more or less short of their original sentence, without the slightest supervision affecting them. This course has been taken in consequence of the circulation of a Home-office memoranda, based upon the Penal Servitude Act of 1857. In the words of this circular, "It is not intended generally to exercise" the power of supervision "in the case of the remission of a portion of the sentence," &c. And the practical working of the measure will be, that by the close of the year, should such calamitous policy be allowed to continue in action, several hundreds of all classes of convicts will have returned to the ranks of their former associates, relieved of a considerable portion of their original sentence, if fortified only by that least reliable of all safeguards, a good prison character. As time goes on the entire present population of the gaols will be emptied upon society; and reprieved murderers, men guilty of homicide, forgers, felons, burglars, highwaymen, thieves, and all the less important, but not less mischievous, members of the criminal class will be once more at large; and unchecked, even by the appearance of supervision, will be at liberty to recommence their lawless life of depredation. Such a state of things—unrelieved by the filtering process of transportation—must inevitably, and sooner or later, produce a very serious social upheaving in this country. It is impossible it can be otherwise. Under such encouragements, crime must continue to—and perhaps more speedily than at present, will rapidly—increase. What else can be anticipated? Under the present *regime*, a criminal has only to conduct himself discreetly whilst in confinement to obtain a remission of his sentence of portions varying from one-sixth to one-third of the whole term. Not unfrequently the worst, and the most hardened of their class possess sufficient self-control to earn the best prison character. Nothing can, in this case, prevent their mixing again with their fellows at the shortest possible period allowed by law; nor their being considered, in all respects, innocent and harmless members of society. Although sentenced to seven, ten, or fifteen years' penal servitude, the felon will be detained under the grasp of the law but five years and three months, seven years and six months, or ten years, respectively, and will then be unconditionally discharged. For the remaining five years, two and a half years, and one and three-quarter years, the criminal is left to his own devices. Notwithstanding that he is sentenced for far longer periods, from the date of his discharge, no one is responsible for him. With a clean bill of health from the gaol authorities, he cannot be detained the full term of his original sentence—and hence the convict establishment is not responsible for him. As discharged from gaol, and with no warrant issued against him, although associating with known thieves and depredators, he is a free man—and the police force is not responsible

Digitized by Google

for him. Neither, again, is society responsible for the outcast, even if desirous to amend; the fact of having been a convict earns for him, rightly or wrongly, the hated title of "ticket-of-leave" man: and the fact of his bearing the designation of "ticket-of-leave" insures his rejection from that class which dubs itself respectable. Thus the present enlightened system periodically empties our goals of their most hardened inmates, provides not the slightest check upon them when liberated, expects them to be innocuously absorbed amongst a population which already reeks of crime, and then is astonished that 135,000 members of the criminal class at large exist, and wonders why crime in England and Wales does not decrease.

Even at the risk of entrenching on the space left for the discussion of the system which does not yet obtain in England, it has been thought advisable to point out, in colours very far from being exaggerated, the crying evils of the system which now disgraces our criminal jurisprudence. From what has been said, it will probably be obvious that, in the opinion of the writer, one great means of breaking up the criminal class is the adoption of that system of convict management in which the terms "conditional liberation" and the "registration of criminals" are household words. In most of the civilised countries of Europe this system prevails with much advantage. But we need not look for examples beyond the limits of the empire. In Ireland* "conditional liberation" has now stood the test of years, with the most unhoped-for and complete success. Under the provisions of this system prisoners discharged before the termination of their original sentence are placed under the supervision and protection—for it becomes a protection—of the police until the expiration of such sentence. The slightest irregularity—far short of an actual offence—ensures re-incarceration; whilst real endeavours after an honest livelihood produces corresponding support. If to the Irish system, with its "Intermediate Establishment" before release, and its "Criminal Registration" after, practical effect were given to the resolutions of the Committee of the House of Commons of 1856; and if to this were added such an amendment of our criminal code, whereby short sentences for habitual offenders ceased, and a repeated misdemeanour on the part of a liberated convict were visited with a term of imprisonment of not less than five or seven years' duration, it is morally impossible that, with our present prison management, and our recently appointed police establishment, the criminal class could fail to be broken up, and the extent of crime in England and Wales could fail to be sensibly diminished.

STATISTICS OF THE COST OF CRIME IN ENGLAND AND WALES.

THE question which the present letter—the last of its series—proposes to consider, resolves into the following form:—How may we reasonably hope to diminish the large and increasing cost of crime in England and Wales? We have seen that the public expenditure on the criminal classes amounts to 2½ millions annually; that the estimated private losses, from individual depredators, amount to 13½ millions; and that the calculated expenses of some details, and the civil service estimates of others, prove that, upon the whole, the cost of crime is very largely in excess of the outlay ten years ago, and shows a determined and steady augmentation year by year;—it only remains, then, to inquire what means and appliances we possess, to check this annual increase, and to permanently diminish the total expenditure upon that class of society which preys upon its neighbours.

Before, however, proceeding to the consideration of any method for the reduction of the cost of crime, it seems needful to premise that the following lines are indicative of no sort of desire to see any necessary expenditure intermitted or foregone, which would tend, either to the legitimate defence of society, or to the permanent well-being of the criminal. It is conceived that that would be the most short-sighted and fatal policy, which, on the mere score of expense, would tamper with the efficiency of that establishment which, in the different phases of its many-sided character, strives to protect the mass of the community from the attacks of the minority, and the minority from outrages upon itself. The country ought to pay, and to pay cheerfully, for all criminal outgoings which competent authority pronounces to be essential—even should the expenditure be estimated on a generous and costly scale. No outlay ought to be considered reckless or extravagant which is necessary; and hence, no attempt will be made, in this place, to suggest the faintest approach to parsimony, in all things needful. At this point, however, the economic statist, on the cost of crime, may justly be allowed to stop. If he conceives that a prodigal expenditure, to obtain the right man in the right place, and to secure what is done, to be performed in the best possible manner, be not only expedient but just; he may surely venture to criticise, if things may be done in a cheaper manner than they are executed, with equal efficiency, when they not so performed,—and to utter a constitutional grumble, if more agents, and less effective ones, are employed in cases in which fewer men, with greater powers, might accomplish the end desired more thoroughly.

Now, many ways suggest themselves, whereby the cost of crime may be reduced. Speaking abstractedly, and with no reflection on existing institutions, and considering secondary causes only, it is clear that, if our whole system of criminal management were more perfect, fewer liberated prisoners would return to a lawless career; and hence, the ranks of the class would be gradually thinned, and the cost of crime would be materially decreased. Again, if our police establishment was more extended, if its system was more organised, and if its influence was more felt at all the extremities of our complicated social system—crime would certainly be checked, and its expense lessened. Once more, if any means could be devised whereby that large class of society, which openly makes criminality a profession, and the numbers and characteristics of which are now individually known to the police, could be completely broken up and effectually dispersed—this would assuredly, and in the most speedy manner, reduce, at once, the amount of crime, and diminish its expense. To secure the same desirable end by one, both, or all of the above-named means, would be, to a certain extent easy, by the adoption of measures which are quite beyond our reach. A minister of justice, or a chief secretary for law, police, and education, a total revision, on principles both scientific and philanthropic, of our criminal code a more perfect and more humanizing mode of dealing with our culprits within the prison-walls; a large addition of, with increased powers to, our constabulary force, to supervise our criminal population without the confines of the gaol; more strict scrutiny of modes of obtaining a livelihood, and less leniency in cases in which visible means of sustenance are not producible for the satisfaction of the agents of justice; these are but a few of the ways in which, if imagination was the creator of the measure, one who sets up for a social reformer might absolutely, and at once—at least on paper—by diminishing the extent of crime, very sensibly decrease its cost.

Those means, however, of producing the same result, are undoubtedly the most desirable, which, making the most use of instruments within reach, produce the least disturbing influences of social revolution. Hence, he who desires the most attention to his plans, will first of all consider what appliances he really does possess to produce the result proposed; and, when it is evident that they are altogether unequal to compass his design, he will then only cast about for other measures to supply the obvious deficiency. Such is the method to be adopted in the present instance. It is confidently entertained that the means already in existence are more than sufficient to reduce the cost of crime—and the result will, it is hoped, confirm such an opinion. That the expenditure on the criminal classes may be diminished to a minimum under the present regime, is not accredited, and will not be urged. When sufficient experience has been gained by the employment of the means within our grasp; and when we perceive satisfactory results from the adoption of appliances at our command, it will then be sufficiently early to apply for fresh powers, to procure fresh amendment.

It may be remembered that, in the last letter of the present series, it was stated that, in a period extending over the last five years, whilst the Civil Service Estimates disclose an increase in the expenditure of the English convict services, to the extent of nearly 60,000*l.*, the last official report of the directors of the Board of Convict Prisons in Ireland—in addition to former large reductions, and in anticipa-

Digitized by Google

tion of still further diminution—returns the sum of 12,000*l.* a year saved to the national revenue in that country. Hence, it is evident that cæteris paribus, the Irish system of convict management, to a very large extent, performs its duties in a manner far more economical than the system which obtains in England. And this result is not at all affected by the question of numbers. England has, doubtless, a larger criminal population, both at large and in prison, than Ireland, and although statistics could be produced to show that the annual discharge from the Irish establishments, have, in some years, fallen but little short of the discharge from the English convict prisons; yet the comparison employed is not a comparison of actual expenditure, but of respective loss and gain. It is proved that in a certain time the English convict depots increase their expenditure to the amount of 60,000*l.*; and that in the same time 12,000*l.* represent only a portion of the savings of the directors in Ireland—but one opinion can be formed upon the subject. The Irish system is by far the least expensive.

But expense is not the only criterion by which to judge the merits of rival systems of convict management. It were but an indifferent policy which reduced the amount or the efficiency of supervision, at the cost of augmenting the numbers of the prison population. Hence, there is still another element in the question to be considered before we can safely pronounce the Irish system to be the more truly economical; and this assumes the form of a question. What are the results of the Irish management, either in themselves, or when compared with the system which prevails in this country? It is of course beyond the limits of the present inquiry to enter into the details of this subject, either positively or by proportion. Let it be sufficient that the following statement be made, with respect to the number of convict prisoners respectively in the two countries. In England, in 1858, there were 8,500 convicts, or 300 more than there were five years ago; the numbers for the intervening years being 8,299, 8,099, and 7,857. In Ireland, on the other hand, during the same period, the numbers decreased from 3,900 to 1,808; and the numbers for the intervening years prove a gradual diminution from 3,900 to 3,462, to 2,776, and to 2,298. In addition to these details from the official report of the Irish Board, further information is gained, that coincident with so marked a decrease in the numbers of the prison population, the numbers convicted to the convict depots have been diminished, and the numbers discharged have been increased. A moment's reflection will show, even to those unfamiliar with the subject, the bearing of these figures. They prove that crime in Ireland is steadily diminishing; and that —compared with five years ago—the convict prisons are absolutely half empty, consequent upon large discharge, small committals, and necessarily few recommitments. Such is the case on the other side of the Channel, when, in England, the government establishments, with a similar comparison, present no sign of vacuity, but rather the contrary; and when, upon the last year's return, it appears that, for 1858, there was an increase in the number of offences proceeded against by indictment, to the extent of nearly 600 cases, and in the number of offences proceeded against summarily to the extent of upwards of 34,000 cases. If to these details, the further consideration be added, that, during the same period, England increased her expenditure on the convict services by 60,000*l.*, and Ireland diminished her estimates by a sum very inadequately represented by 12,000*l.* a year, it will force itself upon the conviction that the Irish system of convict management, be it what it may, at the least combines these two essential features of any system which deserves the title of successful, and that in a manner altogether antagonistic to the English system, a diminution in the amount of crime contemporaneous with a decrease in the expense.

And what is the Irish system of convict management? Even if the more prominent features of this system were unknown at home, the present would not be the occasion on which to explain them. But, in truth, no modern social improvement has ever obtained so wide a discussion amongst those interested in the scheme, or has secured so general an approval from those qualified to give an opinion, than the system, now in the fifth year of its existence, inaugurated by the present Board of Directors in Ireland. All that public discussions, meetings of philanthropic men, speeches, charges, pamphlets, reports, reviews, statements, and articles could effect, to make public any social measure, has been done to ventilate the question of the Irish prison system. Nor have these efforts been in vain. For it may be confidently asserted, that privately, the highest authorities on the subject of crime, including those who have devoted their lives to its suppression, have uniformly, and after a patient and thorough examination of its details, given their adhesion to the truth and soundness of the principles on which it is based. Whilst, publicly, there may hardly be found a member of the more thoughtful portion of the press who has not stoutly advocated its system in its columns.

Such being the case, it seems a work of supererogation to allude to the more well-known portions in the Irish system. It is possible, however, that there may be elements at work which, humanly speaking, ensure its success, which being less prominent to a public examination of the system, are, consequently, the less realised. And it is to one or two of such integral parts of the system to which attention is now desired.

The "registration of criminals" and their "conditional liberation," are features in the Irish system which, although they attract less public notice than the Irish method of classification, of individualization on which the system is based, and of intermediate establishments by which it is worked, are no secondary causes in the results attained. These terms sufficiently explain themselves. The registration of criminals upon release is a precautionary measure of the very simplest sort. A person once convicted of a crime sufficiently grave to ensure commitment to a government prison, is thus for ever marked, not to his detriment, if he become reformed, but for the protection of society should he again relapse into crime, when restored to freedom. The registration is effected by a memorandum in the official records of the convict establishments, and by a communication with the police into whose district the culprit is discharged. The results of this proceeding are obvious. A recommitment upon insufficient evidence, or upon evidence gained by accident, would be improbable—or at the least might be avoided. Hence, the haphazard manner in which the majority of our criminal cases are decided would cease; and the calamitous practical working of Acts—of which the Criminal Justice Act is a painful example—by which adjudications proceed on the question of former committals, or previous innocence, would discontinue to disgrace our criminal jurisprudence. And these measures have been taken, and these results have been secured in a country which—notwithstanding the high efficiency of its constabulary force—possesses advantages incomparably less than those we have the prospect, and are in progress of enjoying. Our new police force has been established on a scale which well nigh gave it maturity at its birth; and is increasing, both in numbers, and in efficiency, with strides which leave little to be desired. The recently published details of Judicial Statistics give us an insight into the work performed by our police. The results are not less alarming than full of encouragement—for, if we ascertain that the country swarms with a population of 135,000 members of an organised criminal class—which gives a proportion of 1 to every 137 persons in the entire kingdom—we are also assured that we possess a police force to which such a criminal population is personally known, in all the individual characteristics of the lawless profession. With an establishment thus organised, and with results thus obtained, it is morally impossible that a system of registration for our liberated convicts could fail to tend, to a certain extent, to diminish our criminal population.

To become effective, however, to diminish our criminal population, the registration of habitual offenders must be supplemented by a system of convict management which shall carry out, as well as decree, the "conditional liberation" of the released culprit. The subject of liberation upon conditions is one too large for discussion at length, in the present place. To the extent permitted by law, it has effectually played its part, with the completest success in Ireland. To its machinery, organised by the convict prison authorities, and carried out through the intervention of the police, the results before quoted, from official sources, to a very large extent, owe their origin. With a police force that finds its way into the remotest parts of the country, and whose influence is felt to the extreme ramifications of society, there can be little doubt that Ireland's success in her management of crime would soon replace England's all but hopeless failure. How very far we are from so desirable a result, legislation, which is only now coming into play, too plainly tells. From the month of January, criminals of all grades, from the hardened

Digitized by Google

and habitual offender, to the culprit for the first time detected, will be launched upon society without the slightest supervision of conditional liberation. This retrograde movement results from a Home Office memorandum issued to guide the executive in the working of the Penal Servitude Act of 1857. Its effects cannot fail to be observable on society—and that at no distant date. By degrees the 25,000 criminals who now form our gaol population will be emptied upon the country, to return, for the most part, to swell the ranks of the 135,000 from which they have been temporarily withdrawn, without the slightest effectual supervision from the police; with no other registration than accident supplies; and apart from any sort of arrangement by which such liberation becomes conditional. The consideration of this lamentable prospect for the future of our criminal policy may well fill thoughtful minds with alarm and grief:—for, although there is much on the horizon of crime—more especially in measures of private influence—to inspire gratitude and hope, there is much likewise—in our public measure—upon which we can only look with unmixed feelings of despondency and fear.

The "conditional liberation" contended for in this country, as it is practised in Ireland, simply amounts to this—it is the supervision of the criminal, at the hands of the police, for that portion of his unexpired sentence which has been remitted for good conduct in prison. Thus, if a person, sentenced to twelve years penal servitude, conforms himself to prison discipline, the law permits his detention for three-fourths only of his original sentence. Hence, he is forced to undergo nine years' imprisonment; whilst, for the three remaining years, he is comparatively a free man. Practically, under the present *régime*, he is absolutely free. But, with the provisions of the Irish system in force, although the criminal would be at liberty to do and act as he pleased, his liberty would be circumscribed in exact proportion to his inability to prove an honest and harmless mode of life. So long as he continues to avoid the just suspicion of the police—so long are the police not only not interfering with, but positively helpful to his well being. But, as soon as he shows a disposition to decline, directly he frequents the society of those known to be professional law-breakers, so soon is his liberty restricted, and he is once more reconsigned to confinement for the remainder of his original sentence. It thus appears that "conditional liberation" applies only to that portion of the original sentence of a prisoner, which, having been remitted upon previous, and in anticipation of future good conduct, remains unexpired. And it is difficult to conceive a system of convict management at once so simple and so efficacious, which so approves itself to the judgment in theory, and so completely justifies its theory by its results.

Of course, the cost of crime will materially be diminished, if, in addition to these external aids for its reduction, internal management be regulated according to more approved designs. If an equally efficient supervision can be obtained, within the prison-walls, at a less cost than heretofore, the system which supplies such inexpensive measures possesses great advantages over all others. The Intermediate Establishments, between the prisoner and the public, under the Irish system, does supply this deficiency. It has been calculated, officially, that a body of one hundred agricultural convicts, in the last stage of confinement under the Irish system, can be made to pay its expenditure without any approach to risk. This, however, is, in comparison to other features of the system, but a matter of detail. The fundamental principles which guide the Board of Directors of Convict Prisons in Ireland, are sufficiently sound to produce in this country, what they effect in their own—a diminution of the cost of crime. Amongst these principles, none are second in importance to those here alluded to, which find their practical application in the Registration of Criminals upon release, and the discretionary continuance of conditional liberation. The legal adoption of these measures, and the conscientious enforcement of their provisions, cannot fail, it is most strongly entertained, to break up the barriers which unite the criminal class; and hence, by the diminution of the extent of crime in England and Wales, to decrease its cost.

THE OBJECTS, METHODS, AND SUCCESS OF YOUNG MEN'S CHRISTIAN ASSOCIATIONS. By D. WAINWRIGHT, Secretary Young Men's Christian Association, St. George's Hall, Bradford, York.

SIXTEEN years ago there were no associations such as those concerning which we write. They were established in a singular way, to meet a peculiar necessity. The reason given for their establishment was the presumed fact that no other institution was doing the work which in the opinion of their founders was needed to be done. The late hours of London business, coupled with the existence of the immoralities such late hours originated, were the grounds on which action was first taken. A few young men deeply conscious of the depressing effects of late business hours, in leading men to throw off all restraint when once free from their labours, were led to band themselves together with the purpose of seeking, by some simple means, to check the evils which rioted before their eyes. Over restraint gave rise to recklessness; in the few brief hours of midnight relaxation much guilt was contracted; and binding as had been the bondage of the day, just as licentious became the freedom of the night. Men of all ages, old in vice, and debauched in morals, were associated with the youngest, who had to listen to their, by no means overnice, conversation, and thus insensibly became initiated into their manners and habits. Evidently enough, unless the young men took the matter into their own hands, there was little help for them. Outsiders could not get at them, neither the minister nor the moralist could bring them within the circle of better influences. Great as were the religious and otherwise philanthropic organisations existing, yet in their then existing forms they were powerless for good; they could make no breach, effect no entrance, within the sphere were all this wickedness luxuriated. The homeless vagrant was easier of access to the truth-teacher than were these young men, the slaves of business tyranny and ruinous competition. The Sabbath-day thus became the universal holiday, and was used neither as a time for spiritual advancement, innocent recreation, so called, nor physical repose, but was hailed as a welcome occasion for senseless rioting and wild excess. At first, just as the evil to be counteracted was more prominently a moral and spiritual one, just so were the efforts put forth restricted to one end, and the object set before these first workers was supremely one. Sin, not ignorance simply, was the chief foe—real, positive ill-doing in its grossest forms was the thing to be checked. It was not that men needed conscience educating, so much as they required to be urged to attend to the clear dictates of conscience. Spiritual results, therefore, in their simplest forms were sought for the first, but this could not long suffice. If the young men who were now become the special objects of this association were to be kept from the sinful pursuits of their past lawlessness, it must be done by the counteraction of other and more laudable aims. Hence, in addition to seeking the spiritual well-being of young men, the programme of objects sought became enlarged; and to promote their mental and social advancement, became likewise the work of the association. These objects can of course be severally advocated on their own ground, yet also because of their reciprocal influences, and their united effect in aiding spiritual advancement; for he would be a poor discerner of truth who did not see that whilst superstition flourishes amid ignorance, religion best progresses when its advances are coeval with those of the mind in its efforts to gain truth. Wherever there is the slightest antagonism maintained betwixt these two things, religion and knowledge both will suffer; it is by their union that prosperity comes to both. The objects then of the association, as now developed, became to make its members intelligent in their religion, and religious in their pursuit of knowledge, whilst it endeavoured to invest all its proceedings with the charm of sociality, and endeavoured to remove the isolation which had only been broken in the convivality of boon companionship, and licentious pursuits, and henceforth bring young men together on a higher platform, in a purer and more peaceful arena of mutual, bloodless, and emulative strife. Destitute of anything that could be called a home, deprived of its softening influences, it was sought to encourage a family feeling, by bringing them together to engage in work which would attract each to each other, and unite in friendliness, through the mutual worthiness of their kindred aims, as each chose his study or particular work; so that it was not so much a movement by which something could be done for young men, as a scheme by which they could be taught to do more for themselves. To bring those of the same age and station in life together, whose duties were similar, and wants alike, in order that the emulative and self-reliant spirit might be evoked, was the

Digitized by Google

great aim of the association. The wisdom of age was not despised, the guidance of others not spurned, yet essentially it was a company of young men united for personal benefit, and the good of those like them in years. Here then have we a body of men who, though engaged in educational purposes, are not schoolboys nor youths, who, being occupied in the day time, seek knowledge in their leisure hours. But they are a body of self-educators, carrying on their education beyond the time of the usual limit, directly guided and ruled in doing so by religious principle; seeking to acquire such mental discipline and habits of thought as shall influence their whole future, and help them to remain learners so long as they live. The great difficulty of the educator, who complains that his pupils remain too short a time under his hand, is thus partially remedied. The stern necessities which summon forth our energies in toil for our daily bread in early years, operate inevitably against the acquisition of such knowledge as will best fit us for working well; and it thus becomes a duty to provide the means for those who, determined to win something from the hours of necessary toil, are ready to go to school again in their manhood, when opportunity serves. As a protest against long hours of labour these associations exist, affording by their appliances the best opportunities for making good use of the time redeemed. If it be asked how do they differ from Mechanics' Institutions? there are two points which may be eliminated. They differ with respect to their express religious basis, and their social element. It is sought by them to put into visible form the idea of union, for practical and common purposes, of those Protestant evangelical bodies of Christians who hold so much in common as to open the way for mutual work. Whatever is undertaken in the way of education, is regarded as a religious duty. Intellect and religion are not divorced, but wedded; and in the harmonious blending of mental progress with religious principle, the association attains its end. Sociality is promoted by the frequent meeting of members for devotional and educational purposes; the presumption being that the religious and philanthropic nature of their union will render interchange of thought and feeling an easy thing when the opportunities are provided.

Since 1844 there have been established 107 associations in Great Britain, all linked together, and joined in confederation with the parent association. With respect to the methods adopted by these various bodies to gain the ends previously laid down, they are various, inclining sometimes to the religious, at others embracing with those other and more general plans. Here the mental, there the religious element prevails. By social addresses, public lectures, and private classes, the several ends have been sought. In London lectures to larger and smaller bodies of young men have been given on scientific, literary, and religious matters indiscriminately, whilst the classes in operation there embrace elocution, mathematics, French, German, Latin, Greek, English, and singing; and in Bradford we have Greek, mental philosophy, English history, phonographic, religious conversational, and discussion classes. The main point noticeable in these classes is that by their means young men in the ordinary pursuits of life are brought to employ their thoughts about subjects which a few years ago were thought the peculiar property of professors and professional students. The importance of this can scarcely be too highly estimated in its refining and elevating tendencies. So great is the tax made upon the energies of these men by their daily work, that unless some counteraction is brought to bear in the way of mental stimulus, the mind must become contracted, and the man will get to live as though getting on in business was the highest of all possible achievements, and that his faculties were given him for no other purpose. With respect to the best method of instruction, class teaching seems the most adapted, especially with regard to those subjects which demand the exercise of thought rather than memory. Left to themselves the stimulus which is supplied by the free social element of the class is wanting; the influence of diverse opinion is not felt, and study becomes wearisome. The open frank intercourse of the class tends to make the duty a delight. The presence of others engaged in the same work nerves to action; and in addition to the natural interest of the subject studied, there is the additional one arising out of the play of thought and the diversity of idea. Still more complete is the class when there is a text-book common to all its members. The method specially employed in some of the classes connected with the Bradford Association, is for the conductor to give, at the commencement of each period of meeting, a digest of the quantity of matter which had been read preparatory, noting the principal points, signifying agreement or difference, and amplifying wherever a point seems obscure or will bear fresh and obvious illustration. Then, after suggesting a few correlative thoughts, or hinting at certain associated difficulties, the class becomes conversational, and its members express their opinions, asking questions and receiving replies. The utmost freedom is encouraged, each being desired to give his quota of thought if possible. Thus thought is nourished, and men who would not burden their memories with definitions, verbal statements, or the exact words of authors, are by degrees led to acquaint themselves with important questions, and, in the process of becoming acquainted with the opinions of others, are led simultaneously to shape and fashion their own. With respect to the success of these associations, adopting these mingled methods, carrying on educational operations on a religious basis, and in a Christian spirit, it is all the most sanguine could desire. Fraternity advances through the methods adopted to ensure mental progress, whilst the love of knowledge is kept alive alike by its own intrinsic worthiness, as by the influence of religious zeal. There is a success which cannot be expressed in statistics, but which is seen indirectly manifesting itself everywhere in an increased general intelligence. Of such a nature is the success of Young Men's Christian Associations, occasionally showing itself markedly in special cases; oftener in a more silent way giving evidence of the diffusion of inquiring tendencies, whose results, though spread over a greater surface, are worthy and manifold. If it be possible to concentrate into a few words the results of this movement, we should affirm that they may be summed up into two generalisations sufficiently approximate, considering the present limits of our investigations, thus: It has been seen and proved that education is no worse for being freed from its baser motives, and the too exclusive secularity and low utilitarianism of its aims; while it has likewise been plainly manifest that religion is always exalted by the intelligence of its followers, and cannot but gain in proportion as free thought flourishes, and blind unreasoning credence is exchanged for the firm foundations of knowledge, and the necessary deductions of rational faiths.

Reviews.

Report of the Workhouse Visiting Society upon the Proposed Industrial Home for Young Women, and the Correspondence with the Poor Law Board. Longman, Brown, Green, Longman, and Roberts. 1860.

The correspondence published in this Report originated in an effort made by the Workhouse Visiting Society to assist the guardians of unions in the supervision and training of the "able-bodied" young women from sixteen to thirty years of age; a work for which the existing accommodations and regulations within the workhouse walls are in most unions totally inadequate. The inquiry into the condition of this class of workhouse inmates, and the proposal to amend it, has been confined to the metropolitan workhouses, but the principle at issue applies to all unions, and affects all ratepayers supporting them, though the facts may be more crying, and the need of reform more urgent, in one city or district than another.

Fully to appreciate the plan proposed by the Workhouse Visiting Society, it is necessary to realise the actual condition of these young women, and the numbers of them maintained to mutual loss by the ratepayers.

In the month of February this year there were 335 girls and women, between the ages of sixteen and thirty, in twenty-seven of the metropolitan workhouses. They were "able-bodied," that is, not incapacitated by disease of body or intellect from earning their own livelihood. Yet they are not only a burden on the public *now*, but, judging by the prison and reformatory statistics of the past, are likely to remain so, in the workhouse, the prison, or the penitentiary. Why they are "on

Digitized by Google

the parish," not accidentally, which is no disgrace to any homeless orphan girl, but repeatedly and habitually, the public may ask, and chaplains, masters, matrons answer in vain, while the ward they inhabit, and the occupation assigned to them, remain as at present.

When we consider that under the head of "able-bodied" are classed all paupers between the ages of sixteen and sixty, and that the average total number of inmates in a London workhouse is about 600, we must admit that the younger, or the weaker, or the better disposed girl or woman runs a fearful risk of "evil communication," in such a crowd of companions.

Nor is the occupation assigned to them calculated to check the freedom of this communication between all ages and characters. Oakum or hair-picking is a mechanical, monotonous employment, requiring no thought and little attention; it leaves their minds and their tongues free for gossip, and all other mischief that ungoverned tongues can do.

The more enlightened and conscientious masters of workhouses are well aware of the evil of this demoralizing congregating and low labour, and one or two have endeavoured, and successfully, to fit the reclaimable women for domestic service, by giving them such training for it as the workhouse could afford. But in an old-built or crowded union, even their power to alleviate these evils would be frustrated, for could they contrive, out of the rough labours of cleaning, washing, and cooking for a workhouse, to form some sort of industrial training for the girls, they could not separate them from their ward-mates during the greater portion of their time.

Seeing and knowing all these difficulties, the Workhouse Visiting Society formed a plan obviously advantageous to the workhouse as well as the class in question, and proposed it to six of the metropolitan Boards of Guardians. This was to open a home for the girls in a central part of London, where, under the training of a competent matron, they might learn those household arts and works which would fit them for domestic service at home or in the colonies. Reading, writing, arithmetic, and needlework were also to be taught, and the house was to be personally superintended by ladies of the Workhouse Visiting Society. In fact, the society offered to relieve the unions of the whole trouble and responsibility of the girls, with such help towards the cost of their maintenance as the Boards should choose to allow.

Five out of the six Boards readily agreed to the proposal, offering to pay for the girls in the Home what would maintain them in the workhouse, believing themselves empowered so to do. But one among these — the Strand Union — thinking it right to refer the matter to the Poor Law Board, elicited from that authority an opinion that such payment did not come under any of the heads of out-door relief at the discretion of the guardians. It is difficult to see the difference—in common sense—between boarding lunatics in asylums, children in industrial schools, or invalids in hospitals or sea-bathing establishments, and boarding these young women in a home as obviously preferable to the workhouse in their case as any of the other establishments in that of the others. But since, in law, a difference does exist, the society have determined to bring the matter before Parliament, hoping for the co-operation of the Poor-law Board as well as that of the Guardians. It is a matter that concerns all who have legal or moral power to influence it, and, short of that, all who pay poor-rates, chargeable with the maintenance of this ill-managed class for good or for evil; or as the Report more pithily expresses it, —"We *cannot* avoid the expenditure; we *can* turn it to better account."

THE *Leisure Hour* for February gives an account of the miners of Cornwall which contrasts most cheeringly with those details of crime and pauperism which it is the province of Philanthropy to consider and seek out. The whole scene around, and process of labour within and above a Cornish mine are clearly and accurately described, but it is with the miner himself that one's interest centres. His work is hard, his wages seldom averaging more than twelve or fourteen shillings a-week, yet out of this he will insure in a sick club, and put by a trifle for old age. The work, too, is described as "specially grimy and sloppy," yet the personal habits of individuals and families are undegraded by it, as the reader will judge from the passages we extract.

Doubtless, the main cause of the Cornish miner's moral superiority to his fellows in station and earnings lies in the religious element that so strongly tinges his character. But something also is due to the system of payment, which is proportioned to his labour, and makes him directly and practically conscious of the evil of idle hours. Another help is in the family union produced by all labouring together for a common fund, the wives and children of the miners being occupied in washing the ore during the hours when the men are in the mine. We lay before the reader a pleasant picture of the evening of their day:—

"The underground worker is the first to finish his day's work. One by one, as sunset is nearing, they may be observed rising up out of the several shafts, fagged, weary, and dirty, into the light of day—the remainder of their bunches of candles dangling at the skirts of their jackets; their flannel suits are sodden with the steam and reek of the mine, and they make at once for the engine-house, where they wash themselves clean in the warm water of the engine-pool, hang up their underground clothes to dry, and put on once more their decent garments. By this time the surface-workers have also finished their daily task; wives and mothers, girls and boys, have laid aside their implements of labour, and have washed their faces, and the several families are now seen reuniting, and retracing their way to their cottage homes. But the evening is yet young, and if it is summer time there are yet a few hours of light remaining, during which the miner employs himself with his boys in cultivating a small patch of land which he has enclosed from the waste, and which furnishes him with many a humble meal for his family. By the hour of curfew the worn miner is generally bound for bed; he has enough of candlelight and darkness in the mine, and (after the first flush of youth has flown) is seldom a night-watcher."

"In intellect the Cornish miner is far superior to the field labourer, or the rough miners of the north. His necessities generate a shrewdness, which grows with his years. He has to exercise his judgment in contracting for work, whether by task or by tribute, and in a sense may be called his own employer. His wages are dependent on his skill and his capability of forethought, as well as his industry, and a blunder in his contract may subject him to a long period of poverty. On the other hand, there is always the hope, or the chance at least, of good fortune occurring, and he is not without his bright visions of ease and competence, though these are very seldom realised. All this sharpens his faculties and affords them healthy exercise, and the result is evidenced in the long run by the growth of a rather superior intelligence upon common subjects. This may account in part for his susceptibility to religious impressions; for it is the densest ignorance that is most impervious to religious teachings. In reference to this subject we may record that, throughout the whole of the mining districts, the sabbath is observed and honoured in a way that affords a remarkable contrast to the practice which prevails in too many of our industrial localities. Everywhere the pitmen are seen on the Sunday, as the hour of service approaches, wending with their families towards their several places of worship. All are decently clad and scrupulously clean, and they mark by the sobriety of their demeanour their reverence for the day of sacred rest."

Correspondence.

To the Editor of the Philanthropist.

SIR,—Two girls taken from workhouses and placed in an excellent "Home," where, though partially disabled, they will be taught to earn a living, forcibly illustrate some of the well-known features of their respective trainings—the one in a large district school, the other in a workhouse school—both having been removed for a short time to the "adult wards," having passed the age of sixteen.

I went to visit them after they had been a few weeks in the "Home," and heard the following account of them from the excellent matron.

The one from the country district school brought a good character with her; she was quiet, obedient, but decidedly *dull;* she moved like a machine, did what she was told, but showed little signs of animation or intelligence. I at first mistook her for another girl, and asked her questions which must have been wholly unintelligible to her, but nevertheless she answered all with the same machine-like assent. It must not be supposed from this that she was in any way deficient; she was considered to have an average amount of sense and power; but the training, and the entire isolation from all the ordinary intercourse of the world, inevitably lead to this. One can easily understand how it is that so many of these girls become lost and bewildered when they first go out into the world and its unknown temptations.

The other girl, somewhat older, was sent with a bad character. The schoolmistress considered her unmanageable, if not worse, and we feared she would give much trouble in her new home. On the contrary, I found, to my surprise, that the matron had not a fault to find with her; she had more spirit than the other girl, had shown a frank, generous disposition; was diligent, industrious, and docile. When I saw her she was on her knees, scrubbing the floor of the schoolroom, though too lame to go to service.

Here, I thought, is another illustration of workhouse treatment; all the worst parts of the girl's character had been brought out there; her energy had been treated as insubordination, and no scope had been given for what natural powers she possessed; she was sharp enough to see much of the injustice and bad management of the place, and not unnaturally rebelled against it.

In the "Home," where individual character is studied, what good there is in her will be encouraged and brought out, and at all events she has two or three persons to *love*, which can hardly be said to be the case in any workhouse.

Both of these evils might be, at least partially, remedied by admitting voluntary aid into each description of school, though nothing can ever make the training in *workhouse* schools what it ought to be for the young. The dulness of pauper children educated in masses in large district schools might be materially lessened by the cheering influences of unpaid visitors and lady inspectors, and also by the introduction of a kindly spirit into every department of the management.

March 9. L.

LIFE-BOAT EXPENSES.*—During the year which has just closed, the National Life-boat Institution has incurred, or is about to incur, the following expenses on either additional new life-boat stations, or the replacing of old boats, transporting carriages, and boat houses, by new ones:—Berwick-on-Tweed, 149*l.* 5s. 5d.; Cullercoats, 254*l.* 10s.; Middlesborough, 110*l.* 10s. 9d.; Redcar, 148*l.* 10s.; Yarmouth, 180*l.*; Isle of Wight (two boats, Brooke and Grange), 406*l.* 19s.; Exmouth, 237*l.* 4s. 7d.; Fowey, 333*l.*; Lizard, 314*l.* 9s. 7d.; Braunton, 59*l.* 18s.; Porthcawl, 323*l.* 19s.; Carmarthen Bay, 375*l.* 9s. 6d.; Aberdovey, 146*l.* 15s. 1d.; Barmouth and Portmadoc, 409*l.* 19s. 2d.; Rhoscolyn (Anglesey), 148*l.* 0s. 1d.; Fleetwood, 174*l.* 18s. 6d.; Silloth (Cumberland), 291*l.* 19s. 6d.; Thurso, 203*l.* 19s.; Lossiemouth, 180*l.* 15s. 6d.; St. Andrew's, 261*l.*; Elie, 203*l.* 9s. 6d.; North Berwick, 203*l.* 9s. 6d.; Ayr, 259*l.* 14s. 8d.; Portrush, 203*l.* 19s.; Dundalk, 117*l.* 13s. 6d.; Carnsore, 124*l.* 10s.; Dungarvan, 130*l.* 2s. The Institution has also expended on the repairs, stores, painting, alterations, and inspection of its numerous life-boats, boat-houses, and transporting carriges, 3,476*l.* 16s. 2d., and 1,510*l.* for exercising the crews of its life-boats; making altogether a total of 10,940*l.* 8s. 9d. The National Life-boat Institution has also granted, during the same period, 1,108*l.* 15s. 3d., as rewards for saving, by its life-boats and other means, 498 persons from a large number of shipwrecks on our coasts. A most satisfactory result, and clearly showing how much has been accomplished by the well-directed efforts which the Institution has brought to bear on this humane cause. This great and national work has, however, only been accomplished by the Society incurring liabilities to the extent of 3,834*l.* With so sacred an object in view as the rescue of our fellow-creatures from an appalling death by Shipwreck, it might be supposed that the National Life-boat Institution had claims which would come home to the heart of every one in this great maritime country. Such we may hope will be the case as its operations become more generally known and appreciated, and that thus an abundant harvest, not only of popular sympathy but of general pecuniary support, will be the permanent result. The support of the public is therefore most earnestly solicited in aid of the benevolent objects of the National Life-boat Institution. We feel assured that their help was never more needed than at the present time, when, through the extraordinary exertions the Society has made within the past few years, it has now ninety-six life-boats under its management, for the maintenance of which, in a state of thorough efficiency, a large permanent annual income is absolutely needed, if its humane mission is to be perpetuated.

* Referred to in the March numbe of the *Philanthropist*, and accidentally omitted.—ED.

THE *Brighton Gazette* announces an offered premium of two guineas for a prize essay on the same subject as that written for by the working men of Bradford a short time since—viz., "Married Women at Home." As in the former case, the prize is offered by a lady, and suggested by a query in Lord Shaftesbury's address to the National Association for the Promotion of Social Science, at their meeting at Bradford.

CRIMINAL STATISTICS OF LIVERPOOL.—Mr. J. T. Danson presented to the department of Punishment and Reformation at the meeting of the National Association, at Bradford, two tabular statements supplied to him as secretary of the Liverpool Local Committee of the Association, by the Chief Constable of Liverpool, and made up from his official returns of the crime of that district, the one showing the offenders dealt with summarily, and the other the crimes committed (and the criminals apprehended) of an indictable character. The first showed a total of 34,857 persons proceeded against for the year just ended. In the year 1857-8 the corresponding number was only 29,714; and in 1856-7 it was, 34,134. Here, however, an explanation is needed. It was only in the last year that the new powers of summary conviction, recently conferred on magistrates, were brought into operation. And this greater efficiency of the law has caused an apparent increase in the face of a real decrease in the number of such offenders. For it is well known that, owing to a better and more permanent disposal of juvenile offenders during the same period, the whole number of criminals in the town falling into this class is rather diminished than increased. Turning to the other table we find the "crimes committed," and reported to the police, largely reduced in number. In 1858-9 they were 3901; in the year before, 5012; and, in the year before that, 6678. In like manner, the number of persons apprehended for such crimes has fallen, in the three years, from 3295 to 2968, and thence to 2564 in the year just closed. This, too, needs explanation. The criminals of this class, in or belonging to the borough, are, it is believed, as numerous as before; they are even, probably, as strongly disposed to criminal conduct; but there are more of them undergoing punishment than usual. Of late, a new policy has been introduced in dealing with criminals who, by repeated convictions, have displayed a settled habit of crime. They have been submitted to longer terms of imprisonment, or to terms of penal servitude varying from 5 to 14 or even 20 years. This, then, with the already mentioned extension of the summary jurisdiction of the magistrates, being taken into account, we have no reason to believe that any such considerable change has taken place in the criminal tendencies of our population as might be inferred from the mere figures.—*Transactions of the National Association for the Promotion of Social Science.*

VAGRANT CHILDREN.—It has been computed that there are between 200,000 and 300,000 vagrant children in this country, who are leading miserable lives, suffering the greatest hardships, exposed to count-

Digitized by Google

less temptations, with the almost certain prospect of eventually becoming inmates of our convict establishments. Many of these no doubt could be reached by means of Ragged Schools, Private Reformatories, and more especially, "Feeding Industrial Schools," as established first in Aberdeen, and since in Edinburgh and other cities; but, when all these means have been adopted, there will still remain a large residuum of the most degraded (especially in London, and our very large towns), who can have no possible prospect in this world but a course of misery, leading to an untimely grave. The lowest estimate would give 30,000 children of this class under ten years of age, or an addition of 3000 one annually; but as more than half do not attain the age of manhood, we may estimate the number who annually grow up in vice and crime at about 1000. For half the value that these unfortunate children in their career of vice and crime cost the honest part of the community by theft, and the consequent outlay in police, prisons, and the administration of justice, we might train these 30,000 children in virtue and happiness; and instead of annually augmenting the criminal hordes by 1000 trained recruits, we should present to the nation 3000 useful members of society, taught from their childhood habits of industry and virtue.—*Ernest Noel, Transactions of the National Association for the Promotion of Social Science.*

THE CABMEN'S CLUB.—The first annual meeting of this society was held on February 28th, at the Stafford Rooms, Edgware-road, the Earl of Shaftesbury in the chair. A considerable number of cabmen were present, but the ladies formed the preponderating element. The secretary read the report, which described the origin and design of the society, having for its object the elevation in the social scale of the cabmen, who as a class were much neglected. The Earl of Shaftesbury had accepted the office of president of the society, and the proceedings commenced under his lordship's auspices on the 28th of February, 1859. Seventy members immediately enrolled themselves. The room appropriated to their use in Bell-street contained a library of 250 volumes of a religious and moral character. A benefit society had also been established. It was also proposed to create a superannuation fund for the aged, incapacitated for labour. A registry for men unemployed was kept at the club, and through its means 150 men had obtained employment. A Bible class had been established. The Sunday evening meetings were best appreciated by the cabmen and their wives; the average attendance had been seventy-two. The committee considered the results very satisfactory. The chairman said he was glad to see so many ladies present, but he had expected to see more cabmen there; he supposed, however, that they were the cabmen's families. (Laughter.) He should have preferred that the meeting had been held in Bell-street, as there would be more interest excited if it took place on the spot. He was very happy to find that so much good had been done in the past, and that there was so much hope for the future. The report contained matters entitled to the serious attention and reflection of the cabmen, and they must not forget that a great deal depended on themselves. There was one very important fact deserving notice—that was, the statement of the Commissioners of Police that the number of forfeitures of licences for misconduct had during the past year decreased one-half. (Applause.) This showed they had risen in the social scale. He believed that they laboured under many unjust imputations, and that much of the discourtesy of manner with which they were charged might be attributed to the domineering and overbearing spirit in which they were often treated by those who employed them. With one exception, he himself had never met with discourteous treatment. Their condition, intellectually and morally, was much improved, and he hoped that, seeing the progress they had already made, they would not relax in their efforts. He saw no reason that because their calling was humble it should not become honourable and consistent with domestic duties, and honour and respectability. In conclusion, he reminded them that if they would act the part of a conscientious Christian they must honour God, not only with their lips but in their minds. Lady Harriet Cholmondeley then presented to Mr. Bennett, the secretary, in a few appropriate words, a gold watch and a Bible, the gift of the cabmen of the club, as an acknowledgment of his exertions on their behalf. Lord Cholmondeley, the Rev. Mr. Chalmers, and other gentlemen afterwards addressed the meeting, and the proceedings, which had been of a very interesting character, closed with a cordial vote of thanks to the chairman.

LORD SHAFTESBURY AND THE RAGGED SCHOOLS.—A public meeting in aid of the Plough-court Ragged School was held a few weeks ago at Shaftesbury Hall, Aldersgate-street. This school was opened in October last in Plough-court, Fetter-lane, and its objects are to promote the moral and religious education of the poor. The Earl of Shaftesbury presided. It appeared from the report, that the average attendance on Sunday evenings was—girls, 87; boys, 41; total, 128. The want of an infant school was much felt, but until they could obtain a larger room, the committee were compelled to turn away those children who brought infants with them. The secular classes were taught reading, writing, and arithmetic, and the average attendance was—girls, 23; boys, 28; total, 51. The average attendance at the girls' working-classes had been 65, and 130 articles of clothing had been given away. A Band of Hope had been established, 74 pledges had been taken, and 428 books given away. The attendance at the Sunday afternoon lectures had been 46. The balance-sheet showed that 56*l.* was still required to meet the expenses. The chairman regretted that he was not able to stay with them long, being compelled to leave. The report was a very satisfactory one. It told them what had been done in the past, and what could be done in the future, if they gave their assistance. Ragged schools were valuable, not only in themselves, but in their adjuncts; the mothers' meetings, fathers' meetings, penny banks, and other similar things, all went to the general improvement, and tended to diffuse among the millions comfort, happiness, civilisation, and truth. His ancestor, who lived in that house 200 years ago, prided himself on having 10,000 of what he called "brisk boys" for the support of Protestantism, and he hoped that he also should have 10,000 brisk boys and girls who would also maintain Protestantism, and, by so doing, confer inestimable benefits on generations living, and on those to come. Many of the children who came to these schools were without parents, and the system tended to bring them into habits of obedience and submission. The teachers who came forward in this cause brought to it great zeal and fitness, and were deserving of the highest esteem. The religious teaching was on pure, simple, evangelical principles, and such as were preached by the Saviour. If they went over the records of other countries, they would not find so many instances of good that had been done. Some persons in high places wished the schools to be brought under Government inspection, but his experience of the habits of these classes showed him that this would not answer; it would imply certificated schoolmasters, and the faculties which were necessary to form a ragged-school teacher could not be made by any government. It was not a gift that every man possessed, and he would recommend that any offer of money, bringing with it Government inspection, should be refused. His lordship concluded by urging them to deprecate any governmental interference, and not to "sell their birthright for a mess of pottage." The report was adopted, and, the meeting having been addressed by several clergymen, a vote of thanks to the chairman terminated the proceedings.

SAMPLES OF COTTON FROM WEST AFRICA.—J. A. Turner, M.P., has kindly forwarded to the offices of the Cotton Supply Association, Manchester, an interesting case of samples of cotton and cotton yarn which he has received from Dr. Livingstone. The sample of cotton is excellent; but the most surprising sample is a ball of yarn, spun by the natives, weighing 16½oz., the cost of which is one foot of calico, or 1*d.* The other samples of yarn are well spun, and very strong. This cotton was grown in the valley of the Shire, which is 100 miles long, by twenty broad. The natives spin and weave it for their own use, and we are informed that so abundant is the cotton in this valley that a vast number of cotton-trees are annually burned to the ground. The navigation of the Zambesi and the Shire is open to the centre of this cotton valley during a great portion of the year. It is evident, therefore, that a large supply of cotton may be readily obtained from this part of Africa by the adoption of an effective agency. Dr. Livingstone deserves the utmost support, both of the Government and of his countrymen, in his most zealous efforts to develop the vast productive resources of the regions he has now opened to commercial enterprise.—*Manchester Examiner.*

TREASURER.
Stephen Cave, Esq., M.P.

SECRETARY AND LADY SUPERINTENDENT.
Miss Ellen Barlee.

The Institution for the Employment of Needlewomen has been formed to assist workwomen of good character, by obtaining work for them, and securing to them the full average remuneration which they would receive were they able to take the work directly from the establishments for which it is executed, instead of obtaining it through the agency of a sub-contractor.

It is calculated that the lower classes of needlewomen in London exceed 30,000 in number. Of these a large proportion working from 10 to 18 hours per day, do not earn more than from 2s. to 6s. per week. Taking into account the slack season, illness, and inability to procure work, many can scarcely average half that sum. It may reasonably be expected that each worker employed by the Institution will be able to earn from 5s. to 9s. per week, an amount on which they can at least subsist, and which will save them from the terrible privations, and consequent temptations to dishonesty and vice, with which they have now to struggle.

To make an Institution of this kind permanent, and worthy of public support, it ought not to be a merely charitable effort, but must ultimately be supported to, at least a great degree, by those who benefit by it. The women employed, therefore, will be required to pay a small percentage on their earnings, (say a penny in each shilling,) towards the necessary expenses of rent and taxes, fuel, superintendence, etc. A contribution to this amount from 300 women, earning, on an average, 1s. per day, would fully meet all the ordinary charges of the Institution. But some time must elapse before the Society can secure employment for so many, and in the interval, the same machinery being required, its objects can only be attained by the help of those who feel an interest in the class which it desires to benefit.

For this aid the promoters of the Institution would confidently appeal. They believe the Institution eminently calculated to promote industry and good conduct in the women employed, and to permanently improve their religious and moral condition.

They would gratefully acknowledge the kind assistance which they have already received, and which has encouraged them to commence their undertaking by engaging the premises they now occupy at 26, Lambs' Conduit-street. Here Work-rooms have been prepared sufficient for the employment of about sixty workers, with a dormitory for the accommodation of a few of the most friendless and destitute—women with families being allowed to take the work to their homes. Further subscriptions are absolutely necessary to enable them to carry out their objects effectively; and especially to provide a Guarantee Fund, from which the parties who intrust work to the Society may receive security if desired, and may be indemnified for any incidental loss or damage. Such additional assistance the promoters of this Institution would earnestly solicit, as well as supplies of work, to allow of their giving the women constant and regular employment.

A single Institution of the kind now established, can only partially provide for the wants of so numerous a class, but should this effort succeed, and sufficient funds be obtained, it is intended to open Branch Institutions in other parts of London.

The Institution is open to the inspection of Visitors from 10 to 5, each week-day, Mondays and Saturdays only excepted.

Post Office Orders addressed to the Secretary may be made payable at the Post Office, 62, High Holborn, W.C.

Donations will be thankfully received by Messrs. Prescott and Co., Bankers, Threadneedle-street.

Further details will be found in a little work, entitled "Our Homeless Poor, and What we can do to Help them." J. NISBET and Co., Berners-street, and of all Booksellers.

Parcels of cast-off clothing will be thankfully received for the poor women, many of whom are most destitute.

AN EXHIBITION AND SALE
OF
THE INDUSTRIAL WORK
OF
REFORMATORIES, REFUGES, INDUSTRIAL SCHOOLS, AND PENITENTIARIES.
IN
GREAT BRITAIN AND IRELAND,
WILL BE HELD AT
WILLIS'S ROOMS, KING STREET, ST. JAMES'S,
ON WEDNESDAY AND THURSDAY, THE 6TH AND 7TH OF JUNE, 1860.

THE Work will embrace that of Turners, Smiths, Carpenters and Joiners, Tailors, Shoemakers, Printers, and Bookbinders; together with Matmaking, Knitting, Embroidery, Straw-work, Needlework, &c., &c.

The Doors will be opened at 12 o'clock on Wednesday, and at 10 A.M. on Thursday, and close each day at 6 P.M. Admission One Shilling.

The above Exhibition and Sale will be held in connection with the

REFORMATORY AND REFUGE UNION.

President—The Earl of Shaftesbury.

Treasurer—Robert Smith, Esq., 1, Lombard-street, E.C.

Hon. Secs. { Robert Hanbury, Esq., M.P., 10, Upper Grosvenor-street, W.
Stephen Cave, Esq., M.P., 35, Wilton-place, S.W.

Bankers. { Messrs. Smith, Payne, and Co., 1, Lombard-street, E.C.
Messrs. Ransom, Bouverie, and Co., 1, Pall-mall East, S.W.

This Association is formed as a centre of information and encouragement for Reformatories, Refuges, Industrial Schools, Penitentiaries, and other similar Institutions in Great Britain and Ireland. The scope of its operations may be gathered from the following statement of the several Funds which are raised in connection with it:—

GENERAL FUND.—For maintaining the general operations, corresponding with the various Institutions throughout the country, procuring the admission of convicted or destitute persons into suitable asylums, publishing Handbooks of information, and generally assisting in the work of Reformatories.

REFUGE FUND.—For making Grants towards the support of existing Institutions, and aiding in the formation of new ones where found necessary; contributing towards the Emigration of those whose good conduct has commended itself to the managers of the Institutions where they have been located; and in other ways assisting the Houseless and the Destitute.

FEMALE MISSION FUND.—For maintaining a Mission to the Fallen Women of the metropolis, and, as may be found practicable, of the country at large; to employ Female Missionaries to labour amongst them; to give donations with cases admitted to the Homes by their instrumentality; and to assist by Grants the Institutions established for the reception of this class.

Contributions towards either of these Funds are earnestly solicited. Further information may be obtained by reference to the Publications of the Union, to be had on application to the Secretary.

A. O. CHARLES, Secretary.

Office of the Union, 118, Pall Mall, S.W.

London: James Nisbet and Co., Berners-street, W.

LAMENTABLE REVERSE OF FORTUNE.—A Lady, of advanced age, and of illustrious rank (being the granddaughter, in legitimate descent, of a Royal Duke) is at the present moment in want of the actual necessaries of life. Her claims will shortly be brought before a proper tribunal, when their justice will be fully and publicly evidenced.

In the meantime, whilst proceedings are pending, contributions, however small, are most earnestly solicited, to provide her with food and clothing, and to preserve to her the shelter of a home.

Further particulars, together with a list of gentlemen who can vouch for the accuracy of the above statement may be obtained of Edward West, Esq., 97, Newgate-street, by whom subscriptions will be gratefully received.

WANTED, by the MATRON of an Industrial Home, a similar Situation in an Orphan Home, or any other Charitable Institution, where the inmates are younger, or of a better class. Good testimonials from several Clergymen and Ladies. Address A. N., Post Office, Mare Street, Hackney.

MR. GEORGE CROXTON, Secretary to the Metropolitan Free Hospital, gratefully acknowledges receipt of Money Order No. 1027, Louth, April 9, for £5, as a donation, from "L. T.," in aid of the Funds.

PHOTOGRAPHY.—This beautiful and wonderful art has long been in the hands of mere charlatans and speculators, whose imperfect knowledge and unskilful manipulations have produced only vile caricatures of our friends. Mr. Barrable, 244, Regent-street, is the first, who, with the reputation of an artist, has applied himself to the study and practice of Photography. In his studio the most beautiful portraits are produced at half the usual prices charged at the West End for much inferior articles. Mr. Barrable respectfully invites the public to an inspection of his specimens.

BROWN and POLSON'S PATENT CORN FLOUR,
Preferred to the best Arrowroot.

Delicious in Puddings, Custards, Blancmange, Cake, &c., and especially suited to the delicacy of Children and Invalids.

The *Lancet* states—"This is superior to anything of the kind known."

Trade Mark and Recipes on each Packet, 4 and 16 ozs.

Obtain it where inferior articles are not substituted, from family Grocers, Chemists, Confectioners, and Corn Dealers.

PAISLEY, DUBLIN,
77A, Market Street, Manchester, and 23, Ironmonger Lane, London.

ALLEN'S PATENT PORTMANTEAUS, AND TRAVELLING BAGS, WITH SQUARE OPENING; Ladies' Dress Trunks, Dressing Bags, with Silver Fittings; Despatch Boxes, Writing and Dressing Cases, and 500 other articles for Home or Continental Travelling, Illustrated in their new Catalogue for 1859. By post for two stamps.

J. W. ALLEN, Manufacturer of Officers' Barrack Furniture, and Military Outfitters (see separate catalogue), 18 and 22, Strand.

WANTED, a HEAD MASTER for the CALDER FARM REFORMATORY SCHOOL. He must be a Member of the Church of England, and one who has had previous experience in similar work, and whose Wife would act as Matron, will be preferred. Salary £150 a year, with House, Coals, Gas, and a Garden.

Applications, with references (rather than testimonials), to be sent on or before the 15th May, to E. B. W. BALME, Esq., Cote Wall, Misfield, Normanton.

WANTED, in a certified Reformatory for Sixty Boys, a SCHOOL-MASTER, to give instruction in School hours, and to assist the Governor in the general conduct of the Institution. He must be a trained and experienced master, and one who will enter upon his work in a zealous, laborious, and earnestly Christian spirit. Apply, giving references, and stating terms asked, to M. S. R., Reformatory and Refuge Union, 11s, Pall Mall, London, S.W.

legs, old wounds, and sprains, whether recent or chronic, yield with surprising celerity to the cooling, healing, and curative properties of this invaluable Ointment. It may be relied upon in all such cases as have baffled the skill of our best Hospital Surgeons; no matter the length of time the malady has endured the Ointment, assisted by a course of Holloway's Pills, will quietly but certainly reach the core of the complaint, and thoroughly eradicate it, without additional impediments to pleasure or business. These remedies will overcome the worst forms of disease and the foulest state of the blood: while in glandular swellings, scurvy, and all diseases of the skin, they are equally irresistible.

ONE SHILLING PER SHARE.

THE ART UNION of GREAT BRITAIN, under the sanction of Her Majesty's Most Honourable Privy Council.

First Prize, Painting, value £150
Second " " " £100
with 98 other Picture Prizes, from £5 to £75 each.

Prizeholders have the privilege of selecting their own paintings from any Public Exhibition in Great Britain or Ireland.

In addition to the above Picture Prizes there will be about 500 other prizes, consisting of Engravings, Statuettes, Busts, Vases, &c., in Parian, Terra Cotta, and Bronze.

Tickets, price One Shilling, each ticket entitling the holder to one chance in the drawing, may be had from the principal Printsellers, Music and Booksellers, and from the office of this paper; or they will be forwarded direct by the Secretary on receipt of an envelope (stamped and directed), together with postage-stamps or post-office order for the number of tickets required.

39, Princess-street, Manchester. SAMUEL H. DEAN, Secretary.

THE NATIONAL SOCIETY.

The annual general meeting of the members of the National Society for Promoting the Education of the Poor in the Principles of the Established Church was held on Wednesday, June 13th, in the Central School, Westminster. His Grace the Archbishop of Canterbury presided, and among those present were the Right Rev. Bishops of London, Oxford, Chichester, Lichfield, Carlisle, St. David's, Bath and Wells, Llandaff, Sodor and Man, Lincoln, and Bangor; Lord Redesdale, Sir Thomas Phillips, Mr. A. J. Beresford Hope, the Hon. Arthur Gordon, Sir W. Page Wood, the Right Hon. J. W. Henley, M.P., Mr. Puller, M.P., the Ven. Archdeacon Bickersteth, the Rev. Sir Henry Thompson, &c.

The meeting having been opened with prayer,

His Grace the President congratulated the members of the society on the satisfactory financial position which the society now occupied. They might look forward with confidence to the close of the present year, and dismiss all apprehensions of a deficit. A Royal Commission was now, as they were no doubt aware, engaged in an inquiry into the state of education throughout the country. What would be the tenor of their report of course he could not say, but he anticipated it would show that while much had already been accomplished, very much yet remained to be done. During the last twenty or thirty years a great advance had, no doubt, been made in the work of national education, but no one could pretend to say that the people at large were educated or literary, or were likely to become so. The early age at which children were removed by their parents from school rendered it impossible that they could acquire more than an elementary education; and even what little instruction they did receive at school, it was to be feared many of them very soon forgot in their engrossing toil for a livelihood. In the large towns the children were thus prevented from availing themselves of the education which was offered by various bodies, while in a great number of rural districts the children had no opportunity of receiving education at all. Contrasting the number of children who attended school with the number of those who either could not find time to attend school or had none to go to, it would be seen how much yet remained to be done in the way of national education. To the National Society was due much of the progress which had already been made. (Hear, hear.) Its efforts had been attended with great success, the plan of education which it adopted had met with general approval, and he trusted the society would continue to receive that support which it so well deserved. (Hear, hear.)

The Secretary then read the report of the society, the gist of which was as follows:—

"The committee have cause to be thankful for the success with which the work of the society has been blessed during the past year. The funds placed at their disposal have enabled them to raise the rate of assistance given towards building school-rooms, and also to resume their grants in aid of teachers' houses. The number of applications towards school-building entertained by the committee during the past year has been 141. The amount paid by the society during the last twelve months towards school-rooms and teachers' houses, duly completed and secured, has been 2,979*l*. By this outlay the society has helped to provide accommodation for 18,741 children, and to build 79 teachers' residences. The number of schools united to the society during the last year, either by the terms of the trust deed or by application from the managers, has been 167, making the total number of schools in union 11,539. There has been a considerable increase during the past year in the proceeds of collections in churches, but the amount thus raised falls far short of the income which the society was accustomed to receive from collections under Royal letters. The committee are unable at present to state what amount of the money due to the society will be recovered from the estate of the late receiver (who was a defaulter), which has been assigned to trustees. The committee confidently believe that the plans which they have adopted for a periodical examination of the society's accounts by professional auditors, Messrs. Grey and Prideaux, of Lincoln's-inn-fields, are such as to secure for the future the safe disposal of the funds of the society. The committee trust that the report of the Royal Commission on Education will not interfere with the present system of supplementing voluntary efforts by assistance from the State. The result of a change might be either a mere secular system of instruction, or some plan which would make religious knowledge only one among many branches of learning to be taught in schools, instead of, as at present, the element which pervades the whole course of education. The introduction of any such measure the society will always resist."

Sir J. Kay Shuttleworth said that the system of the National Society, including as it did the combination of religious with secular education for the great mass of the people, and the association of aid from the State with the efforts of the various religious societies, had during the last few years been regarded with growing favour by the general public. In maintaining that system, which gave the Church, so far as her own schools were concerned, a direct, immediate, and paramount control over the education of the country, they occupied an impregnable fortress, from which no power could force them to retreat unless through apathy or division among themselves. (Hear, hear.) But it would not do to palter with the system either in principle or detail. It would not do to yield assent to the assertion recently put forth in an influential journal that, owing to the great commercial necessities of the country, the education of the people could not be carried beyond children of ten years of age. He could not for a moment believe that in a great Christian country like England, the education of the masses could not, of necessity, be carried beyond that limit. (Hear, hear.) The law had pointed out the path in which they ought to proceed. Was not the factory system already in successful operation? The half-time system for all children from the age of eight to thirteen employed in factories had worked beneficially. There was no reason why the same principle should not be applied to all associated employments, although there would, of course, be a difficulty in applying it to those which were not associated. He entertained a strong hope that as the industry of the country continued to be developed, the wants of that industry would be more and more recognised; that the necessity of bestowing education on the manual skill and practical activity which contributed so largely to the wealth and prosperity of the country would be more strongly felt, and that they would be enabled to raise the moral, intellectual, and spiritual condition of the masses of the people so as to realise the expectations even of the most sanguine. (Hear, hear.) With all deference to the opinion of his Grace the Archbishop, he believed that the intellectual progress of the people would be carried higher than he imagined, although he admitted that a considerable time must first elapse. Still, it was essential to hold that Christianity was intended for the masses of the people, and that Christianity and ignorance ought not to be associated. He believed the great mass of the people would be able to attain such a degree of education as to read and understand the Scriptures, the writings of the divines of the Church, the biographies of good and learned men, and to be subject to all the influences of Christianity through literature. He concluded by moving the following resolution:—

"That the thanks of the meeting be given to his Grace the President and the committee of the society for the report presented by them, and that the meeting desires to express an earnest hope that the committee will use their best endeavours to secure the maintenance of those principles on which the present system of education has been administered."

The Rev. Dr. Burgess, in seconding the resolution, expressed his conviction that it would be impossible for the Government to alter a system under which the great mass of the people were educated. The main thing that the society had now to do was, not to extend the quantity, but to increase the quality of the education

Digitized by Google

which they afforded. He thought the Government might well afford 1,000,000*l.* a-year for the education of the country. He was satisfied that that sum would be sufficient, and that when the demand reached that amount, as it would not do for some years to come, the House of Commons would never refuse it. The National Society was now in its first jubilee, and had reason to be proud of the great results which it had achieved. He thought, however, that the constitution of the society might be enlarged with advantage.

The Rev. W. Ackworth (Plumstead) complained of the report of the Government Inspector as to the school in his district, and urged the necessity of some appeal from that authority.

Canon Trevor advocated an enlargement of the constitution of the society.

The Rev. Sir H. Thompson remarked that, as the Archbishop had concurrent jurisdiction with the President of the Privy Council in the appointment of inspectors, the withdrawal of his concurrence would procure the dismissal of any inspector.

The Rev. Dr. Burgess hoped an impression would not go abroad that the Government inspection was of an objectionable character. Such was certainly not the opinion of the Clergy generally. For his own part he could testify that the inspector in his district was a thoroughly competent person, and had always displayed the greatest kindness and consideration in the discharge of his duties. (Hear.)

The President said that, although his concurrence in the appointment of an inspector was required, he would never be disposed to use that power for the removal of any officer, except under very urgent circumstances. He was glad to find Sir J. K. Shuttleworth was so sanguine in his anticipations of educational progress, and trusted they might be fulfilled.

The resolution was then carried by acclamation, and the meeting broke up.

THE LONDON FEMALE PREVENTIVE AND REFORMATORY INSTITUTION.

The annual meeting of this Institution was held on Friday, June 1, at the Music-hall, Store-street, Bedford-square; Colonel Goodwin in the chair. The Rev. Canon Dale, the Rev. Hugh Allen, Rev. W. Landels, and other clergymen were present, together with a deputation from the Reformatory and Refuge Union. The chairman, in opening the business of the meeting, referred to the object of the Institution and its labours during the past year, which had been very successful. A large existing amount of female destitution had fallen under the observation of the agents of the Institution, which, so far as funds would admit, had been alleviated. He considered that the usages of society were very faulty in reference to female indiscretion or immorality, and that the question of the social evil warranted legislative interference. The third annual report, as submitted to the meeting, alluded to the progress of the Institution since its origin in September, 1857. Its operations were commenced in a comparatively small house in Grafton-place, Seymour-square. At the expiration of the first six months it became necessary to take larger premises, which were offered at 200, Euston-road. Here prosperity again attended the efforts of the managers, and early in 1859 additional premises were procured at Cornwall-place, Holloway-road. During this period 223 have been admitted to the benefits of the Institution, from whom the following particulars have been ascertained:—81 had neither parent living, 40 were motherless, 42 were fatherless, 60 had both parents living, 120 had been domestic servants, 46 needlewomen and artificial flower-makers, and 58 were not brought up to any particular employment. From September, 1857, to December, 1859, the following cases have thus been disposed of:—95 have been received into domestic service, 54 have returned to their friends, 3 emigrated, 2 have married, 6 been dismissed, and 29 have left at their own request. During the past year 110 new cases have been admitted, and 18 re-admitted. Twenty-one of these applications were made by private persons not in the agency of the Institution, and 32 were voluntary applicants. A case occurred in October last, when a young woman having left her home in Buckinghamshire, arrived an utter stranger in London, without any definite purpose; she was brought to the Institution by two fallen females, and thus preserved from ruin. She was returned to her parents. It is thus one of the great objects of the agency not only to reclaim the fallen, but, on the maxim that prevention is better than cure, to afford protection to friendless young women when circumstances expose them to danger. The total income, derived almost exclusively from donations, has amounted during the past year, including a balance of 7*l.* in the treasurer's hands at its commencement, to 1,491*l.*, and the expenditure during the year has only left a balance of 4*l.* on the 31st of January. The committee feel that from being so largely dependent on donations their annual income is necessarily very uncertain, and they would be very glad to increase the number of annual subscribers. An income of 2,000*l.* will be required to maintain the Institution efficiently in its various departments, and not a fourth of this sum can be relied upon from the last-mentioned source. On the conclusion of the reading of the Report several clergymen addressed the meeting in support of the agency of the Institution, and the following resolutions were moved and carried unanimously:—"That this meeting desires to express its thanks to Almighty God for the great success which has attended the recent special efforts to rescue the fallen, and to express approval of the course adopted by the committee of the Institution, in order to aid the plan of the midnight meetings."—"That this meeting, while rejoicing in the success of all efforts adopted for the rescue of the fallen, also recognise the importance of aiding those who, not having erred, are in danger of falling, which is one of the objects of the Institution." The proceedings terminated in a vote of thanks to the chairman.

WESTERN UNION OF TEACHERS ANNUAL MEETING.

The annual meeting of the Western Union of Teachers was held on Saturday, in the Lewin's Mead Boys' School-rooms, Bristol.

Mr. Thos. Coomber occupied the chair, and in opening the proceedings said, when they contrasted the present gathering with the attendance at the Park-street Institution, on the last occasion of their meeting, they could not but take pride in the contrast; and he congratulated them upon the great accession of support which that meeting proved their Society had gained. Although its growth had been at first slow, yet they were none the less confident of its certain progress, the catholicity of its basis insured that in an age so decided in its liberal tendencies. He was glad to say that they had just had excellent proof that the principles which guided them in its formation were making their truth felt. The United Association of English Schoolmasters had given in their adhesion to those principles, and at their last general meeting in London, they determined that their Society should be open to all school teachers, whatever their persuasion in matters of religion might be. He had had the honour to act in the management of their Society since its origin, and he knew that it had been felt from the beginning that the yearly meeting could hardly produce the results which the projectors of their body hoped to accrue from its formation. The establishment of District Branch Associations had from the first been strongly advocated, and he was glad to say that a beginning had been made in this direction in Bristol and its vicinity. They had organised a Society under the name of the British Branch of the Western Union, which had already held some very interesting meetings. One of the papers that had been read at those meetings was of such a character that the officers of the Association had earnestly solicited its author to repeat it upon the present occasion, and he had no doubt that they would find reason to thank the Bristol Branch for that contribution. He was glad to be able to report many important additions to their library and museum, and should the members of the Society so increase as to warrant the confidence which publishers were ready to bestow, there was no doubt but that this would become a strong and valuable property. They had to lament the decease of Jellinger Cookson Symonds, Esq., barrister-at-law, one who, from his desire to encourage any movement that seemed likely to conduce to the progress of national education, and the extreme catholicity of his views, took a great interest in their Society from its commencement. Mr. Coomber then referred to a new educational periodical, *The Educational Guardian*, which he said was conducted entirely by elementary teachers—one of the editors, until recently removed from the district, being a member of their body. In conclusion, he congratulated them, as working educationists, upon the great interest taken in their labours by the very first minds in the legislature of the country. They had entered a new epoch in their profesion, and the time had

Digitized by Google

now come when their labour, if they were true to it, would not fail to bring them both comfort and consideration. He then called upon Miss Mary Carpenter to read the following paper:—"On the Relation of Ragged and Industrial Schools to the Common Pay Schools."

Miss Carpenter said—The subject before us is one of great importance to the welfare of the schools with which you are connected, to the population in which they are situated, and to the country in general; it is one which involves deep principles, affecting the future welfare as well as the present interest of millions of our fellow citizens. It is with peculiar satisfaction that I embrace the present opportunity of addressing you as teachers, because I know that your experience and position will enable you to comprehend the sad and solemn realities I shall lay before you, as others cannot do, whose situation in life removes them from any proximity to those children for whom they are legislating, and of whose actual condition they are perfectly ignorant. You will be able, from your own personal knowledge, to test the truth of my statements, and to bring valuable information and your own testimony to refute or to support them. An educational conference was held in London three years ago, over which the Prince Consort presided. His Royal Highness, in his opening address, which was fraught with elevated sentiments, and bore the marks of deep reflection, aided by carefully-collected statistics, made the following appalling statement:—The total population in England and Wales of children between the ages of three and fifteen being estimated at 4,908,696, only 2,046,848 attend school at all, whilst 2,861,848, receive no instruction whatever. With respect to the educated portion, Prince Albert stated that an analysis of the scholars, with reference to the time allowed for their school tuition, proved that forty-two per cent. remain at school for less than one year; and that, including in the average time those few who had five years' schooling, less than half-a-million children remain no more than two years at school. The attention of the conference was mainly occupied in considering the condition and wants of the two million children who are attending the ordinary schools, and in devising plans for stimulating to more regular attendance and a lengthened period of instruction. The Committee of Council on Education has sympathised in those efforts, and by the stimulus of certificates of merit, and bribes for regular attendance in the form of an annual capitation, has done all that lies in the power of the Government to co-operate with the voluntary efforts which are being made to improve the educational condition of the labouring classes. But these 2,861,848 who received no education whatever! who are growing up in ignorance! These were passed by at the conference; they are passed by in the educational council of the nation; they are passed by when statesmen legislate for the improvement of the people; they were passed by when a Royal commission was last year appointed on "popular education," for the commissioners defined this term as meaning "the families of day-labourers, mechanics, and the poorer class of farmers and shopkeepers," and these included but a small proportion of the class among which are to be found nearly 3,000,000 children who are growing up in ignorance. Before proceeding further, let us endeavour to realise the state in which these children are growing up. Their ignorance is not a simple deficiency in intellectual training, not a want of certain kinds of knowledge which are very useful in the ordinary business of life, and which may be made highly available either for good or for evil. This is not the blighting, poisoning ignorance which is at the root of all the criminality which infests our land, nor is any head-knowledge, even of the sacred Scriptures, that without which "it is not good for the soul to be." The ignorance which is slightly indicated by decimal figures, and by the mention of the "beggarly elements" of reading and writing, is a practical ignorance of man's immortal nature and destiny; an ignorance which degrades below the brute creation, that does fulfil after its kind the end for which the Creator gave existence; which chains the sense, and debases by sensual indulgence; which makes men hunger only for the bread which perisheth, and not for that which is the nutriment of true life; which makes them thirst only for that which stimulates to maddening frenzy, preventing them from recieving the waters of life. Such is, in faint and few words, the meaning which is really hidden under the simple word "ignorance," but which is too often lost sight of in our anxiety to convey rudiments of book-learning, which we most falsely suppose will be an antidote to crime. And the effect of such ignorance is not only that the individuals labouring under it are utterly unfit to hold any useful social position in the State; not only that they are without such practical acquaintance with the laws of God and man as will withhold them from the crime into which they are continually led by the desire of sensual gratification; but that they live in a state of entire isolation from the comparatively virtuous and respectable portions of society, and consequently more or less in absolute antagonism to it. This condition of things necessarily perpetuates itself. Now, it would be wrong to make the sweeping assertion that all children who are not on the school-books are in the degraded condition here described. Prince Albert states that about six hundred thousand of the children who are absent from school are known to be employed, and thus, though by their want of knowledge they are doomed to remain all their lives mere "hewers of wood and drawers of water," yet they are not necessarily falling into evil habits; but still he says that there are "2,200,000 not at school whose absence cannot be traced to any ascertained employment or other legitimate cause." The exact number of the children matters not. Their name is legion, and they swarm wherever large masses of the community are congregated together. Now, it is from this portion of the population that the crime and the pauperism of the country mainly springs. Juvenile delinquents may indeed be found in other classes. You have doubtless often had mournful examples come before you of children taught in your own schools—perhaps peculiarly clever ones—drawn into crime, generally by bad companions, and thus using the intellectual culture which has been given them actually as a more powerful instrument of evil, luring on others to their own destruction. We have lately seen the child of wealthy parents sentenced to a reformatory, and exhibiting such precocious knowledge of evil that I refused to expose the children placed under my care in the Red Lodge to the contamination of intercourse with her. But there are exceptional cases. In Liverpool, during the nine months ending September, 1856, there were 19,336 persons apprehended; of these only 3 per cent. could read and write well enough to be available for any useful purpose. Half the remainder had a little imperfect knowledge; the rest were profoundly ignorant. This was not an isolated case, and the return for the next year indicates an improvement. During the early part of 1857 I applied to all the reformatories in England for educational statistics of the children, both boys and girls, who had been received into them. Out of 1,174 children of whom the returns were made, one half were in a state of absolute ignorance, and only 259 (between one-fourth and one-fifth) had so much knowledge as to enable them to read their Testament. In some of the schools, the children who had received available knowledge were only one-fifteenth of the whole number. The proportion of children who enter our workhouses in a state of profound ignorance is even greater than this, as testified by those whose official position affords them full opportunities of judging. Our reformatories and gaols (though happily the latter are falling into disuse for such a purpose), and especially our workhouses, find a constant supply from the two millions of uneducated children, and they will continue to do so at a very great expense to the nation, until the supply is stopped from which they proceed. Now how is this mass of ignorance to be grappled with? Are there not insuperable reasons on the side of the children which would prevent them from attending under any circumstances, even if their school pence were paid? Granting that the parents were poor but striving, though, from various causes, on the very verge of starvation, and that the pence were paid by private benevolence (though this is a condition of things which ought not to be a permanent one), can the children be sent so decently clothed as to appear without shame among other children? And will not the necessities of the parent frequently make him obliged to detain his boy and employ his services, if by doing so he can earn something for his subsistence? Yet, if all these difficulties are surmounted on the part of the child, do you wish to make him an associate of your own scholars, who are in a more substantial condition of life? I once applied for admission for such a boy into a good charity school. One would have supposed that was exactly one for whom such an Institution was intended; for the Sunday clothes and dinner were provided, as well as a good education. But one of the trustees waited on me, at

Digitized by Google

the request of the others, and stated that they thought it undesirable, with a view to the children of respectable labouring persons, to admit any from this class. We know that the feeling of rank is strong in the upper classes, and that parents carefully guard their children from low or vulgar associations; we have no right to blame these for similar feelings, founded as they often are in truth. But most of the children of this excluded class are really in a state which the schools are no more calculated to meet their wants than they are adapted to the schools. The condition of ignorance, which has been already described, clearly indicates this. Children cannot be admitted in any numbers to a school intended for the mechanic and well-ordered class, without lowering the whole tone of it, and preventing the possibility of a high intellectual status, while, at the same time, they cannot derive the elevating and civilising influences which they need, in a school unprovided with any means of education, but common school teaching. We must have, then, another class of school, if we would reach this order of society. It may be asked how it is that this want has been felt only during the last sixteen or eighteen years? The answer is simple. When, between thirty or forty years ago, a great effort was made to establish what were then called Lancasterian Schools, which were commenced in Bristol with the now most excellent Redcross-street British School, the lowest streets and alleys were ransacked for scholars, even Deep-street was not then unvisited by ladies who undertook this "mission of love"—all classes were gathered together indiscriminately. But as education has gradually improved, especially since a great stimulus has been applied to it by the Committee of Council on Education, these schools have risen into a higher class. Many respectable mechanics, and little shopkeepers, who formerly gave 1s. per week for the schooling of their children, now thankfully avail themselves of the opportunity offered of a very superior education at a much lower cost, provided by enlightened benevolence and Government help. But this state of things only makes it more important that a suitable provision should be made for those who cannot share this benefit. Surely a late vice-president of the Committee of Council on Education need not have feared that by giving help to these lower schools he might make them permanent Institutions, and draw down other schools to them, instead of raising the class received by them. It would indeed be right that a Government should guard against such a danger, if it really existed, but it is purely imaginary. During the twelve years that Ragged Schools have been in operation, we have never heard of a single instance of a National or British School being drawn down to the condition of a Ragged School, or of its injury from the proximity of one. On the contrary, we do know numerous instances, and we believe that the experience is general, of good pay-schools being decidedly benefited by the neighbourhood of a good Ragged School, which has removed from the streets wild children, who would otherwise have annoyed and contaminated their regular scholars; and from the school a few lawless children of disorderly parents whose irregularity of attendance prevented their non-improvement, and made them an extreme hindrance to others. I trust that I shall be informed of the experience of the teachers present on this point. It has, then, been shown that there is a large underlying mass of the population which is not reached by the ordinary day-schools, that they cannot, by the nature of things, act on this class. I have endeavoured briefly to show what pauperism and crime are engendered from this class, and that, indirectly as well as directly, they have a most injurious influence on the children of the labouring classes in their neglected and untaught condition. That these ought on every ground to be taught I need not prove to you. Let the parents be ever so low and degraded, and unworthy of help, the children, and society through them, must not suffer in this way, by the ruin of the innocent and irresponsible. "And this is not one of the cases," says so distinguished a political economist as John Stuart Mill, "in which tender of help perpetuates the state of things which renders help necessary" Instruction, when it is really such, does not enervate, but strengthens as well as enlarges the active faculties; in whatever manner acquired, its effect on the mind is favourable to the spirit of independence; and when, unless had gratuitously it would not be had at all, help in this form has the opposite tendency to that which in so many other cases makes it objectionable; it is help towards doing without help." Space forbids my sketching out more than a few of the peculiar features which distinguish schools adapted to this class, commonly called "Ragged Schools," from the National and British Schools, independently of the payment of school fees. Besides the ordinary instruction in elementary knowledge, there must be industrial teaching of both boys and girls; various means must be adopted, which are expensive, both of time and money, for teaching cleanliness and order; and, above all, moral training must enter into every department of the school. Arrangements must also be made for the children to spend the interval between school-hours in the playground, under proper supervision. The school cannot be kept up in efficiency without frequent visiting of the homes by the master; and sympathy and help from persons in a higher class are essential, for the encouragement of the teachers as well as of the children. It will be evident that the pupil-teacher system must be utterly inapplicable in such a school, and that the possession of a Government certificate of intellectual attainments can no more prove that any one is fitted to manage such a school than it can inspire with the Christian love, patient perseverance, and earnest devotion necessary to carry it out. It is evident, also, that such a school, if good, and possessed of a sufficient teaching power, must be very expensive, and that the mere collection of a number of scholars in an ill-managed school must be productive of great evil. Ragged Schools, to do their real work, must be good. It might have been expected that the Committee of Council on Education would have used its most powerful machinery, and given its greatest help to grapple with such a mass of ignorance, and to second the efforts of those who were devoting themselves to remove it. That is not the case. The Committee of Council on Education refuses to give any educational help to this class, and the Ragged Schools at present are either in a very low educational condition, or barely struggling for existence. I believe it is for the best interest of the pay-schools that these should be well supported. Ragged Schools ought also to be industrial in their nature, but I refer in the title of this paper to the certified Industrial Schools, in which it is intended to infuse a compulsory element to act on those who are leading a vagrant mode of life, and to bring them under the influence of proper training. The Industrial Schools Bill was passed three years ago for this purpose, but owing to some defects in its structure, it has not yet been carried out, as was intended. Vagrant and vagabond children still infest our streets, though there are in Bristol two Certified Schools, one in Pennywell-road, and the other in Park-row, open to receive them. It is hardly necessary to point out how important it is for the morality of higher schools, that such children as are habitually committing acts which are preparing them for more serious misdeeds, and who are luring others into their evil ways, should be placed under control. Such an one was alluded to last year by one here present; he could not be kept regularly either at a British or a Ragged School; he left his home for nearly a fortnight, rambling the country; and when his father warned him that the police were watching for him, he replied, "And I am watching for the police." Technical difficulties preventing the magistrates from committing him, he was received then as a volunteer; his talent and energy, now under guidance, make him a good scholar, and he bids fair to be an ornament, rather than a plague to society. Such would be the case with numbers who are running the road to ruin, if properly arrested in their course. This brief survey of a great and extensive subject will, I hope, have the effect of leading those to think upon it who, like yourselves, are devoting their lives to the cause of education. You may, in your various spheres, fully occupied in them, as I know you are, have the means of helping the movement at least by your sympathy; and toiling on your road, "As ever in your great Taskmaster's eye," you will be thankful that devoting your own efforts to the elevation of the children placed under your care, others go out to the highways and byways of life, and strive like the Saviour, "to seek and to save them that are lost."

At the conclusion of the paper, Miss Carpenter requested the opinions of the teachers assembled as to whether they agreed with her in her remarks upon the subject in question, or whether they took a different view of the matter.

Mr. Turner, of Redcross-street School, made some observations, coinciding with the opinions expressed in the paper just read, and after other remarks the following resolution was unanimously agreed to:—"That the teachers here assembled are aware from their own experience of the

Digitized by Google

existence of a large portion of the juvenile population who are utterly inadmissible to the National and British Schools, and that they deem the establishment of good free day-schools (commonly called Ragged Schools) adapted to the wants of these children, not only important to society, but very beneficial to their own schools."

In the course of the day a paper was read by Mr. A. Seaton, "On Prize Schemes," and another was read "On Corporal Punishments," by Mr. M. B. E. Dent, both of which were very interesting, and induced a very animated discussion.

The proceedings terminated about five o'clock, with votes of thanks to the several readers of papers, and to the Chairman.

CHURCH OF ENGLAND BOOK-HAWKING UNION.

The annual meeting of the Church of England Book-Hawking Union was held on Wednesday afternoon, June 13, at Willis's Rooms, the Earl of Carnarvon in the chair. Among those present were the Bishops of Lichfield, Chichester, Rochester, and Sodor and Man, Sir John Coleridge, Archdeacon Bickersteth, and Mr. Slaney, M.P. The proceedings were opened by prayer, when the noble chairman read letters from several persons of eminence, excusing themselves for not attending. Before calling on the Secretary to read the report, he would indicate in a few words the character and objects of the Society. Bookhawking dated from a comparatively recent period, having originated in Hampshire, the county with which he was particularly connected, about nine or ten years ago; the present Bishop of Rochester, then Archdeacon Wigram, being at the head of the movement, which did not, however, spread into other parts of the country till 1854. Last year there were seventy local societies, and no less than 12,000*l.* worth of books was sold annually. It was thought desirable to bring these various societies into connection, and last year the Church of England Bookhawking Society was established, under the auspices of the Duke of Marlborough. The object of the Society was to supply, 1, a depot of books; 2, a periodical containing practical information connected with it; 3, a register for hawkers; and, lastly, lists of publications from which the hawkers might select their stock. The central union does not pretend to control the local societies. Its machinery is of the simplest, and, owing to the fact that its officers all serve gratuitously, the whole of the expenses do not amount to more than from 150*l.* to 200*l.* Objections, indeed, had been raised in some quarters, but they might be answered in a few words. One was, that by supplying one class of literature to the people, the Society was interfering with the regular publishers and booksellers. The answer to this was, that the objection was not raised by booksellers, who have, on the contrary, generally assisted in its objects. Another objection was, that in associating to supply cheap literature, they were interfering with the law of supply and demand. This objection was founded on a confusion of town and country. In towns there were lending libraries, mechanics' institutes, and other means of reading; in the country it was different. Labourers and farm-servants did not visit a town perhaps more than once a-year, and then only on market and fair days, when there were other attractions besides books. They did not go to the books; the books must, therefore, be brought to them. You have stretched legislation to its utmost extent in favour of the mechanic; it is but fair to do something to improve the condition of the agricultural labourer. A third objection was, that the hawkers' books were not bought by the labourers, but by farmers, squires, and clergymen. The noble lord then proceeded to quote some statistics from the hawkers' register, to show that a vast majority of the books were sold to farm labourers. But he would remind the meeting that national education had received encouragement from men of all shades of opinion, and had been developed quite as much in the country as in towns. Now, he believed that there was something in the mind of man which, in the long run, naturally accepts that which is good and throws off the bad. But, that it may do so, there must be a choice. Hitherto the country people had had nothing but the bad placed before them. They were all aware that pedlars and vendors of crockery carried about and disseminated in the country books of a most mischievous and poisonous character. Now, the object of this society was, to supply an antidote to this poison.

The Secretary then read the report, from which it appeared that there were fifty-seven local associations, ten of which had been established during the past year; that the number of hawkers was seventy, some of whom had been engaged in the work for seven or eight years, and that each had on an average effected sales to the amount of 231*l.* 10s. 2d. The sales in towns had been trifling compared with those in the country, and 2,800*l.* worth of books had been supplied by the central depot. The Bishop of Rochester's services to the cause were acknowledged.

The Bishop of Lichfield, in moving that the report be adopted and printed, observed that if thirty years ago any one had proposed such a society as this his seriousness or his sanity would have been doubted; it would have been thought like putting pictures before blind men. A great change has, however, come over the spirit of the age, owing to the general diffusion of education. But it is the condition of our nature that good is always mixed with bad. Out of the diffusion of knowledge some evil has arisen; there is no doubt that some persons become acquainted with books which do harm, and this society's object is, not to counteract the diffusion of knowledge, but to give it a right direction. This was just the work of the Bookhawking Society. If corrupt publications were circulated among the labouring classes, the way to drive them out was to substitute pure literature in their place. His first idea had been that the books should not be of a directly religious character; but events had ruled it otherwise, for the predominant proportion of the books sold consisted of Bibles, Prayer-books, and Church-services. This he considered a cause for thankfulness. There were three societies in his diocese, selling in all about 1,000*l.*-worth of books annually; and in this movement there was no party spirit. They were supported by men of all kinds and shades of opinion. In most institutions there was a certain admixture of evil; but the diffusion of pure literature among the poor was an unmixed good. So far from interfering with the regular book trade, it was beneficial to it, inasmuch as it was the means of introducing a taste for reading among a class who would otherwise never think of buying books; and it did not in the slightest degree interfere with the parochial system, for it was one of the rules of the society that no hawker should sell his books in a parish without having first obtained leave from the parochial clergyman, who might also prohibit any particular book on the list being sold.

Sir John Coleridge rose to second this resolution. He said: My lord, ladies and gentlemen, I am extremely glad to share the honour of supporting the resolution just proposed by the excellent Bishop of Lichfield; and I am also glad that it is my duty to follow him, to come second to him, because it relieves me of the necessity of saying those things which have fallen so forcibly and so eloquently from his lips. I assure you, ladies and gentlemen, I am desirous to bear my testimony, to express my honest conviction, that we are, according to our means, helping on an excellent work. The Bishop said truly enough that we live in an age of societies. It would be happier for mankind if all pursued one uniform course for the advancement of the kingdom of God upon earth; it would be better, I say, if, instead of societies, we all of us formed one universal association for the furtherance of that object. But it is in vain to speculate on such a condition, and therefore the agency of societies becomes necessary. The question of what this society has done and is doing is disposed of by reading one sentence in the report:—"Although the work is not self-supporting, yet it is believed there are few benevolent institutions by which so much good is effected with such little assistance from without." I can state from my own experience that that report is a modest statement of what the society has done. It is established to meet an existing evil of the age in which we live—an evil of the greatest magnitude. I do not know what possible objection can be urged against this society. It is the evil case of fallen humanity to be corrupted by the perusal of bad books. Such is the frailty of human nature, that those books present to our minds a great attraction. We read a great page in a great author, but in a short time the impression is weakened, and soon altogether passes away. But, alas! an evil book leaves an impression more or less permanent. Any one who has had the misfortune to read a bad book knows too well how the memory of it lasts, and continually lingers in the mind. I remember reading, when I was a boy at Eton, the greatest oration in the English language. There were passages in it I have never forgotten. I cannot trust an old man's memory to repeat them to you, so I have this day copied them from the book, and with your permission I will read them to you.

The author I refer to is no less a man than John Milton, and the work I quote from is his speech for "Unlicensed Printing." You know he advocates the fullest liberty for the press, yet hear what he says:—"I deny not but that it is of greatest concernment in the Church and commonwealth, to have a vigilant eye how books demean themselves as well as men; and therefore to confine, imprison, and do sharpest justice on them as malefactors—for books are not absolutely dead things, but do contain a potency of life in them to be as active as that soul whose progeny they are—nay, they do preserve, as in a vial, the purest efficacy and extraction of that living intellect that bred them! I know they are as lively, and as vigorously productive, as those fabulous dragons' teeth, and being sown up and down, may chance to spring up armed men." Now, what is the moral to be drawn from that? He would be glad to treat bad books as criminals, to imprison and shut them up. You cannot do that. You cannot prevent the publication of bad books; but you can, by the blessing of God, shut them up by publishing good books. In the present day there is a desire for reading, and if we can supply it by healthy books, bad ones will become disgusting. This is the principle upon which the operations of the society are based. We cannot prevent hawkers going about with bad books, but if we send hawkers about with good books, I do not believe the human mind will generally reject the good and take the bad. It is a wide field of labour that is opened to this society. Such a report as we have heard to-day must have delighted us all. The Secretary has reminded me that the society is not self-supporting, and therefore impresses upon our friends the need of their help in carrying out the operations of the Society. I have much pleasure in seconding the resolution.

After an able speech from Mr. Baxter, the Bishop of Rochester observed that he felt a difficulty in following such speeches as those which he had just heard; but they had not alluded to what he considered a striking peculiarity of this Institution—namely, its adopting the principle of the division of labour. It had been found that it is necessary to group those whom we wish to help in classes. Now, it was one of the excellencies of the Bookhawking Society that it brought down intellectual training to the condition of the poor. Great exertions had been made of late years in the cause of education, and teachers were trained at a great expense of money and pains; but it was often found that the third and not the first class master was the most practically useful man. So the usefulness of the bookhawker consisted in this, that he could speak to the people in their own language. The Bishop of Lichfield had said that religious works had commanded the largest sale; but he was not quite sure that this was the fact. There was a great demand for secular works, in which, though they were written in a Christian spirit, the enforcing of Christian truth was not the immediate object. He instanced a little book by the Rev. G. H. Hoare, entitled "The Letter-Writer for the People," and created much amusement by reading extracts from the letters. There was one from a schoolboy, asking his father for money; another alleging excuses for not paying a bill. There were also letters from a sailor to his sweetheart, and an answer; a letter proposing marriage, followed by one accepting, and another refusing. The beauty of the latter he conceived to consist in the fact that it was so worded as infallibly to elicit a second proposal. His lordship observed that one of the excellencies of this society was that it contented itself with small things, and in illustration of this he proceeded to read extracts from the diaries of some of the bookhawkers, one of whom stated that he found the people between the ages of fifty and seventy could not read. Some of them, however, had bought the "Adult Spelling Book," and were beginning to learn. He also remarked that the tone of the people's conversation corresponded with their reading powers.

Mr. R. A. Slaney, M.P. for Shrewsbury, moved, and Archdeacon Bickersteth seconded, a vote of thanks to the noble Chairman, which Sir John Coleridge cordially tendered to his lordship; and after a few words of acknowledgment from Lord Carnarvon, the meeting broke up.

THE FILEY LIFEBOAT.

(To the Editor of *The Times*.)

Sir,—*The Times* frequently chronicles shipwrecks which occur in this bay, and almost as often has to add, "The crew were saved by the Filey lifeboat."

A short time since it was stated at one of the meetings of the National Institution that this boat had saved more lives than any other in England, and during my own residence here, nearly twenty years, I know that in every instance of shipwreck our fishermen have cheerfully pushed to the rescue—men having often to be called out of the boat from too many volunteering, but never requiring to be urged into it; and, after saving the lives of the crews, have taken them to their homes and supplied them with warm clothing and other necessaries.

Many of these men who have so often helped others are themselves urgently requiring assistance. The gale of Monday last has not only destroyed their property, but has also deprived them of the means of gaining a livelihood. Some of the yawls which at first were thought to be lost have fortunately been recovered; still, nine are totally destroyed; a tenth has received so much damage as to make it questionable whether she can be repaired, and other three will each cost their owners from 50*l*. to 150*l*.; altogether the vessels could not be replaced for 5,000*l*.

Each boat is usually owned by three or four fishermen, who also have among them about 400*l*. worth of nets. These have, to a great extent, to be renewed every year, which is done principally upon the credit of their earnings in the forthcoming herring fishery. As this begins in July all their preparations for this year are made; and therefore they have not only lost their boats, but are involved in debts for gear, which is now of no value to them for want of boats in which to use it.

Could these be procured for them to the number of only half those lost, arrangements might be made by which the men could prosecute the next herring fishery, on which their livelihood for the year chiefly depends, and not only theirs, but the livelihood of many others who find profitable employment in the curing and other processes connected with the fishery.

To provide these boats local subscriptions will be cheerfully forthcoming, but will be altogether inadequate to meet the case. These men have done the public good service and have a claim to public assistance. It cannot be more deservedly bestowed, for a more industrious, sober, well-disposed set of men cannot be found if you search the kingdom through; and I am sure, sir, that open as your columns are to all objects of utility, your space will not be more worthily occupied than in admitting an appeal to the public on behalf of these men.

The Rev. T. N. Jackson, Vicar of Filey, will, I am sure, corroborate these statements to any one who may wish to inquire into the particulars, and either he or I will be happy to receive any subscriptions towards the fund which it is desired to raise to carry out the above object.

I am, sir, your obedient servant,
WILLIAM S. CORTIS, M.D.

Filey, Yorkshire, June 2.

LONDON UNIVERSITY COLLEGE HOSPITAL.—A festival in aid of the funds of this excellent Institution was held at the London Tavern on Wednesday evening, June 6th. Lord Brougham, president of the council of the hospital, occupied the chair, supported by Lord Belper, Sir E. Ryan, Sir Francis Goldsmid, M.P., Mr. Evans, M.P., Mr. W. Ewart, M.P., the Hon. George Denman, M.P., Dr. Roget, Dr. Thorowgood, Mr. J. R. Jaffray, and other friends of the Institution. The usual loyal and patriotic toasts having been disposed of, the noble chairman said it had often been represented that it was as difficult to tax and to please as it was to love and be wise. (A laugh.) But while the Chancellor of the Exchequer would take no refusal, and needs must when he drove, the managers of that hospital could only appeal to the goodwill and generosity of the public; but they trusted that they would not make that appeal in vain. That Institution had been established for twenty-six years, and had conferred the greatest benefits upon the humbler classes of the community. One of its distinguishing characteristics was that it was in all respects a free hospital, no patient being refused admittance for whom there was room within its walls; subscribers to its funds, however, having certain privileges of recommendation for relief. Owing to the limited means at the disposal of the committee, the sphere of their operations was necessarily restricted, upwards of 70 out of the 200 beds which the establishment was capable of providing being unoccupied solely from this cause, and many applicants being consequently debarred of the succour which their sufferings urgently demanded. Another prominent feature of the Institution, and one which reflected the highest credit both on its medical staff and on the council, was the attention paid to the clinical lectures, and the efforts made to obtain cases of

Digitized by Google

difficulty and interest, calculated to afford the most valuable instruction to medical students. The whole of the fees derived from the young men who walked the hospital and enjoyed the advantages of these lectures were devoted strictly to the purposes of the charity, upwards of 57,000*l.* altogether having been raised from this source during the last twenty-six years. The hospital was now crippled by a debt of 5,360*l.*; and, until its finances were materially recruited by a benevolent public, its managers would be reluctantly compelled to stint the aid they were daily called upon to administer to human suffering. The noble lord concluded an eloquent appeal by proposing "Prosperity to University College Hospital." The health of the chairman was afterwards proposed in highly eulogistic terms by Lord Belper; and in the course of the evening subscriptions were announced by the treasurer to the amount of 2,718*l.* The musical arrangements were under the direction of Mr. T. E. Williams, who was supported by an efficient corps of vocalists. Miss Cazalay and Miss Killpack also gave their gratuitous services as pianists.

THE NINE HOURS MOVEMENT.—A public meeting in furtherance of this object was held on Friday, June 1st, at St. Martin's-hall. The attendance was very numerous. Mr. Wheeler, plasterer, was called to the chair, and after reading the bill convening the meeting, observed that the intention of its being called was to secure the object which workmen of various trades had been labouring with greater or less earnestness to obtain since 1855. He denied that the present was a revival of the movement. The question of the nine hours movement had not been settled, and the sacrifice made had been too great to give it up now. The agitation was not kept up by a few, but extended to 8,000 or 10,000 persons. The attitude that they had taken towards their employers was respectful, and while the speakers considered that every legal means should be adopted in labouring to secure their object he had reason to believe that they would ultimately be successful. They had been told by the press to wait, and what they wanted would be granted; but he considered that the time had fully come when their demand should be satisfied. In Scotland the amount of work performed had not been lessened by the adoption of the "nine hours movement." The speaker, in conclusion, urged the adoption of no coercive means, and repelled the assumption that the movement was kept up by paid agitators. Mr. Potter, who was received with much applause, moved the first resolution:—"That the object of this movement is not to injure the master builders, but to benefit the men; that the desired reduction in the hours of labour, while it will materially contribute to the physical health, the social improvement, and the mental development of the operative builders, is not calculated to inflict the slightest loss, either social or financial, on their employers; and that the concession of this boon is certain to beget a better understanding between them and their workmen than that which, unhappily, at present prevails." The speaker, after referring at considerable length to the general laws of labour, and combating the views of modern political economists, urged the necessity of a higher appreciation of labor and a corresponding advance of wages. He further denied the utility of workmen laboring longer than nine hours daily, and instanced the testimony of Mr. Thomas Piper, an influential master builder, that the only intention of the latter class in resisting their demand was not from any loss that they might sustain, but because the question was a public one, and they did not wish to give in. On the previous agitation the case was not fully known in the provinces. Now it was different, and support had been promised to the nine hours movement from forty towns, besides different societies. Mr. Quirk seconded the resolution, and alluded to the large amount of destitution caused through the late strike in the metropolis during the past winter, and expressed his belief that through the discontinuance of emigration and other causes the labor market at home would continue overstocked, and thus a very important social problem arise. He had learnt that the joiners had joined in the nine hours movement, and advised not only union among the members of one trade, but a thorough union among all trades, in continuing to keep their claims before the public mind. The motion was carried unanimously. Mr. Stacey, printer, in moving the second resolution, indulged in some violent strictures upon *The Times*, which he said had lied as foully in stating that the present movement was kept up by professed agitators as when it stated in August last that the workmen had no interest in the agitation. He moved:—"That the meeting is fully convinced that the desired reduction is no more than is justly due to the manifold requirements of the operative builders, and therefore pledges itself, by the use of all the just and lawful means at its disposal, to persevere in the present agitation until the nine hours movement has been granted." The motion was duly seconded and carried unanimously, when the proceedings terminated with a vote of thanks to the chairman.

THE HOSPITAL FOR SICK CHILDREN.—The annual festival of this charity was held on Wednesday evening, June 13, at Willis's Rooms, Sir John Pakington in the chair. The attendance was numerous. After the usual loyal and patriotic toasts, the chairman proposed "The Prosperity of the Hospital for Sick Children," and referred to the object of the charity as appealing to our common sympathy with a power to which no eloquence could add. It was a strange fact that up to 1852 there was no institution of the kind which tended to alleviate the diseases and the sufferings of children. It was a strange fact that this was the case in this city of London, where our charitable institutions were great, and worthy of the metropolis of this great empire; but for infantine disease little had hitherto been done. While suffering in any kind excited our sympathy, there is no state of suffering that could do more so than the case of those in whom we expect to see rosy health. Those cases are numerous in town and country, and unhappily the tender age of childhood is peculiarly liable to disease. Two-fifths of the deaths in London were of children under 10 years of age. He was sorry that this was the only Institution of this nature in the Metropolis, and all honour was due to those by whom the Institution was called into existence, and he might add, into prosperous existence. Since the opening of the Institution, 2,274 in-patients had been received, and 58,969 out-patients, and the hesitation felt by parents in admitting their children into the Institution was removed. He had the pleasure to announce that a donation of 500*l.* had been put into his hand from Mr. Goshen. It is by such instances that the noble charities of London are supported. Sir John Harding, the Queen's Advocate, proposed "the health of the Chairman," and in a facetious speech alluded to the various public measures with which his name was associated. The amount of donations received during the evening amounted to about 2,000*l.*

THE METROPOLITAN DRINKING FOUNTAIN ASSOCIATION.—The first annual meeting of this association was held on the 31st of May, at Willis's Rooms, Mr. Samuel Gurney, M.P., in the chair. Various letters were read from gentlemen favourable to the objects of the movement and who were unable to be present at the meeting. The report referred to the first erection of drinking fountains in Liverpool and to the erection of the first one in London at St. Sepulchre's, Snow-hill, by Mr. Gurney, influenced by the fact that even in the former provincial town one fountain was used by no fewer than 2,000 or 3,000 daily. It was ascertained that this first fountain in London was used about 7,000 times daily. To carry out the benefit so as to reach the more populous districts of the metropolis the present association was formed. The first necessity was the want of funds to meet the then sources of expenses—the cost of the fountain and erection, the water supply, and keeping the fountains and appurtenances in order. In meeting the first of these liberal donations were received, and, in reply to urgent memorials from the Association, the Middlesex Water Company agreed to supply water without charge to a few fountains, and the Lambeth Water Company agreed to the reduced charge of 3d. per 1,000 gallons, but it is regretted the remainder of the companies adhere to the usual charge of 6d. per 1,000 gallons. Application was next made to the Metropolitan Board of Works, and to the district boards, and the majority of the latter responded favourably, so that free grants of water were made to about ninety fountains. The designs of the erections to be made next attracted attention, and in this the Association had no precedent. The choice of material appeared to lie between granite and cast-iron, and considerations of economy chiefly decided the committee in favour of the latter. One year's experience of the mode of filtration adopted by the committee has proved it to be very efficient. The plan of attaching money-boxes to the fountains for the donations of friends has been adopted, and the first money-box has been placed at the first erected fountain on Snow-hill. So far as the experience of four weeks justifies an opinion, it is very encouraging, and a sum of 8d. a-day has been deposited in

Digitized by Google

small coins varying from farthings to two-shilling pieces. The experiment is to be extended to five other fountains, when, if successful, it is proposed to supply every fountain with a money-box, when the erection will be more than self-supporting. Among the superior fountains in preparation may be instanced a beautiful fountain for the Royal Exchange, the donation of Mr. Samuel Gurney; a very handsome and costly fountain, of pure Gothic design, intended for Palace-yard, or some other site contiguous to Westminster Abbey, the gift of Mr. Charles Buxton, M.P.; a beautiful fountain, of classic design, to be placed in the Strand, presented by Mr. Robert Hanbury, M.P.; and a fountain of very chaste design, to be given by Mr. Noble, for which Mr. Theed, the distinguished sculptor, is preparing statues. Another fountain has just been erected in St. George's Hospital, Hyde-park-corner, after a design by Mr. Westmacott, R.A. Mr. John Bell has also prepared some handsome designs of both standard and mural fountains, and other designs are in preparation by Messrs. Wills. A turncock has been appointed, whose exclusive duty it is to visit the fountains at regular intervals, for the purpose of keeping them clean and in good order. A daily return is made by him to the central office. The total receipts of the Association during the past year have amounted to 2,609*l.*, and the expenditure to 2,346*l.*, leaving a balance of 263*l.* The Earl of Shaftesbury, in moving the adoption of the report, paid a tribute to the chairman for the great boon he had conferred on the public by his labours in carrying out the objects of the Institution. He considered that in respect of a supply of water as a beverage this metropolis presented an unfavourable contrast with continental cities. A glass of gin could sometimes be procured more readily than a glass of water. He hoped that such a state of matters would no longer exist, and that a glass of water would be placed within the reach of the poorest of the working-class. Mr. Slaney seconded the resolution, which was carried unanimously.

London Diocesan Church Building Society.—The sixth annual meeting of the London Diocesan Church Building Society was held on Friday afternoon, June 15, at Willis's Rooms, the Bishop of London in the chair. The meeting was numerously attended, and amongst those present were the Bishops of Oxford and Lincoln, Earl Grosvenor, Lord Ebury, and Sir W. Page Wood. The report for the past year stated that events have occurred during that time which promise to have a very favourable influence upon the future interests of the society. The committee, previous to July, 1859, were impressed more year by year with the overwhelming difficulties arising through the public apathy towards church-building, which, together with the rapidly accumulating population of the metropolis, led to their determination to lay the whole case before their president, the Bishop of London, and to ask from his lordship that advice and guidance which, as Bishop of this vast diocese, he was so well qualified to give. Upon the receipt of the letter om the committee, the bishop invited a large number of laymen and clergymen to meet the committee of the society at London House. At that conference the whole question was discussed, and in consequence of suggestions then made the Bishop announced his intention of personally bringing the claims of the Diocesan Society before the clergy of the whole diocese, and also of addressing a letter to the lay residents of the metropolis with a similar view. These resolutions have since been carried into effect, and in the course of last winter the Bishop held meetings in various localities of the metropolis, and urged the claims of the society. One of the results of these meetings has been that while in the first four months in 1859 the number of sermons preached on behalf of the society was only six, the number for the corresponding months of 1860 is returned as thirty-nine. The attention of the committee has been called to another subject of great importance to the interests of the Church in this diocese, though not falling directly within the ordinary objects of the society. The report of the committee of the House of Lords on spiritual destitution in 1858 recommended, as one of the most effectual means of supplying the needs of London, the local appropriation of the vast Church revenues of the diocese, which, after the falling in of the lease of the Finsbury estate in 1866, will probably amount to no less than 70,000*l.* per annum. It has been matter of consideration what steps ought to be taken in order that the recommendations of the Committee of the House of Lords may be carried out. The finances of the society, though still far short of what in this wealthy diocese they ought to be, show an increase upon the previous year of 800*l.* in donations and collections in churches. The number of churches consecrated during the year has been eleven, being the same as the year before. The system of missionary curates is beginning to be better understood among the clergy, and the grants made during the past year show a considerable increase upon those of the past year. The Bishop of London, speaking on the subject of missionary curates, said:—"It was not enough to build new churches; the material temple was of no use without sending a man to minister in it; and then, having endowed the church, they should be most careful to appoint a right sort of man to that office. The plan suggested by the late Sir Robert Peel had generally been adopted by this society; it was, first, to send a clergyman into the district, that he might gather a flock as he could, and then his labour was to be crowned by the erection of a church building. This was the object of the employment of missionary curates. An example of this plan he would just mention. At the east end of London, in one of the new districts of the parish of West Ham, the railway being made to pass by there, a large village, almost a town, very quickly sprang up. This society found a clergyman who was willing to labour there. He went and visited the people at their own homes, then gathered them together in a small school-room, which but inconveniently held 150 persons; and since then, at the expense of a certain gentleman, also a clergyman, a temporary iron church had been erected. He (the Bishop of London) went to open it the other day, and found a congregation of 800 or 900 persons; and he had been told that the church was usually quite full. The time was now fast approaching when that iron church must be removed, and a real permanent church erected, to stand as long as the parish should continue to exist. Such was the course of the operations of this society." The other speakers were the Bishops of Lincoln and Oxford, Vice-Chancellor Page Wood, Earl Grosvenor, the Rev. Daniel Wilson, Rector of Islington; the Rev. R. Gregory, Rector of St. Mary-the-Less, Lambeth; Mr. Selwyn, M.P.; Mr. W. Cotton, and the Rev. Dr. Jelf.

Pauper Children.—The Inspectors of Schools give upon the whole a good report of the Parochial Union Schools this year The children are commonly found on admission to be in a state of the grossest ignorance, but in these schools they get a rudimentary education combined, in many cases at least, with systematic industrial instruction, the boys in gardening, field-work, or common trades, the girls in washing, cooking, and needlework. The effect of this on the school instruction, on the vivacity, intelligence, and acquirements of the children, as well as their physical and moral health, is said to be almost marvellous. There is an abundant demand for the girls as domestic servants, and from well-conducted schools the boys generally get situations when about fourteen, but it is said they often leave their first place because they feel more independent in one of their own choosing than in the place found for them by the guardians, or, as they term it, "the workhouse situation." Where the children in these schools are carefully trained, and kept away from the adults, the effect is thoroughly to dispauperise them, and the tendency of such treatment is to annihilate hereditary pauperism; but they have a far better chance where they are removed from the workhouse and united in district schools. Unhappily it is difficult to get district schools established in the country, and in many places the children are still so brought up that it is hardly possible they should turn out industrious workpeople — a sad contrast with well-managed unions, where it is very gratifying to see how a large proportion of the children turn out well. In the three years ending last Michaelmas, thirty-seven boys were discharged from the House of Industry School in the Isle of Wight, and thirty-two of them are now earning a livelihood. In the Stepney Union, which has for twenty years had a well-managed school, 1,467 children have been got into service, and only thirteen of them are now dependent on the rates. Musical instruction is adopted in some of these schools, as industrial training; and a school inspector, Mr. Tufnell, remarks that he has been surprised at the large proportion of the London boys that evince musical talent, several to such an extent as to be enlisted to be trained as bandmasters. From eight of the metropolitan union schools, with 167 boys in their bands, 115 enlisted into the army the year before last, and the demand has been beyond the supply. In

Digitized by Google

some the boys are trained for the sea. The Central London School has for years maintained a ship in its yard, and annually trained about fifty boys for the navy, and it is now about to erect another ship. The Stepney School has also a ship, and in six years has trained 218 boys for sea service. Proper care has to be taken in the selection of trades, and, though some instruction in tailoring and shoemaking is usual, it is not well to see a very large proportion of the boys apprenticed to callings which are generally overstocked, and in which machinery is rapidly superseding the human hand; and probably Mr. Tufnell is right in saying, that in general the main object should be not so much to give special instruction for particular occupations as to implant in them, by regular labour, such habits of industry that they will be able to turn their hands to any business placed in their way. An inspector remarks with regret the premature removal of children by their relatives from these schools, just as from the national schools; but he justly adds, that as education becomes gradually more common, even the very poor will get more ashamed of extreme ignorance, and more sensible of the advantages of some mental cultivation; and the annual introduction to all parts of the country of a number of well-trained pupil-teachers, some of whom were at one time paupers, who do not all enter the scholastic profession, and who have learned too much easily to forget all that they have been taught, must have an extensive influence in making the benefits of education more intelligible to the uneducated.—*Times.*

THE SHOE-BLACK SOCIETIES AND THE STREET SHOE-BLACKS.—The annoyance to which the boys sent out as shoe-blacks by the organised Societies have been subjected by the unruly conduct of wandering shoe-black boys subject to no discipline or control, has caused the committee of the various Societies to submit a statement of their difficulties to the magistrates and police authorities. The disadvantages under which the Societies' boys labour is this, that having been conditionally sanctioned by the police with an understanding that they should be subject to discipline, stationed at particular posts, and wear a number for identification; and if at any time, owing to objections raised by any neighbouring householder, or any other cause, the police should require a boy to leave his stand, even though he had previously been allowed to ply at it, the boy has orders from his school to quit it and return immediately to the Society's office. Therefore, when the police bid these boys move on, which is their only redress in a disorderly competition between rival shoe-blacks, they—the Society boys—lose their post altogether, while the vagrant boys simply walk off and return when the disturbance is over to the post of the more orderly and duly-licensed boy, who thus loses permanently a remunerative station of which he had first possession. The Society asks no unfair monopoly, but simply that all shoe-blacks shall have an assigned station, and that none shall be allowed to intrude upon such station when pre-occupied by another boy.

Notices to Correspondents.

The Editor requests that any circumstances connected with Charitable Institutions, which it may be thought advisable to bring before the public, may be communicated to him at 337, Strand, on or before the 14th of each month.

NOTICE.

It is requested that Reports of Meetings, Pamphlets, Reviews, or other matter communicated for the benefit or notice of "The Philanthropist" may be forwarded, if possible, to the Editor, on or before the 14th of the month, that they may have the attention to be desired.

Notice.—Subscribers of £1 1s. and upwards to the Reformatory and Refuge Union, 118, Pall Mall, will be supplied on application with "The Philanthropist," a Monthly Journal of Social Economy.

SOCIAL SCIENCE—No. II.

IF we could imagine a community of men coming together for the first time, and laying the foundation of a state of society, it is certain that the first step they would be compelled to take would be the establishment of certain regulations binding upon all. Such regulations necessarily form the foundation of the social framework, and for this reason Jurisprudence was rightly placed by the National Association at the head of the five general subjects into which their field of operation has been mapped out. In the sense apparently affixed to it by the Association, judging at least by the business done in this department at the annual meetings, Jurisprudence includes legislation, though (viewed scientifically) the two are essentially distinct. The true foundation of law lies in those universal precepts which, in some shape or other, have been recognised by all nations, and embodied in every code; and if considered as the result of these rules—and what is termed general Jurisprudence is nothing else—this branch of human knowledge deserves the eloquent description given of it by Hooker—"her seat is in the bosom of God, her voice the harmony of the world." But unhappily the laws of every country, though containing the principles of truth, form in their actual details a melancholy record of the passions, prejudices, and ignorance of each succeeding generation. Our own legislation, whether parliamentary or judicial, is only too much open to this condemnation; and no more important social question can be proposed for solution, none more deserving the attention of all earnest and thinking men in every class of the community, than is the ascertainment of the true principles on which our legislation should be based.

Now at the outset of the discussion looking at the existing facts (which I maintain to be the first step in all social inquiry)—looking to the ninety volumes of statutes ranging from the time of the Plantagenets to the last session of Victoria—looking to the shelves on shelves of Reports, crowded with the decisions of our judges, who have made more law than all the parliaments that ever sat,—we are struck with the singular cumbrousness of our national jurisprudence, and with the superfluous interference of our law-makers. We laugh indeed at the sumptuary acts passed some centuries ago, and are astonished that a legislature should ever have busied itself with the breadth of a ruffle, or the shape of a shoe. But future generations may not think the present century much wiser. Within the memory of middle-aged persons there were Government Inspectors who prescribed the exact size of the cloth-pieces manufactured in Yorkshire; at the present moment the great majority of contracts between traders in England are incapable of being enforced by law because a particular written form, with which it is often impossible to comply, is prescribed by statute to those who make the bargains; and as if to show that the mania for legislative interference is as active as ever, we have now grave proposals for making people sober by Act of Parliament. When the great French Minister Collert asked the merchants of France what he could do for them, their reply was, "Let us alone;" and this answer might be profitably written on the doors of Parliament, and the walls of every Government office, as the first lesson for the inmates in that great and much neglected science, the Province of Legislation.

It is necessary, however, to take care

Digitized by Google

that this sound principle of non-interference be not carried too far. It is quite right that every individual in the community should be able to use his faculties, and employ his property, in any way he thinks fit, perfectly unfettered and uncontrolled, as long as he refrains from injuring his neighbour in so doing, and provided that he is himself a free and responsible agent. These two last conditions are obviously essential to the general proposition; yet they are often overlooked in arguing on legislative questions. For instance, we may concede as indisputable principles that a parent has a right to bring up his child according to his judgment; that the owner of a house may regulate its internal management; and that a master and his labourer may agree together as to the hours of work. But it is not infringing these principles—if a parent sends his boy into the streets to be a beggar and a thief; if a householder crowds hsi rooms with lodgers to a degree that defies decency, and breeds disease; if an employer avails himself of the helplessness of children to work them till their bodies grow crooked, and their minds savage from inordinate labour;—to say in each of these cases that the conditions of freedom do not exist, either because the public is injured, or because the parties to the bargain are not on fair terms, and consequently that legislation should step in, and compel the observance of mercy, morality, and justice. The Factory Act, the Common Lodging Houses Act, and the Industrial Schools Act, have all been objected to on the ground of their interference with personal rights; but each one of them is fully justified by the exceptional circumstances which it was passed to meet.

This question of the province of legislation—how far interference with the individual is to be exercised—is the fundamental point in treating of Jurisprudence as a branch of Social Science; it has never yet been sufficiently investigated, and it is impossible to do more than allude to it in this short notice of so wide a subject. There are two other important public questions connected with the department which demand a few sentences,—the method of arranging and promulgating our laws, and the facilities that should be afforded for administering justice between individual citizens.

The laws of this country, as already mentioned, are scattered over so vast a surface of Parliamentary enactments and judicial decisions, that they are practically a sealed book to the great body of the people, and are also productive of continual uncertainty and litigation. Various attempts have been made, from the time of Lord Bacon down to the present, to remedy this evil, but it is not probable that the work will be heartily taken up, and therefore vigorously prosecuted, unless public attention is turned continuously to the subject, and pressure brought to bear on the Government. Some years since a Statute Law Commission was appointed, and it was believed that the work had been commenced in good earnest; but after some years of delay and uncertainty, during which the public expected much and obtained little, it became apparent that the Commission either from a lack of funds or of adequate machinery for its purposes, or from the original vice of its constitution—the entrusting to men already overburdened with other occupations a task demanding the entire energies of more than one vigorous mind, had failed in its objects, and it was accordingly abolished with universal assent. During its existence this Commission prepared a number of Bills to consolidate various branches of the law; and it may be hoped that in some shape or other these measures will be ultimately passed by Parliament. What is really wanted is a good systematic plan for the work; and it is not likely that any better can be devised than that successfully adopted by the State of New York, and some years since recommended by the Law Amendment Society for this country. The plan is this:—First, to get rid of all useless and effete matter by striking out of the statute-book the repealed, expired, and obsolete Acts; which step alone, if the work went no further, would be an immense boon to the nation. Secondly, to group the remaining enactments in distinct classes, forming the principal heads of our law, arranging each in one consolidated Act. Thirdly, to revise and condense all these groups, and reduce their different chapters to language as simple and clear as possible. It has been calculated that if five well-qualified men gave their whole time to the work, it would be completed in a few years, when our whole statute law would be comprised in three or four portable volumes. This result has been actually obtained in the State of New York, with much the same materials to work upon; and it seems strange that so little public interest exists on a subject of such vital moment to every member of the community.

But the best laws, and the clearest and most concise enactments, are comparatively worthless if the means for executing justice are defective; and the third great social question connected with Jurisprudence is, how to render our tribunals really accessible to the people. Many suppose that the County Courts have done this already, and there is no doubt they have done a great deal, especially for the working classes, to whom before the establishment of those tribunals justice was altogether denied. In 1857 the amount of money for which plaints were entered in County Courts was 1,937,745*l.*; judgments were obtained for 978,592*l.*, and there were actually paid into court 776,711*l.*; an astonishing record of the efficacy of cheap and local justice!

It would be, however, a great mistake to suppose that the County Court system has met all the local requirements of the country. It has, in fact, met none except those of the poorer classes. The wealthier are still practically deprived of local justice to an extent unparalleled in any other nation. There are many towns in England, numbering tens, nay hundreds of thousands of inhabitants, and surpassing in wealth and importance the capitals of most foreign States, which never see justice administered within their boundaries in any case of more than fifty pounds' value. Even the circuit towns are only visited twice, or at the most three times a year by the judges, and the justice which is obtained at these intervals is clogged with the condition of previously instituting formal pleadings at Westminster. Our merchants and manufacturers suffer continually great losses from this want of a tribunal to which they can resort, it being often impossible for them to wait till the assize comes round, and equally impracticable to remove the cause to London. This grave deficiency in our judicial system is of modern date, for in mediæval times all the principal towns in the provinces had courts of their own for the trial of cases of debt and mercantile disputes, the business of the superior judges being chiefly to try questions relating to land. There could be no more valuable social reform than the restoration to our great provincial cities of their ancient right to tribunals of plenary jurisdiction.

Another serious defect in the County Courts as at present constituted is the want of any equitable powers. The Court of Chancery is too expensive, and as respects the great majority of the nation too distant, to afford available redress in small cases of breach of trust, or in other matters over which a court of equity alone has cognizance. Several attempts have been made to arm County Courts with equitable jurisdiction, but hitherto without success. It may be hoped that the approaching meeting of the Social Science Association in Glasgow, when its English members will learn that every county in Scotland has a Local Court exercising unlimited powers both in law and equity, will convert some of the opponents of the old Saxon system of justice. Procedure may be simplified, fees may be cut down, the substantive law may be improved, but all this will avail but little as long as suitors and witnesses are compelled to travel to a distant court. Let us hope that the public opinion which of late years has been growing on this subject will ultimately compel Parliament not only to legislate with a cautious regard to individual freedom, and to promulgate our laws in a concise and intelligible shape, but also to grant fully that national privilege enunciated in the Great Charter—the privilege of claiming justice speedily and without hindrance at the hands of an accessible tribunal.

Report of the Committee of the Manchester and Salford Reformatory for Juvenile Criminals, December 31st, 1859.

THIS Reformatory is at Blackley, four miles from Manchester, and was formerly the Angel Meadow and Ancoats Ragged and Reformatory School. It is now an Industrial-school, with a farm attached, under the bailiff of which the majority of the boys are employed; twelve only out of the fifty it can contain, being, as a rule, occupied in learning the trades, which are tailoring, shoemaking, coopering, and basket-making. The progress during the past year has been satisfactory :—

"The farm shows a profit of 36*l.* 9*s.* 6*d.*, and the carpenters' work of 30*l.* 14*s.* 4*d.* The other trades have cleared their expenses, with a small balance of profit, the basket-making excepted, upon which there has been a loss of 11*l.*

"Nearly one-half of the net profit of the industrial department, stated in the current account at 116*l.*, has been realised from the hire of boys sent out to work during the summer months. Several have been from time to time engaged to assist in the gardens of gentlemen belonging to the committee. Others have been employed by the neighbouring farmers. The committee regard this simply as an experiment, and it is doubtful whether the practice will be continued during next summer, as there are unquestionably some disadvantages attached to it.

"Whilst its profits have increased, the expenses of the institution have, in proportion to the average number of inmates for the past year (fifty as compared with thirty-eight in 1858), considerably diminished. The total cost per head has been 6*s.* 11*d.* per week, or 17*l.* 19*s.* 8*d.* per annum. In 1858 it was 8*s.* 0½*d.*, and 20*l.* 10*s.* 8*d.* respectively. The net cost for the past year, deducting the profits of the industrial department and the interest received from the bank (13*l.*), has been, 15*l.* 7*s.* 8*d.* per head.

"As the Government allowance for boys committed to the Reformatory is 7*s.* per head per week, it will be seen that the cost of maintenance has now been reduced within the limits of the allowance. It must not, however, be hastily concluded that the institution no longer needs the subscriptions which it receives from the benevolent in this town. In the first place, there have been during the last twelve months, and there may be for many years to come, a small number of voluntary inmates — that is, criminal boys brought by their relations or the city missionaries, for whom there is no Government allowance, but only, at best, a small and inadequate payment from their parents.

"The institution is no longer (as at first) designed chiefly for the reception of such cases—but it cannot close its doors to them entirely—and if received, a subscription is needed for their maintenance."

The committee also call attention to several letters appended to their report—from boys who have been educated at the school, and many of whom have subsequently emigrated to Canada. A book is kept at the institution for the preservation of such letters, and those published in this year's report are a selection.

The most satisfactory evidence of the favourable working of the school is in the fact recorded in conclusion :—
